Q. Now by whom is that magazine published? A. It is a national organization, the name of which I am not familiar with. It is purchased by utilities throughout the country, has general information on farm equipment, and has an advertisement by the particular utility that purchases a certain quantity on the back page of the magazine. The name of the organization that publishes it, I am sorry I can't give you.

Q. That magazine is then purchased by private utilities throughout the country and mailed out? A. That is my
7787 understanding.

Q. Now just to clarify the record, yesterday, in speaking of the extensions which you had made into rural areas, you stated in substance that your men regarded it as prospective customers all persons within a thousand feet of the extension lines, and that as of the first of the year, 60 per cent. of all of these prospective customers, as so defined, had taken elec-

—3,285—

tric services? A. Yes.

Q. I assume that you meant heads of households; you didn't classify people by number of persons but by house-
7788 holds? A. That is correct, and I would like to make a further statement with reference to that, that classifying them as prospective customers, and using the 1,000 feet figure was simply for the purpose of estimating the possible revenues from the line on the theory that we could make service drops for the 1,000-foot customers, whereas, if he was further than that, a further extension of the distribution system was probably necessary. There were more customers than that possible in the district, but those are for the purpose of estimating revenues from the extensions.

Q. I merely wanted to get the record correct as to what you meant by "persons," and I thought you regarded families as units. A. Yes, I was talking about houses.

Q. You identified yesterday Respondents' Exhibit No. 61 which was thereafter received in evidence, which is a graph showing certain comparisons in respect to residential service as supplied by Union Electric Company and subsidiaries, and on the other hand computed upon a national average. I believe you have a copy of that exhibit before you? A. I have. 7790

—3,286—

Q. Now the greater portion of the residential service in respect both of kilowatt hours and of costs, that is to say receipts, rather, supplied by the Union Electric Company of Missouri and its affiliated companies in that Group, is supplied to urban customers, is it not? A. A great majority?

Q. Yes. A. That is correct.

Q. Is that true of the customers upon which the national average is computed? A. The data covered for residential customers was for urban, rural, non-farm and farm, where 7791 little or no irrigation is involved. That is the statement of the Edison Electric Institute in the bulletins from which these data were taken.

Q. So, taken as a whole, you would not necessarily say, would you, that the figures for national average and the figures for the Union Electric Group represent comparable classes of consumers? A. In the absence of definite knowledge on the percentage of rural and urban customers in the national averages, I couldn't answer that question.

7792 *Charles E. Michel—By Respondents—Cross*

Q. That detracts somewhat from the significance of the comparison, then, doesn't it? A. No, sir. I, in my own mind, would say not because I think that the Union Electric Group territory is quite typical of the average. I don't know that,

—3,287—

but that is my opinion.

Q. You spoke of sales to other utilities, do you handle those sales? A. I am involved in a great many of them. Many of them I handle personally. Some of them I do not.
7793 The inter-company sales I have nothing to do with, but the sales with the other utilities are handled by me in connection with the executive head of the division that serves the company, and I will say this, that the rates in connection with those different companies are a product of the sales department's thinking in connection with the rate engineers, and with the hydraulic men in the company having to do with our water power plants and so forth. I am intimately connected with those sales.

Q. When you speak of the intercompany sales, do you include only those companies which you have identified as
7794 being within the Union Electric Group, as you have used the term? A. Now I can't make the definite statement on that. We have on our statement "intercompany sales", and I, without guessing, could not tell you precisely what companies are involved in that "intercompany sales". I can't answer that. I can get the information for you without any difficulty whatsoever, but I don't have it in my mind.

Q. You don't know whether Illinois-Iowa Power Company is one of those companies? A. I am not sure, that is the very reason I can't guess; I am not sure of that.

—3,288—

Q. What are the utility companies, sales to which you do handle, what are the names of them, if they are not too numerous? A. You mean the utility companies to whom we sell service?

Q. Yes. A. I can give them to you.

Mr. Browning: Could you state what year the figures are for, or do you want just the names of the companies?

Mr. Binford: Just the names.

7796

The Witness: The names of the companies are as follows:

Arkansas-Missouri Power Company; City of Farmington; City of Kirkwood; East Missouri Power Company; Missouri Electric Power Company; Illinois-Iowa Power Company; Western Light & Telephone Company; Central Illinois Public Service Company; Iowa Electric Company; Iowa-Southern Utilities Company; Missouri Power & Light Company; Nauvoo Electric Light & Power Company; Van Buren Light & Power Company; Wever Electric Company; Denmark Light & Telephone Company; and the Town of West Point.

7797

By Mr. Binford:

Q. Other than the Illinois-Iowa Power Company, all of these sales are handled by you or under your supervision? A. To a greater or less extent. In some of the cases my work has been purely that in connection with rates. In other cases I have personally conducted the negotiations

7798 *Charles E. Michel—By Respondents—Cross*

with the executives of these other companies for the sale of that power.

Q. Now with respect to rates and rate changes, I gather from your testimony that your sales department has general charge of that work, of those determinations, is that true? A. That is correct, sir.

Q. How far does that work go, does it go to the extent of appearing before regulatory bodies for approval of changes in rates? A. If I may explain, the extent to which
7799 we appear before the regulatory bodies has been as follows: After rate changes have been determined on, regardless of the origin and the reason why the change, and the rate and statistical department of the sales department have worked up the rate, and have had it approved by the top executives of our company, we then take that rate up to the commission and say, "Now, to meet this situation (explaining it), this is what we propose to do; this is the number of customers involved; this is the type of rate reduction; how much it will be, and so on."

And by discussing with the rate engineers, primarily, of
7800 the commission, we find if they have objections to any features that we have in, or if they have other suggestions as to what they think we ought to do; and we come back, revamp and work over the schedule again to meet these suggestions, and get them approved again, and then we turn them in for regular filing, which is not handled by the rate and statis-

tical department.

Q. But when you spoke of "we" approaching the engineers of the regulatory commissions, do you mean you per-

7801

sonally or people acting under your supervision or control? A. I have done it, yes; I have done it on a couple of occasions when the commission has asked me to talk to them, but generally it is handled by the head of our rate and statistical division.

Q. Who is under your supervision? A. Who is under my supervision.

Q. Now you gave certain figures yesterday relative to rate reductions which were not wholly clear to me. You stated, at page 3,245 of the transcript of yesterday's testi- 7802
mony, "in the period September 1, 1919 to June 15, 1940, there were 82 reductions in rates made by the Union Electric Group".

Now in order to clarify that and for example, let us suppose that the Union Electric Company, and each one of its subsidiary companies concurrently made a rate reduction. In your figures, would that be counted as one rate reduction, or would you include as a rate reduction the action of each company taken at that particular time? A. If it was applicable to the system, it is one rate reduction; if it is applicable to a group, then it is a separate rate 7803
reduction.

—3,291—

Q. So that if Union Electric Company of Illinois reduced its rates today, and Union Electric Company of Missouri fell in line next week with a similar reduction, that would be included here as two reductions, is that true, whereas if they did it on the same day, it would be one reduction? A. No, sir, the date of the reductions which I have in front of me, and the type of the reduction, which I also have in

7804 front of me, does not confirm that. When it is a single reduction of a single rate, it has been called one reduction.

(Discussion off the record.)

By Mr. Binford:

Q. So that your testimony is merely confirmatory of the tabulation set forth in Respondents' Exhibit No. 56? A. Yes, sir, that is correct.

7805 Q. You also stated on the same page of your testimony of yesterday, to which I have last referred, that the total reduction is found to be $6,016,183 per year. How is that figure computed? A. That figure is computed as follows: When we make the rate reduction as of a certain date, that reduction is applied to all of the customers, month by month, for the previous 12 months, or a substantial sampling of all of those customers, and the reduction in the revenue received during those preceding 12 months by the application of the new rate is the reduction that we attribute to the introduc-

—3,292—

7806 tion of that rate.

Now of course it is generally very much smaller than the actual reduction because, when the increased service goes on, there are further reductions that take place, but it only has to do with the application of the new rate schedule to the previous 12 months' service, and how much revenue we would have lost had that service been billed under that rate.

Q. Now the particular figure of $6,000,000-plus, which you gave, referred to what year, if any particular year? A. That is a totalization of all of the reductions during the

period under discussion for the service used by the customers affected by the reduction during the previous year.

Q. For the period then from September 1, 1919 to June 15, 1940, approximately 21 years? A. No, sir. If you were to apply that figure, the very minimum you could apply would be $6,000,000 per year for the years that have passed since the date of reduction.

Q. As an average? A. No, sir, it is a totalization, it is not an average.

7808

(Discussion off the record.)

Mr. Hamilton: Mr. Michel, is the figure of $6,000,000-plus, which you have given, the sum total of the respective reductions shown on Respondents' Exhibit No. 56?

The Witness: Yes, sir, it is.

Mr. Hamilton: And is each reduction there shown based on a reduction of revenue which would have resulted, if the rates represented by the reduction had been applied to the consumption in the year immediately preceding the date of the reduction?

—3,293—

7809

The Witness: That is correct, sir.

Mr. Hamilton: So that the figures given are not on a cumulative basis?

The Witness: They are not.

By Mr. Binford:

Q. Now I believe you further testified that before rate reductions were put into effect by the Union Electric Com-

7810 pany or Group, a sampling was made for a period of a year or thereabouts of some ten per cent., in the case of residential customers, of customers affected, to see what the results would be before the rate was made universal? Is that true? A. That is correct, 10 per cent. per month for a period of one year. The actual process is to go to the customers' file and pull out every tenth card for 12 months, then tabulate the 12 months' consumption, and billing by month, not total, and that would make, for instance, 12 times the number
7811 of samples.

If there were 300,000 customers involved, the sampling would be 30,000 customers, and there would be 12 bills for each of the 30,000 customers.

They would then be analyzed and the new reduction, or rather the new rate, applied to each of those individual bills, and that result would then be extended to the residential group. A 10 per cent. sampling has been found, over a

great many years, to be rather startling in its accuracy.
7812 That is not true of the large power group, nor to a large extent of the commercial group. In the large power group the rate is applied to all customers affected for a year, month by month, and in the small lighting group, to a much larger sampling than 10 per cent. in order to arrive at the figures.

Q. Then you were not testifying that you put a new rate actually into effect with the customer, or with 10 per cent. of your customers for a year, before putting it in effect for the remaining 90 per cent.? A. Oh, no

7813

Q. So that you have no test which you can apply to show what increased service or increased consumption may result from a reduced rate? A. That is an intangible value in which I place but very little value. I am convinced in my own mind that reduced rates in themselves do not produce any considerable additional consumption unless the rates are fair, equitable and are followed with promotion and sales activities to put them over.

Q. But if so followed, as I presume is true in the case of your companies, hasn't consumption historically grown with reductions in rate? A. Yes, sir, definitely so.

7814

Q. You have spoken of interchange of information, adver-

—3,295—

tising material, and other matters between yourself and the individuals in charge of sales in other North American companies. You spoke particularly this morning of the advertising character known as Reddy Kilowatt? A. Yes, sir.

Q. Which you have adopted, to some degree? A. Yes.

Q. Who originated that character? A. Ashton Collins is the owner of the device, and the patents.

7815

Q. Who is Ashton Collins? A. He is an independent operator working this little device throughout the United States to, I believe now, the very definite advantage of the utilities and himself.

Q. He is not connected with the North American System? A. Oh, no. His headquarter offices are in Birmingham, Alabama.

Q. How often do you have contact with the sales managers or the persons occupying that position, whatever their titles may be, of the other North American subsidiaries? A.

7816 *Charles E. Michel—By Respondents—Cross*

They are at intervals. I would say that on the average we are together about four times a year.

Q. I think the particular occasion that you last mentioned on direct examination, upon which you conferred with several sales managers of other North American companies, was identified by you as being at the conclusion of a

—3,296—

general gathering of utility men? A. Yes, sir.

7817 Q. What was that convention? A. It was the sales executives' conference of the Association of Edison Illuminating Companies.

Q. How often do conferences of that character take place? A. Once a year.

Q. Do you attend other conventions or conferences of utility sales executives? A. Yes, sir.

Q. What ones? A. Primarily the general sales committee of the Edison Electric Institute. I am a member of both of those committees. Then there are a number of subcommittee meetings that are held, and I attend those.

7818 Q. How many such meetings, including subcommittee meetings, do you attend during a year? A. I would say that at the present time I will average maybe four or five, possibly six, meetings in a year.

Q. And those meetings, I assume, give you an opportunity for conferences, aside from the general meetings, with the sales executives of the other North American companies? A. Yes, sir, they do.

Q. I think you made the remark, in speaking of your first

—3,297—

reactions to the Reddy Kilowatt character in advertising,

that no one man has a corner on sales ideas? A. That is correct.

Q. You would likewise say that that would be true, that no electric utility company has any such corner? A. That is correct.

Q. Or any system of utility companies has any such corner? A. As I understand your question it is that neither any system nor any one utility has the corner on all the good ideas in sales promotion work?

Q. Yes. A. I would say that that is a very correct state- 7820
ment.

Q. I assume you derive benefits from these general meetings which you attend, or you wouldn't attend them? A. That is right, I do.

Q. You spoke in respect to this most recent meeting of yours with certain other sales executives of the North American System, of a special extension case upon which you were working, and which was mentioned, although not identified, by a speaker at the general meeting? A. Yes.

Q. And later discussed particularly with you by another 7821
sales executive of the North American Company who had a similar problem? A. That is correct.

—3,298—

Q. And as a result of that conference I understood you to testify that you revised the proposal which you had made in respect of your case, to conform with the studies which had been made by the other gentleman of the North American System, of whom you spoke? A. The first part of your statement is correct. I revised it, but not to conform to his data.

7822 *Charles E. Michel—By Respondents—Cross*

It conformed to my data after I thoroughly understood the characteristics of the load, which were most exceptional.

Q. But his experience and studies were of aid to you in causing you to give further thought to the matter? A. Very definitely. I am quite sure that if I had not discussed that load with that executive and if he had not been entirely frank with me, that my company would never have been considered in the final location of that plant, and I am advised today that we are under very serious consideration, in fact there
7823 is only one other place that is receiving consideration at this time.

Q. How far had the other North American sales executive progressed with his similar case at the time you talked with him? A. He had already placed his proposal on the basis of his understanding of the peculiarities of their load, which I did not have, and it was in the hands of the prospective customer at that time, and he did not have the data with

—3,299—

him, but sent it to me when he got back home, with all of the details. Then, after I made mine, I sent him the details of
7824 what I had done.

Q. And you had already made a proposal of your own, which you were able to withdraw and amend? A. Well, I had made a proposal on a total misconception of the requirements of the customer.

Q. If it hadn't been for this meeting, then, it would appear that both of you would have submitted proposals which might have been slightly to your disadvantage, isn't that true, or have left standing proposals which might have been to your disadvantage? A. Well, that is a hypothetical ques-

tion that I assume is correct. If I hadn't gotten the information from somebody else, that is true, and I don't think I would have gotten that information elsewhere, because I had put the matter in the files.

Q. It never had occurred to you to make inquiry of any sales executive of any other North American company as to whether they had had similar experiences, prior to your submission of your proposal in this case, until this accidental meeting? A. Well, I wouldn't call it an accidental meeting. Frank and myself were sitting down and 7826
discussing the most intimate details of our sales operations, in St. Louis and Milwaukee. I am thoroughly familiar with the Milwaukee situation, and we were going into the most

—3,300—

intimate details of our operations, going into a lot of facts.

Q. But this particular matter was brought into the conversation through a remark by a speaker in the general meeting, isn't that true? A. Yes, sir, and after he had made it I tried to identify the thing in my own mind, and I don't know today that I have, but I believe that I have, and then I was discussing it with Frank Coffin. 7827

Q. Are you familiar with the rates charged by the Potomac Electric Power Company to its customers? A. Well, I wouldn't say familiar, I have them, I have them in my files, and they have been the source of a good deal of study by my rate men, but to say that I am familiar with them, no, that is not a correct statement.

Q. Are you familiar with the method of sales promotion, particularly in respect of greater utilization of electric equipment, employed by the Potomac Electric Power Company? A. Yes, sir; within limits, that is.

7828 *Charles E. Michel—By Respondents—Cross*

Q. Will you describe very briefly what they are? A. Any promotion of the electrical utilization equipment for the home through the Potomac Electric Power Company's territory, as I understand it, is handled through an organization here in Washington. The name of that organization is in my files, I don't have it in my mind. But that is the promotion, as I understand it, the way they handle it. And

—3,301—

the Potomac Company itself does not do any direct mer-
7829 chandising to its customers, leaving the merchandising to the dealers and so forth.

Q. Whereas your Group maintains the 26 stores? A. Maintains 26 stores.

Q. For the sale of merchandise? A. Yes, sir.

Q. Are you familiar with the rate structure of the Cleveland Electric Illuminating Company? A. Not to any greater extent than I explained in connection with the Washington operations.

Q. Could you state roughly how that rate structure dif-
7830 fers from that of the Missouri group of companies? A. No, sir, I cannot, I cannot tell you. It is in the hands of my rate statisticians who are constantly giving it attention. I read it, as I read the rates of all of the utilities in which I am interested, but I do not attempt to carry those rates in my mind. I have got enough trouble trying to carry my own.

Q. Your answer would be the same both as to merchandising methods and as to rate structure in the group of North American companies centering in Milwaukee, or is your familiarity with that situation greater than it is with the two which I have mentioned? A. My familiarity with Mil-

waukee formerly was great, I was in very close touch with

—3,302—

it. Today I am not in close touch with it to the extent that I was formerly was, and I would say generally that an attempt on my part to go into the details of their operations, would be impossible; I couldn't do it.

Q. In respect of rate reductions, and also of merchandising, do you keep in touch with the activities of companies in Missouri, Illinois and Iowa, which are not in the 7832
North American Group? A. I watch them, I learn them from the newspapers, and I learn of them from the Edison Electric Rate Book, and things of that kind, and I am constantly watching them, yes, sir.

Q. They are on file, I presume, in respect of rates at least, with the regulatory commissions? A. Yes, I assume that they are, but I don't get them from that source. I get them from the rate book published by the Edison Electric Institute.

Q. And that rate book covers the whole national field, does it not? A. It covers the national field. Of course, it 7833
gives the general information, it doesn't give specific information. The application of a set of rates out of that rate book, unless you knew all the underlying principles, is a most difficult task.

Q. How far is it from St. Louis to Keokuk, roughly? A. About 220 miles.

—3,303—

Q. Do you make frequent visits to that office? A. I do not, but my men do.

Q. How frequently do they make those visits? A. I have had one man up there for pretty nearly a month. I am getting tired of it right now, and I am going to get him back.

I have had three or four men up there on two or three occasions within the last sixty days, for one or two days.

I have had a couple of home economists up there.

All of these men have been doing training work with the group that operates up there, as well as dealer relationship work.

7835 I have had my merchandising manager up there for too long, I will say that, during the last sixty days.

Mr. Binford: Mr. Examiner, I have no further questions at this time, and I don't expect to have any further questions of this witness, but I would like to reserve the right to recall him for further cross-examination upon any particular point, if occasion seems to require it.

Redirect Examination by Mr. Browning:

7836 Q. Mr. Michel, in giving the distance from St. Louis to Keokuk, you were giving your present recollection? A. Just a round figure, out of my head.

Q. And you would yield to the atlas, would you? A.

—3,304—

Absolutely. I will say this to you, that I have driven it within the last two years, five times to my knowledge, from St. Louis to Keokuk in my own car, but I don't know exactly what the mileage is.

Q. In answering questions with regard to sales department personnel, you were not including the district managers

or local representatives whom your department advises and trains, but who are not directly within your department, is that correct? A. That is right, that in the figure of 302 they are not included.

Q. Does the total number of stores which you mentioned include all merchandise show-rooms throughout the system? A. Yes, sir.

Q. You were asked certain questions with regard to intercompany accounting practices on intercompany merchandise transactions, including whether orders were placed on 7838
a single contract. Do you know the facts with regard to that? A. I do not.

Q. Regarding this incident which you have described in some detail on cross-examination, the potential customer and the discussion thereof between you and the Milwaukee sales manager, and the assistance in interchange of information between you, would you have given that information to any non-affiliated company? A. No, I would not, any more than they would give it to me.

—3,305—

Q. Would you have asked it of any non-affiliated com- 7839
pany? A. I would have thought it was rather impertinent to do so.

Q. You were asked as to your knowledge of the sales promotion work of the Potomac Electric Power Company. Do you attempt to carry every detail of every sales promotion policy of the other members of the North American Group in your mind for instant reference? A. I do not.

Q. Have you discussed the sales promotion policies of the other North American subsidiaries with their sales managers from time to time? A. I have.

7840 *Charles E. Michel—By Respondents—Redirect*

Q. In dealing with rates of other North American subsidiaries, do you attempt to carry all the figures and details in your mind? A. I do not.

Q. But you have seen their rates, and discussed them with the other sales managers, and the material is in your files? A. In special cases, yes, sir. I wouldn't say that that was the general policy, but that we do it constantly on different problems that come up.

Mr. Browning: That is all.

7841 —3,306—

Mr. Binford: No further cross-examination at this time, with the same reservation.

Mr. Browning: And as usual we object to the reservation.

The Examiner: Very well.

Mr. Browning: Is my understanding correct, that we now will take a recess until Wednesday morning, November 13, at 10 a.m.?

Mr. Binford: That is agreeable to me.

The Examiner: Yes, we will recess now until next

7842 Wednesday, November 13, 1940, at 10 a.m.

Mr. Browning: I might add just this, Mr. Examiner, that we will expect at that time to put Mr. Stokes on the stand for cross-examination.

The Examiner: All right.

(Whereupon, at 12:30 o'clock, p.m., the hearing in the above-entitled matter was recessed until 10:00 o'clock, a.m., Wednesday, November 13, 1940.)

—3,307—

7843

BEFORE THE

Securities and Exchange Commission

Docket No. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.*

7844

Hearing Room 622,
Securities and Exchange Commission Building,
Washington, D. C.
Wednesday, November 13, 1940.

Met, pursuant to adjournment, at 10:00 o'clock a. m.

7845

Before: W. W. SWIFT, *Trial Examiner.*

Appearances:

S. PEARCE BROWNING, JR., and CHARLES S. HAMILTON, JR., of Sullivan & Cromwell, 48 Wall Street, New York City, Attorneys for the Respondents.

RALPH C. BINFORD, and HERMAN ODELL, Attorneys for the Securities and Exchange Commission.

7846 *Stanley Stokes—By Respondents—Direct*

PROCEEDINGS

The Examiner: The hearing will be resumed.

Mr. Hamilton: I have just one or two questions for Mr. Stokes, if I may, before the cross examination.

The Examiner: All right.

Whereupon, STANLEY STOKES resumed the stand and testified further as follows:

7847 *Direct Examination by Mr. Hamilton (Continued):*

Q. Mr. Stokes, you have previously testified as to the town of DeSoto, Missouri, in illustrating the organizational set-up of the Union group, and you mentioned your local representative in DeSoto as a Mr. Ditch. I don't think you indicated how long that gentleman had been at DeSoto. A. Mr. Henry Ditch came with the Union Electric group in 1922, and has been located at DeSoto since that time with the exception of two relatively short intervals in which he was located at Festus, a nearby town. During those intervals,

7848 he was still employed by the Union Electric group on some construction work.

The general plan followed by the Union Electric group in taking over such properties as DeSoto was to attempt to utilize the local people insofar as possible, but in this particular case, the Monroe family who had been the owners of the property were unable to carry on the work satisfactorily

under our improved methods and different type of operations, and it was necessary to discontinue their service.

The previous operation had been somewhat haphazard and slip-shod and it was difficult to teach them the newer and better methods.

Q. Do specialists from the St. Louis offices of the Union Electric group supplement the work of the company's representatives in communities like DeSoto and Festus? A. They do. The Union Electric group has a number of specialized people who constantly keep in touch with the outlying divisions and particularly towns like DeSoto. For instance, our Mr. Carter Lewis, chief illumination engineer, has made 7850 seventeen visits to DeSoto and about eight to Festus during the past year.

Also, our chief hydraulic engineer, Mr. Davis, has made a trip down there to assist them with their water works pumping problems, and our commercial cooking specialist, and the merchandise manager and the man in charge of all of our air conditioning work, Mr. Freund, have all made frequent visits to that community and have assisted the customers in every way possible.

About the first of October, a woman home lighting specialist was detailed to DeSoto and has been there ever since 7851 and will remain there until the demands of the various customers have been met.

—3,310—

Q. And do power salesmen of the group likewise visit the town from time to time? A. Well, that is a regular routine matter. The power salesmen cover that district just as they do the other districts and contact the present power customers and prospective power customers to endeavor to develop additional business and to render service to that which they already have.

7852 Q. Did the former Consumers Electric Light & Power Company, which you testified previously served the community of DeSoto, render any such specialized services to the community of DeSoto? A. No. It would have been impossible to have rendered such specialized services. They were simply a small-town family and had no opportunity to learn such things.

As a matter of fact, they didn't know how to go out to get the additional load and if they had gotten it, their equip-
7853 ment, at the time the plant was taken over, would have been inadequate to carry it and they required a firm source of power to be able to handle such matters.

Incidentally, the Union Electric group had the money and, recognizing the necessity for a firm source of supply to DeSoto built transmission lines down there and connected the town with their large system, thus assuring an unlimited supply of power as far as DeSoto was concerned.

With such a supply of power and the knowledge of how to get the business, the town has prospered and has increased

7854 its load materially.

The original management was confronted with a pretty serious problem. To summarize it, if they had gotten the load, they couldn't carry it and they didn't have the money to build the plant to carry the load.

Q. You are now speaking of the former management? A. Former Monroe people—former owners. So that the net result has been the rapid improvement and development in the service rendered and a greater service being rendered which was not dreamed of in those days by the previous owners.

Mr. Hamilton: That is all.

7855

Cross Examination by Mr. Binford:

Q. Would you state your position with the Union Electric Company of Missouri? What is your position with the Union Electric Company of Missouri? A. Consulting electrical engineer is my title.

Q. What is your position with the other companies in the Union Electric Company of Missouri group as you have designated? A. The same position. Although I do not particularly utilize the title, my time is distributed on the work done for the other properties and I have the same functions to perform for the entire group that I have for the Union Electric Company of Missouri.

7856

—3,312—

Q. Do you mean that your salary is allocated to these various subsidiaries? A. Yes.

Q. Do you know how it is allocated? A. Well, from time to time I give the accounting department an estimate of the amount of work. It is usually based on our budget which is to be carried on in the different groups and that sets up a distribution which is adjusted from time to time.

7857

Where there is a specific work—what we call a work order—in progress, such as the Venice Plant No. 2, then my time is charged direct to that work order, but the miscellaneous general overhead is distributed on the basis as outlined.

Q. I believe you stated on direct examination, but I would like you to restate now: When did you come to work for the Union Electric Company of Missouri? A. I came to work for the Union Electric group in 1912.

Q. What were you doing before that time? A. I was at Missouri University; graduated from there in a five-year course with the degree of electrical engineer. During the summer prior to my graduation, I did some summer work out west just to make a little money to go to school the next year.

Q. Did you work for any subsidiary of The North American Company before you entered the employ of the Union

—3,313—

7859 Electric of Missouri? A. No. That summer work was with the Telluride Power Company, just as a student engineer.

Q. I think you described at some length the engineering work done in the interests of the Union Electric group as a whole as you designated the Union Electric group. Do you know how those costs are allocated? A. You mean the costs of my salary or time?

Q. I mean the costs of the entire operation that would seem to be for the benefit of the companies as a whole. A. All distributions are done on a cost basis. That is, there are no profits added, if that is what you mean.

7860 The total expenditures in my department, when distributed on the various companies, will be the same total figure as though we had done all the work for one company. That is, it is done on a cost basis.

Take, for example, one of my men. He has a specific job to do and his time is distributed on that work where specific work orders have been approved. Prior to the approval of specific construction work is where a good deal of our work comes in because we do some of the preliminary engineering, and that is carried as a general expense item and distributed

on the work, if it is a large enough job, later carried as a suspense work order and then distributed later.

—3,314—

Or, if it is work that is studied but not carried out, that will be distributed probably in the most equitable manner. It may be in proportion to the construction budget of the various companies.

Q. What companies do you include within the Union Electric group that you speak of? A. Well, in our definition of the Union Electric group, I included the electric 7862
companies only in that particular definition. I can list them for you.

Q. That is to be taken as applying to all your testimony? A. That is right. We referred to the Union Electric Company of Missouri and subsidiaries and in that connection we meant all of the properties including the Union Colliery Company and others, but when referring to the words "Union Electric group," we meant only the electric companies.

Q. So you didn't include the St. Louis County Gas Company? A. Not in the terminology of Union Electric group. 7863
When I referred to the gas company, I spoke of it by name—that is, to the St. Louis County Gas Company.

Q. I gathered from your testimony that the Keokuk Plant supplements the steam generating plants in Missouri. A. Yes.

Q. In a way that permits the more economical operation of the other plants, is that true? A. The Keokuk hydro

—3,315—

7864 *Stanley Stokes—By Respondents—Cross*

plant is a generating plant for the group of companies just as the Osage hydro-electric plant is a generating plant and just as the steam plants are generating plants.

The whole taken together generate the power and it is all on a common transmission line and high voltage tie system, so that they are operated, each, for the best effect at the time. We don't distinguish between the Keokuk plant or the Osage plant or steam plant.

7865 They are operated as a system group of plants for the best over-all economy.

Q. The same thing would be true if the Keokuk plant were a thousand miles away rather than 200 or something like that? A. Well, you couldn't—that is a hypothetical question—well, you couldn't transmit the power a thousand miles so I wouldn't know hardly how to answer that question. The losses would be prohibitive if you could.

Q. At what point are the losses prohibitive? A. Well, it is difficult to specify a particular point at which losses become prohibitive. The ordinary design of a good transmission line or power transmission is to design for ten per
7866 cent. losses or slightly less on the peak.

The losses on the Keokuk lines, with both lines in regular operation, run in the neighborhood of 5½ per cent. About 10 per cent. if one circuit were out of order.

—3,316—

It is a normal transmission line design, corresponds to the design of our more recent lines to the Osage plant.

Q. You may have covered this in your direct testimony, I don't recall. When was the Keokuk property acquired by your group? A. As I recall, about 19—let's see. We had the

contract there in 1913, and I believe we acquired the ownership about 1926. I have that figure, but that is the way I recall it.

Q. Prior to that time, you operated without that reserve hydraulic power? A. Prior to which time?

Q. Prior to the time you acquired that particular property. A. No, we had a contract agreement with the Mississippi River Power Company. You see, that property could not function without the steam reserve plants into St. Louis and it was recognized in the beginning and the contract was 7868 provided between the Mississippi River Power Company and the Union Electric group to provide the necessary steam reserve so that the hydro plant at Keokuk could carry its rated load.

I will give you certain figures. The firm contract demand of regular customers, whose load can not be dropped, is 115,000 kilowatts and the capacity of the hydro plant under low water or ice conditions is 70,000.

The remainder has to be made up by a steam plant somewhere and the most economical combination was to utilize —3,317— 7869 those already available in St. Louis.

Coal was pretty high priced at Keokuk and freight rates were not favorable.

Q. Freight rates change at the Mississippi River, do they not? Freight rates change at the Mississippi River? A. Freight rates have changed, did you say?

Q. Aren't they based on the St. Louis area there? A. Well, I am not a specialist on freight rates, but you have group rates from Pittsburgh to St. Louis and from the east-

ern centers to St. Louis, but major group rates like that probably do not apply to Keokuk.

At least, I know that the cost of coal at Keokuk was one of the factors that made it attractive to use the steam reserve plant to St. Louis.

Q. What I was thinking of is this: Hasn't it proven more economical to transport coal by your own trucks across the Mississippi River than to have it shipped across direct or do you recall that? A. No, we do not haul it that way.

7871 We ship it and pay a twenty-five—formerly 25 cents a ton bridge arbitrary charge that now has become 30 cents a ton, but we do no coal trucking across the bridge, at least none of any consequence. It is shipped by railroad cars. The reason we ship any coal across is primarily because the generation on the Missouri side is tied up with the steam-

—3,318—

heating load in the City of St. Louis as well as the fact that under some conceivable river conditions, it is possible that there might be some disturbance to submarine cables

7872 and we want to have adequate reserve in St. Louis.

We recognize that the cost of generating power in St. Louis is higher than the cost of generating it across the river by the bridge arbitrary charge.

Q. There is a bridge arbitrary? A. It is now, I believe, 30 cents. You see, the bulk of all of our generation is done on the Illinois side, the big plant being Cahokia.

Q. Is that plant on the Illinois side or is it rather in the middle, split? A. Cahokia is on the Illinois side of the river.

Q. Wholly on the Illinois side? A. You see, the river has boundaries set up there by an Act of Congress, known as harbor lines. The Cahokia Plant is located on the Illinois side of the river on one of the harbor lines.

Q. I believe you testified concerning some inter-company committees of The North American system and your attendance at such company meetings.

This proceeding was instituted, I believe, in March of this year. Prior to that time, how often did these committee meetings occur? A. We hold our committee meetings twice 7874

—3,319—

a year.

Q. Twice a year? A. Yes.

Q. Do you also attend any meetings of engineers other than the inter-company meetings? A. Yes, I am a member of the St. Louis Engineers Club and some of the national societies.

Q. How often do they meet? A. Well, it depends on which ones we refer to, but, ordinarily, there is generally a Spring and Fall meeting or at least one meeting a year of any of the committees of any consequence. 7875

The most frequent, I believe, is about twice a year. I don't attempt to keep up with all of those meetings, of course.

Q. Do you take periodicals dealing with engineering and keep up with the advancements in the field generally? A. We try to keep up to date with the art. There are periodicals that run by my desk, usually subscribed for by the company, but I see such as I am interested in. Of course, I would like to bring out the fact that by the time the engineering

7876 *Stanley Stokes—By Respondents—Cross*

information gets into these periodicals, as a general thing, the job has already been done some time hence and that is an historical statement of what took place.

For example, on these standard matters where we have

—3,320—

—sometimes those discussions have been going on for six years in various places and the information gets into the periodicals; it is relatively unsuitable for new design.

The art changes rather rapidly. I don't mean to say
7877 there is anything wrong with the article, but I do point out that they usually are a statement of historical accomplishment which, to one who is actively engaged in the work, is past history, and what he is interested in is how to do the next job.

Q. Do you use pulverized coal in your steam generating operation? A. We do almost exclusively.

Q. Where did that idea originate as far as you know? A. The development of the work on pulverized fuel, as such, was done at Milwaukee by the company which is now the
7878 Milwaukee Electric Power Company.

Q. That is where the idea originated? A. It is. We spent very large sums of money on that development work. We were interested in it, followed it very closely and found that it was suitable for our coal, which we had had considerable difficulty burning on stokers because of the high sulphur content, and we watched those developments at Milwaukee with much interest.

I made a trip up there to the Lakeside Station to see the thing in operation when it had not been going very long and we found that it would work on our coal. We actually

7879

tried it, took the coal up there, and it is the thing that

—3,321—

permits us to get the capacity out of our furnaces today.

We have both systems in operation in St. Louis. We have both the storage system and the individual pulverizer. They both work very satisfactorily.

We have a certain personal preference for the individual pulverizer, perhaps because we did a little development work on that ourselves.

7880

Nevertheless, we have under design and construction, a new plant at the present time and we are installing individual pulverizers in that plant. That is the major point with the Union Electric group, because we do have to use the local Illinois coals that are not too distant and they slag at relatively low temperatures and the pulverized firing is undoubtedly without any question the solution to the proper burning of that particular fuel and that represents—roughly speaking, 80 per cent. of the power generation is in the boiler room, 80 per cent. of the operating costs, so those things are really of some importance.

7881

Q. Are you familiar with the methods used in reference to the fueling in the Cleveland Electric Illuminating Company? A. Yes, they have a very modern and very attractive plant out at Ashtabula. I have visited that plant out there. They have very successful operations.

Q. How do their operations compare with yours? A. Well, Cleveland's over-all B. t. u. economy at Ashtabula, is

—3,322—

slightly better than ours for two reasons: First, that they have a better grade of coal and it costs a little more and

they can afford to burn it a little more efficiently—spend the money to do it, I mean—and, second, they can get a better load factor on their plant on the average, because they are a steam generating system and do not have hydro power. We have to always design and operate our plants to get the minimum annual total cost of power, not merely the minimum annual operating expenses.

We have got to watch our fixed charges. Where part of your power is produced from hydro power and where your
7883 fuel cost is relatively low, you can't afford economizers and other devices for obtaining the highest efficiency.

We are attempting to install what we think is the most economical plant for our district right now, and we are not going to the maximum steam pressures or temperatures because the cost of our fuel does not justify it.

The added fixed charges more than outweigh the B. t. u. economy. So, in answer to your question, I think that Cleveland does a very handsome job in their generation out there. They have a plant at Ashtabula, Avon, and Lake Shore there, which are very creditable plants and, particularly, I have
7884 to admit that so far I haven't been able to obtain quite as low cost per kilowatt as they get.

We have severe foundation conditions to meet. We have

from thirty-six to fifty foot variation in head on the river and those plants up there are located on a very simple solid rock foundation with the lake level practically constant, so those factors all have to be taken into account in any such comparison.

Q. It seems to be, then, from your remarks, that each public utility located in a particular geographic area can not

7885

benefit so very much from the experiences of others because of its own peculiar situation, is that true? A. I wouldn't generalize and reach any such conclusion as that. The type of plant at Ashtabula is such that if you were to go through the plant, being a non-technical man, I would say you would think it was the same type of plant as you were looking at in St. Louis.

The only difference is, there are certain refinements which we would put on immediately if the price of coal went up and which we have made provision for in certain cases, 7886
and, if I were engineering the Ashtabula station, I would do what they are doing, and if they were engineering the St. Louis station, they would do what we are doing.

I am talking about the refinements which are gone into to get the minimum over-all cost including fixed charges, making such allowance as is proper for different prices of fuel. For example, in the St. Louis district, alone, if, by reason of some change in coal prices, the very low grade fuel there were to be suddenly decreased in price and if the

7887
better grade of Illinois coal were to increase, we might have to change our present policy, redesign the plant a little bit and arrange to burn the very worst fuel if it gave the lowest annual over-all cost.

Q. Of course, you wouldn't say that the problems of each locality are peculiar to themselves? A. The foundation conditions may vary in different localities, as I have indicated, but the general problem of manufacturing steam power is not particularly different.

For example, they can find out what things have worked well at Ashtabula and apply them at St. Louis and if we find something there that is particularly effective in St. Louis, they can apply them there.

The only difference, after you once get your plant built, in building it you may have some foundation differences. That is a relatively small percentage of the total cost. Once you find it built, the only difference I know of that affects the power production is the temperature of the condensing
7889 waters and the price of fuel.

Q. Outside of The North American System, do you know what companies now use pulverized fuel? A. I know that the pulverized fuel equipment in regular manufacture is available to other systems if they want it. I am not particularly familiar with very many other systems in detail. I

just—I do know that there are others who use pulverized fuel but I am not particularly informed as to just what plants—

Q. (Interposing) What engineering developments in your
7890 system have you adopted from other systems, non-North American systems? A. I can't specifically mention one right this minute. I have very little contact with these other systems and when you say "engineering developments from other systems"—could you illustrate, perhaps, what you mean a little better by mentioning some particular type?

Q. Any source other than within The North American system. A. Well, it is a little hard to say what you consider an engineering development, but each year the refinements and changes that are made in the art we adopt them.

7891

For example, if improved metallurgy were to be developed by the manufacturer, next year he would incorporate it in a turbine and when we bought the turbine, we would get the benefit of that development, obviously; but to say that we have adopted an engineering development, as such, from some other company, I can't recall such a case.

Q. Yet, you do, I imagine, try to keep abreast of developments in the field as a whole rather than confining your knowledge to your own system? A. We, as I said before, do attempt to keep up with the times.

7892

—3,326—

Q. Prior to this particular trip of yours to Washington, that is to say, on your trip here for direct examination, when was the last time you were in Washington? A. I can't recall exactly what—I was up here, oh, it may have been five or six years ago.

Q. When was your latest trip to Cleveland? A. Oh, I get up to Cleveland at least once every other year on the average.

Q. And to Milwaukee? A. Milwaukee every three or four years. I have been up there since the Port Washington station has been in regular operation and visited and saw it. It didn't get into operation until 1932, so it must have been three or four years ago. I made a two-day inspection up there at that time and went over the plant very thoroughly.

7893

Q. I don't believe you testified as to public relations with the Union Electric Company of Missouri or that group, did you? A. No, I did not. I am engaged strictly in the technical field. I will say, though, that I have been employed there for twenty-eight years, lived in the city, and I believe

that the general attitude of the public toward the Union Electric group is very favorable.

Q. Upon your direct examination, which consumed several days, you, of course, just to get it in the record, referred

—3,327—

to notes. You spoke from notes on your direct examination? A. I did, and I also discussed it otherwise. I used notes where necessary.

Q. You described in great detail the operation—mechani-
7895 cal operation—of the plants in your system and of the transmission and distribution lines; is that operation peculiar to The North American group, or is that, possibly, common to most modern utility set-ups? A. It is not common to most modern utility set-ups. There are, of course, some companies who have both steam and hydro plants and each one has his problems and does his best to solve them.

We have worked out the methods that are in use there in St. Louis, by a number of years of experience, making little minor corrections as they show improvement.

The man in charge of hydraulic operation, Mr. Davis,
7896 started with the Mississippi River Power Company in the beginning of their operation and was very successful in handling that plant and when we acquired that property, we made him the chief hydraulic engineer for the company as a whole and that does represent a good many years of experience in the particular type of work.

Q. The acquisition of the Mississippi River Power Company by the group was prior to your incumbency in any position with the Missouri Electric—Union Electric Company

—3,328—

of Missouri? A. I didn't hear the question.

The Examiner: Read the question.

(Whereupon, the pending question was read by the reporter.)

The Witness: It was not. I came with the Union Electric Company of Missouri in 1912. If I understand the question now, I said that the acquisition of the Keokuk property by the Union Electric Company group was prior to my incumbency with the company.

By Mr. Binford: 7898

Q. The Mississippi River Power Company—

Mr. Binford: Read the question again.

(Whereupon, the question was read by the reporter.)

The Witness: I think I understand the question. The approximate date of the acquisition of the Mississippi River Power Company by the group was, as I recall it, about 1926, the original contracts having dated from about 1913. 7899

I came with the group in 1912, some fourteen years prior to the acquisition of the Mississippi River Power Company by Union Electric Company of Missouri.

By Mr. Binford:

Q. Are you familiar with the accounting matters of your companies? A. Only in a general way, such as is necessary for an engineer to know and carry on his work successfully.

7900 *Stanley Stokes—By Respondents—Redirect*

Q. Are you familiar with the Federal Trade Commission's investigation into holding companies in general, made some years ago? A. No, I am not familiar with that particular investigation. I read the newspapers and I knew there was a Federal Trade investigation, but my answer to that is No.

Q. Then, you wouldn't be qualified to speak as to a write-up that occurred at the time of the acquisition of the Mississippi River Power Company? A. No, I would not. I
7901 know nothing about it. I am not qualified to discuss that phase of the business.

Mr. Binford: I have no further questions.

The Witness: I would like to add that I do know from an engineering standpoint that the development of a company like the Mississippi River Power Company, in a virgin field without background of many years of experience in a particular operation, is a very difficult thing to do and we would expect it to be more difficult than to build the Osage project by the Union Electric Company of Missouri that would be an estab-
7902 lished firm, but I would not consider myself qualified to answer your question properly.

Mr. Binford: I have no further questions, but I would like to reserve the right to recall this witness for further cross examination, if the examination seems to require it.

—3,330—

Redirect Examination by Mr. Hamilton:

Q. Just to clarify the record, Mr. Stokes, you were asked, I believe, where the use of pulverized fuel had originated and

you answered that it had originated in the company now named Milwaukee Electric Power Company. A. Wisconsin Electric Power Company, I should have said.

Q. That is what I wanted to make clear. A. The company was the Milwaukee Electric——

Q. (Interposing) I think the record is clear on that now. A. I can't recall the exact name. I know the company operated under the other name for years.

Mr. Hamilton: That is all, Mr. Examiner, of course with the usual objection on this reservation. 7904

The Examiner: Very well. I will reserve my ruling until the real issue is presented.

(Discussion off the record.)

The Examiner: We will recess for five minutes.

(Whereupon a short recess was taken.)

The Examiner: I understand, Mr. Hamilton, that Dr. McClellan will not be available until 1:30. In view of that situation we will recess until that hour.

(Whereupon, at 11:05 o'clock a. m. the hearing 7905 recessed until 1:30 o'clock p. m. the same day.)

7906 *William McClellan—By Respondents—Direct*

AFTERNOON SESSION

(Whereupon, at 1:30 o'clock p. m. the hearing reconvened.)

The Examiner: The hearing will come to order.

Whereupon, WILLIAM MCCLELLAN, a witness called on behalf of the Respondents, having been first duly sworn, was
7907 examined and testified as follows:

Direct Examination by Mr. Browning:

Q. Dr. McClellan, will you give the reporter your name and address? A. William McClellan. My business address is Union Electric Company of Missouri, St. Louis, Missouri.

Q. You are president of that company? A. I am president of the Union Electric Company of Missouri and various companies in that general system.

Q. Will you describe for us your own personal history and your experience in the utility field? A. Well, I was
7908 born on November 5, in Philadelphia, Pennsylvania, 1872, and I went to the public schools of Philadelphia for my preparatory school work, and a large part of that also, owing to the fact that I had been brought up always with tools and things of that sort, my father being an engineer as well, I came naturally into it. Also, this school I went to, having quite a manual training department, I found myself suddenly transmitted to Swarthmore College for Engineer-

ing, despite the fact that I had never been to college myself,

as instructor of engineering. It was really for that purpose, which, at that time, as young as I was, I was well qualified to do. That was '90 or '91.

From there I went to Reading, Pennsylvania, primarily to do some testing on Neversink Mountain Electric Railroad —that is a mountain railroad over one of the mountains near Reading, Pa.

While there, they elected me again because of manual training and my mathematics—they elected me a teacher of mathematics and of manual training at the Reading High 7910
School and I stayed there for seven years, and at that time I decided that I had better go to college, so I entered the University of Pennsylvania, graduated in 1900 with a degree of Bachelor of Science and at the same time had a scholarship in mathematics, honorary scholarship in mathematics awarded to me. But, instead of that, I remained at the University as instructor of engineering physics from 1900 to 1905 and, while doing that, I spent my time working for a degree of Doctor of Philosophy, which I got in 1903, majoring, as we use the term at the University, in physics.

Then, during that time, especially with my summer vacations, I worked a great deal for the Philadelphia Rapid 7911
Transit Company, which was the top company, main company, of all the transit lines in Philadelphia.

—3,333—

The result of that was that when the summer vacation didn't finish some of the work, they asked me to stay and I did stay throughout the year, for two or three years, as engineer in charge of construction, building power houses and some pole lines, doing rebuilding power houses under load,

and sub-stations, things of that sort—all the things that go —car-barns for the company—largely construction work, because that was my job.

In 1905 I decided I wanted to go to New York, so I obtained a job in New York with Westinghouse, Church, Kerr & Company, which, at that time, was one of the important engineering firms of the country, ranked at the very top of those engineering firms, my object being to go to New York and get a chance to get acquainted with organ-
7913 ized engineering as distinct from personal engineering.

I worked there with them on the new Pennsylvania terminal in New York City. I electrified the Erie Railroad —that was one of my principal jobs—from Rochester to Morse, New York; just the same kind of system as the New Haven. In fact, it was the first trunk line in the United States that had this modern electrification system on it.

I also did some other work for—underground cable work and redesigning sub-stations—65,000 volt sub-stations, which was a pretty high voltage in those days—in fact, one of the highest; and, doing all that sort of thing, of course,
7914 I ran some of the cars, for a while, when they put that elec-

trification in; got their schedules in for the operation, and things of that sort, and had a great deal of contact with all the operating people in the Erie Railroad in that particular locality.

My people, always having been in business for themselves, I was obsessed with the idea that I had to be in business for myself, so, in spite of the fact that the result of all of this work that I had done for Westinghouse, Church, Kerr

& Co., crowded as it was into a relatively short period, I was offered a vice presidency to stay.

As I say, I was obsessed with the idea of getting my shingle up, so I went into business, myself, with my good friend Campion, and we formed a firm of McClellan and Campion, which continued from 1907 to 1915.

Our work was construction work. The biggest job we did was a huge paper mill on the Delaware River, but we did a number of small things, and we made a lot of reports on certain things, possible water powers and things of that sort. 7916
Details escape me just at the moment.

And, then, of course, along came the panic of 1911, and we had our troubles. About that time I was offered the job as chief of the division of light, heat and power of the upstate—what we call the Second District Public Utilities Commission, which had to do with all the utilities in the State except those in New York City, itself.

—3,335—

Q. This is New York State you are talking about? A. New York State I am talking about. And the Second District Commission had all of the cities in the State except 7917
New York City, at that time, and I was the chief of division of light, heat and power.

I was afterwards made chief engineer, and I was with them about two years and a half. I did make the proviso—and that is the reason I told you that my engineering firm went on—that I wouldn't have to interrupt that although, as a matter of fact, I didn't get to my private office very much.

7918 I had to devote all my time to commission work, although Mr. Campion, my partner, did do some work when the office was open.

My work with the commission, of course—I think most people will understand that all those companies, large and small—of course, we had Buffalo, Rochester and Syracuse for the large companies, and we had the smallest possible villages that we worked with—and gas, electricity.

My work there was on valuations on rate cases, on finance
7919 cases, on regulation of practices, on complaints and everything of that sort, and, of course, it gave me a very intimate contact with all of the companies of that state.

A large part of my time I was on the road working in their offices and, of course, we had general regulations also to work on.

—3,336—

In the gas business, we got through some regulation for the standards of gas and things of that sort.

Well, at the end of that time, which was about 1913—I think the middle of 1913 just as close as I can remember
7920 it—I resigned from the Commission and went back to my private business and at the same time was made assistant to the president of the Buffalo General Electric Company, which was the company that had to do with the local distribution in the City of Buffalo, New York—of course, there were a lot of Niagara companies up there, having to do with larger power—but this was the company which served the City of Buffalo, itself, for its general lighting and power purposes of the citizens of Buffalo, and I assisted the president, participated in financing and advised in regard to

7921

rates and a lot of things that came up as assistant to the president—anything that he had to do, if he asked me about it, I would help him with it. It was rather valuable experience in actually meeting operating problems.

It was almost the first—my first experience in 1913—in actually meeting operating problems as distinct from construction problems and regulatory problems that I had had with the Commission.

There is a vast difference, because, when you solve an operating problem, it often means you have got to decide to 7922

—3,337—

spend a lot of money on something, whereas, when you just —say, consulting engineer, for example—when you are only giving advice as to how a problem should be solved, you walk off and you don't have much responsibility for how the money is to be spent, but when you have a decision to make, that you have got to spend a quarter of a million dollars, if you make a decision one way, it broadens you considerably, and that was my first experience there.

So, I went back to the firm. We took in Mr. Paine as a partner, which is unimportant. He was a very prominent 7923 man at the time—he wasn't with us very long before he died. But we went back to a great deal of report work on valuations and rate cases and extensions, everything that has to do with the power—electric power—business, and during those days, I suppose, well, I traveled all over the country.

Of course, I was with the New York Commission, I was with the New Jersey Commission, Utah Commission, Colorado Commission, North Carolina Commission, Washington Commission. I think I was before the California Commission.

7924 *William McClellan—By Respondents—Direct*

I was working for some of the larger companies of the country in all of these special tasks as kind of special counsel, worked with all these companies all over the country and before these different commissions.

During that time, when I was still in private business, the New York Commission, which had changed—the personnel had changed then—that is, the men I had worked

—3,338—

with had gone but other men were there—the Commissioners.
7925 They came to me and asked me to undertake for them the organization and progression of an investigation of the New York Telephone Company. So I did that as a private engineer retained by the Commission and organized a force.

I should say altogether we must have had 150 men finally working for me, accountants, engineers and we went through the New York Telephone Company from soup to nuts.

The result of it all was there was a reduction of rates by the telephone company.

I, also, during this time, was employed some time by the courts of New Jersey; the Commission of New Jersey, I
7926 think, asked me.

I always liked, personally, to be working for them all to keep up various points of view with regard to this industry, so I was glad to do that.

Then, in 1916, in the midst of my work, Provost Smith of the University of Pennsylvania induced me to take the job of Dean of the Wharton School of Finance and Commerce of the University of Pennsylvania in Philadelphia.

That happened about 1917 or '16. I can't think just when it was. I was there about three years, and when I

7927

went over there, again, I was supposed—I did keep my office open, but I didn't see much of it because, shortly after that, of course, the war came on and, while I was Dean of

—3,339—

the Wharton School, I did some war organization work in Washington and organized the Intercollegiate Intelligence Bureau of which we had about two hundred colleges gathered together as members, their job being—our job being to furnish the United States Government departments with any kind of specialists they might want. They had all their system for getting general help, but they finally had to draft, you know.

7928

But, if they wanted a man who had a lot of experience in some peculiar gas and they didn't know where to find him, we would find that fellow. If they wanted a man to spend a lot of his time on some peculiar mineral and didn't know where he was, we would find that fellow.

If they wanted a man that did some particular kind of mining work, we would find him and we did that sort of work for the Government, which was afterwards taken over by the State Department and they operated it, put in a division that operated it instead of having it done by outsiders.

7929

Well, then, about 1919—not very far from the time of the Armistice, I resigned as Dean of the Wharton School and at that time became vice president of the Cleveland Electric Illuminating Company, which is the company in Cleveland that serves the whole City of Cleveland and other portions nearby with electric light and power service.

7930 *William McClellan—By Respondents—Direct*

I was very closely associated with Mr. Lindsay, the presi-
—3,340—
dent of the company and who was not very well at times, so the result of it was I got, perhaps, more than the normal share of operating responsibilities, although, of course, he was well enough to be seen by me very frequently—daily, in fact—but I had a chance to, perhaps, do, as I say, more than the normal amount of operating work that would come to a vice president under a president.

7931 Before that, however, I had been with the Clevela l company, I think, maybe two or three years, just as a private engineer, and I did some work on valuations and did some work in a rate case with the Ohio Commission and did also some work—no, that was later, after I was vice president—with the City Council, and went pretty thoroughly into depreciation of poles and other parts of the property, we having made some very elaborate experiments there to get the truth of some of those things, and then, I, of course, with Mr. Lindsay, during—we had problems of financing that we came to New York City on, we had other large problems,
7932 and rate adjustments with the City Council there—both the steam heating and electric rates—and I was there with him until 1921.

I resigned because I didn't want to leave my home. I had been going out to Cleveland every week and had not been living there, coming home week-ends, and I didn't want to move my home to Cleveland, so rather than do that, I resigned, and went back then soon after that, formed the firm of McClellan and Junkersfeld in 1922.

—3,341—

7933

Mr. Junkersfeld was a man who had had a good deal of experience in engineering work with the Commonwealth Edison in Chicago and later with Stone & Webster, and he was my partner in this engineering firm, designed, principally, to do construction work, and we did a very large amount of large construction work.

We built the Cahokia plant in St. Louis; we built the plant for the Western Power Company, later part of the P. G. & E. in San Francisco; we built the plant for the Government in Saskatchewan; we built a lot of other plants, 7934
cement plants in the Hudson River, power plants for one or two of the paper companies in Canada.

I could go on with that sort of thing. We also made a very large number of reports—reports on all the properties of the Cities Service. We examined every one of their properties. That was made for one of the banking firms of New York. We made a very thorough examination of all the North American Light & Power Company properties leading up to what they were worth.

Of course, at that time, that report was made, not for The North American Company here, but for the Studebaker 7935
interests and others which owned it at the time. That was before The North American Company was interested at all in the North American Light & Power Company properties.

—3,342—

A great deal of work of that sort, of construction work, regulation and things like that. Mr. Junkersfeld died in 1929—oh, it was during that time when McClellan and Junkersfeld was still going on that I was again recalled by the Commission of New York State.

7936 *William McClellan—By Respondents—Direct*

That was some years after I left it, to take their side of the case against the New York Edison Company in New York City, and I agreed to do it and spent about a year on that kind of work while I was, as I say, a part of the McClellan and Junkersfeld, and we again—that resulted in a rate reduction.

Q. During that period, did you act as consulting engineer for any other utility companies? A. Oh, yes. All the time I was working, principally with—a great deal of our work
7937 was with untility companies and I did—but this interlude of the Commission—for the Commission, of course, naturally, there was less of that kind of work I did.

I did most of my work with various companies, but there was enough of the other to keep me in touch with the Commission practice.

Q. Could you name some of the companies for which you did work during that period? A. Well, it is hard for me to distinguish between just that period and the period of Stone & Webster. The Long Island Lighting Company, the New York Edison Company, itself—in spite of the fact that I
7938

worked for the Commission, against them, I worked for the New York Edison Company, itself—and I think, at that time, we also had some work for the Public Service Company of New Jersey.

Those things escape my memory, but, of course, I referred to the North American Light & Power Company investigation. I just don't remember just now. Of course, during that time, we did a great deal more construction work than we did examination work.

Well, as I say, Mr. Junkersfeld died and I didn't want to marry another partner, and so we sold out to Stone & Webster, and, as a part of that arrangement, I went over to Stone & Webster as vice president of the Stone & Webster Engineering Corporation.

We did have—which was a subsidiary of Stone & Webster Engineering Corporation—we did have a company in Canada, which I followed a great deal, known as William McClellan & Company, Limited, with offices in Montreal.

As a matter of fact, that was kept up until later on when 7940
I came down to Washington as president. With the Stone & Webster Engineering Corporation, I just did the same sort of construction work, design work, consulting work, things we had done before.

A good deal of my time was then spent with the North American Light & Power Company system. I went out there nearly every week consulting with Lou Fisher, the vice presi-

dent in charge of construction and operation, on a great many problems in that company, and had a great deal to do with the building of the elevated and tunnel line, Illinois Ter- 7941
minal system in St. Louis and also with a big terminal building there and things of that sort.

Well, I kept with Stone & Webster until April, 1933, and Mr. Dame and Mr. Gruhl, who were officers of The North American Company, then asked me if I would come to Washington then as president of the Potomac Electric Power Company, so that ended my—I agreed to do it—that ended my career with Stone & Webster and I was with the Potomac Electric Power Company until I went to St. Louis as presi-

7942 dent of the company—until I went to St. Louis in May of 1939.

Q. Had you had any work on matters of Potomac Electric Power Company while you were with Stone & Webster? A. Oh, yes. I had had a great deal. In fact, in addition to some very general problems of not great magnitude in connection with some of our steam work, there were two very important problems.

7943 In the first place, I was called in there one day by Mr. Gruhl and Mr. Dame and asked if I thought a block rate system could be introduced in Washington. The existing organization didn't think it could and they had had, at that time, a flat rate system, so I was asked if I would go down to Washington, which I did, to introduce with the Public Utili-

—3,345—

ties Commission, the block rate system, which is what we have at present, although not the same figure, the same system.

7944 So I came down here and spent probably six months working at this thing and finally went before the Commission with the evidence and found the Commission was quite willing to put in this system of rates—found the Public Utilities Commission was quite willing to put in this block system of rates as distinct from a single flat rate when it was properly presented to them, as I and some others did.

Then, of course—this was before I was president—I also helped with the details afterwards with the company.

The other major problem was the very rather complicated problem of this high line transmission line between Buffalo——

Q. (Interposing) Between what? A. High line, we call it—transmission line between Baltimore—I said Buffalo—Baltimore and Washington.

The Pennsylvania Water Power Company up here on the Susquehanna River had some extra power left over for various reasons that they couldn't dispose of.

As a matter of fact, it was rather due to the Pennsylvania Railroad changing its mind about certain electrification of its freight lines.

7946

The result was this left this power on the hands of the company and they came to the Washington Company and said, "We would like to build this transmission line down

—3,346—

here to Washington, and we think we can show it will not only be profitable, make you some money, both by lifting off some of your peak, and by giving you an economy flow of power between the two companies."

Well, it met a strange and rather cool reception in the local offices. They just couldn't see it because, as a matter of fact, it wasn't very profitable, I will have to admit that 7947 myself. But The North American Company in New York looked at it, thought that it ought to be considered.

They couldn't make, at that time, very much headway down here. These fellows were all right, they were loyal, but they just couldn't see it, and so they asked me if I wouldn't come down—first asked me, "Do you think this contract ought to be made?"

Well, I studied it for two or three days. I said, "A contract ought to be made." They asked me, "Will you go down there and see if you can help the local organization

get a contract?" So, I said, "Yes," and I did come down here and spent a great deal of time.

I think that was again, perhaps, some four or five months before we got the contract signed and we argued over it, worked over it with the engineers of the Baltimore Company, soon discovered that we could not find exact profit in it—I mean, positively sure profit in it—so I finally induced them to make it what I called "a no-loss contract," fixed up

—3,347—

7949 a contract so that the Potomac Electric Power Company couldn't possibly lose, the accounts would be kept in such a way that if the contract showed any loss whatever, they would pay us that loss in dollars and cents for the period of, I think, fifteen years, although I can't speak for the book on that.

As a matter of fact, it has since worked out of tremendous advantage for the company and has been profitable, and the Baltimore Company will never have to pay us any money so far as I can see, but it was a good way to make the contract under the circumstances.

7950 Some time after that, I was asked if I would come down as president and I agreed to it and I came down, probably, in April, 1933, as president of the Potomac Electric Power Company, and, as I say, stayed there several years and then, after that, went out to Missouri as president of the Missouri Company, which includes, so far as I can tell, most of my professional career.

Q. Are you a director of all of the companies in the Union Electric group? A. Oh, yes.

Q. Are you a director of any other corporations——

Mr. Binford: (Interposing) Object unless the Union Electric group is identified in terms of this witness. Various witnesses have spoken of the Union Electric group in different terms and I would like to have this witness clarify just what he means by the Union Electric group.

—3,348—

By Mr. Browning:

Q. Let me define my question then. Are you a director of Union Electric Company of Missouri and its subsidiaries? 7952
A. Yes.

Q. You are a director and president of St. Louis County Gas Company? A. I am.

Q. Now, are you a director of any other corporations? A. Well, I am a director in Washington, here, of some of my old companies, the Potomac Electric Power Company, Washington Railway & Electric Company, Capital Transit Company, and I am also a director of the—business organizations I am talking of now—Riggs National Bank.

Q. Were you a member of the President's Commission 7953
on Muscle Shoals in 1925? A. Yes. President Coolidge appointed me on the Muscle Shoals Commission in 1925, one of five members on the Commission.

Q. Have you been a trustee of the University of Pennsylvania? A. Yes. I——

Mr. Binford: (Interposing) Objected to as immaterial and irrelevant.

The Examiner: Objection overruled.

—3,349—

7954 *William McClellan—By Respondents—Direct*

Mr. Binford: Exception.

The Witness: Yes, I have been a trustee of the University of Pennsylvania.

By Mr. Browning:

Q. During what period? A. Well, from about 1929 to 1939, and various civic positions and things of that nature.

Q. I would like you to enumerate some of them.

Mr. Binford: Same objection.

7955

The Witness: I was president of the National Symphony Orchestra——

The Examiner: (Interposing) I am making the same ruling.

Mr. Binford: Same exception.

The Witness: President of the National Symphony Orchestra; director of the community chest and manager of the campaign one year; director of the Board of Trade.

By Mr. Browning:

7956

Q. In Washington? A. In Washington that is. In St. Louis my only position of that sort I was willing to take was director of the St. Louis Symphony Orchestra.

Q. Were you on the committee to revise the Government of the District of Columbia? A. Yes, I was appointed by——

Mr. Binford: Objected to as irrelevant and immaterial.

—3,350—

The Examiner: I will overrule that objection.

Mr. Binford: Exception.

7957

By Mr. Browning:

Q. Have you been a member or officer of any engineering associations? A. Yes, I have been a director and vice president and president of the American Institute of Electrical Engineers. That was about 1922, I was president of that national organization.

Q. Are you a member of the American Society of Mechanical Engineers? A. I am a member of that. I was also president of the American Engineering Council here in 7958
Washington for two years. In fact, I got out of it just a year ago. I have also been a director of that and an associated group for a great many years.

Q. Have you written any articles which have appeared in technical magazines or papers before technical societies? A. Yes, I have written papers and general articles on technical subjects, participated in discussions and, generally speaking, in connection with these national—particularly, these national societies of engineering.

Q. Have you appeared as an expert witness before any public service commissions? A. Oh, yes, I testified, as I said 7959
in my testimony, before the Colorado, California, Utah, New Jersey, New York, Pennsylvania, various commissions over

various parts of the country.

Q. I believe you testified that you were a vice president of the Cleveland Electric Illuminating Company from 1919 to 1921 and that prior to 1919 you had done various consulting work for the Cleveland Company. That is correct, is it not? A. That is correct. I went out there—I think it was

originally suggested by Mr. Harrison Williams that I go out there and see Mr. Lindsay——

It was about the time I came back from my work with the Commission—and Mr. Lindsay and I got to be very good friends. He was president of the company, and he had me come out there and do a great deal of consulting work and things of that sort from time to time in connection with the Cleveland Company before I was vice president.

Q. Did you do any work for the Cleveland Company after
7961 you ceased to be a vice president? A. Yes. After I ceased to be vice president of the company, McClellan and Junkersfeld did a great deal of advisory work on the 70th Street Plant in the rebuilding of it and also on the Avon Power Plant.

In fact, we were consulting engineers on that. Those particular things I remember. I think we did some other things, but those two larger jobs I remember very well.

Q. Have you generally followed the development of the Cleveland company since? A. Yes, I have followed it since.

—3,352—

7962 I get comparative reports as president of Washington and president of St. Louis. I see these reports come in. I keep a running knowledge but not a detailed knowledge of what we are doing.

Q. Did you ever have any contact with the Wisconsin-Michigan group of subsidiaries in The North American Company? A. Of course, I had some general contacts with them and I was doing all this work as McClellan and Junkersfeld, because Missouri had pioneered in powdered fuel——

Q. (Interposing) Because what? A. Because Wisconsin companies had pioneered in powdered fuel and we were get-

 7963

ting the benefit of their pioneer work. So I used to go up and had rather intimate relations with John Anderson and others of the Milwaukee Company in connection with that.

Later on, they decided they wanted a very elaborate traffic survey made of the City of Milwaukee, and they had McClellan and Junkersfeld do it and we went up to Milwaukee and made a very elaborate traffic survey of the trolley lines and buses and parking conditions.

As a result of that, I had very intimate contact with Mr. Way and other officers of the Milwaukee Company. I got 7964
acquainted with conditions in the City. I appeared before the council once or twice for some speeches in connection with the report and I knew a great many people there, but so far as I remember, that is about the only business rela-

—3,353—

tionship I had with the Milwaukee company.

Q. And you have since followed the development of the business of that group of subsidiaries through their statistical reports? A. Through their statistical reports and through meeting various officers, Mr. Van Derzee, Mr. Way and others at various times, talking things over with them. 7965

Q. Now, you testified that after some consulting engineering work for Potomac Electric Power Company, you became president of that company in 1933? A. That is right.

Q. And that you took that office at the request of Messrs. Dame and Gruhl? A. Yes.

Q. Who were they? A. Messrs.—that is the way the request came to me, through them, because they were either president and vice president or chairman and prsident. I can't think which. But the two highest officers of The North American Company at the time.

7966 At one time, Mr. Dame was president and Mr. Gruhl was vice president. Later on, I think, Mr. Dame was chairman of the board and Mr. Gruhl was president. That was just a change of titles.

The essential relationship was the same and they asked me to come down here and they really weren't satisfied with

—3,354—

the way the organization was set up down here and just how it was functioning.

7967 Q. What? A. How the organization was set up in Washington and how it was functioning. They weren't fully satisfied with it and they asked me if I would be willing to come down and take hold of the organization in kind of—well, they thought I knew what it ought to be and they asked me to come down and do it, so I did and made some very, very extensive changes in the organization without, at the same time, introducing any new people at the top.

In other words, I changed the organization around a great deal and introduced a lot of new people down below to strengthen it and left what I thought, when I had to go 7968 to St. Louis—left what I thought was a pretty good organization.

Q. They told you that they expected you to deliver the goods when you came down here? A. Oh, yes. That is—just about, as I say, they expected me to put in a modern efficient utility organization in this company.

It had grown up, you see, under Messrs. Sinclair and others—it had grown up without taking knowledge of the advances of everything in the arts of organization. These men had been with these companies almost from the very

7969

beginning and they just simply hadn't gotten streamlined

—3,355—

and modernized.

Q. Now, had you expected to stay in Washington? A. Oh, yes. That was the only reason I took the job. I thought I was going to stay here the rest of my life and when I got it organized, I thought I was going to be able to sit here and hit the high spots and enjoy life.

Q. How did you first receive any word that North American wanted you to go to St. Louis?

7970

Mr. Binford: Objected to as not relevant nor material to the issues in this case.

Mr. Browning: Mr. Examiner, I submit that it is entirely relevant. In the first place, we are tracing the development of this witness' experience within The North American system. In the second place, it has a direct bearing on North American's relations with its subsidiaries.

The Examiner: I can see where it might possibly have relevancy and I will overrule the objection.

7971

Mr. Binford: I wil withdraw the objection.

The Witness: I was called over, I think it was one Saturday night. I had noticed in the papers that trouble had broken out in St. Louis and that was all the information I had.

The next Saturday night following my noticing this in the papers, I was called by Mr. Fogarty, who was at that time president of The North American Company in New York, to meet him at the Union League Club.

—3,356—

7972 *Colloquy*

I didn't know what it was for. I really didn't even suspect what it was for.

When I got over there, he said this trouble had broken in St. Louis, that Messrs. Egan and Boehm and——

Mr. Binford (interposing): Mr. Examiner, I would like to have this expression of this trouble clarified.

The Witness: Well, the charges had been in the
7973 paper that they had been collecting a slush fund not having it appear on the books and had been making political contributions which did not appear on the books. That is the substance of the trouble.

Mr. Binford: That didn't appear plain in the record.

The Witness: It didn't. I agree with you, sir.

He told me that, of course, at that time, he said, "We don't know anything about these charges; we have known nothing about it; but, in any case, for the benefit of the company, it looks as if Messrs. Egan
7974 and Boehm and Laun will retire from their positions and we would like you to go out there as president of the company and allow you to choose other help that you may need in connection with it."

Well, it was a startling thing to me, at my age. I hadn't expected to be shifted around like that. I had no desire for any further "goats' feathers", as Ellis Parker Butler calls them, otherwise known as "honors", but it seemed, from Mr. Fogarty's argument, to me that I was in a peculiar position to do it because

of my standing and experience, and so forth. Perhaps he was unduly flattering.

I didn't have to go, but after all friends of a good many years seemed to be in trouble and needed help, and so I finally, the next night—the following Sunday night—I went home and thought about it and talked it over with my family and I told them I would go out as president of the company.

At that time I took Mr. Woodbridge of New York with me as vice president, and Mr. Edward Gushee 7976
from Detroit as executive vice president. They came out with me at the same time.

Q. You had it understood that you were taking this St. Louis job as an emergency job of temporary tenure, is that correct? A. That was up in the air somewhat. I was taking the—of course I had to be elected president. You couldn't be elected to anything else, but it was announced that I was acting president and there was a general understanding that the thing could be cleared up in a short time and that I might come back and eventually—I wasn't permanently stationed 7977
at St. Louis, but as things developed, I am there for good—well, not for good, but I am permanent president of the company and no idea of changing.

Q. Since that time, have you been in charge of the management of the St. Louis group? A. Since that time I have been head of the management of the St. Louis Union Com-

pany of Missouri and its subsidiaries as well as the subsidiary of The North American Company, the St. Louis County Gas Company that we operate in St. Louis.

(Discussion off the record.)

7978 *William McClellan—By Respondents—Direct*

By Mr. Browning:

Q. I believe you testified about your work on the North American Light & Power Company properties. A. Yes, I got started with the general report on the value of the company before they took it over and it was on the basis of our report that they took the company over and then I stayed with the company, itself, for consulting work of various kinds.

7979 Q. As a result of this experience you have been working with North American properties for over twenty years and the course of your work has taken you over the entire system, is that correct?

Mr. Binford: I object to the question "as a result of his experience" he had been working, so and so. The question should be, "Has he been working such and such a length of time" and possibly——

Mr. Browning (Interposing): I will withdraw the question.

By Mr. Browning:

7980 Q. Does the management of a public utility involve diverse problems, Doctor? A. Oh, yes. Obviously it involves the most diverse problems, but my picture of the management of public utility problems boils down to three major problems.

—3,359—

I consider the duty of the management, if it is going to be a successful utility, to preserve harmony or balance, if you say, among those three major problems and that is, first of all, the consumers, secondly, your organization, your personnel, your great thousands of men who have got to give the service, and then, third, of course, you have got the people

who supply the money. The people who supply the labor, the people who supply the money and the people who get results.

The great problem of utility management is to preserve some kind of management between those three forces that have to be satisfied.

The consumer, of course, wants the lowest rates and the greatest amount of service so that stands.

The personnel, the labor, they want the biggest wages they can get, the shortest hours; they are not unreasonable, but that is what they want. The biggest wages don't go with 7982
the lowest rates, necessarily, because, if you put the wage up too high, you can't get the rates down.

The man who is giving you the money, of course, that is the very peculiar thing about our industry which makes it different from most other businesses of the country, is that we are growing so fast. The result is that we are always needing money.

Every year we have got to invest a huge sum of money in

—3,360—

the company.

We have to put this money in the company. Therefore, 7983
we are constantly going to the people for money. They want adequate return on their money. So these three groups of people don't all want the same thing.

They want things that may be a little bit antagonistic. The great big problem of management is somehow or other to keep the stockholders satisfied, to keep the rate-payer satisfied, and keep the great organization that works for them satisfied. They are not always wanting things that jibe together and, in addition to that, as I say, we have this great sum of money to be obtained every year.

7984 Now, there are problems, coming up under keeping the consumer satisfied that are very numerous. The first one, of course, is that the rate shall be satisfactory.

My own experience, no matter what else you do for a consumer, if he thinks you are charging him too much money, no matter how nice you are to him, it doesn't do you any good, so, therefore, you have got to have your rates right, first of all.

After you get your rates right, there are a whole lot of
7985 other things then. He wants service. He wants to think that you are interested in his problem, and we have an interest in that, too.

His lamps, everything he has got, must be working right

—3,361—

and we are interested in that because, if they are not working right, if they are out for example, we don't get any kilowatt hours and it means a loss of money.

So we have a mutual interest in that sort of thing, so everybody in the company is trained, as far as it is possible in the organization, to make the customer feel that we are
7986 just not throwing the kilowatt hours at him, but we are interested in the way he gets it and how he gets it and the results that come from it.

We have got to train our organization to do it. When you come to the men, of course, everyone is familiar with the problems you have there. They want shorter hours. They want to be paid for holidays. They want time and a half for overtime. They want employment conditions fixed so that the older men stay on and the last man hired is the first man fired and all that sort of thing.

7987

All those conditions introduce a tremendous lot of problems that we are just constantly at work with and if they are not handled properly, the men aren't happy and if they are not happy, we don't get full loyal service out of them.

Well, we come to the kind of problems you have with the stockholders in keeping you supplied with money, even the bondholders, that comes through bankers and insurance companies, and we have to spend a lot of time getting the mortgages right for them.

—3,362—

7988

The average stockholder, no matter how good-natured he is, never thinks the dividends are as high as they might be. We have got to tell them they can't be any higher because we have got to do certain things.

There is such a thing as regulation in the world and we have got to teach him about that, because that sometimes interferes with it.

Those, as I say, are the major problems confronting the man in the utility business.

7989

Q. What do you consider, Doctor, to be some of the principal differences between a public utility and other businesses? A. Well, the first big difference is that owing to the way things have been organized in the world, through regulation, with Government approval and everything of that sort, the average consumer in the community must deal with us.

It isn't like buying gasoline; it isn't like going to a department store for shirts or anything else. The only place in St. Louis that a man can get kilowatt hours is either from us, the Union Electric Company of Missouri, or from

our small competitor, the Laclede Company. It is, of course, a small competitor, limited in its capacity.

That is the first thing. That means that, of course, customers relations amount to an awful lot to us. They are no more important to us in one way than they are with anyone else because, obviously, a department store that doesn't have good public relations, the people aren't going

—3,363—

to come and buy from it. That is perfectly true, but never-
7991 theless, they will have at least a visible loss of business to correct them.

In other words, if they are sassy and not nice, why, gradually, they will lose the business.

We don't notice the loss in business because everybody has to come and take it. We might not get as much business, but it isn't quite so visible as it is to someone else that is losing.

As a consequence, that makes a difference.

The second thing is that the business—of course, you might—another thing we have is the reverse of that in a
7992 way. We have absolutely no way of refusing the customer. The customer comes to us; we must give him service; it is the law. It is the very nature of the—we are a public servant, from the old common law.

Then, the second thing is, we have no choice about the size of our business, provided the public chooses to give it. Now, a gasoline company, today, working on 10,000 barrels a week, their board of directors can solemnly meet. "Shall we go to 15,000 a week? No, we shall not go to 15,000 a week. We prefer, for our private benefit, to stay at 10,000." We have no such choice as that.

7993

This business comes to us and whether we like it or not, whether it is profitable or not, we must take it; we must provide the money to do it; we must provide the organization to give it and that is different from the average busi-

—3,364—

ness, which has more or less control of its growth and size.

If the market is bad and they don't want to go out and get money, they will say, "Well, we won't grow this year." They have a choice. We have no choice about it at all, which introduces another tremendous group of problems.

7994

Right now we are projecting curves. We don't know whether to enlarge our power house or not.

If certain things happen, which look as if they are going to happen, we ought to do it. If we do do it and they don't happen, we will have a machine there that we can't use.

Now, we have no way of telling. It looks as if it would be needed, but if we put in $8,000,000.00, in that generator, which is about what it would cost, and events should turn where it is not needed, then we would have eight million stuck.

7995

On the other hand, if along came something in Missouri for war purposes that we had to confess we haven't the power, then we would be in a poor position. So that kind of problem to use judgment as to just how fast to increase your stuff—in normal times, it is not hard, but in special times, it is very difficult.

So that that is one thing that differs and, of course, all that means, as I said before, it means we have got to constantly go to the market for money to pay for all these im-

7996 *William McClellan—By Respondents—Direct*

improvements, which is different from the average manufacturing organization.

—3,365—

The average manufacturing organization does financing now and then, chiefly when it chooses to expand its plant for its own reasons. We have to go whether we want to or not, because the public expands our plant.

Then, another thing that we have in which our business
7997 is different from any other—I don't think there is any other business in the country unless it may be some of the chemical businesses that might have something like that—that has in front of it what we call the electric age.

We simply don't know from year to year just what is going to happen in the business owing to the fact that inventors, in research work, work all the time.

Now, for example, we started out on electric light; they hadn't developed the motor. When they developed the motor, that caused a great growth in business, and that has gone on and gone on.

7998 We have had the radio; we have had all sorts of things of that sort adding to our load; all the gadgets in the house, sweepers, irons, do everything electrically.

There is nothing corresponding to that in any other industry. Do everything electrically. Everybody is inventing new devices. We don't use a garbage pail. They want us to have a device with a kind of grinder next to the sink and put it in it that goes down in soup somewhere. All that kind of thing.

—3,366—

Then they are working at cold light. Now, cold light will take, perhaps, oh, it might come to take 10 per cent. Real cold light would take, maybe, one per cent., but semi-cold light would take ten per cent. of the energy of what we have been working on.

That would mean for a kilowatt hour you would get ten times as much light. We have got to think of that and that is on its way with this so-called fluorescent light.

Air-conditioning suddenly burst on us.

We were running along on a pretty steady even keel at 8000
that time, wondering where the next big bulge in load was coming from. Our air-conditioning comes on. That means we haven't any more off-peak. In Washington the peaks have vanished because the peak in summertime is almost as much as in wintertime, because of this air-conditioning.

What is going to follow air-conditioning I don't know. We have house heating. Inventors may find a way how to do it. So far they haven't.

So there is nothing corresponding to this continual growth in demand of this electric service in any other busi-
ness that I know of. We have got to guess and be ready 8001
for it.

Now, the other funny part of it is—that is different from other businesses—we haven't anything, so to speak, to give to anybody except the residence customers. What I mean to say is, we have got to get ready for this war, for example, but the Government can't use a darn thing we produce. I mean,

—3,367—

we are auxiliary, so to speak, to every other business of the world. If you want shells, the Government gets the shells from the shell company, but we have got to give them power.

8002 *William McClellan—By Respondents—Direct*

We can't sell our kilowatt hours direct to the Government to be used as kilowatt hours. That is what I mean. There is nothing we can do with kilowatt hours except to get somebody to use them for something.

So the result is again it is just another example of the fact that other people are controlling our business so far as loads are concerned, so far as the demands are concerned.

Some fellow over here in a big factory may decide tonight to go on a double shift. Well, if it does, that wouldn't mean
8003 we would have to have any more capacity, but he would run night and day on the same capacity; that would affect us.

Some other factory may be doubling his demand. That would double the demand on our stuff. All that stuff we have to continually guess at and we have to be continually watching, which gives you an idea of the kind of organization we have got to have as distinct from any other manufacturers.

I don't know that there is any other—oh, yes, of course —I don't know whether I ought to bring it up before this body, but, of course, there is such a thing as regulation in
8004 the world, which is different from most other businesses, except the railroads.

—3,368—

That is, lots of things we would like to do, we have to get permission to do, get approval for and all that sort of thing, which I am glad to say, most of us are in favor of, even though it is sometimes irksome and a great inconvenience.

It all arises, of course, from the fact that if you have got to get your kilowatt hours from us, it didn't take very long to learn that there had to be some kind of regulation under those circumstances. But it does make a difference.

Q. Do you feel that the development of the business has ceased? A. What?

Q. Do you feel that the development of the business has ceased? A. Oh, no. Oh, my, no. It certainly hasn't ceased industrially. Of course, if you look at the home, we are now doing everything, I think, that has to be done in the home. We are air-conditioning; we are doing everything that has to be done in the home now except heating the home, and that doesn't seem very near, but as soon as you step outside the home into the factory or into the office, there 8006 seems no limit as to what might have to be done.

New jobs for the electric power to do just the same as the phrase we have, "Do it electrically." Of course, some years ago we did none of that, but now we dry paints, all sorts of curious things. We find it has special advantages —the fact that it is light, it has certain radioactive effects

—3,369—

while using the heat for drying. We find a lot of other things in it.

It is the old story, "Do it electrically." 8007

Now, we don't see the end of "Do it electrically." Just ahead of us there are a great many different things, none of which we see now, but judging from the way they crop up from time to time, there is no end to that development.

Q. Are all the employees of the company involved in your management problems? A. Oh, yes. Every last man in our organization we try to fill him up with the idea that he is part of the well-being of that company in how he behaves and how he acts.

Now, there are some of them, of course, that have direct contacts. We used to have the notion that reading a meter was something for any old man that could stagger around through cellars and places like that. We have learned that that meter-reader has a direct contact.

In the first place he enters a person's house in many cases —we are trying to get away from that by putting meters outside, but at present he enters a great many people's houses. Therefore, he must look—if we are going to have
8009 those people comfortable, he must look like an honest man; he must look like a clean, decent fellow.

In the second place, he gets into the house. He has got

—3,370—

to be courteous because all the way from the president of the company down to that lowest official—and I imagine the meter-reader is what you would call one of the very minor technical people of the organization—from the president, however, down, there is a very subtle transfer of thought in the minds of the people.

8010 If they see nice meter-readers, courteous fellows, clean-looking fellows come into their houses, somehow or other they think that company must be pretty decent. They don't think it all out. Don't misunderstand me, but there is a very psychological transfer of attitude there.

If the president of the company and the vice presidents are interested in community affairs and have rather generous notions about things and deal with things from the community's side of the picture, in a generous way, in some subtle psychological way, they get the idea across that this company must be pretty decent and so the behavior of every

last man—you may think a bookkeeper sitting inside a cage, never seeing anybody of the public—my gracious! we have had a lot of trouble with that. If they are careless, if they don't realize, after all, that a customer getting a wrong bill, for example, from a wrong chapter in the book or something like that, may undo all the good work that some of the rest of us have done just because the people think—they have got the idea we are nearly perfect, then somebody makes a mistake down in the cage there, then you are not perfect

—3,371— 8012

and you have lost as much as you have gained, so everybody everywhere, we believe, and we try to fill them with the idea that they mustn't try to do anything particularly, but just must behave in public and do their work like upstanding decent fellows. That is all we ask.

We don't ask them to go out and do anything positive to sell the company, but just decent, upstanding, thoughtful, conscientious, honest. That is what we want.

Q. Is there difference between the localization and non-localization of various management functions? A. Oh, well, if you take a long string of management functions, there are 8013 some that can't be done any other way but locally. There are others that might be done locally, but not so well—and, of course, there are a great many others that just can't be done locally at all.

Q. Could you give us some examples? A. Well, I should say anything that has to do with the individual service of the consumer, that the consumer knows about, must be handled locally. I say, "What the consumer knows about." It is not what affects the consumer, but what the consumer knows about.

8014 *William McClellan—By Respondents—Direct*

Now, what does the consumer know about? Well, he knows about whether his lights flicker, for example. He knows whether his bill was bigger last month than it was this month. He knows whether his certain devices are working right—these sweepers and these irons and things like

—3,372—

that.

He knows whether he is disturbed unduly by meter-readers; he knows whether when he gets his bill he has easy
8015 access of paying; he knows all those things.

Now, anything that has to do with that can only be handled with satisfaction locally. That is, where the consumer knows these things. For instance, you take—well, I think Mr. Stokes, if I am not mistaken, has given you a lot of data about a little town we had down south of St. Louis called DeSoto. It has been in the record.

It is a pretty good example, but if we do take DeSoto, now, there is a place that is half-way between the southern extremity—I don't know how many miles it is—forty or
8016 fifty—I have just forgotten how many miles it is down there, but it is long enough to be quite a distance away from St. Louis. It is even quite a distance away from what we call Webster Grove.

Now, those people down there—of course, all I know about the company is as it exists today. I do know something for the record and I think Mr. Stokes will tell you about it from the time he took it over.

I am not going over all that, but I do know today that if anybody in DeSoto—there is a fellow down there by the name of Henry Ditch. He has a couple of fellows helping

him. He stays in DeSoto all the time and he has a girl

—3,373—

in the office that handles various things, also handles utilization equipment like heaters and things like that.

Well, if anybody, even if the lights go out in the house, of course word comes to Henry Ditch. Those people know him; he is in and out there all the time, so they call up Henry Ditch, and he has got to go down there. He says, "You must have done something; you must have short-circuited this." He sticks a new fuse and makes them happy 8018 and at the same time doesn't let them run away with the idea that it is the company's fault. He does it in a nice way.

He says, "You must have short-circuited something." He takes a look at the cords. Maybe it blows out again and then he knows something is wrong. So he hunts up the cord and he says, "It is the cord on this side lamp here."

Well, all that sort of thing is building up fine public relations and it is also giving us the kilowatt hours from that lamp with the least possible delay, so both customer and the company win.

8019

Now, then, the next time a woman has a range, maybe, and she starts to cook a dinner and the darn fool range goes out of whack and, of course, it is a Westinghouse or General Electric, and she ought to call them about the range, but she doesn't—she calls up Henry Ditch and he has to hustle out and he can fix it maybe and maybe he can't. If it is something that he can fix, why, he fixes it right there quickly, but maybe it is beyond him and maybe he hasn't

—3,374—

got enough stuff in DeSoto to do it. If so, of course, there

is a problem that can't be handled entirely in DeSoto. It has got to be handled somewhere else.

You have got to go outside of DeSoto, maybe to Festus, which is the headquarters of the county division. Maybe they will have organization enough to take care of it; maybe they won't. Well, if Festus can't do it, he goes up to Webster Grove, which is the head of the whole county organization. Maybe something has happened there that Webster Grove can't handle. I can imagine examples.

8021 It may be that there had been a heavy windstorm that has blown down a lot of lines. Now, Henry can climb a pole and fix a wire that has broken because he is an old lineman. He used to work on the line; a class A lineman. He might fix that, but if there is a dozen poles and a lot of lines blown down, even Webster Grove might not be able to handle it.

They might have to call in the whole St. Louis construction organization to get two or three gangs down there and get all those poles up and get them fixed up quick so as to restore service.

8022 So there is a great division between this local stuff, but by and large, the thing that the consumer—now the consumer doesn't know anything about—supposing he knows his lamps are burning out a lot. Now, he makes a kick to Henry. Henry says, "Well, I don't know what made those

lamps burn out unless your voltage is fluctuating." You know that if that voltage regulation is not right, if it is a 115 volt lamp, it shoves up 125 and down 104, those lamps will burn out quickly, so he tests the voltage out.

The customer doesn't know about variation in voltage. He doesn't know we are compelled, as far as we can, to keep within certain limits and we do, but once in a while it gets out and we have got to correct it by some sudden load coming on, but Henry knows it, so Henry calls up.

Now, Henry can't fix that voltage regulation. It has got to be done by some substation outside of DeSoto entirely—maybe at Festus, and maybe when Festus tries to fix it and they can't because it might upset something else and somebody in the center, or it might upset something to the south 8024
and west. It is a great complicated thing with the local fellows doing their part in contacting the customer.

Then it gradually reaches a step away from that local place. Each person has their part.

Now, I think that answers that question.

Q. Are there functions which can be performed better in St. Louis than in DeSoto? A. Well, obviously, yes. You see, as I told you, connecting and disconnecting services, customers moving in and out of houses, paying bills, these minor troubles, selling particularly small merchandise, all that can 8025
—3,376—
be handled, but these other things that I have talked about—for instance, even the preparation of bills would hardly be handled in DeSoto as economically and as satisfactorily as they could be handled elsewhere, but they might be sent and mailed from there.

Then, as I told you, the real trouble crews. You couldn't maintain sufficient trouble crews in DeSoto to meet any emergency at all. That could be handled away and a lot of the accounting can be very much better handled away.

8026 *William McClellan—By Respondents—Direct*

The minor accounting, what might be called day-book accounting, just mere records, can be handled in DeSoto, but that has to be put in a systematized account. Reports to the Missouri Commission and Federal Power Commission, they have to go into the hands of experts and we can't have these experts everywhere—we have got to collect them in one spot—so there are a lot of things that can be handled very much better away.

As I tried to explain, we start with a local place. The
8027 first place you get to for matters that can't be handled in DeSoto, is Festus. Then, Festus finds its limits. When you can't go to Festus, you go up to Webster Grove. Webster Grove finds its limit and there are a lot of things that have got to be handled. The only other place is St. Louis.

So there are a lot of things left over that have to be handled in a more constant concentrated place like St. Louis.

—3,377—

Q. What are some of the items which are necessarily handled in St. Louis? A. Well, the biggest item of all handled in St. Louis, of course, is power generation. Very naturally,
8028 we have got to generate our power in great big power houses to get it cheap. Well, Webster Grove is—anything below Webster Grove—even Webster Grove can't handle a problem of that sort, because they only know what power they need.

Somebody has got to be in St. Louis saying what Webster Grove needs, what all these places need and worse than that they have got to look at the growth of the communities and see whether they are going to stop growing or grow faster or whether their power needs are going to increase.

Nobody can do that. Now, that is on the demand for power. Now, as soon as they know that on a certain date

you have got to have so much power, then, of course, the whole engineering department comes in. How are you going to get it? Shall we add to Cahokia, an existing power plant? Shall we add to Venice or shall we build a new one at Venice or Ashley Street, or shall we build a new generator up at Mississippi River Power Company or over at Osage, the big water power plant? How will all that be done? That can only be done at some central point that knows all these various things.

That is the biggest end of power generation. 8030

Well, next to power generation, you have got to hook all

—3,378—

these plants all together when you have got a lot of them. That can only be done at St. Louis. What we call transmission lines.

Then, even sub-transmission lines, which are simply underneath, subsidiary transmission lines, to get the small places—the transmission lines, themselves, being the big lines that connect up the main power houses and the big substation on Page Avenue. That has to be done by a central organization in St. Louis that knows the territory, knows 8031 where you can put underground, overhead, rights-of-way.

That has to be done in St. Louis. I could go on and mention some of these problems. Then, of course, the main accounting has to be done in St. Louis for all the companies and our sales policies, in fact, most policies, general policy matters have to be settled in St. Louis because they take the attention of the principal executive officers.

Q. Are there functions which can not be performed in St. Louis? A. Functions, you mean of the company?

Q. Yes. A. Well, there are functions that can be performed so much better outside, it is practically impossible to perform them entirely in St. Louis. That is the first thing.

In the second place, even if you could perform a portion in St. Louis, they could be done so much better outside that

—3,379—

it is a waste of money and inefficient to try to do them in St. Louis.

8033 Q. Could you give us some examples? A. The biggest of that is financing. It is almost impossible for us—it would be impossible for us in St. Louis to have a complete financing department because, in the first place, we can't get all the money in St. Louis.

Now, that is, of course, a fact that can't be denied.

In the second place, inasmuch as we can't get all the money in St. Louis, we have got to appeal to the country. We have got to go to the whole country.

Then, you have got to have people in St. Louis that are accustomed to doing that particular thing and not doing

8034 merely local things. You have got to have an organization and a distribution department that can appeal to the whole country, that have what we call distribution, national distribution as against local distribution for securities.

With all due respect to St. Louis people, they might organize it with the help of other people outside, but they couldn't possibly, they haven't the distribution, to get the large sums of money we need from the whole country, and so on. You can go on with that problem.

When it comes to how you can get that money, we don't keep any, we can't afford, our financing doesn't come fre-

8035

quently enough to afford to keep a crowd of expe ts around all the time to determine as between preferred stock, bonds,

—3,380—

different kinds of bonds if we choose.

I mean by that, first mortgage bonds and debentures, and things of that sort you might want to issue, the relative marketability of those things at any given time, what they ought to be sold at, the determination of all those features, and then, of course, if a mortgage has to be written, we don't—

8036

there is hardly a lawyer in St. Louis writes a mortgage in twenty years, especially a public utility mortgage, which is an extremely different mortgage from the average mortgage owing to the way we have to operate, taking the property up and down, removing things, so that all those things, while we may do some of it and do do some of it in St. Louis, it has either got to be completed—and the big ends of it is done outside of St. Louis.

Q. Could you place all the common stock of the Union Company in St. Louis?

8037

Mr. Odell: I am going to object to that question because I don't think this witness has been qualified to answer questions of that kind.

Mr. Browning: I think the witness' experience has been shown to embrace practically every field of public utility management, Mr. Examiner.

Mr. Odell: Not in St. Louis, though.

The Examiner: This calls for more than public utility operation. It calls for a financial knowledge. Has he qualified himself along that line so far in this

—3,381—

8038 *William McClellan—By Respondents—Direct*

record? I don't recall it but maybe you can refresh my memory on that.

Mr. Browning: We can clarify that in the record.

By Mr. Browning:

Q. In the course of your connection with various utility companies throughout your experience, Dr. McClellan, have you had any contact with their financing? A. Oh, I have had—in the first place, I have had information in that regard,
8039 but when you say "contact with financing," I have done nothing in regard to a great many of them, but now to recite where I have had what really might be called "contact," of course, in the Cleveland Company, we not only participated in arrangements, discussed the matter at home, but also participated in the arrangement for the sale of securities—Spencer, Trask & Company, Dillon-Read & Company—went through the bargaining with National City Company and things of that sort, so that was what I would call direct contact.

In addition to all this enormous, what might be called
8040 "information contact" when I was with the Commission—but there I didn't do anything—I want to make that plain—I just observed what was going on.

In this other case, I actually participated in these things. Then, of course, in the Cleveland Company, we also had a campaign to sell common and preferred stock to the community.

The Examiner: Well, are you familiar with the——

The Witness: (Interposing) And I knew some of the difficulties and arrangements we had in connection with that.

The Examiner: Are familiar with market conditions in St. Louis? The availability of the St. Louis investors to absorb your company holdings and protect them?

The Witness: Yes, I am quite familiar with—I have observed what they can do and in various places I asked brokers about it and I know from experience 8042
—not direct experience in St. Louis, because I have done no financing there—but I have observed the houses. I know the size of things they are doing and I could say that there is nobody in St. Louis without outside help, who could handle a $10,000,000.00 issue.

Mr. Odell: I am going to even object to a conclusion like that because I still insist that this witness has not qualified himself to give us financial expert advice.

The Examiner: I will overrule the objection.

The Witness: I beg pardon? 8043

The Examiner: I say I will overrule the objection.

Mr. Odell: I am going to take an exception. I would like to have you consider that again because I submit that this witness has not qualified himself as an expert on financial affairs.

He has qualified himself as an expert on engineering matters, questions of management and oper-

8044 *Colloquy*

ation of utility businesses, but that is a long way off from being an expert on financial affairs.

As to the studies he has made on matters in St. Louis, I think that we at least ought to have the benefit of some more detail.

The Witness: Off the record, please.

The Examiner: Off the record.

(Discussion off the record.)

8045 Mr. Browning: Will you read the question please?

(Whereupon, the question was read by the reporter.)

The Examiner: What is the last objection? Read the last comment that Mr. Odell made.

(Whereupon, the above statement was read by the reporter.)

The Examiner: All right. It is true that Dr. McClellan has only been the president of this St. 8046 Louis group of companies since the early part of 1939 and that may not be a sufficient length of time for him to have familiarized himself sufficiently with the security markets in St. Louis to express an opinion, but I think that the witness should be permitted to express an opinion formed on the length of time that he has been there and I will overrule the objection.

Mr. Odell: I think that his opinion should not be based on the length of time he has been there but

the study he has made while he was there, and I object to this witness' answering Mr. Browning's question as to the ability to place common stock in

—3,384—

St. Louis until the witness gives us the benefit of a little more detail as to what study and investigation he has made of that general question.

The Examiner: What do you say to that, Mr. Browning?

Mr. Odell: May I finish, off the record, for a 8048 minute?

(Discussion off the record.)

Mr. Browning: In view of the objection we withdraw the question.

By Mr. Browning:

Q. What is your policy on purchases of machinery and equipment manufactured in St. Louis? A. Our policy on purchasing all equipment is to pay no attention to where it is made, but to buy it—first, as an initial matter—but to 8049 buy it, quality being considered, at the very lowest possible price.

However, if a piece of equipment can be bought in St. Louis for the same or as low a price as it can be bought elsewhere, of course, we buy it in St. Louis.

In other words, we wouldn't pay any premium to give it to St. Louis people. We feel, in justice to rate-payers and everything concerned, we feel that quality considered, we ought to buy it at the lowest possible price. But, of course,

8050 we have an obligation at the lowest price, to give it to St. Louis. That is our general policy.

Now, then, of course, there is a great deal of material

—3,385—

that can't possibly be gotten in St. Louis at all and we must buy it outside of the city. That goes without saying. A great many things just can't be had there.

We can't limit our buying to St. Louis. On these contracts, of course, purchasing materials are made at the 8051 lowest price and, of course, giving St. Louis the benefit of any buying at the lowest price.

Q. Well, is localization or efficiency your test of management? A. Oh, efficiency, just as in this little purchasing item I have just been talking about here, efficiency is an item.

In other words, when we get it, the mere fact that it is made locally is interesting to us, but we first have got to be sure that we won't have to pay more for it to local men than we do any place else so that is a measure, so to speak, of efficiency.

8052 The same in our engineering. We have local engineers, but we don't necessarily employ local engineers. I mean, if we have to go outside of our own organization for local engineers, we don't employ—we have a general rule that we will try to get St. Louis men for the job if we possibly can, quality considered.

We don't want to bring in a man from the outside, but if we can't get what we want in St. Louis, then we must go

—3,386—

outside and that applies to everything.

Q. And it applies specifically to where you perform functions? The question is where you can do it the best? A. Yes. Where we can do it best is the—and by doing it best, of course, we mean other things—the cheapest in the long-run, the whole cost involved. It may not be the cheapest thing from the initial penny that we pay out or the dollar that we pay out, but everything considered—insurance, whether we shall deal through local agents or whether we shall go outside to outside agents.

All those things must be considered from its total cost 8054
and total benefit to the company, but efficiency is the measure of it and nothing else.

In other words, we wouldn't do a thing locally just for the sake of having it done locally. There is nothing like that. If it isn't efficiently done locally, we won't do it locally. If it is more efficient to do it outside, we will do it outside. That is our measure.

Q. You consider that a sound point of view? A. I consider it sound because I think I am sound myself and it is the point of view I follow in solving my problems. That is what I call management. That is my point of view. 8055

(Discussion off the record.)

—3,387—

By Mr. Browning:

Q. Is size determinative of localized management in a public utility? A. I don't think size has anything to do with it, with localized management.

Localized management, irrespective of size, is what you can do best locally. I don't care whether it is big or whether

8056 *William McClellan—By Respondents—Direct*

it is little, size hasn't anything to do with the determination of what should be done locally. In fact, size may influence the answer, of course.

A great big thing may mean that more may have to be done outside than some little place, that is perfectly true, but it is efficiency that still controls, irrespective of size, what should be done.

(Discussion off the record.)

8057 The Examiner: We will have a little recess.

(Whereupon a short recess was taken.)

—3,388—

By Mr. Browning:

Q. Do you regard size as determinative of management in a public utility? A. No, I do not. I think, from my experience in management, that, of course, the thing that determines everything in management is the efficiency.

In my experience, generally speaking, especially in our
8058 business where the two questions have come up, efficiency and regulation, it has been my general experience that the larger you get a company the more efficient you can expect it to be and the more easily you can expect it to be regulated.

Now, the question of size has to do with the nature of your organization.

Of course, as the thing grows in size you have got to make sure that the character of your organization fits the complete job that has to be done, but that is just as well done for a large company as it is for a small company.

 8059

The difference between localization and outside management or top management, the proportion between the two has to be adapted, but it can be adapted to give you maximum efficiency, and I think better with a large company than with a small company.

In fact, the whole history of this thing, from beginning to end, of our industry, has been the stepping from small to large, to get efficiency, whether it is in power generation, whether it is in merging little bits of communities like the

—3,389— 8060

DeSoto thing you have been hearing about from Mr. Stokes, whatever it is, it is the stepping of the small to these large, to get efficiency, and then adapting the organization to fit that whole subject.

Now, therefore, I know this North American organization, for example, that we are talking about here, ever since 1920 or thereabouts, perhaps—yes; oh, I know it before that; I know it intimately since 1920, and I know it since about 1916 or 1917, shortly after I left the Commission, but I was more closely connected with it from 1919 and 1920 on.

Now, I can't—it seems to me that an organization like 8061
that is very much like some of our huge manufacturing organizations in the country. I have never heard of General Electric Company, for example, with plants in different cities, with strong localized management in those plants for what they could do in those plants, but with the top management in Schenectady and one in New York adding on and doing the things that couldn't be done locally, I have never heard anybody in the world call that organization inefficient because it was big.

In fact, I have just heard the reverse.

8062 *William McClellan—By Respondents—Direct*

In the same way I have observed organizations like General Motors, with plants stuck everywhere.

So here we are. I don't see that size in any case, if I

—3,390—

start out with De Soto—De Soto people are infinitely better off than they would be if they were not part of a large organization.

They are getting more reliable service and I think they are getting cheaper service.

8063 I am talking about what I have seen, what I have known and—

Mr. Odell: (Interposing) What are you referring to, Dr. McClellan?

The Witness: I have just happened to pick out the town of De Soto that you have been told some of the details about by Mr. Stokes.

We have just dozens of towns just like it.

There is no question but what, as you go up in size, in our kind of business, you get increased efficiency and you also, I think, which is another important point—I have even heard—I can't recall of specific cases just at the moment—but I know in the New York Commission we used to think we could regulate the big companies a darn sight more easily than the little ones, and I have heard of other commissions in other parts of the country tell me that the big companies were much more easily regulated than some of these little companies, because in many cases they had more resources, stuff could be brought to them in better shape—

8064

8065

Mr. Odell: Mr. Examiner, I am going to object

—3,391—

to what some of these other commissions told the witness. I think that ought to be stricken from the record.

Mr. Browning: I think the witness is giving us the benefit of his experience, Mr. Examiner.

Mr. Odell: That is an important question in this case perhaps.

8066

We don't have these other commissions or commissioners present so that we can cross-examine them as to what they said and why they said it.

Mr. Browning: I think the witness could drop what other people told him and give us his own conclusions.

Mr. Odell: I think that portions of the record that contain statements of what other people have told this witness should be stricken.

The Examiner: That is clearly hearsay and I will grant that motion.

8067

By Mr. Browning:

Q. Then I will ask the witness for his own conclusion as to these particular tests.

The first test which I want to ask him about is: "Not so large as to impair the advantages of localized management." In your opinion, is size determinative of the advantages of localized management? A. Oh, not at all; not at all. I think that the advantages of localized management

8068 *William McClellan—By Respondents—Direct*

can be had in any situation which is big enough, really, to

—3,392—

permit of local management, versus the other.

In fact, I think you can get the advantages of localized management with big organizations just as well as you can possibly get it with small organizations, and perhaps better, so that I don't think size there enters into it.

I don't see how it could interfere with localized management.

8069 Q. In your opinion does size impair "efficient operation"? A. Oh, my gracious, no. Just the opposite. Just the opposite.

I think, as I have testified here—I think I have said it two or three times—I think that, as you grow in size, with proper organization, I don't see why efficiency shouldn't increase rather than decrease.

It does in material things; there is no question of that. Take a power house, for example.

There is no question about it that, for various reasons,

8070 a 300,000 kilowatt power house—there is no question about it being more efficient than a 50,000 or 25,000 kilowatt power house.

First, because the units themselves are likely to be more efficient, and secondly, you can afford—on that big base—you can afford to put brains in to operate it, to get an effi-

—3,393—

cient job, that you can't afford to put on a small one.

Q. You have testified as to extensive experience with commission regulation.

In your opinion does size impair the effectiveness of regulation? A. No, I do not think it does.

I think—In my experience, I think that the effectiveness of regulation—meaning by that the effectiveness of getting through cases and getting the facts and all that to be discussed—I know, from my own experience with the New York Commission, that the larger companies were very much more easy and I have heard Chairman Stevens tell me that, definitely——

Q. (Interposing) Just a moment. A. The larger companies were much more easily regulated than the small ones—I will say the small ones—and there are reasons for it, why they should be. 8072

Those men come up from those large companies with all the data, the information, that is needed for regulation, in far better shape.

The lawyers are better trained, more familiar with what they are doing, because they have more of it to do.

The engineers, the accountants, come up with everything in far better shape.

Time after time I personally have had to ask for things and wait weeks for it, in the case of small companies. 8073

Everything comes up in fine shape from the larger companies, so that size, as far as regulation is concerned, unquestionably, in my mind, means efficiency.

Q. What has been the general policy of The North American Company with respect to local autonomy of its subsidiary companies?

8074 *Colloquy*

Mr. Odell: Mr. Browning, before you go into that question, I want to know whether the record shows that what Dr. McClellan says about what Chairman Stevens said is eliminated from the record.

Mr. Browning: That is agreeable, yes.

(Discussion off the record.)

The Examiner: That quotation from Chairman Stevens is stricken.

8075 Mr. Browning: Will you please read the last question, Mr. Reporter?

(Whereupon the pending question, as above recorded, was read by the reporter.)

The Witness: Well, that—I have forgotten just what year it was that Mr. Frank Dame came into The North American System, but he was the one that established this general local autonomy system, or rather the division between local autonomy and North American's relationship to these companies. He believed that—and the Company has practiced it

8076 —he believed in a very maximum amount of local autonomy; that is, putting men in charge of these

—3,395—

companies who really, so far as they were concerned, operated these companies as if they had the sole responsibility for operating the companies.

Nevertheless, of course, the wisest of them not only remembered the relationship of The North American Company to them—they had a right to know what was going on; many times a right to know in

advance of how problems were going to be decided—but nevertheless the decision was left in the hands of the local man, and that was, of course, partly because The North American System is made up of a relatively small number of very large, important companies at some of the principal cities of the country, and not of a huge number of little bits of companies that confessedly could hardly stand alone, and confessedly one hundred per cent. local management of companies of that sort was impossible. 8078

Of course, it is equally impossible, in my opinion—but not to the same degree—even in a company as big as some of the companies I have been connected with, like Cleveland, St. Louis; that is a good illustration of the proportion of it—cities of that size can have a great deal of local autonomy but they can't possibly do everything locally that will make for the greatest efficiency in every direction.

Now, I, for example, in my association with the Cleveland Company, as a vice president—we are talking of The North American System now—and with 8079 the St. Louis Company, I can't recall a single time

—3,396—

when I have ever been ordered to do anything.

The method has been to, in the first place, as I sat in those companies, all those three companies, as an executive officer, sometimes I decided it was not necessary to discuss it at all with The North American Company; other times, when my mind was made up to do a certain thing, it was wise to say something about it.

8080 *William McClellan—By Respondents—Direct*

Always remember that, in my opinion, from all my experience with these companies, a man would be a sort of foolish man, who, with all those facilities for advice on strong, hard problems, wouldn't make use of those facilities, for which he was getting good advice, even though the responsibility was finally on him to decide what to do.

Now, I say I have never been ordered to do anything. There have been times when there were sharp
8081 differences of opinion, but all I have to say is that out of it there came a reconciliation of views, so that it was never necessary for the owners of the property —and in spite of all the local autonomy you can think of, you can't deny that there you have in many cases the owners of the property, you are talking to the owners of the property, and, therefore, their views, expert and otherwise, are entitled to a great deal of weight—but I know of no time in my history that they have ever said, "You do so and so", and especially against any ideas that I had myself.

8082 —3,397—

The responsibility is put on us pretty heavily to solve the problem, and that is—I am talking now from my personal experience with this, not of anybody else.

I have seen some of the others and I know they feel the same way about it. I mean we have talked together. Mr. Way—I mustn't say that.

By Mr. Browning:

Q. Doctor, you can— A. Leave that out?

Q. —leave that out, what the others told you. A. Fortunately I didn't get that far.

Q. Well, now, Doctor, turning to the St. Louis management situation, which you found when you went to St. Louis in the spring of 1939, was the former executive management local in character? A. Oh, yes. The former executive management at St. Louis was local in character. It, in reality, consisted of two people—Mr. Egan and Mr. Boehm.

Frank Boehm was a Missouri boy who spent his whole life with this company and, so far as I know, so far as I can remember—and if he did it was very slight—he never had any business experience outside of Missouri and outside of this company. 8084

Q. Can you tell us when Mr. Boehm entered the employ of the Company? A. I had it here somewhere. I will find it.

—3,398—

Q. I think it is right there in your notes, Doctor (indicating). A. I don't know whether I had put it in these notes or whether they had been put in the notes.

Yes, it is right here (indicating). 8085

Well, Mr. Frank Boehm was born in Missouri. He entered the service January 4, 1910, as a clerk, and has come up through various promotions until he got to be executive vice president January 1, 1936.

Q. That was Mr. Boehm? A. That was Mr. Boehm.

Now, Mr. Egan—he joined the Union group on November 1, 1916, as assistant general manager, and then he became vice president later; president April 1, 1920 and was president until 1939.

8086 *William McClellan—By Respondents—Direct*

I do know that Mr. Egan was a product, more or less, of Missouri, as well, because his father was interested in street railways—I think president or general manager of the street railways of Kansas City, Missouri,—and I knew that Mr. Egan was there before he came there, so he had a very much larger experience in St. Louis than his life with the Union Company would indicate.

Now, this management consisted of Mr. Egan and Mr. Boehm and, if one were to divide the management into in-

8087 —3,399—

tensive management and general management, Mr. Boehm was a very large part of the management of the Company.

Mr. Boehm left St. Louis with relative infrequency. I mean to say he did little traveling.

He spent his time around St. Louis. I never met him often at conventions.

I used to meet Mr. Egan all the time at conventions but I seldom saw Mr. Boehm in New York; often I saw Mr. Egan there.

I know that he spent a great deal of his time right there.

8088 Now, that is the men that were doing it and they didn't have the kind of organization that I would have, but nevertheless I have got to acknowledge that those men did have fairly good public relations, as I heard when I came to St. Louis.

They had a good organization for accomplishing things in some way or other.

The thing I objected to, however, would be that they did not give them any chance to grow, and there was too much individual responsibility on the part of one man, which is contrary to my methods of organizing anything of that sort.

8089

Moreover—I don't know how to put this without objection—I, for a great many years have had the distinct impression—rule this out if you want to—from conversations, and so forth, remarks dropped, that these men wanted to

—3,400—

disregard, as far as possible, any influence from New York, and wanted to have an intensely local management.

It is almost well known among us—if you don't want it in, you can rule it out—I can't give the day or anything of that sort, but it was an intensely local management and with 8090 a certain disregard, as far as possible, of the New York management or New York authority, which, as I have told you, in my own case, we carried many problems out there, but the question of authority in New York was never exercised, even though it might have been present.

They were perfectly willing to let the man have full authority, but they wanted to know what was going on, wanted to know how he was behaving, but they didn't have him as any agent of theirs in the place.

It was intense—that is the surprising thing, that St. Louis, even with all that, with all the liberty of autonomous 8091 management, that was not given to anybody else in the companies in the other places, that it happened as it did there.

Q. You mean that St. Louis didn't have even the ordinary contact with New York? A. Well, I can't speak—all I know is that I frequently have seen Mr. Way of Milwaukee and Mr. Crawford of Cleveland up there.

We have talked and chatted about our common problems. I would even almost go so far as to say that I almost never had a conversation with Mr. Egan, and certainly not with

—3,401—

8092

Mr. Boehm, in New York, except on specific things once or twice in fifteen or eighteen years, whereas the others I might frequently—we talked over things.

Not officially, I mean to say, not by design, at any time, but we just bumped into each other.

Mr. Browning: I should like to have this chart marked as Respondents' Exhibit No. 62 for identification.

8093 (The document referred to was marked for identification as Respondents' Exhibit No. 62.)

By Mr. Browning:

Q. Dr. McClellan, was this chart, Respondents' Exhibit No. 62 for identification, prepared under your supervision, to show the organization set-up of the Union group? A. This chart——

Q. (Interposing) Was it? A. Yes, but I have got to explain that it is the organization of the Union group as I hoped to complete it, and as I am in process of completing it,

8094 not that it is complete at present.

Mr. Browning: I offer this in evidence as Respondents' Exhibit No. 62.

Mr. Odell: No objection.

The Examiner: It is received in evidence under that number.

(The document referred to was received in evidence as Respondents' Exhibit No. 62.)

8095

By Mr. Browning:

Q. Now, Doctor, will you describe the steps which you are taking, referring to the chart when necessary? A. As I told you before, the management I succeeded was a very much centralized management, almost in one man, with everybody else acting under almost his personal orders, and no man having been given definite responsibility without a string on it.

Special jobs were handed around hit or miss, so that jealousies, troubles of that sort, came into it. 8096

So, in making this up, which was what I went out there for to handle this company, I had those two or three things in mind:

First, to put definite responsibility on responsible officers, have them report so that they would know—to various bodies—so they would know they were responsible; have the responsibilities definite so that there couldn't be jealousies arise between different men, as happened in the old organization, as to who was going ahead and who wasn't going ahead, and things of that sort.

8097

So it starts out—this particular diagramatic arrangement is merely to keep from crossing lines unnecessarily—with the Board of Directors on the vertical line on the end.

—3,403—

Now, reporting to the Board of Directors is the president, the secretary, the comptroller, and the executive vice president. Now, the executive vice president is in effect what is generally called a general manager.

In letting him report to the Board of Directors, that is something new. The general managers usually report to the

8140 *William McClellan—By Respondents—Direct*

I made the remark to my directors that I was very sorry to have to operate without them because, while they didn't hold me back, at all, nevertheless, it was very great value to be able to go up and talk to men who were looking at other companies and had an interest. That is the point.

I can go to lots of consulting engineers and lots of consulting accountants and get advice on what to do, but the trouble about all those fellows is that they haven't an interest in the thing, a vital, and I might just as well say financial interest in the problem the same as I have.

8141

Therefore, the advice of those men of The North American is different from any other advice you get. In my opinion, it is better for that reason. It is interested advice, but all out in the open, so far as the top management is concerned.

—3,420—

Mr. Browning: I should like to have marked for identification as Respondents' Exhibits 63, 64 and 65, three tables. The first of these, Exhibit 63, which is entitled "The St. Louis County Gas Company" shows the securities issued by the company with date of issue and date of retirement, among other information.

8142

(The document referred to was marked for identification as Respondents' Exhibit No. 63.)

Mr. Browning: The second, Respondents' Exhibit 64, also entitled "The St. Louis County Gas Company," shows gross income by years from 1912 to

president, but it serves to increase the prestige of his position, to make him know that he doesn't really have to do—that he has access to the Board of Directors and doesn't have to do just what the president tells him, and that sort of spirit.

Now, it is the same way with the comptroller, although that is part of the development of the age, that the comptroller, instead of being merely a head bookkeeper, is a very important part of the organization.

8099 I remember, when I came to Washington, I called the comptroller in here and told him that he had a right to come into my office and tell me that, as president, I didn't have the right to spend money, and question my authority. I believe that to be true.

So that the executive vice president, as I say, reports—comptroller reports to the Board of Directors; the Secretary naturally reports to the Board of Directors, because he keeps the minutes; if for nothing else, he reports to the Board of Directors for that reason.

—3,404—

8100 Now, they all also report to the president of the company and you will notice the comptroller and executive vice president—all vice presidents as such—for example, we have a vice president in charge of sales; so far as these sales are concerned he reports to the executive vice president or general manager, but, as a vice president, he reports to me.

I wanted the chart to show that no vice president was going over the head of some one else if he wanted to come in to see the president.

So it is all vice presidents as such, whether they have managerial duties or not.

1939, with interest on funded debt and times interest earned.

(The document referred to was marked for identification as Respondents' Exhibit No. 64.)

Mr. Browning: And the third, "The St. Louis County Gas Company" has a sub-heading, "Earnings available for common dividends and amount set aside for depreciation reserve."

8144

(The document referred to was marked for identification as Respondents' Exhibit No. 65.)

By Mr. Browning:

Q. Dr. McClellan, were these tables prepared under your direction and the information thereon taken from the books and records of the company? A. They were prepared under my general direction and I know they were all taken from the books and records of the comptroller. I recognize some

—3,421—

of them but I don't recognize every one of them—I mean every figure on them—but they were, I know, taken from the books of the company. 8145

Mr. Browning: I offer them as Exhibits 63, 64 and 65.

Mr. Odell: No objection.

The Examiner: These tables are admitted in evidence under the numbers assigned to them.

(The documents referred to were received in evidence as Respondents' Exhibits Nos. 63, 64 and 65.)

Now, the treasurer, of course, reports to the president.

Now, the non-operating companies, of which we have three at present, all to be dissolved at soon as they can legally be dissolved—there is absolutely no reason for keeping them; nobody wants to keep them, but by law those three companies, an account of a few damage suits—that is the only reason they are living, but by law you can't get rid of them until you have gotten rid of all their liabilities. So you are just stuck. 8101

That is the reason for those three particular non-operating companies. That is a nuisance to us and everybody else. 8102

Now, then, we come down underneath. The vice-president—up toward the left there (indicating)—in charge of corporate affairs, is Mr. Woodbridge, a lawyer.

—3,405—

He has general charge under me of all corporate affairs. I could tell you a lot about him.

Everything that has to do—we are getting rid of companies; we are making reports to commissions; we are getting orders from the Commission; we are handling valuations; we have complaints; we have licenses; we have in the nature of easements, almost like franchises in certain cases, the essentials of franchises, everything of that sort, anything that is in the nature of a corporate affair Mr. Woodbridge passes upon, or taxation matters—he is the final authority under me in regard to those matters, so there is no staff shown on this, of course. 8103

Mr. Woodbridge has a large number of departments that report to him, but are autonomous, again, as far as they can be.

The comptroller, of course, has an enormous staff.

The executive vice president has these departments (indicating). His staff is shown on here (indicating).

Now, the operation which has to do with everything except generation, so to speak—that is, the men in charge of generation put the kilowatt hours on the bus bars and this man Miltenberger, "Operation", takes them away by transmission lines, distribution lines, services, and things like that.

The construction department is in process of organiza-
8105 tion. We haven't given it concrete form yet.

—3,406—

The Electrical Engineering—you have met Mr. Stokes. I found him when I came here. That is what I meant by saying they had good men.

Mr. Miltenberger has been with this company a great many years, certainly over twenty years, and I found him to be a most useful man and a most able man.

Mr. Stanley Stokes—you have had a little sample of him. I have high regard for him as an engineer.

Mr. Tenney, in the same way, is in charge of Steam
8106 Plants. He has been with the company a great many years. I think most of that has been described to you.

Q. Yes. A. I am just speaking generally. I didn't have to go out and find somebody for this purpose.

Mr. Berry has been with the Company, and Mr. Michel—he has been here before—with the Commercial Department; very able men.

Purchasing—now, this is a new man; we found a purchasing department that was in the hands of a man who is about physically disabled, and, to a certain extent, men-

8107

tally disabled, and we had to—there was nobody in St. Louis, so I put that in the hands of Mr. Gushee, who had been in Detroit and he knew this man Covell.

We got Mr. Covell from Detroit on a temporary basis and finally made his position permanent. He had so much

—3,407—

experience—of course, I could have found some good-looking fellow in St. Louis, and I might put him in the job and train him, but we couldn't afford that with our huge purchases.

8108

We had to have a man with a great deal of experience, and so he knew of this fellow, and he was brought in from the outside.

Steam Heating—Hillemeyer is an old fellow who has been with us a long time, doing a good job.

Property Records—that is Harold W. Ross.

Now, here is St. Louis County (indicating). That happens to be a separate operating division and Mr. E. H. Lewis is in charge of St. Louis County. The headquarters is at Webster Grove.

8109

Mr. Lewis also runs other county operations, like Jefferson County that we have been talking about, all outside of the City.

He is an extremely able man, and I had no reason to change him.

Personnel—Alderson is one of the older fellows. He has charge of everything relating to personnel.

Rate Research is a very important department, extremely important department, because we can't wait until troubles come with rates before we fix them; we have got to be constantly looking ahead.

8110 *William McClellan—By Respondents—Direct*

Our rates—all rates of all companies have grown up—

—3,408—

it is a kind of hodgepodge, owing to the way they grew in the early years.

The result is that now there is hardly a company that I know of that isn't fixing up its rate systems, to get all sorts of dislocations out of them, and we have to take advantage of that, of course, because one thing you can't do is raise anybody's rates in a rate adjustment, if you can avoid it.

8111 So, as a consequence, if the time comes to make adjustment in rates, then we have got to have a lot of studies in advance to try to get some of these dislocations that have grown up in history, with all rate systems of most every company.

Some companies are more fortunate than others, but I know of very few that haven't got relics of history that bother them all the time.

So that this rate research bureau is studying rates all the time, to find out what is the matter, so that we will know

8112 what to do with them when we get a chance, and, in spite of everything else, I think rates are coming down in this country.

Things may stop it for a while, but generally speaking, they are on their way down.

Advertising speaks for itself. Mr. Holland has been with us a long time.

Then the Stores Department; general storekeeper Mr. King. He has been with us a long time.

—3,409—

There are very, very few new men. I picked Mr. Heren, who is a general assistant over here. He just picks up a lot of things. We have investigations made by him, if there seems to be trouble anywhere. He also pays attention to content and editing of our employees' magazine. He does a great deal of reading of everything that comes out which might have reference to the company, digests it and lets us have it, and then he sits in discussions.

As I told you, I put him on one of his main functions, which is to make sure that he, at least, of all of us, keeps 8114
the public point of view.

He is a sort of devil's advocate in everything that comes up. He is arguing for the public so that we won't forget it and be too corporate. That is what we are trying to do.

He is a newspaper man. He is not a publicity agent or anything of that sort. We keep him out of that entirely. That is Mr. Holland down here.

We have got these subsidiary companies:

First, the Union Electric Company of Illinois. The manager of that is Mr. Welsh—the East St. Louis Division that is.

8115

The Mississippi River Power Company—that is Mr. Dickinson. That is a subsidiary company.

The Union Electric Company of Missouri, Cupples Station Light, Heat & Power Company, St. Charles Electric Light & Power Company, Lakeside Light & Power Company,

—3,410—

Union Electric Land & Development Company.

Lakeside is going out and St. Charles is going out. I think, within six months, there will be only two companies. Three of them are going out.

8158 *William McClellan—By Respondents—Cross*

PROCEEDINGS

The Examiner: The hearing will come to order.

Whereupon, WILLIAM MCCLELLAN resumed the stand and testified further as follows:

Cross Examination by Mr. Odell:

Q. Dr. McClellan, I believe that you testified that you
8159 were employed by the Second District Public Utilities Commission, which was the New York State Utilities Commission regulating utility companies in the state of New York except those in New York City, in the period between 1911 and 1913. Is that correct? A. That is correct.

Q. Then in 1913, you formed a private engineering firm which continued until 1916—— A. (interposing) No, I testified that the firm had been in existence and that one of the conditions on which I took the New York State Commission job was that the firm could continue. I was not able to give much attention to the private business but it was
8160 going on and Mr. Campion was there. The office was kept open but I did not do any outside work.

Q. You went—— A. (interposing) I went back to the firm that had been in existence before I took the Commission job.

—3,426—

Q. I believe you stated that during the period from 1913 to 1916, you were also assistant to the president of Buffalo General Electric Company, is that correct? A. No, one year, just the year after that I resigned that job, from 1913

8116 *William McClellan—By Respondents—Direct*

Union Colliery Company. The St. Louis & Belleville Railway has to stay and the St. Louis County Gas Company is more or less permanent.

Now, that is the kind of organization that just as soon as it is completed—it is partly done now.

Q. I don't believe that you told us about Mr. Gushee's prior experience before coming to St. Louis. What was his— A. (Interposing) Well, Mr. Gushee's prior experience—he had a very, very varied experience, I think, in cer-
8117 tain things out west, nothing whatever to do——

Q. (Interposing) I mean, with what company was he connected before he came— A. (Interposing) I think the Detroit Edison Company was the only utility company. He had gone with that in various ways and had gotten to be one of the top in the principal officers of that company, when I got him down here.

Q. Could you have secured people with the ability and experience of Messrs. Gushee and Woodbridge in St. Louis? A. Oh, no. In fact, it was difficult to get anybody like what I wanted in a man like Gushee anywhere. In other words
8118 —3,411—
I was hunting for a pretty top man. Not only that man couldn't possibly be found in St. Louis, there was no possibility of his getting experience. The Union Company had nobody.

Certainly, under the circumstances we were operating there, we were mixed up in some questions that were under investigation that was impossible to get anybody in St. Louis with the experience, that knew the utility game.

In fact, I suppose, I, myself, having to go out there much against my will is partly an illustration that at least the

to 1914, that I was assistant to the president. It was really one year.

Q. And then you returned—— A. (interposing) And while I had that position, I still was with my firm.

Q. I see. In describing your duties with this firm, Doctor, you stated as follows: "Of course, I was with the New York Commission, I was with the New Jersey Commission, Utah Commission, Colorado Commission, North Carolina Commission, Washington Commission. I think I was before the California Commission." 8162

Referring to that statement, Doctor, will you tell us whether you were a member of all of those Commissions? A. That testimony ought to be corrected. I appeared before them all. I was not a member of any Commission at any time in my life. That testimony has to be corrected to just not with them but appeared before them.

Q. And referring again to that statement, Doctor, were you ever employed by any of those Commissions during this period between 1913 and 1916? A. Only by the New York Commission twice and by the court of New Jersey once. 8163

—3,427—

That is all.

Q. I am referring to your activities in the period between 1913 and 1916. A. No.

Q. Were you ever employed by any of the commissions that you have—— A. (interposing) Not in that particular period that I can recall, no. I was employed by various utilities companies and I appeared before these commissions in cases. That is all.

8119

people who sent me there thought they couldn't find anybody in St. Louis.

Q. Doctor, I don't think you mentioned the personnel of the board of directors. A. Well, perhaps——

Q. (Interposing) What have you in mind for the board of directors of the Union Electric Company of Missouri and the St. Louis County Gas Company? A. Well, the board of directors now is really the officials of the company. That is what it amounts to, which is, after all, not a very surprising thing with a single stockholder, because it is a close

8120

corporation, but for the purposes of efficiency, the purposes of making sure that we don't make mistakes, I am very anxious—in having the benefit of advice, I am very anxious to get the kind of board that I had here in Washington, a board of which at least half of it is made up of very promi-

—3,412—

nent, independent, local citizens, the same kind of board I have worked with here in Washington.

In St. Louis, at present, it is really made up of the officers of the company, nobody else connected with it, and I

8121

don't like that, and I want to get it just as soon as we can to get a board of perhaps eleven, with five or six independent citizens of St. Louis right on the board, and then, perhaps, officers of the company. That is all right. There is a tremendous advantage to the man that is operating the company to have that, tremendous advantage.

He gets help in all his local problems. He has the responsibility to these independent men to care for not only his personal conduct, but his official conduct, and it is a great help.

8164 *William McClellan—By Respondents—Cross*

Q. In other words, you were retained by various utility companies to appear before the various commissions that we have just described? A. Quite right.

Q. Then I believe you testified that from 1916 to 1919, you were Dean of the Wharton School of Finance and Commerce. Is that right? A. Except for the particular close accuracy of the dates. That shows about the period. I do not mean to say I was there from January 1, 1916, but it was about the period.

8165 Q. Is the Wharton School of Finance and Commerce a school for electrical engineers? A. No, it is a school for just as it is called, Wharton School of Finance and Commerce. It is to give a man training in business.

Q. In other words—— A. (interposing) It has noth-

—3,428—

ing to do with engineering at all.

Q. And durng this period from 1916 to 1919, did you do any work for state commissions? A. I do not believe I did. I can't remember. My firm, my partners, were bothering me all the time because I was so totally away from the firm but

8166 I cannot remember just at the moment——

Q. (interposing) And you confined your activities—— A. (interposing) To work as Dean of the Wharton School entirely and, as I described, to this Intercollegiate Intelligence Bureau which I had in Washington and which I organized while I was Dean of the Wharton School for war purposes.

Q. Then you resigned as Dean in 1919 and went to work for the Cleveland Electric Illuminating Company? A. That is my recollection, that it was fairly close to Armistice Day in 1919.

8122 *William McClellan—By Respondents—Direct*

Q. Do I understand correctly that your aim is and that you are now working to reconstitute the St. Louis management along the lines which have been followed in Washington, Milwaukee and Cleveland? A. Just about, yes. They have the same—it may differ in some details, but the same underlying principal of fixing responsibility and then having it definite and then making the men carry it out, not having any uncertainty as to what a man's responsibility is or that it is his job.

8123 Q. Doctor, I think you mentioned briefly the financing assistance which a North American subsidiary receives from North American. Have any of the subsidiaries with which you have been connected had organizations which have had

the financing experience that North American has had? A. Well, I can speak from personal experience with three of them, because I did do financing with the Cleveland Company when I was vice president—came down to New York and discussed the issuing of bonds and, of course, I went through with the Potomac Company, the first initial bonds

8124 under competition sold some bankers which was a very unique experience.

Secondly, selling bonds to an insurance company, then—that was the two—then, in the St. Louis Company I have had no—done no financial work for them in the way of selling securities, but I know what their facilities are, so I can speak personally for that.

Now, the truth is that up until very recently, when we financed every year, and even then it wouldn't work very well—financing hasn't been done frequently enough to war-

8167

Q. And you continued with the Cleveland Electric Illuminating Company until sometime in 1921? A. I think that is correct, yes.

Q. During this period while you were associated with the Cleveland Electric Illuminating Company, were you a member of any state commission? A. No.

Q. Were you employed by any state commission during that time? A. I think not.

—3,429—

8168

Q. Your contacts with commissions during that time, I take it, were with the Ohio state commission? A. With the Ohio state commission and there may have been some others because my business firm was still going on. It was never interrupted.

Q. Your engineering firm? A. Engineering firm but, of course, I devoted practically all of my time—as a matter of fact, I did not live in Cleveland. I went out there every week.

Q. Then you stated that in 1921 you left Cleveland Electric Illuminating Company and formed the engineering firm of McClellan and Junkersfeld? A. That is right.

8169

Q. And you continued with that firm until 1929, is that correct? A. I cannot be sure of the exact date. Yes, I think that is probably correct, as far as I can get at it. It is probably correct.

Q. I believe you stated that during this period between 1922 and 1929, the preponderance of your work was with utility companies, assisting them in the construction of plants and acting as consulting engineer for various utility companies? A. I should say the preponderance of it in dollar

8125

rant any of these companies in keeping a sufficiently expert financial organization to do everything connected with the financing, just not in the goods.

The result is that Cleveland had nobody. As a matter of fact, the only two people that participated in that financing were Mr. Lindsay and myself, with some discussions with the board of directors, because Lindsay had some independent members on his board of directors.

In the Washington situation there was nobody except myself and Mr. Neal, who is now president, and members

8126

—3,414—

of the Board of Directors who have discussed financing, but none of them could have possibly given me all the help I needed in connection with that financing.

I don't mean to say that we couldn't have financed without New York, by some means; I am not saying anything like that, but I am saying I could not have done it as well and if we had tried to do it ourselves, I would have had to try to get help such as New York gave me and, personally, I don't think that help is available.

8127

Q. Does North American help in these financing matters result in substantial savings to the subsidiary companies? A. It has been my belief that that is true. I can't measure the savings. There is no way I can do that. But it has been my opinion, definitely, that we are better off to have their help financially than we would be otherwise.

Q. Now, Doctor, we have had various testimony from Messrs. Stokes and Michel, as to the contacts of the St. Louis organization with other subsidiaries of The North American Company. As a chief executive of the St. Louis

Company, are you interested in the maintenance of these contacts? A. Yes, very much so. Not only as chief executive, but because, in past years, I have, personally, had opportunities to find out the real value of these committees to the individual companies.

—3,415—

Q. What value do they have? A. Oh, they have this value, that you are able to get together a group of men doing the same kind of work, solving the same kind of problems,
8129 but because of the peculiar relationship, they have no inhibitions at all about telling everything they know. I mean, as distinct from going to any trade organization or anything like that, where the management would probably not let these—these fellows would have the impression the management didn't want them to do it.

Here, in this committee, they just let everything down because of their peculiar membership in this one North American family and that gives a comparison of the problems; it gives an insight to the problems; it gives information that I don't believe you could get in any other way.

8130 Q. Does any such intimate relationship exist between non-affiliated companies so far as you know? A. I know of no such relation except the big general trade organizations like Edison Institute Committees and things like that where everybody that is associated with business comes into it, but there is no sub-grouping of committees——

Q. (Interposing) I mean, does this intimate inter-family relationship exist in the large trade organizations? A. Not that I know of. Not at all. I tried to say that you go to that and it is a much more formal participation. This is an intimate personal participation.

—3,416—

8131

Q. For example, did the Potomac Company have any intimate contact with the company in Baltimore? A. Hardly any. Even to this time it is surprising how little we ever had in common.

Q. Well, what is the essential element in this relationship? A. Well, I think the essential element in the relationship is the—call it what you please—the compelling urge because members of a family are in general financial control of the companies, there is an intimate relation between them, they are expected to do it because of this relationship at the top.

8132

I don't think today that if it weren't for the relationship that binds Missouri and Wisconsin in the same system, I don't believe these things will persist.

I think, if they were even entirely separate, why, I believe, the committee work would stop. I think there would be some earnest souls try to keep it up for its value, but I think the inherent binding force would be gone.

Mr. Odell: May I get Mr. Browning's question that led to that answer?

8133

(Whereupon, the question was read by the reporter.)

By Mr. Browning:

Q. Doctor, are you aware of any competitive feeling between the various subsidiaries of The North American system? A. Oh, yes; oh, yes. Of course, there is a very intense

competitive feeling. It shows itself in lots of ways. When

these reports come out on unit costs of various kinds, whether it would be per kilowatt hour generated or whether it would be cost of billing, which is furnished the accounting department, whatever it refers to, there is a great racket and fuss and feathers.

My men will come into my own office and say, "Look at this." They watch the relative costs that come in. I don't believe they are doing it sometimes. I say, "Well, maybe they are. I don't believe they have got all their costs in."

8135 In other words, there is evidence to me that there is lots of competitive stuff and they don't do it with other people. It is just our own companies.

Of course, they don't get it in Chicago, so easily. They don't get it in Cincinnati because they can't see it as easily and they don't know how the things are kept, but nevertheless, there is intense—one man prides himself on the most efficient powerhouse in the world.

The other fellow will say, "That doesn't count, it is the powerhouse that makes the lowest cost per kilowatt hour. Ours is cheaper." There is a lot of intense competition. They

8136 don't like it if the other fellow shows them up.

Q. By "the other fellow" you mean the fellow in the family? A. Yes, that is all we get unless for some reason

they ask for it. Then they wouldn't get it the same way.

Q. Doctor, through the years you have had, according to your testimony, rather constant contact with the executives of The North American Company, and particularly during the period when you have been an executive of a subsidiary operating company. Have these contacts been of

value to you as an executive of the operating company? A. They have, and so much so that I wondered why they weren't made more frequently because, when we did have them, they were found to be very, very valuable and I could show you some correspondence that contacts occurred sometimes through the years of some body. I would write to Milwaukee——

Q. (Interposing) I am talking about your contacts with The North American officials. A. North American officials? I beg your pardon. I was thinking of contacts with some 8138
of the others. That is all wrong. With North American officials there is no question of that. Mr. Fogarty, on everything that has to do with financial matters and, as a matter of fact, having been traveling auditor ever since he was a kid with The North American system, all he knew about general matters of that sort was extremely valuable. The vice president, Mr.——

Q. (Interposing) Freeman. A. (Continuing) —Freeman, of course, we carried problem after problem to him.

—3,419— 8139

Advice giving, not orders, but just advice was of great value.

When Mr. Doolittle was the vice president on engineering matters, of course, he had no big staff or anything like that to solve the problems for you, but it was tremendously valuable to talk to that vice president and then the king of them all, in my opinion, was Mr. Dame, when he was living, who fought, bled and died in every phase of public utility life. He was of great help.

When there was talk of the North American Company getting out of Washington and I was still here as president.

8146 *Colloquy*

Mr. Browning: That is all.

(Discussion off the record.)

The Examiner: We will now recess until 2:00 o'clock tomorrow.

(Whereupon, at 5:40 o'clock p. m., the hearing adjourned until 2:00 o'clock p. m., Thursday, November 14, 1940.)

8147 —3,422—

Docket No. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.*

8150

Hearing Room 1103,
Securities and Exchange Commission Bldg.,
Washington, D. C.,
Thursday, November 14, 1940.

8151

Met, pursuant to adjournment, at 2:00 o'clock p.m.

Before: W. W. SWIFT, *Trial Examiner.*

Appearances:

HERMAN ODELL, Attorney on behalf of the Securities and Exchange Commission.

8152 *Colloquy*

PROCEEDINGS

The Examiner: The hearing will come to order.

Mr. Odell: Mr. Examiner, counsel for Respondents and I have agreed to defer the cross examination of Dr. McClellan until Monday morning at 10:00 o'clock.

A continuance of the hearing until that time will also be acceptable to us.

I, therefore, move that this hearing be continued until
8153 Monday morning at 10:00 o'clock.

The Examiner: Very well, the motion is granted and the hearing is continued until next Monday morning at 10:00 a.m. That is November 18.

(Whereupon, at 2:05 o'clock p.m. the hearing was adjourned until 10:00 o'clock a.m., Monday, November 18, 1940.)

—3,424—

8154

BEFORE THE 8155

Securities and Exchange Commission

Docket No. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.* 8156

Hearing Room 1101,
Securities and Exchange Commission Bldg.,
Washington, D. C.,
Monday, November 18, 1940.

Met, pursuant to adjournment, at 10:00 o'clock a.m. 8157

Before: W. W. SWIFT, *Trial Examiner.*

Appearances:

S. PEARCE BROWNING, JR., and CHARLES S. HAMILTON, JR., of Sullivan & Cromwell, 48 Wall Street, New York City.

RALPH C. BINFORD, and HERMAN ODELL, Attorneys for the Securities and Exchange Commission.

8170 *William McClellan—By Respondents—Cross*

value. I think that is quite true. We did a lot of other

—3,430—

industrial work. It was all construction work with a relatively small amount of reporting.

Q. You stated that sometime during this period, you worked for the New York Commission in a matter involving the New York Edison Company? A. Yes.

Q. When was that? A. To the best of my recollection, it is somewhere around, it might be the latter part of '28. It

8171 was toward the end of this period before we sold out to Stone and Webster.

Q. What was the nature of that work that you did before the New York Commission in connection with New York Edison Company? A. Well, it was in connection with a rate case, valuation, examination of their operating expenses as to whether or not they were higher than they ought to be, depreciation and non-used and useful property, all of those things that go with a pretty thorough examination of a company's property and operations in connection with a rate case.

8172 Q. You made a valuation of their property? A. Not the usual valuation, not the detailed inventory of everything that they had in a valuation but an examination of the testimony that had been put in by others at which I arrived at a figure which I said represented the valuation. I did not

—3,431—

make, as I had in many other cases, an extended inventory of everything they had but I did submit a valuation.

Q. Who hired you to do this work? A. The Chairman, of course. My memory fails me as to the name but it was

the chairman of the Commission in New York City, and I do not think at that time the Commission had been changed.

Q. My question was directed more to whether the company hired you to do this work or the Commission? A. No, the Commission hired me. I was working for the Commission.

Q. And who paid your fees in connection with that? A. The Commission.

Q. How long did that work continue? A. Maybe a year. It was, I should say, a year. Roughly, that would be the 8174
time, about a year.

Q. Were you in charge of that particular case, having a number of people working under you? A. Yes, I had a number working for me and, of course, I personally put in all of the testimony in regard to it and handled that case personally.

Q. During this period, were you also working with your private engineering firm? A. Yes.

Q. In other words, you were working both with the Com-

—3,432—

mission at that time and taking up your duties in your 8175
private engineering firm? A. Absolutely, yes. It was just a case that really the firm had, although I had agreed to do it personally.

Q. I believe you stated that sometime in 1929, your firm was assumed by Stone and Webster and, thereafter you were employed by them until sometime in 1933, is that correct? A. That is correct.

Q. During the period from 1929 to 1933, were you employed by any state commissions? A. No.

8176 *William McClellan—By Respondents—Cross*

Q. And you were not a member of any state commission? A. No.

Q. Then I believe you stated that from 1933 to 1939, you were with the Potomac Electric Power Company? A. That is right.

Q. And from May, 1939 to the present time, you have been with the Union Electric Company of Missouri? A. That is right.

Q. During this period from 1933 to the present time, were
8177 you a member of any state utility commission? A. No.

Q. Or employed by any state utility commission? A. No, nor have I appeared before any in this period except as an officer of my company.

—3,433—

Q. Considering your career, as a whole, there were only two occasions, once in the period from 1911 to 1913, and again sometime in 1928, when you worked on this New York Edison case that you were employed by the state commissions, is that right? A. Yes, I think that by state commissions, that is all I remember.

8178

The Examiner: Will you read the question and answer, please?

(Whereupon, the last question and answer were read by the reporter.)

By Mr. Odell:

Q. Then, Doctor, based on your experience as an employee of the New York state commission on these two occasions, you were able to testify, as you have, that size

8179

does not impair the effectiveness of regulation by state commissions, is that correct? A. No, that is not my testimony. My testimony is that is the fact but that is not based on just my experience with those commissions. That is not the sole basis of my testimony.

Q. What are the other bases for your conclusions there? A. Wandering around through the country, appearing before many commissions, as I have; going intimately into the affairs of a large number of companies and seeing how they were organized and see how they did their work and doing 8180
that all over the country brought me to that conclusion, not merely working for these commissions. You see——

—3,434—

Q. (interposing) Then, Doctor—— A. (continuing) Let me finish my answer, you see when a man is employed by a corporation to adjust its rates or help with a valuation or something, he gets a very intimate knowledge of whether they are efficient or not and it is all of those things that bring me to the conclusion.

Q. Then your conclusion was based on your personal ex- 8181
perience on two occasions when you were employed with the New York commission, and secondly, on your observations when you were with private engineering firms doing work for state commissions? A. And doing work for corporations which gives me an intimate knowledge of whether they are good or bad.

Q. Do you mind clarifying "good or bad"? To whom are you referring? A. When you get into any corporation to look at its property, value it, look at its rate structure, look at how it is doing its business and how it is organized, you

8182 *William McClellan—By Respondents—Cross*

find out whether they are on their toes to do business and whether they have got good organization to accomplish it and have good public relations or whether they are sloppy, to use a slang term, or inferior. You get all of that knowledge seeing how the inside works.

Q. Doctor, have you also kept yourself informed on the problem of size as it bears on the effective regulation by

—3,435—

state commissions by general reading on the subject? A.
8183 Yes, of course, I have. To answer your que tion, general reading and not only general reading but also observation.

Q. And you have kept yourself abreast of information on this question by doing such reading and by your observation? A. Yes, that is true.

Q. So that, would you say, the conclusions that you have given us are based partly on what you have read on the subject as well as what you have seen, as well as your personal experiences with these companies? A. Yes—the question refers now to what point, what is it?

8184 Mr. Odell: Will you read the question?

(Whereupon, the last question was read by the reporter.)

The Witness: What subject, what point? My conclusions on what?

By Mr. Odell:

Q. Your conclusion that size does not impair effective regulation of public utility companies by state commissions? A. Then that is quite true.

8185

Q. Are you familiar with the annual reports of the Public Service Commission of New York? A. Not intimately familiar with them. I have not operated in New York. I have had no reason to pay particular attention to those. I

—3,436—

have been very busy with other things. Since I left them, I have not been intimately acquainted with those reports at all. The best I can say is, if some notable case came up, I might look at that for its general effect but I am not familiar with them, no.

8186

Q. In your reading and study of this question of size as it bears on the effective regulation by state commissions, did you consider the following statement found in the 1937 Annual Report of the Public Service Commission of New York and I am quoting from Volume I of the Report of the Public Service Commission of New York for the year 1937,——

Mr. Browning: May I interpose there—I suggest that he first ask the witness if he read the 1937 report.

Mr. Odell: I believe the witness stated he was not familiar or has not seen these annual reports of the Public Service Commission.

8187

The Witness: I did not say that. I said I was not familiar with them.

By Mr. Odell:

Q. Have you read the 1937 annual report of the Public Service Commission of New York? A. No.

Q. In view of that fact, would you care to contradict the following statements appearing in that report and I quote from Page 39 of Volume I:

—3,437—

8188 *William McClellan—By Respondents—Cross*

The chapter is headed, "Utility Mergers and Consolidations".

"When it became apparent to the Commission that a major unification movement was under way and that a definite statement of policy should be announced, so that all companies contemplating applications to the Commission might know what the Commission would require and what it was aiming to accomplish, a memorandum was prepared and finally adopted on November 10, 1936 outlining a plan to
8189 which all mergers and consolidations would be required to conform. This statement was as follows:

"There have been submitted to the Commission, formally and informally, several plans for the unification of several companies, each of which is now being operated separately. The most important plans relate to companies in the Consolidated case (now called the Consolidated Edison), the Niagara Hudson and the Associated Systems.

"The purposes of these plans are in general to eliminate intermediate companies, to simplify their corporate structures, to enlarge the operating units, to reduce the cost of
8190 service and to reduce the taxes which are being levied upon intercorporate transactions within a single system due to involved corporate relationships.

"Generally, these purposes are to be commended and there long has been need for corporate simplification in many systems, but the most important question is whether the companies or systems resulting therefrom will facilitate or hinder effective regulation. Mere size is a handicap to regulation

—3,438—

A small company can be investigated and even its property

8191

valued in a short time; but to cover a company which serves a large part of the state or has property running into hundreds of millions of dollars, several years and large sums of money are now required because of its size, the area to be covered, the variety of local conditions and the lack of proper records, such as inventories or continuing property records and original cost data. * * * The time and expense required to investigate and value any company or system could be greatly reduced if continuing property records were kept up-to-date, if the books of account showed the original cost, and if the depreciation reserves represented even approximately the amount of depreciation actually existing in the property and if it were not necessary to estimate reproduction costs."

8192

That is all I am going to quote from this statement, Doctor, and I think I read slowly and you heard me.

All I want to ask is, do you want to contradict that statement?

Mr. Browning: Just a minute. Let us examine that a minute.

8193

(The volume was handed to counsel.)

By Mr. Odell:

Q. All I want to know is whether you want to contradict that statement. I do not care to have you give me any explanation at this time.

—3,439—

The Examiner: Off the record.

(Discussion off the record.)

8194 *William McClellan—By Respondents—Cross*

By Mr. Odell:

Q. Do you care to contradict the following statement appearing in the excerpt which I have just read, "Mere size is a handicap to regulation."? A. I certainly deny that. Mere size is not a handicap to regulation.

Q. Doctor, during your incumbency as president of the Union Electric Company, have you tried to sell any securities in St. Louis? A. No, not a bit.

8195 Q. And during your incumbency, has the situation arisen where the company had to sell any securities in St. Louis or otherwise? A. Nowhere. It has been a constant problem with us, knowing we must sell securities, but no situation has arisen where we have gone out to sell any. I beg your pardon, let me add to that, except in one case where we sold $1,100,000 of common stock of the gas company direct to the North American Company.

Q. Then Doctor, what is the basis for your conclusion as stated on page 3,380 of the record and here is your statement:

8196 "It is almost impossible for us—it would be impossible for us in St. Louis to have a complete financing department

—3,440—

because, in the first place, we can't get all the money in St. Louis.

"Now, that is, of course, a fact that can't be denied."

What is your basis for this statement, "in the first place, we can't get all the money in St. Louis." and your second statement, "Now, that is, of course, a fact that can't be denied."? A. The basis for that statement is, first of all, my

experience in other communities like St. Louis, such as Washington, and general experience, many many talks with bankers. Even in St. Louis, bankers come into my office saying, "Of course, we could not put all of the securities here. We would have to go outside for them", and my general knowledge. To my knowledge, it never has happened with any company of our magnitude any place in the country.

Q. Have you ever faced the bankers in St. Louis with the problem of distributing any securities for you in the past year and a half? A. No. 8198

Q. I see. A. I have talked to them a great deal, though. They have been in to talk to me about doing it.

Q. Does the Union Electric contemplate any financing? A. Yes, it has got to finance, a great deal of financing. It faces a tremendous problem of financing.

—3,441—

Q. In the immediate future? A. In the immediate future. We are spending money hand-over-fist now. In fact, I think very early next spring we will have to get money somewhere.

Q. Doctor, have you been faced with the problem of finding a lawyer in St. Louis who could write a public utility mortgage? A. No. 8199

Q. What is the basis for your statement appearing on page 3,381 of the record which is as follows: "there is hardly a lawyer in St. Louis writes a mortgage in twenty years, especially a public utility mortgage". A. Well, that perhaps is a little bit too conversational and ought to be corrected. I ought to have limited that statement to public utility mortgages and not a general mortgage on a man's house or something like that.

8200 *William McClellan—By Respondents—Cross*

Q. I think the statement is limited that way. I want to know whether you have been faced with the problem of finding a lawyer in St. Louis who could write a public utility mortgage for you? A. No, but I know the public utility mortgages more or less that have been written in St. Louis and I know how it is always done, almost always done, and consequently, I think I am safe in making that statement.

Q. You say you have studied public utility company mort-

—3,442—

8201 gages? A. No. There are only two or three public utilities in St. Louis and I know they have mortgages and, therefore, inasmuch as there is no public utility mortgages except ours in St. Louis that really amount to anything of that big a nature, I am safe in saying there is hardly a lawyer who could do it. It isn't as if there were 100 or 200 of these public utility mortgages made in St. Louis and, therefore, you might find lawyers who could do it, but there is very little of that kind of business in St. Louis or any other city, for that matter. Incidentally, that does not challenge the St. Louis lawyer except he does not have a chance to get the ex-

8202 perience.

Q. Have you consulted with other people on this question of finding a lawyer in St. Louis who could write a public utility mortgage? A. No, I haven't had to write a mortgage so I haven't had to consult anybody about it.

Q. Your conclusions, then, on that point are based on the fact that there are few public utility companies in St. Louis? A. Few mortgages. It isn't often that mortgages are written.

Q. Have all of those mortgages that have been written been written by lawyers other than St. Louis lawyers? A.

8203

They probably have all been written just like our own, St.

—3,443—

Louis lawyers doing what they could in conjunction with specialists in New York or somewhere else. That is the way those things are usually handled, local lawyers do what they can on it and supply what they can but they work in conjunction with specialists from large places.

Q. Have you participated in past financing operations in St. Louis? A. No.

8204

Q. Where mortgages were written? A. No.

Q. Do you know whether those mortgages which have been written have been written by St. Louis lawyers or lawyers from other parts of the country? A. No, I do not know. That was an expression of opinion based on my rather broad general experience in those things but not from direct experience in St. Louis.

Q. What are the functions of the Union Electric Company of Missouri and its subsidiaries other than financing which you state cannot be performed in St. Louis? A. What are the functions?

8205

Q. Yes, other than financing which cannot be performed in St. Louis. A. Well, the principal other function, of course, as I testified, we have got to go outside of St. Louis to buy a lot of things, a great deal of our equipment and things of that sort. We must, from time to time, go outside of St.

—3,445—

Louis to get personnel. Sometimes we cannot find anybody adequately trained in St. Louis. That is the only time we do go out, when we must go out and beyond that, we have the very large question of going outside of St. Louis for

certain help such as engineering firms, law firms, to do specialized tasks that we cannot find anybody to do there or after trying, think that we can't find anybody in St. Louis with the requisite experience to do it and then, above all that, comes the great question of policy, corporate decisions, in general, in which, if we go outside of St. Louis we get prospective on those we get experience in handling lots of other properties, and we get, and especially proper, those who have the same sort of interest in the St. Louis problem
8207 that the local managers have.

A great many questions come up in regard to just what shall be done in the way of public policy, the question of rates, the question of types of equipment to put in. These committees, for example, are outside of St. Louis. We get help from those and I personally have had experience with those committees and know how valuable they are and so——

Q. (interposing) I am referring more, Doctor, to the operating functions of Union Electric Company and its subsidiaries. A. The operating functions?

8208 Q. Yes. A. That is, to a large extent, localized in St.

—3,446—

Louis. The mere operating functions, putting the kilowatt hours on the wire.

Q. I see. A. Except for these other things I have talked about.

Q. Since you have been president of Union Electric Company of St. Louis, have there been instances where you had to go to engineering firms outside the city of St. Louis for advice and assistance? A. Yes. We have a man, for

example, I can't think of his name at the moment, whom we employ to look into our rate structure. We have brought men from some of the other companies of the North American system. We have had a man looking into our customer information service. We have Stone and Webster, of course, of New York City and Boston building our power house and working on the designs or specifications, things of that sort.

Q. Is that on the additions to your Venice plant? A. Yes. We had trouble on one of our transmission lines to Bagnell. The foundations of the poles were giving way and we brought 8210
Stone and Webster in to help us. My own men came to me in that case and said, "We could do this but we do not feel we have had all of the experience and we think we had better get somebody like Stone and Webster who has had general experience to tell us how to fix these things. If we do it it might be more expensive" and, therefore, in response to their

request, I brought in Stone and Webster.

Q. Would you say that presented an acute problem which required the assistance of outside engineering firms? 8211
A. I would say that is an acute problem that made the assistance advisable. I am not saying we could not have fixed that, that things would have gone to pot and fallen down, but it was advisable in the minds of the men who were there though not required absolutely.

Q. Have there been any other instances of the Union and its subsidiaries where you have called on outside engineering firms for assistance?

Mr. Browning: By "outside engineering firms", you mean outside of North American?

8212 *William McClellan—By Respondents—Cross*

Mr. Odell: And outside of St. Louis.

Mr. Browning: In other words, firms like Stone and Webster?

Mr. Odell: Yes.

The Witness: You mean firms and individuals too, I presume?

Mr. Odell: Yes.

The Witness: Mr. Campion is working for the Potomac Company.

8213

By Mr. Odell:

Q. Just a moment. I am asking for persons not associated with the North American system. A. No, I can't

—3,448—

recall any further instances than those that I have mentioned, if they are outside of the North American system, but when these men come from the North American system, they do not come as gifts. We employ them.

Q. Will you identify the firm of Stone and Webster?

8214 A. Stone and Webster Engineering Corporation is its corporate title.

Q. It is not affiliated with the North American system other than its work with the North American system?

Mr. Browning: I object to the word "affiliated".

The Witness: I can't speak for the affiliation. I do not know anything about affiliation but I know they are an outside independent firm that we employ that way. I do not know whether they are affiliated or not.

By Mr. Odell:

Q. I believe you stated, Doctor, that at one time you were associated with Cleveland Electric Illuminating Company, Potomac Electric Power Company and now with the Union Electric Company of Missouri. During the times that you were associated with these various companies, did you ever try to arrange for any financing without the aid of the North American Company? A. No, never. It was an avowed policy on our part not to do it. We made use of the 8216
North American facilities, of course, in financing.

Q. During the course of your career, have you ever par-

—3,449—

ticipated in financing operations without the aid of North American Company? A. Well, certainly not to amount to anything. I cannot think now whether I did anything with Mr. Huntley of Buffalo General Electric Company. My memory does not serve me there but certainly nothing of any importance.

Q. Have you ever made a study or investigation of the facilities and the advice available to you in the event that 8217
you did not desire to call upon North American Company for their assistance in financial operations? A. Well, I faced that in Cleveland, I faced that problem in Cleveland when Mr. Lindsay, the president of the company, and I came down to New York to see National City, Dillon, Read, Spencer Trask, in regard to financing. I faced it in the first Potomac issue which was worked out and required by the Public Utilities Commission to be offered to bankers in competition with each other.

8218 *William McClellan—By Respondents—Cross*

I faced it in the second issue that I handled with the Potomac Company and those are the three direct ones.

Now, I have seen it by what might be called collateral experience in North American, other people talking. There have been hundreds of conversations about it.

Mr. Odell: May I interrupt and ask that the question be read again to Dr. McClellan?

The Examiner: Yes. Read the question.

—3,450—

8219

(Whereupon, the last question was read by the reporter.)

The Witness: Yes, certainly.

By Mr. Odell:

Q. You made a study of the facilities available to you? A. Yes.

Q. What did your study consist of? A. Conversations with bankers, conversations with people that are selling securities and the fundamental fact is that they are interested in their own interests and not in mine and, therefore,

8220 would never be available to me for the same kind of help that the North American would be.

We do not take the information from salesmen of pumps, say, without finding out something about it because we know the pump man is going to talk his pump and going to look after his own interest and if we want advice, we have got to have somebody looking after our interests.

Q. Well, you say you have made a study. What was the purpose of it? A. It has been a continual study. If you mean a special study, there is no way of making a study.

It is a continual study. It is a fundamental fact that you do not go to people who have other interests than yours.

Q. Have you ever called upon investment banking firms for advice and assistance in connection with a financing operation? Certainly.

—3,451—

Q. Have you done so without first discussing this matter with the officials of North American Company? A. No.

Q. Without first consulting with the officials of the North American Company, have you ever discussed with investment 8222 bankers, the type of security you should offer, the interest rate or the dividend rate? A. Not a directed discussion toward the issue of any security, but many discussions by the bankers coming in to see me and suggesting that we could do certain things and all that sort of thing but no directed discussion with a banker toward the definite issuing of certain securities.

In other words, when the problem comes up to issue the securities, we do not go to bankers and talk about it until we have discussed the matter with the North American Company. 8223

Q. In other words, without first consulting the North American Company, you have never gone to an investment banker and said, "Look here, we need some more money here and I want you to give me your ideas as to what kind of security we should offer"? A. No, not without first discussion with North American.

Q. Have you ever done it after consulting with the North American Company? A. Yes. I have sounded out some times local bankers and it is pretty difficult to disassociate the

—3,452—

two, the North American from the other because the North American being in it from the beginning, I might go to somebody and talk, yes, but I cannot remember exact cases now. I know that I have, particularly one or two in Washington.

Q. Have you ever made a study of the financing operations of utility companies who are not part of a holding company system? A. No, I can't say that I have made any investigation of them, except as to the results of the financing when it was done but not as to methods.

8225 Q. You never made any study as to the methods? A. No.

Q. But you say you made a study of the results? A. I observed them and see that they come out with a certain kind of security, certain features in connection with it, and compare that with our own. That is what I meant by results.

Q. Have you ever made a study to determine whether, in those particular cases, looking at the results of these utility companies, whether the security that they issued was the best type of security for the company? A. No.

Q. Did you ever study these results to determine whether or not the utility company was paying a higher interest or 8226 dividend rate than was required under the circumstances?

A. No, it would be very difficult from the outside to determine that any way without knowing a great many details.

Q. Are you familiar with the Southern California Edison Company? A. Oh, somewhat, not in detail at all. I built a power house out in San Francisco and I got acquainted in a general way but I really do not know.

Q. Do you know whether that company is a subsidiary of a holding company? A. I think not, if my memory serves me.

8227

Q. Are you familiar with their recent financing operations? A. No.

Q. Have you seen any reports of their recent financing operations? A. No, I do not recall any. As I say, I can't remember. I know there was something advertised in the paper and things like that but that is all. I do not know when it was they did it even.

Q. In 1935, Southern California Edison Company issued and sold $108,000,000 worth of bonds with a 3-3/4 interest rate. Are you familiar with that particular operation? A. No, indeed.

8228

Q. In October, 1940, the Southern California Edison Company issued and sold $108,000,000 of bonds to refund the

—3,454—

bonds that had been issued in 1935—

Mr. Browning: (Interposing) I move to strike the statement.

Mr. Odell: Do you mind if I finish my question?

Mr. Browning: No.

Mr. Odell: (continuing) at a price to yield 2-7/8 per cent. Are you familiar with that operation?

8229

The Examiner: Just a minute. Read that whole question to me, please.

(Whereupon, the pending question was read by the reporter.)

Mr. Browning: I move to strike both of the last two questions on the ground that they are mere statements of fact which do not appear in the record.

8230 *Colloquy*

Mr. Odell: I think that both of those statements are a matter of public record and I am merely asking the witness whether or not he is familiar with those statements.

Mr. Browning: I have no objection to counsel asking the witness if he is familiar with the 1935 and 1940 financing operatings of Southern California Edison Company and developing any information which the witness may have. What I object to is making these
8231 statements of fact for the record by counsel.

Accordingly, I renew my motion to strike.

The Examiner: Mr. Odell, is the suggestion of counsel acceptable to you? Is that the purpose of your inquiry along this line as to whether the witness is familiar with those two issues?

—3,455—

Mr. Odell: Well, he said that he is familiar with them to the extent to what he has read or seen in newspapers on that.

8232 The Witness: I did not say that.

Mr. Odell: I may have misunderstood but I think the record will show he stated something similar to that.

The Witness: If it does, it is wrong.

Mr. Browning: My suggestion is that the two questions and answers be stricken and that counsel pursue the line of what does the witness know about any financing operation that Southern California Edison Company may have carried on.

Colloquy

8233

Mr. Odell: I think he has already testified to that and if the reporter will go back and read the record, it will so show.

The Examiner: Off the record.

(Discusssion off the record.)

Mr. Browning: I move to strike.

Mr. Odell: I think the way my question is worded, I am asking whether he is familiar with those two particular financial operations.

8234

Mr. Browning: I have no objection to that question but I renew my motion to strike the last two questions.

The Examiner: I will grant the motion but you may ask him whether he is familiar with those two issues.

Mr. Browning: Are we striking that physically

—3,456—

from the record?

The Examiner: No, the record will stand as it is.

8235

Mr. Odell: Off the record.

(Discussion off the record.)

Mr. Odell: Could we have a short recess?

The Examiner: Yes.

(Whereupon, a short recess was had after which the hearing was resumed.)

The Examiner: Are you ready to resume?

Mr. Odell: Yes.

8236 *William McClellan—By Respondents—Cross*

By Mr. Odell:

Q. Dr. McClellan, as an engineer, are you in favor of the dissemination of information on matters constituting contributions to the art? A. Very much so.

Q. Would you say that the engineering profession, as a whole, is in favor of dissemination of such information? A. I would say that it was, as a whole, in favor of that except, of course, where private interests are involved, such as a man
8237 who is developing a process which he expects to patent, for example. He is not telling the world about it and thing of that sort.

Q. With the exception of an instance like that? A. Not only that instance but you might accumulate instances, I do not know. Sometimes when you are performing an experi-

ment and do not expect to patent it, you do not care to tell much about the progress of your developments until you are satisfied yourself of it even though there is no patent involved. You would not let outsiders know about it until
8238 you are pretty sure that the experiment, so to speak, was finished. You would not give them progress reports of the experiment, for example. You would not care to do that.

In fact, there have been some very important scientific men who have waited a good many years to be sure what they would say before they would publish it and the same way with companies. They might be carrying on experiments and even thought they might expect to tell the public about them later, they would not tell about them in the meantime.

Q. Would you say in the last example you gave, where the engineer for the company conducting those experiments

8239

knew that an engineer in another company was faced with similar problems, would you say that it would be uncommon, in the engineering profession, for those two engineers, faced with substantially the same problem, to consult with each other? A. No, I would say, from my own experience, I would say that he would hardly ever refuse to consult with the other engineer. It is a question of how far he would consult.

Q. But he certainly would not keep silent on the question if he knew another engineer was faced with substantially the same problem and was experimenting with that problem? 8240

—3,458—

A. He might tell the whole story. He would not go into the details. He might speak generally, for reasons of his own, but fundamentally, the attitude is to exchange information but not necessarily or completely or wholly or to tell the whole story. I think that same thing applies to other professions too. Even lawyers, I think, would exchange generalities, but I am not sure they would tell everything respecting their cases. Some engineers are the same way.

8241

Q. Would you say, Dr. McClellan, that in the course of your association with North American Company, that you have become familiar with the operating heads, at least, of the Cleveland Electric Illuminating Company, the Wisconsin-Michigan group of companies and the Potomac Electric Power Company? A. Yes, I would say so. I would go even further and say I have gotten acquainted with all of the North American upper men.

Q. Would that also include the important engineers on the staffs of each of those companies? A. To a less degree.

8242 *William McClellan—By Respondents—Cross*

In my later years since I have become an executive, not so much with those men as I did, maybe 15 or 20 years ago when I was more directly concerned with engineering.

Q. Speaking generally, you, at least, know the men who are considered to be the important engineers in each system? A. Yes, I think that is true. I have a bad memory. I might

—3,459—

not even be able to give the names in some cases, but if the
8243 names were mentioned, I would know them.

Q. Would it be inaccurate for me to say that you consider such men to be your friends? A. In the North American system?

Q. Yes. A. Why, they are undoubtedly friends, but if you mean they always act like friends, no, especially if they have criticism to make, they certainly do come at you sometimes with criticisms.

Q. Isn't that a gesture typical of friendship? A. It may be but I mean they certainly do not pull their punches because of any friendship. That is what I mean, but I do
8244 really think they are friends.

Q. And I take it that you respect the ability of these men as executives and engineers? A. I certainly do and on two occasions, I have gone to them on that basis because I did respect their abilities and their opinions and the help they could give me.

Q. Would I be assuming too much if I said that that feeling was mutual? A. Well, no, I do not think you would be assuming too much. I think they regard me as their friend, if that is what you mean by mutual.

8245

Q. Assume, Doctor, that your company, Union Electric

—3,460—

Company, has solved the problem in engineering or general operation which either the Cleveland property or the Washington property is faced with. Let us assume further that these companies are not subsidiaries of the North American Company. Would you refuse to permit the members of your staff to give, say, the engineers of the Cleveland property or the engineers of the Washington property the benefit of the collective knowledge of your company on a 8246
problem that you have already solved and which one of these companies is faced with? A. Quite the contrary, not only would not refuse to give it but it is given. I mean everyone of those things, the results, when they are completed and ended is discussed in this committee and the boys know they have a free for-all position to the last——

Q. (interposing) I am postulating that situation, at a time, we will say, when Cleveland Electric or Washington and the Union Electric properties are no longer subsidiaries. Assume that situation. A. Would I refuse?

8247

Q. Yes. A. No, I would not refuse ever, I do not believe, except I can't tell whether I would or would not keep it until I get to the specific case because there might be cases in which something more was involved than the information I don't know. Generally speaking, I would not refuse.

—3,461—

Q. Aside from—— A. (interposing) If they came and asked for it.

Q. Aside from an exceptional situation? A. Generally speaking, if they came and asked for it, they would get it,

8248 *William McClellan—By Respondents—Cross*

a great deal of it. In fact, somebody might write a paper and give it all, give it to the whole world to know.

Q. And knowing the executives in the other companies, would you expect a request from you to such companies, under similar circumstances, would be treated in a similar manner? A. No, I would not expect that. In my experience, I have wanted information sometimes and I either haven't had the nerve or something like that just to ask for it. On the other hand, if I knew the man intimately, I
8249 would have less hesitancy in asking but if I was totally unacquainted, I might write a general letter suggesting that I would like to have it but I would not think I had any right to it and I know in some cases, there are companies—I cannot name individual companies—but it just comes to the back of my head that sometime I have been refused. Some men seem to want to be pretty close mouthed, I don't know why. It has not been my policy.

Q. Can you give us the details? A. I told you I couldn't. I told you it is in the back of my head I did not get the same kind of enthusiastic response from everybody.

8250 —3,462—

Q. But knowing these executives of the other companies as you do and considering your long acquaintanceship with these men, you would not expect to be summarily turned down by them, would you? A. I would not, because I have an extraordinarily wide acquaintance and I think I am luckier than some.

Q. Mr. McClellan—— A. (interposing) One thing, let me say, let me add to that. May I add to it? May I add to it to explain just why I say that?

The Examiner: Yes, you have that right.

The Witness: One thing is, one great difficulty we have in asking for information from other companies; there is hardly a letter we don't put in "This, of course, will not be made public and will not be used anywhere. This is for our private information."

A lot of presidents, under those circumstances, would not even trust us because some of the information we are giving them might not be put into evidence, or something like that, the way we would like to have 8252
it and they won't trust us, confidentially, that is the reason. That is one of the fundamental troubles we have, if you are not in a family or connected.

By Mr. Odeil:

Q. I am referring to a situation, Doctor, where information you would receive from such other company would be the kind of information that you would use in improving

—3,463—

your own operations, it would be used in connection with a specific engineering or operating problem that you were then faced with. A. Even that isn't always clear. In all the letters I write I say, "I will not make this public. I will use it for my private use", but what I am trying to bring out is the other man won't take my statement 100 per cent and even at times, he is reluctant to give me that information in that manner. 8253

Q. I assume the other man assumed you would not use this information that would result to his detriment that, barring that, he would give you the information? A. I think

8254 *William McClellan—By Respondents—Cross*

so, but I am bringing out everybody could not do that. Some companies might not get it. I might and somebody else might not.

If the companies that are presently subsidiaries of the North American Company cease to be so, would you say that your friendship with the operating heads of these various companies would cease? A. No, those friendships are personal.

Q. And you believe that they would continue? A. I think
8255 they would continue without question, personal friendships with the officers of the other companies, yes, sir.

Q. Doctor, you have referred to reports on unit costs of various kinds that each company gets up. I do not think

—3,464—

that you described very many of these reports or more than one or two. Your statement on that point was as follows:

"When these reports come out on unit costs of various kinds, whether it would be per kilowatt hour generated or whether it would be cost of billing". Those are the two reports, I believe, that you referred to, unit cost per kilowatt
8256 hour and unit cost of billing. A. There are hundreds of costs; unit cost per kilowatt hour——

Q. (interposing) I am referring now to the reports that are distributed to the various companies. A. Well, we all gather together, all the companies of the system, but we file first a general operating statement. It is sent to New York. We also file a detailed operating statement in far greater detail than the ordinary summarized operating statement. That is taken by statisticians and others in New York and analyzed down into reports that come to us, I think

monthly, as long as this and as high as that (indicating) with a great list of items all down the side and then here are the companies and I can tell, for example—I merely mentioned two costs of perhaps 40, 50, 60 that are in this list. I don't know whether it has been put in evidence by others or not.

Mr. Browning: I expect to offer those later.

Mr. Odell: I see.

The Witness: One of those, for instance, we find it —3,465— 8258

costs us X cents per bill to bill a customer, Wisconsin Y cents and Washington Z cents and so on. Now, we look at those and we wonder why, if ours is high, why it is high. If it is low, we sort of tickle ourselves and let the other fellow worry.

Now, there is a great list of those things, B. t. u.'s for the power station, B.t.u.'s per kilowatt hour; pounds of coal per kilowatt hour, a lot of other things per kilowatt hour and then a lot of things, per customer, per customer, per customer, and a great list of things, you see, for all of these companies on that 8259 sheet. It shows just what we are all doing for these several items and, of course, if we are high compared to the others, then we all get excited. That is the point I am trying to bring out and if we are low, I say, we sort of chuckle.

Q. And each of these operating companies then assemble this information that refers to their particular company, and it is sent to New York for preparation into a table showing comparative performance? A. That is right, but New

8260 York has to do some analysis on it because, for one reason or another, perhaps we group under, let's say commercial expenses, we group something that another company doesn't so New York sort of takes that out and gets an adjusted cost to try to make it really comparative. That is the point.

Q. I take it this information that is assembled by each

—3,466—

of the operating companies is assembled as much for its own information as for the purpose of distributing or sending it
8261 to New York? A. Yes, that we would do, of course, so far as that is concerned. We would want to know what our billing expense was per customer, for example, even if we did not send it to New York naturally, and then we try to scout around. I have done it with other companies but we do not get very far because we have no way of knowing how they keep their expenses and the comparisons are almost worthless, in many cases, because we cannot go into their business and find out how they do it.

Q. I take it that these reports that each of the operating companies assemble, a number of copies are made of that re-
8262 port so the executives within the companies may have a copy? A. Well, we get a copy to keep——

Q. (interposing) There is more than one copy. I am referring to the records or the information that is assembled by the operating company. My question was whether there was more than one copy made? A. There are at least two copies made but, as a rule, they are so expensive to typewrite and copy up we do not make a huge number of copies. What we do, there may be three copies, for example, one may come to me, one to the comptroller who makes up the report

and who keeps one copy in his file for record purposes, and then there is a second copy and on that there is a slip of

—3,467—

paper with 6 or 8 or 10 names and it circulates around each of those men, they look at it and check it off, so far as their work is concerned, and that is the general system. Now, there might be five copies made of some reports, I don't know. Sometimes the chief engineer wants one to keep and we will say, all right, make an extra copy. That is sort of inside the company, for mere convenience, what we call the work- 8264
ing copies and the number we make of those may depend on circumstances. There may be one working copy, there may be five working copies in some other reports. I do not know. I know there is a difference.

Q. I take it the cost and the work involved in reproducing some extra copies of such reports would not be excessive, would it? A. No, it would not be excessive, maybe, in dollars and cents, but what to do with them after you reproduce some of them, load the files up with them and have them all around, extra working copies——

Q. (interposing) Let me stop you, Dr. McClellan. As- 8265
sume they were not retained in your files and you had people to whom you could send them. Would there be any great problems involved in reproducing some extra copies? A. No, it would not be huge.

Q. It wouldn't be huge, you say? A. Because you can make carbon copies, if you want one, but if you want many,

—3,468—

you have to go to the expense of photostating or mimeographing and all that sort of things, but the expense multiplied by the number of things we do is a figure we are trying to

cut down all the time. It isn't a joke. It isn't just nominal. It takes a lot of time, too, when you get to it and the total expense is not cheap.

Q. Dr. McClellan, I believe you stated at various times in your career you were responsible for the management of the Washington properties, namely Potomac Electric Power. You were also associated with Cleveland Electric Illuminating Company in an executive capacity and, at the present time, you are president of Union Electric Company of Mis-
8267 souri. Have you ever been responsible for the management of two or more of these companies at the same time? A. Never for the management of more than one company at one time. At the present time, I do not want to have the record overlook anything, at the present time I am still a director so my responsibility of management ends with whatever director responsibility one has but nothing else.

Mr. Browning: Could we clarify that?

Mr. Odell: Yes.

The Witness: I am a director of the Potomac Elec-
8268 tric Company. I am a director of the W. R. & E. Company, and I am also chairman of the board of the W. R. & E. Company but my responsibility there is limited actually to presiding at board meetings

—3,469—

and nothing else.

By Mr. Odell:

Q. Have you ever been faced with the problem—— A. (interposing) What problem?

Q. (continuing) of managing two or more of these companies at the same time? A. Never.

Q. Dr. McClellan, when was the last time that you had written an article for publication in an engineering journal? A. I think about one year ago I made a talk on power for preparedness before the St. Louis section of the American Institute of Electrical Engineers which was afterwards assembled and printed as an article but I think that is the only one that I have written in quite a number of years.

Q. Do you recall the time you wrote an article before 8270
the one you last wrote? A. No, I can't recall when. In fact, I never wrote a great many articles. My articles were written on more general subjects, of a more general nature, than engineering. My engineering articles, of which there are a fair number, were largely, sometimes simple and sometimes elaborate, discussions of papers read before societies in which I got up and made some extended remarks on the paper that was under discussion and then, afterwards, I took the proof of it, edited it and put it in shape for publication. I was never a very elaborate writer of articles on engineer-

—3,470— 8271

ing subjects except I have written a great many of the kind I described. I think the last major one I wrote before that was before the N. E. M. A. organization but not on a strictly engineering subject.

Q. Do you recall what the subject was then? A. No, I cannot. It had something to do with the general organization for marketing of equipment and things of that sort as between companies. That was the N. E. M. A., which is the National Electrical Manufacturers Association. I can't

8272 *William McClellan—By Respondents—Cross*

recall that stuff. I have had a good deal of stuff printed but not as formal articles which I sat down and wrote.

Mr. Odell: Off the record.

(Discussion off the record.)

Mr. Odell: Will you read the last answer, please?

(Whereupon, the last answer was read by the reporter.)

8273

By Mr. Odell:

Q. Have you written any articles on the question of size as it affects efficient operation? A. No, not that I can recall.

Q. Have you written any articles on the question of size as it impairs the advantages of localized management? A. No.

Q. Have you written any articles on the question of size as it impairs effective regulation by state commissions? A. No.

8274

—3,471—

Q. Have you addressed any engineering groups on these questions that I have just enumerated? A. No. The fact of the matter is, it never occurred to me to discuss it. It never has been in my mind a moot question, that there was any room for discussion.

Q. You say you have never discussed these questions before? A. Not publicly. I have never written papers on them, that is what you said, or before engineering organizations.

Q. Yes. Have you ever discussed them in private? I mean outside of things that have been published?

Mr. Browning: Will you read that question?

(Whereupon, the pending question was read by the reporter.)

The Witness: No, I do not think there has been much discussion there even. As I say, I have never met anybody to whom it was a moot question needing any discussion. 8276

By Mr. Odell:

Q. Have you ever made a canvass of engineers, operating executives and other authorities on these questions? A. No, I never thought of it.

Q. When did you start to collect your thought on these questions? A. Well, I suppose—yes, I started to notice them and collect my thoughts on them, I think about 1912 or '13 after I had been a year with the New York Commission which was my first big experience with handling all these 8277

—3,472—

matters with a great many companies, large and small, in New York state.

Q. May I interrupt for just a moment. What was the complexion of utility companies?

Mr. Browning: When?

By Mr. Odell:

Q. What was the complexion of utility companies in the state of New York? A. I do not know what that means.

8278 *William McClellan—By Respondents—Cross*

Q. Just a moment, at the time you were employed by the New York state commission in the period from 1911 to 1913? A. You will have to define "complexion".

Q. Complexion as to size. A. Size of a utility company?

Q. Will you compare the size of operating utility companies in New York in the period from 1911 to 1913 to the size of utility companies in New York in the period from, we will say, 1930 to 1940? Are there as many companies presently operating as operated then? A. Well, now, I can-

8279 not answer that question without the record before me. In the second place, there may be as many companies operating but I think probably more of them are under holding companies than there were when I was there, but when it comes to size of companies and relative size, which gives me the same kind of an answer, I think the relative size may not

have changed so much. Except for the holding company feature and that I cannot speak by the book, I would have to have the record in front of me.

8280 Q. Do you recall the first occasion when you were called upon to express an opinion as to size affecting the effectiveness of regulation by state utility commissions, size as it affects efficient operation and size as it affects localized management. Do you recall the first time when you were called upon to give an opinion upon that question? A. Why, the first time that the question was ever raised at all was when I read the present holding company bill and I am frank to say I never could understand how it got into the bill that size had anything to do with it and to express an opinion, it was in connection with that bill and when the Union Com-

8281

pany had to make its defense against that bill, that was the first time I ever knew the question was raised. I never would have put it in the bill. I would have said, "too small to regulate", "too small" instead of "too large".

The fact of the matter is——

Q. (interposing) Just a minute. How much time did you give to these general questions before you appeared here to testify? A. Before I appeared here to testify?

Q. Yes. A. As I say, I have been thinking a great deal about it ever since those phrases were used in the Holding

8282

—3,474—

Company Bill so I have been thinking about it sometimes in a desultory fashion, sometimes more directly ever since it was in the bill and this holding company question came up. Up to that time, I had never heard the question raised.

Mr. Odell: May we have a two minute recess?

The Examiner: All right.

(Whereupon, a short recess was taken after which the hearing was resumed.)

8283

By Mr. Odell:

Q. Dr. McClellan, are you familiar with Mr. Woodbridge's experience in matters of financing? A. Not with the details of what he personally did or anything of that kind except in a very general way. I know the general part he played but I cannot tell just exactly every detail.

Q. Do you know whether he has assisted as to legal matters and financial operations of the Union Electric Company? A. Yes, I know that.

8284

Q. Then you would say that Mr. Woodbridge is familiar to some extent, at least, with the legal aspects of the financial affairs of the Union Electric Company? A. Oh, yes.

Q. Do you know whether he participated again as to the legal aspects of the distribution of any security issues by

—3,475—

Union Electric Company? A. Well now, I cannot tell——

Mr. Browning: (interposing) I would like——

8285 Mr. Odell: (interposing) I asked if he knew. He can say yes or no.

The Witness: I think I know, yes, in a very general way.

Mr. Browning: I do not know what the legal aspect of the distribution of securities is. I would suggest a clarification.

The Witness: I can explain what I meant.

By Mr. Odell:

8286 Q. I will explain it; contract with the underwriters, qualification with the S. E. C., qualification with the state regulatory bodies A. Exactly, quite. That is what I meant and also, as I remember, the last distribution had some very short-time chances for exchange. There was a legal aspect to that. I know he was intereseted in that and all of these things you have mentioned, I know, of course, that is the part he takes care of.

Q. Dr. McClellan, do you know whether Mr. Woodbridge participated in the conferences where the question of the type of security, interest rates, was discussed? A. I cannot tell

you whether he participated or not, but I do know that he confesses that not to be in his field. I know that. That is a banking field and whether a security should be sold for a certain price or rates or things of that sort, he regards that

—3,476—

as banking, I know that. He has told me that not so long ago.

Mr. Odell: That is all for my cross examination.

Redirect Examination by Mr. Browning: 8288

Q. You were asked in some detail about your actual employment by state regulatory commissions and you testified with regard to such employment. In addition to such employment, is it true that you appeared a great many times before state regulatory commissions over a very considerable period of time? A. Yes.

Q. And that you kept in contact with state regulatory commissions, their methods of operation and views? A. Well, during that time when I was appearing all those times that I appeared before these commissions, with the exception of 8289 one, it was for utility companies. I am leaving out the specific time I gave when I was employed by the New York Commission, but those things you are talking about, when I appeared before the Commissions, it was for public utility companies and, of course, I read their reports and read their decisions. It was a part of my business to know how they arrived at their values and rates and everything of that sort and, in those days, I was quite familiar with it.

The single case where I was employed by anybody else than the utility companies was that Lockport City employed

me once in a case to represent it against the utility. That

—3,477—

was, of course, after I left the Commission. I cannot tell the year, it may have been '14 or '15. That is the only case outside of those other two cases I mentioned when I was employed by the New York Commission that I was employed by other than utility companies and the one case where I was employed by the Chancery Court in New Jersey in connection with a case.

8291

—3,478—

Q. As the Court's independent expert? A. As the Court's independent expert, yes.

Q. As the chief executive of an operating utility, do you also generally keep in touch with Commission regulation? A. Not very intimately. I have men in my organization that are supposed to be watching that. The lawyers in my organization will call my attention to outstanding points and things of that sort, but it is utterly impossible with all I have to do to read all that stuff and keep intimately acquainted with it as I once did when it was a matter of my

8292 bread and butter.

Q. Now, the views which you have expressed with regard to Commission regulation were based, not only on your employment by State Commissions, but on your entire experience before Commissions and in connection with them? A. That is what it all comes from, yes.

Q. In other words, your views, as you have expressed them, are based on your entire experience throughout your entire career? A. Oh, quite.

Q. You were asked on cross-examination whether you had refused information to non-affiliated companies, that is, to companies outside of the family group, if they came and asked for it, and also you testified as to what would happen if you asked for such information from non-affiliated companies. You have also testified in your direct examination as to the interchange of information between the affiliated

—3,479—

companies within the North American family group. In your opinion, as a practical matter, would the constant 8294 interchange of information continue between the various North American subsidiaries if the family relationship were discontinued? A. It is my very definite opinion that it would not continue. I think I have said in my previous answer to a similar question that there would be some earnest souls that would think it might continue and would try to do it, but I am sure it would not work out. Without some compelling reason at the top, it would not continue.

Q. As a practical matter, do you know of any case in which a utility company with which you have been connected has constantly exchanged detailed information with 8295 non-affiliated companies? A. I do not know of any cases. I could add to that. I expected, when I made the contract with Baltimore, with the close relation we would have in handling that power, Baltimore and Potomac companies, as when I was president, we would have relations in regard to operating matters but, much to my surprise, I found there was none at all, they made their decisions without consulting us and we made ours without consulting them. It was on a basis of general comity and not specific arrange-

ment, but there is no compelling reason and it just doesn't happen, that is all.

—3,480—

Q. That is in the absence of common financial interest? A. That is what I mean exactly.

Mr. Odell: I would like to interrupt you. I didn't get part of his answer. Do you mind if she reads it back?

8297 (Whereupon, the preceding answer was read.)

Recross Examination by Mr. Odell:

Q. Mr. McClellan, you referred to the interchange of information between your Baltimore companies and the Washington companies. In your opinion, are the operations of these two companies similar? A. Yes, similar to the extent they are both serving large cities, both have the same kind of problems of growth to meet and both have sales problems, both have company policies. I would say there was quite a similarity between the operations of the companies
8298 on their general basis.

Q. Are you familiar with the men who are the executive heads of the Baltimore company? A. Oh, yes.

Q. Do you respect their ability as engineers? A. Not as engineers.

Q. Well, go ahead. A. Mr. Herbert Wagner is an engineer and so am I, but how much respect he would give me as an engineer these days and how much I would give him, I don't know, but as an executive head I have respect for him.

—3,481—

Q. As an executive head you have respect for him? A. Yes.

Q. Have you ever discussed with Mr. Wagner the question of exchanging information? A. No.

Q. Between his company and the Washington companies? A. No, not with regard to larger decisions. Of course, don't misunderstand me, there is a lot of minor stuff in the handling of that high-line between two companies, the boys in his company and our company, dispatching the power and things like that, over the use of it, but no discussions at all in re- 8300
gard to general company policy. For example, to give you an illustration of what I mean, I am quite certain we decided to put an extra 50,000 kilowatt generator in Washington and I am quite certain that Baltimore didn't know a thing about our decision to do it, and if they decide to build a station in Baltimore, we wouldn't know a thing about their decision to do it.

Q. Did you ever discuss your decision to build this 50,000 kilowatt station with Mr. Wagner? A. No, not a bit. Of course, this last 50,000—I wasn't here, but the other one I 8301
was in charge of, the one that just went into operation about a month ago.

Q. Now, do you find from your connection with the Washington company,—would you say that the Washington company would benefit from interchange of information with the

Baltimore company? A. Why, if we could get it, just as we would with the Cincinnati company, but no more than the others. That contractual relation doesn't bring it about only for that, except in the use of that particular facility.

8302 Q. I think you have testified to the effect that the companies, subsidiary companies of the North American system have benefited from this interchange of information? A. Well, I haven't the slightest doubt about that.

Q. You have also testified that you are familiar with the operating heads of nearly all of these subsidiary companies in the North American system? A. Yes.

Q. And that you have great respect for their abilities? A. Yes.

8303 Q. In your opinion, would you say that these operating heads are short-sighted businessmen? A. Which operating heads?

Q. Of the various subsidiaries in the North American system. A. No, I have great respect for them. I think they are long-headed and pretty canny.

Q. And do you think that these gentlemen are aware of the value that results from this interchange of information among the subsidiaries? A. Yes.

—3,483—

8304 Q. I am sure of it. Considering their ability and your opinion of them, do you think that these gentlemen would arbitrarily cut off this interchange of information? A. No.

Mr. Odell: That is all.

The Witness: But wait a minute. They wouldn't arbitrarily cut it off but they wouldn't be able to keep it up, because it is something that permeates the mass. Everybody has got to understand it.

Mr. Odell: I will ask you another question.

Mr. Browning: Read me the last answer, will you?

8305

(Whereupon, the last answer was read by the reporter.)

Mr. Odell: I have no other questions.

Mr. Browning: That is all.

(Discussion off the record.)

Mr. Browning: We now move for an adjournment of the hearing until Monday, December 9, at 10:00 o'clock a.m.

8306

The Examiner: No objection to that is there Mr. Odell?

Mr. Odell: No objection.

The Examiner: Very well, the hearing is now continued until December 9 at 10:00 a.m.

(Whereupon, at 12:15 o'clock p.m., the hearing in the above matter was continued until 10:00 o'clock a.m., Monday, December 9, 1940.)

—3,484—

8307

8308 *Colloquy*

AFTERNOON SESSION

(2:15 P.M.)

The Chairman: Are you ready?

Mr. Binford: Yes, sir.

The Chairman: I understand counsel for North American has moved for a continuance for two weeks.

Mr. Browning: That is correct.

The Chairman: May we ask whether, at the end of any continuance which will be granted, you will be
8309 ready to move forward then with the conclusion of your case without further delay?

Mr. Browning: I took some time during the noon hour trying to work out a schedule. I was a little caught by surprise this morning at the argument. I figured at the noon hour that we would probably be through in five weeks, including adjournments. The way I reached that conclusion was this: We have about three more batches of evidence, if you want to call them that, which we think about as so-called tie-in testimony and the so-called North American general
8310 testimony, and then the third batch is just odds and ends. Now, none of those are at all extensive.

Commissioner Healy: What is the nature of the remaining evidence? What are the issues that you have still got to give testimony about?

Mr. Browning: As to the first batch, the so-called tie-in testimony, Mr. Commissioner, we have now completed the factual presentation with regard to all of the public utility subsidiaries of the North American Company, and all businesses connected with them di-

8311

rectly. In giving that evidence we have not given any evidence substantially with regard to tie-ins between any particular subsidiaries. What we now wish to put in is rather brief additional evidence on this matter of tie-ins. That is in no sense a duplication. We do not intend to duplicate anything that is in this record.

Commissioner Healy: What issue is that directed to?

8312

Mr. Browning: Well, it is directed, in very large part, to the single integrated systems constituting a system.

Commissioner Healy: What about (A) and (C)?

Mr. Browning: (A) and (C) do not affect the definition of a single integrated system.

Commissioner Healy: What about those issues?

Mr. Browning: Our evidence to date covers (A) and (C).

Commissioner Healy: It does?

Mr. Browning: Yes. We have no thought of duplicating anything which we have put in, and what we have remaining to put in is relatively brief.

8313

Commissioner Healy: That would close the record on all issues in this case, unless the staff wanted to——

Mr. Browning: (Interposing) Just a moment. Now then, as to the second batch in what I said we referred to, in our own minds, as the so-called North American general testimony, we want to put in certain brief testimony with regard to the North Ameri-

8314 *Colloquy*

can Company itself, its acquisition of these investments, the holdings of them, and very briefly with

—6,850—

respect to the three subsidiaries or groups of subsidiaries which are not public utility subsidiaries. I am referring to North American Utilities Securities Corporation, the West Kentucky Coal Company and its subsidiaries, and the 60 Broadway building.

The Chairman: Could not all that be stipulated?

8315 Mr. Browning: The testimony which I intend to put in regarding those three subsidiaries is going to take about an hour. It would take me so much longer to discuss the stipulation.

The second batch of testimony which I have been discussing is, of course, primarily directed to the constitutional issues in the case. We wanted to be sure we are putting in all the proof that is necessary to try the constitutional issues, but, as I say, it is not very extensive.

Then finally I have referred to odds and ends.

8316 Now in any proceeding of this character you are bound to have odds and ends. People have made motions at various times which have been held in abeyance; the Commission counsel has requested that certain additional matter be furnished for the record; we have a motion to strike the 24 feet of exhibits that the Commission counsel put in.

Mr. Binford: Which motion is not filed. You mean you have in mind the motion.

Mr. Browning: We reserved the right to move to strike, and we intend to move to strike. In regard to

8317

that last matter, if I may give you some indication

—6,851—

of what is involved, I had an emissary come down and make an index of the 24 feet, and he came back and reported he could not make a complete index but he had a partial index, which was 57 pages single spaced, and I think you will appreciate the motion to strike that material will take a little time. What happened was that this stuff was just dumped with no regard to its relevancy or materiality.

8318

Commissioner Eicher: Two pages of index to a foot is not so bad.

Mr. Browning: I thought he did a pretty good job; yes. With all this in view I would personally estimate at this time, and I think we have gotten to the point where we can make a pretty good estimate, that including adjournments we have got about five weeks altogether.

The Chairman: Including adjournments of what nature?

8319

Mr. Browning: That is the point. I suggested this morning and pressed for a two-weeks' adjournment. The reason I did it was that the second week happens to be a particularly unfortunate week for our particular purposes. It is Easter week, Washington is going to be jammed, we have our hotel troubles, and so forth. I realize those difficulties are all restricted to people working on the job. I thought it all over during the lunch hour, and in view of the staff's position I am agreeable to reducing the motion to a week.

8320 *Colloquy*

The Chairman: To a week?

—6,852—

Mr. Browning: Yes. I have no desire whatever to delay the proceedings.

The Chairman: If you get the week you want a further adjournment then?

Mr. Browning: Yes, I would, Mr. Chairman. Here is what I have in mind: If I could get a week's adjournment I would expect the first batch of testimony
8321 we put in to take about a week, that is all, the second week, and then the constructive thing to do at that point, in my opinion, would be to take a two-weeks' adjournment, and at the end of that two weeks to put in everything else.

The Chairman: Let us see what the "everything else" is. Your first batch is the incidental businesses?

Mr. Browning: The first batch is what I call tie-in testimony.

The Chairman: Will you repeat that? What is that sort of thing?

8322 Mr. Browning: I said we want to put in evidence regarding the tie-ins of certain of these systems.

The Chairman: In an attempt to meet (A) and (C).

Mr. Browning: In an attempt to meet 2(a)(29).

Commissioner Eicher: Of course (A) and (C) are largely embodied in the 2(a)(29).

Mr. Browning: Yes, Mr. Commissioner.

The Chairman: You want that tie-in testimony, and then you have got testimony relating to the inci-

—6,853—

dental businesses?

Mr. Browning: That is right. Those three I mentioned.

The Chairman: That you said would take about an hour?

Mr. Browning: I said the three incidental businesses would take me about an hour.

The Chairman: Yes, I said that would take you about an hour.

Mr. Browning: Yes. Then remember we have got this testimony regarding North American itself on the 8324
constitutional issue. I expect that stuff to take about a week. By the way, in making my estimates I am including cross examination, as far as I can guess it.

The Chairman: At this juncture, if you get a week's adjournment why can not you go without cessation from there? What do you need to get ready for after that week's adjournment?

Mr. Browning: Above all, what we need to get ready for is odds and ends which, you remember, was my third division. I would rather have the two weeks.

The Chairman: And then your motion to strike? 8325

Mr. Browning: Yes.

The Chairman: You mean you want to particularize the motion as to certain items? Is that what you mean?

Mr. Browning: I imagine so, yes. It is days and days of work.

The Chairman: This may not be an advisable suggestion, but it occurs to me as a possibility: When the Commission comes to make its findings it will, of

8326 *Colloquy*

course, ignore irrelevant testimony. Why can not the record be closed with leave to you, in connection with requested findings, to make your motion at that time? In other words, why not we hold the record open? If the Commission comes in on your motion, and when the Commission considers it and hears counsel for the Commission, it will perhaps set it down for argument and perhaps not, perhaps pass on it and do what it thinks is right in regard to striking from the record.

8327 Why not hold the hearing record open for the trial examiner for that purpose?

Mr. Browning: For that particular motion?

The Chairman: Yes.

Mr. Browning: That would be a very constructive way to deal with it. Of course that is not the only odd and end. Let me give you another example. One of the things which we have been thinking about but never had time to reach a conclusion on is how we can get in this record, for the constitutional issue, enough in regard to securities and their rights and

8328 not too much, and the easy thing for me to do would be to do what our learned opponents did, to dump in the Atlantic Ocean, all the indentures and debentures, but I do not want to do it. For instance, we may want to frame a stipulation with the staff by which there might be leave to refer, but all of these things take a little time, and I call them odds and ends.

My purpose in suggesting the two weeks' adjournment there in the middle was to give us a chance to

take a deep breath and to look over the whole picture, to see where we were. In other words, when you close a record in a proceeding like this, not only ourselves but the staff, we want to really think for a little while about what is left to get in.

Commissioner Healy: How far are you planning to go with the constitutional issues, if I may ask? Are you going to put in any evidence as to any companies outside of the North American system? I mean, what are you going to offer in evidence? 8330

Mr. Browning: We are going to offer, I think, very little, very brief. For example, what I have in mind is some evidence on size.

Commissioner Healy: Size of what?

Mr. Browning: Well, the issue under this Act is the size of an integrated public utility system.

Commissioner Healy: We are talking of the constitutional issues now.

Mr. Browning: I beg your pardon. Yes. We probably want to give you some facts. Since one of the bases urged for the constitutionality of the statute 8331 would be that holding companies have become too big, we may want to offer a few facts on the subject of what is big. Again, however, in no bulk. In fact in discussing the remaining evidence, no single part of it is bulky. We are, frankly, in a closing-up period here.

Commissioner Healy: If you get the two weeks' adjournment could you then start and go right through

without cessation?

8332 *Colloquy*

Mr. Browning: Mr. Commissioner, that goes to human nature. I have generally found it advantageous, in a case that we were forced to prepare as we went along, to keep my eye on what was going in next. Your question is going really to: Can we prepare all of it in two weeks. I think it would be better, from an operating standpoint, if I did not try to do that.

Commissioner Healy: Well, if we grant a week's adjournment do you think you could close the record
8333 in five weeks, counting next week as one?

Mr. Browning: Yes, sir, assuming I am right on my guess on cross-examination. You realize that that is a little difficult to guess, but I am basing my judgment on the cross-examination to date.

Commissioner Healy: Of course the Commission may indicate inside the next two or three weeks how far we think people ought to be allowed to go in putting in evidence on constitutional issues when the evidence relates more particularly to holding companies in general and then takes evidence outside the particu-
8334 lar system that is involved in the pending case.

Mr. Browning: I realize you have got a rather tough set of questions on these so-called tentative conclusion companies. We have nothing bulky on any of this. In other words, I really think, in the evidence that is left, it is rather foolish to argue about it, because it is going to take a lot less time to put it in

subject to a motion to strike than it is to argue about it. For example, the material we are going to put in on

8335

other companies is so brief it would be much easier to put it in subject to a motion to strike. I mentioned that other example of the testimony on the three companies.

Commissioner Eicher: On this problem of constitutional evidence, Mr. Dubois just whispered in my ear the query as to whether or not the court might recognize an arrangement like this, that counsel stipulate, before the first closing of the record, that in the event of an appeal the record may be reopened to present such additional constitutional evidence as either party may desire before prosecuting the appeal.

8336

Mr. Browning: Well, that is certainly one way to handle it. Again, however, my views are colored by the fact that we are so close to the end. I take it that even after this record is closed nobody is going to object to reopening it to the extent of putting in a very limited set of facts. I mean, for example, as you all know, the sale of the Nebraska Natural Gas Company, if the record had been closed and if we wanted to reopen it simply to put evidence in on that company, I do not think anybody would object. In other words, I think the suggestion which has been made would be much more apropos in the case of a record which had not progressed as far as ours had.

8337

The Chairman: Anything further?

Mr. Binford: May it please the Commission, our argument this morning was on two things: first, an

8338 *Colloquy*

objection to the granting of a motion for recess, and, secondly, there was an objection to the introduction of any further testimony on the part of the respondents on the ground it affirmatively appeared, and had now been admitted, that on the record every possible integrated utility property or activity has already been covered by detailed engineering testimony and evidence in this case, and covered also in respect to business and financial operations, and otherwise, as well
8339 as every business that is operated in any way that can be considered as in connection with any possible integrated system. That necessarily leaves anything else, it would seem, as a mere matter, presumptive at least, of greater detail and surplusage. Of course they have the right to present their case, but that would appear to be the case unless there is a clear offer of proof which up to that time had not been made on the record, an offer of just what additional evidence they propose to produce. We finished all the operating properties and all the business that under any geo-
8340 graphic or other conception could be considered as possibly incidental to the operations of any of these several systems. That is all completed in this possibly 7,000 pages of evidence.

The Chairman: What about these properties to which reference has been made?

Mr. Binford: Those properties under U-5-B and U-5-S of the North American Company in evidence in this case. We have some information concerning

those properties there which shows other non-utilities, other direct subsidiaries of North American Company, which are not in the geographic field of operation, that is the activities are not, of any of the several utility properties operated within the system. We also have the other side of the picture, namely, the detailed description of the operation of these utilities, so we can see from both sides that there is no possibility of interlocking there, and I do not think there has been any contention made that there was. So I think on 8342
the very face of the record a detailed description of those non-utility properties, which are wholly outside the system except for common stock ownership for a common period, that any evidence on the activities of any of these operating systems is a waste of time.

The Chairman: Counsel says it will not take him more than an hour to put that evidence in.

Mr. Binford: I understood it was to take more than a week or so.

The Chairman: Suppose that is an hour, you have got two other categories of evidence, as I understand. 8343

Mr. Browning: No, Mr. Chairman. That hour you are talking was part of my estimate of a week, which also included this general testimony I want to offer about North American Company.

Commissioner Eicher: You mean the constitutional question?

Mr. Browning: That is right.

—6,860—

The Chairman: You say there are three categories?

Mr. Browning: That is right.

8344 *Colloquy*

The Chairman: One is the non-utility properties and these other things?

Mr. Browning: No, that and North American Company in general.

The Chairman: See if I follow you. You have got certain incidental properties as to which you want to introduce evidence, is that correct?

Mr. Browning: Yes.

The Chairman: That is one category?

8345 Mr. Browning: Yes.

The Chairman: Just let me separate them, if I can.

Mr. Browning: All right. Then you should put down as your second category the testimony about the North American Company itself.

The Chairman: That is the constitutional element?

Mr. Browning: Yes.

The Chairman: Then you have got mopping-up testimony?

Mr. Browning: Odds and ends.

The Chairman: Odds and ends?

8346 Mr. Browning: Yes. Wait a minute. The fourth on your list is what I call the tie-in testimony.

The Chairman: What does that mean?

Mr. Browning: We want to offer evidence with regard to the position of certain of these properties.

—6,861—

The Chairman: For instance, Cleveland and St. Louis?

Mr. Browning: No, no, the Union with other systems, with other properties.

The Chairman: That is not in as yet?

Mr. Browning: No, sir.

The Chairman: You have not, therefore, completed your Union case?

Mr. Browning: Well, we have completed Union in the sense that we have described everything that is Union, and I have got no intention of going back to that at all.

Mr. Binford: I disagree as to that being in the record. There is testimony in relation to each company, as to its relation with each other. 8348

Mr. Browning: We are not going to duplicate that.

Commissioner Healy: Whose testimony is that? Yours or his?

Mr. Binford: That is his testimony.

Mr. Browning: Mine. We are not going to duplicate that.

The Chairman: Supposing we set to one side the so-called constitutional question. Can you find out how long it is going to take you? 8349

Mr. Browning: The first two items on your list I figure a week, including cross-examination.

The Chairman: Let us put the constitutional question one side for a minute. Maybe we will not let you put it in, because we can not pass on constitutionality,

we don't know, we have not made up our minds on that.

Mr. Browning: Yes.

8350 *Colloquy*

The Chairman: Take your incidental properties, you say that will take you an hour?

Mr. Browning: Yes.

The Chairman: Now your tie-in evidence, how long is that going to take?

Mr. Browning: I figure a week, including the cross.

The Chairman: And your odds and ends, if you leave out your motion to strike, how long will that

8351 take you?

Mr. Browning: Again I figure a week, but if we finish before that—that is at the end, if we finish before that then we are finished.

The Chairman: You need not follow this suggestion, but it occurred to me one way to save time on the so-called constitutional evidence would be for you to advise the Commission in writing of the general character of the testimony, with some particularity, and let the Commission determine whether it will

8352 allow it to go in.

Mr. Browning: Mr. Chairman, we are going to spend some time in arguing about it.

The Chairman: Is it going to take a week to put it in?

Mr. Browning: At a maximum, including the cross.

The Chairman: I think you are sanguine, because I can conceive your putting in certain testimony on

constitutionality, if the Commission allowed it to go in

and allowed the Commission to rebut, Commission's counsel, it would take four weeks.

Mr. Binford: Furthermore there may be some objections on whether or not it ought not to go in orginally, as to particular items.

Mr. Browning: I can say this: The evidence which I have in mind is not going to take long enough to justify talking about a stipulation. If anybody objects to it the simplest, most expeditious way of dealing with it is to take it subject to the motion to 8354
strike. I am just being practical now.

The Chairman: Supposing we take this under advisement and let you know about the adjournment?

Mr. Browning: Sir?

The Chairman: We will advise about the adjournment.

Mr. Binford: The hearing then stands adjourned?

The Chairman: I think we can advise him within an hour.

Mr. Browning: I have a practical aspect here, Mr. Chairman. 8355

(Discussion off the record.)

The Chairman: If you will leave us for a little while we may be able to decide in 10 minutes.

(Whereupon counsel retired from the hearing room and after an interim of three minutes the following proceedings were had:)

The Chairman: The Commission will grant an adjournment of a week in the hope that you will not

8356 *Colloquy*

need any further adjournment when you resume, and before you offer your so-called constitutional evidence the Commission would like to have a statement of an offer of what you intend to prove in that connection, before you get to that.

Mr. Binford: This being Friday——

The Chairman: Beg pardon?

Mr. Binford: The week will be regarded as a week from Monday?

8357 The Chairman: Yes, a week from Monday. Well, sir, it is more than a week, it is 10 days. At any rate, you will resume on the 7th of April.

(Whereupon, at the hour of 2:55 o'clock p. m. an adjournment was taken until Monday, April 7, 1941, at 10 o'clock a. m.)

—6,865—

8358

BEFORE THE 8359

Securities and Exchange Commission

DOCKET NO. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.* 8360

Hearing Room, Second Floor,
1757 "K" Street, N. W.,
Washington, D. C.,
Monday, April 7, 1941.

Met, pursuant to adjournment, at 10:00 o'clock, a.m.

Before: WILLIAM W. SWIFT, *Trial Examiner.* 8361

Appearances:

S. PEARCE BROWNING, JR., and

CHARLES S. HAMILTON, JR., of Sullivan & Cromwell, 48 Wall Street, New York City, New York, appearing for The North American Company, et al., Respondents.

RALPH C. BINFORD, appearing for the Securities and Exchange Commission.

8362 *Colloquy*

PROCEEDINGS

The Examiner: The hearing will come to order.

Mr. Browning: As the Examiner will recall, on March 28th the Commission, after argument, granted an adjournment until today "with the hope" that we would not need any further adjournment after resuming and that before offering so-called "constitutional evidence" the Commission would like to have a settle-
8363 ment of an offer of what we would intend to prove in that connection.

In view of the Commission's position and its desire for expediting the hearings, we have exerted every effort during the past week to that end, and I am glad to be able to say that, assuming the reservation which I will mention shortly, we expect to finish with our testimony this week. We make this estimate of not more than a week with some allowance for cross examination, although, as the Examiner knows, this is very difficult, if not impossible, to estimate. In
8364 order to achieve such expedition, we have reduced a considerable amount of testimony to exhibit form, as will appear in the course of this hearing.

As regards the Commission's request on so-called "constitutional evidence": A great deal of the evidence which we have already submitted bears not only on questions of statutory construction but also on constitutionality, and this will be true of the evidence which we will offer this week, so that I see no useful

purpose to be served in attempting any detailed description of it. However, as to presentation of further evidence dealing strictly with constitutional issues along the lines discussed by counsel in the arguments on Engineers Public Service Company,—and that is really what I understood the Commissioners had in mind,—we will be glad to adopt the suggestion made by the Commission and close these hearings, with the reservation of a right to reopen the hearings and offer such evidence later, and we will propose such a stipu- 8366
lation at the close of the hearings.

Another point which I should mention is that we have not yet had time to prepare our motion to strike the Commission's exhibits, but such motion can either be submitted later, as I believe one of the Commissioners suggested, or the situation handled by stipulation. We expect to make a practical suggestion along these lines later in the week.

Of course, there are other points, chiefly odds and ends, which may occur to the staff or to ourselves before the end of the week, but we can take those up 8367
in due course.

Mr. Lindseth.

Whereupon, ELMER L. LINDSETH, a witness produced on behalf of the Respondents, having been previously sworn, was examined and testified as follows:

—6,868—

Direct Examination by Mr. Browning:

Mr. Browning: Will you please mark this series of statistical tables and charts, consisting of ten sheets

and bound together, as Respondents' Exhibit No. 124 for Identification.

(The document referred to was marked for identification as Respondents' Exhibit No. 124.)

By Mr. Browning:

Q. Mr. Lindseth, when you testified previously in these hearings, you were at that time Assistant to the President
8369 of The Cleveland Electric Illuminating Company? A. That is right.

Q. Have you since left the employ of that company? A. Yes, on September 15, 1940.

Q. Will you give us your present occupation? A. On that date I joined the staff of The North American Company as an engineer, and have been engaged continuously since then as a technical assistant on their staff.

Q. Referring to Respondents' Exhibit No. 124 for Identification, have all these tables and charts been compiled under your direction? A. They have.

8370 Q. Now, I would like to take these charts and tables one by one, and have you tell us the source from which you took the information. Taking Sheet "A", first,—will you please state the sources of these statistics? A. These are,

in all cases, from the records of the companies.

Q. And Sheet "B"? A. In the case of the North American Company, these are data from Sheet "A", and taken from the records of the company; in the case of the State data to which the corresponding figure for the North American Company are compared, these are, in all cases, from

published sources, the area and population being from the U. S. Census, 1930; the Number of Electric Customers, Total k. w. h. Sold, and Total Electric Operating Revenue, Columns 3, 5, and 6, are from published data of the Edison Electric Institute,—the other three columns, 4, 7, and 8, are from published data of the Federal Power Commission.

Q. Turning now to Sheet "C", tell us from what sources that information was obtained? A. Again the data on the North American Company came from Sheet "A" and were taken from the records of the company. The other data are 8372 from published sources, in most cases those of the Federal Power Commission reports filed by the several companies and known as their Form 1.

In the case of the Niagara Hudson Power Corporation, these data are taken from Moody's Public Utility Manual, 1940.

In the case of U. G. I., these are from the tentative re-

port of the S. E. C. under date of January 22, 1941.

In the case of American Waterworks & Electric Company, Incorporated, these data were taken from the American Waterworks & Electric Company, Incorporated, Statistical Handbook, 1940. 8373

Data on New England Power Association are also taken from Moody's Public Utility Manual.

Q. Turning to Sheet "D", what is the source there? A. These data, in all cases, represent, only graphically, those data reported on Sheet "C".

Q. Turning to Sheet "E", what is the situation there? A. These data, in all cases, are those reported by the F. P. C.

8374 *Elmer L. Lindseth—By Respondents—Direct*

in their State Rate Reports, and represent the latest published information from that source, January 1, 1940.

Q. Turning to Sheet "F", what is the situation there? A. Sheet "F" has, as its source in the case of the North American Company companies, the records of those companies; the State averages and the U. S. average are from the published reports of the F. P. C., known as Statistics of Electric Utilities in the United States, 1938. Companies other than those included in State averages, have had their
8375 data taken from the reports of those companies to the Federal Power Commission, known as Form 1.

Q. That last category you were referring to are the companies listed under the heading "Other Electric Systems"? A. Yes, sir; that is correct. —6,871—

Q. What were the sources for Sheet "G"? A. The data here on the North American Company are in all cases, from the records of the companies and the corresponding U. S. averages are taken from the Edison Electric Institute Statistical Bulletin No. 7.

Q. Where did you get the basic figures for the line marked
8376 "Combined Systems"? A. The Combined Systems sources are weighted averages of the three reported systems of the North American Company.

Q. Turning now to Sheet "H", what are the sources of these? A. Data for the North American Company are taken from the records of the companies which, however, check with the sources from which data on other systems was taken, namely,—"Financial Statistics for Electric and Gas Subsidiaries of Registered Public Utility Holding Companies for the Years 1938-1939", Securities and Exchange Commission.

8377

Q. Referring to Sheet "I", you have testified by footnotes to the source, or sources, of your data, have you not? A. That is correct, with the exception that the data for the North American Company, which are not indicated as to sources, are from the records of the company, with the exception of the last column, the data for which have been taken from the S. E. C. Notice of Hearing dated March 7, 1940.

8378

Q. I notice that several of the footnotes apparently do not indicate their source. Could you mention the sources in those cases? A. These would include Footnote (i), the source for which is Moody's Industrial Manual, 1940; (m), the same source; (q), same source; (u), same source; (K), same source; and (L),——

Q. The same source? A. The same source.

The data in the last column are so-called "crow-flight" distances, point-to-point distances taken from the map, as distinguished from the data from the first two lines which was reported by the S. E. C. and which was indicated to be the nearest distance by rail.

8379

Q. In certain figures there, referring to the automobile industry, did you obtain any information from a special source? A. Yes. In the case of the automobile industry, other than the Ford Motor Company, data are from a report of the S. E. C. entitled "Survey of American Listed Corporations, Supplement No. 4, August, 1940." These data are for those automobile companies registered with the Securities and Exchange Commission under the Securities and Exchange Act of 1934, which excluded the Ford Motor Com-

8380 *Elmer L. Lindseth—By Respondents—Direct*

pany. Data for the latter are from the filed reports in Massachusetts, and are taken from the Wall Street Journal.

—6,873—

Mr. Browning: I offer the exhibit in evidence as Respondents' Exhibit No. 124.

Mr. Binford: I object to the reception in evidence of the Sheets "C", through and inclusive of Sheet "I", upon the grounds that the data relative to properties and operations not comprised within the North American System are wholly irrelevant and immaterial in this proceeding.

8381

Mr. Browning: Has counsel stated his objections?

Mr. Binford: Yes.

Mr. Browning: We contend that it is material and purely relevant and admissible, Mr. Examiner, among other reasons as bearing upon the issue of statutory construction. The phrase used in both Section 2A29 and 11B1, in the so-called "size test", is "not so large . . . as to impair . . ."—of the Commission is there, by the terms of the law, itself, required to exercise judgment as to size.

8382

I am unable to understand counsel's position that that judgment should be exercised in a vacuum. It is as if you would ask a Fiji Islander, let's say, "What size an apartment house elevator should be." Obviously, he would have to know something about elevators and something about apartment houses.

The Commission and the courts which are going to pass upon the issue of size should have in the record statistics regarding sizes of other electric systems and

other enterprises. It is either that, or counsel is making the contention that somebody is going to

—6,874—

make up his find in a vacuum as to what the size of the unit is. In fact, I must state that I am unable to understand the contention that in considering size, nothing else, no other factors are to be considered whatever.

We submit that the exhibit is clearly admissible.

Mr. Binford: Mr. Examiner, my position is this: 8384
Here are a number of selected enterprises of various kinds which are named in this exhibit and their magnitude is the only thing shown. If we followed Mr. Browning's line of thought, it seems to me that this hearing would be opened to a full investigation of the efficiency of the American Telephone and Telegraph Company and other large companies, and whether the issue should include the matter of their efficiency in relation to the efficiency of other companies and we don't know whether that efficiency is because of their great size or in spite of their great 8385
size, and in order to properly bring in these comparisons and receive any real assistance from them, it would be necessary to go into an analysis of the operations of each one of the systems and show wherein their size retarded the efficiency of the operation or whereby it benefited the efficiency of the operation. The mere introduction into evidence, the mere fact that other companies are operating in various fields not covered in this proceeding at all, which

8386 *Colloquy*

have vast accumulations of capital or which have vast operating enterprises, does not prove their effi-

—6,875—

ciency or inefficiency.

We must, it seems to me, necessarily decide the issue of efficiency with relation to size from what has been shown in this case, plus what the Commission may take judicial cognizance of as to the efficiency of operation of the North American Com-

8387 pany and all conceivable relationships brought out by the evidence of its operations and its magnitude. Collateral inquiry into any other large enterprise or enterprises seems to be wholly beyond the possible physical limitation of an inquiry of this sort.

Mr. Browning: It seems to me, Mr. Examiner, that that argument is fundamentally addressed to the weight which counsel claims should be given to the exhibit, rather than to its relevancy.

The Examiner: Off the record.

(Discussion off the record.)

8388

The Examiner: Are you going to interrogate the witness first about this proposed exhibit, Mr. Browning?

Mr. Browning: I have a very few questions on certain of the sheets, nothing else.

The Examiner: Well, suppose you ask him those questions and I will take this under advisement as to the reception of this document in evidence.

Mr. Binford: With reference to the sheets, may the record show that I would like to object to ques-

tions directed to non-North American properties on the same grounds, namely, immateriality and irrele-

—6,876—

vancy, as I previously objected to the exhibit itself.

The Examiner: Your objection now goes to Sheets "C" through "I", inclusive. That is what I understood to be objected to.

Mr. Binford: Yes, sir.

The Examiner: All right. 8390

By Mr. Browning:

Q. Turning to Sheet "A", Mr. Lindseth, in Columns 1, 2, and 3, you have shown Electric Service Area, Number of Communities Served, and Population Served Electrically. Am I correct in understanding that the area and populations served are the total area and population of the service areas of the respective companies with no deductions because of the fact that any competing electric utility may be situated therein? A. Yes, that is correct. These are respectively, the service area and population served electrically, which are 8391 used in the conventional description of service areas.

Q. In other words, to make it concrete, you have included the population of Cleveland, in its entirety, despite the fact that there is also a municipal power plant there? A. Yes, that is correct; we serve a portion of the City of Cleveland.

Q. That would also be true of the City of St. Louis, and the Laclede Company? A. That, too, is correct.

—6,877—

Q. Not with respect to the number of communities that you have excluded, communities in the service area where

you render no service? A. That is a correct understanding.

Q. But that you have included communities where you render part of the service? A. Yes.

Q. Turning to Sheet "E", will you please refer to the second group of columns which is headed "50,000 and More", and specifically to the percentages given for the Wisconsin-Michigan System. I note that the percentages given are 130, 132, and 124. Is there any special circumstance involved there? A. Yes, there is. This is a unique situation in the
8393 basis for comparison in that the only city in Wisconsin with a population of fifty thousand or above, not served by properties of The North American Company, is the City of Madison.

This is a unique city in a number of respects. The company is also served by a holding company subsidiary, Madison Gas and Electric Company, and the community is one of high customer density and of unusually high purchasing power growing out of the circumstances that this is a State capitol and is the seat of a very large State university and the community is one of only modest size, fifty-seven thou-
8394 sand population. Because of this high purchasing power

growing out of its unique character, the average use per consumer is high and this, coupled with the high customer density and high purchasing power, makes it as a basis for comparison with the entire seven hundred thousand population served by the three North American Systems, rather an unfair comparison.

The character of the electric business done in Madison is primarily one of residential and commercial business, with

a very small amount of industrial business, but twelve and one-tenths per cent. of the kilowatt-hours sold, as of 1939, were classed as industrial. This gives the community a degree of stability which is quite different from that in an industrial community, making for a certainty of income that is favorable to the company and the consumers.

Further than this, the company serving Madison, electrically, likewise serves it with gas resulting in numerous economies of joint operation.

8396

Q. Is the company which serves Madison a subsidiary of a registered holding company? A. Yes, it is that.

Q. Tell us which company that is. A. United Light and Power Company.

Q. Referring to the percentages shown for Cleveland in the same column, is there any characteristic of the Cleveland

—6,879—

rate which affects those percentages? A. Yes, there is. It will be noted that the three points at which bills are prepared are at twenty-five kilowatt-hours per month use, one hundred kilowatt-hours per month use, and two hundred and fifty kilowatt-hours per month use. These have been chosen by the Federal Power Commission as a basis of comparison on somewhat of an arbitrary basis and are not truly representative of the picture of representative rates.

8397

It is a characteristic of the Cleveland Company that its rate to small users are low, witness the column headed "Twenty-five Kilowatt-Hours Per Month" where the average rate of the Cleveland System is but eighty-eight per-cent. of the State average of other companies for the same use.

8398 *Elmer L. Lindseth—By Respondents—Direct*

At one hundred kilowatt-hours per month, the percentage relationship of the Cleveland and state-wide average is one hundred and twelve per cent. Now, based on the so-called distribution of customers by use, in the metropolitan Cleveland area, fifty per cent. of the customers use fifty-one kilowatt-hours per month or less, based on the most recent study of that characteristic, October, 1939, that is,—one-half of the customers use fifty kilowatt-hours per month or less. In the same city it was determined that seventy-five per cent. of the
8399 customers use seventy-six kilowatt-hours per month or less. That is three-quarters of all residential consumers use

—6,880—

seventy-six kilowatt-hours per month or less. At one hundred kilowatt-hours, and above, but eleven per cent. of the customers are affected. That is, then, as a basis for weighted average comparison, the arbitrary point at which the Federal Power Commission compares these bills,—namely, twenty-five, one hundred, and two hundred and fifty, are likely to give a rather warped prospective, giving an amount of emphasis to large users greater than is deserved.

8400 For example, at two hundred and fifty kilowatt-hours per month, and above, but one per cent. of the customers of the Cleveland System were affected, as of the date of that study.

Referring again to the twenty-five killowatt-hours per month, and smaller bills, it is a characteristic of Cleveland rates that a fifteen kilowatt hours a month, that is, a very small user, its bill of sixty cents is extraordinarily low and by that, we may use as a comparison, all of the cities in the United States with a population of two hundred and fifty thousand or above, that is, large cities.

 8401

As of January 1, 1940, the date of this comparison, no city in the United States in this population class, two hundred and fifty thousand and above, had rates lower than these of the Cleveland Company This includes both publicly owned and privately owned utilities. None had a bill lower than the Cleveland Company at fifteen kilowatt-hours per month.

—6,881—

Q. Now, referring to the very last line in the column group which consists of the figure one hundred and one repeated three times, am I correct in understanding that that same figure is affected by the Madison situation which you mentioned? A. Yes, that is correct. 8402

Mr. Browning: Off the record.

(Discussion off the record.)

Mr. Browning: Referring to Sheet "F", I might state that the reason why the companies shown under the heading "Other Electric Systems" were selected is that they are the leading systems which are not subsidiaries of registered holding companies. 8403

I should add to that we excluded Detroit Edison Company and Pacific Gas and Electric Company because their status has been in doubt.

Mr. Examiner, that is all I have to ask this witness at this time but I will recall him tomorrow or the next day when one or two additional exhibits are ready, which we were unable to have ready by this morning.

8404 *Colloquy*

The Examiner: Very well, Mr. Browning.

Mr. Binford: Mr. Examiner, I would, at this time, like to withdraw my objection to Sheets "E", "G", and "H", of the offered exhibit, Number 124, but insist upon it as to the remaining Sheets "C", "D", "F", and "I", severally, since the sheets I first mentioned are not a direct bringing in of individual non-

—6,882—

8405 North American Companies and the same reasons do not exist for the exclusion of those sheets as does exist in the case of the others.

The Presiding Officer: With reference to Sheet "E", let the record show that interlineation of the words "Percentages of State Averages—Excluding the North American Company Properties" has been allowed.

Mr. Browning: Could the record aiso show that Sheets "A", "B", "E", "G", and "H", are admitted in evidence; the balance, as I understand it being

8406 under consideration by the Examiner?

Examiner: Yes, that is the status. Sheets "A", "B", "E", "G", and "H", are now admitted in evidence and I will reserve a ruling with respect to Sheets "C", "D", "F", and "I".

(Respondents' Exhibit 124, Sheets "A", "B", "E", "G", "H" received in evidence.)

Mr. Hamilton: I will call Mr. Freeman.

Herbert C. Freeman—By Respondents—Direct 8407

Whereupon, HERBERT C. FREEMAN, a witness produced on behalf of the Respondents, having first been duly sworn, was examined and testified as follows:

Direct Examination by Mr. Hamilton:

—6,883—

Q. Will you give the reporter your name and address, Mr. Freeman? A. Herbert C. Freeman, 60 Broadway, New York City.

Q. Are you now a Vice President of The North American 8408
Company? A. Yes, sir.

Q. And for how long a period have you served in that capacity? A. Since July, 1927.

Q. Do you now hold certain directorships in The North American Company System? A. I am Director of The North American Company, The North American Utilities Securities Corporation, West Kentucky Coal Company and its three small subsidiaries,—Sixty Broadway Building Corporation, The Cleveland Electric Illuminating Company, North American Light and Power Company, and Wisconsin Electric Power Company.

8409

I am also a Director of Pacific Gas and Electric Company and of the Associated Music Publishers, Inc., in which North American Company has an interest.

Q. And have you, from time to time, during the period of your officership with The North American Company, held certain other directorships in The North American Company System? A. Yes, I have.

—6,884—

Q. Now, will you state your business experience, Mr. Freeman? A. Shall I go back to 1898?

8410 *Herbert C. Freeman—By Respondents—Direct*

In 1898 I became a very junior clerk in a firm of East India Merchants in London. I then had an opportunity to go into the George A. Touche and Company, chartered accountants in London, and I was there for three years and was most of the time secretary to Mr. George Touche.

I then came to this country in 1902 and joined the firm of Touche, Niven and Co., public accountants. I passed my examination for Certified Public Accountant in the State of New York in the spring of 1904 and later on, I became a
8411 partner of Touche, Niven and Co. and remained there until the end of 1920 and at the beginning of 1921, I left them to become Vice President and General Manager of one of their clients, The National Cloak and Suit Company, which was then the third largest mail order business in the United States, and I later became President of that company.

I remained President until it merged with another company in April, 1927, when I became free and Mr. Dame, who was then President of North American Company and whom I met earlier and with whom I worked earlier in my work as a public accountant, hearing I was free, asked me to join
8412 The North American Company, which I did, in July.

Q. And since that time, you have been continuously engaged in the affairs of The North American Company? A. Yes, sir.

—6,885—

Q. When was The North American Company incorporated? A. It was incorporated June 14, 1890.

Q. And did it, at or about the time of its incorporation, take over the assets of another company? A. At that time it acquired the assets of the Oregon and Trans-Continental

Company, a corporation which consisted chiefly of railroad securities and some securities of the predecessor of the present Wisconsin Electric Power Company. It also included two thousand shares of capital stock of Edison General Electric Company, the predecessor of the present General Electric Company.

Q. And under the laws of what State was The North American Company incorporated? A. Under the laws of the State of New Jersey.

Q. And its capitalization at the time of incorporation 8414
consisted of what? A. Capital stock of one class, in the amount of $40,000,000.00.

Q. And how does that compare with its present capitalization? A. At December 31, 1940, the total capitalization was $265,309,195.00, including earned surplus of $44,132,991.00; and paid in surplus of $312,994.00; in addition, it had

—6,886—

capital surplus which has now been transferred to reserve for contingencies amounting to $32,801,970.00. That is not included in the figure of $265,000,000.00.

Q. Who was the first President of The North American 8415
Company? A. The first President of The North American Company was Mr. Henry Villard, a former Civil War Correspondent and a leading financier in the latter part of the 19th Century. Mr. Villard was one of those associated with Edison in the initial development of electricity in the early 1880's, and he served as the first President of Edison General Electric Company, the predecessor of the present General Electric Company.

Q. For what purpose was The North American Company organized? A. For the purpose of taking over the assets

8416 *Herbert C. Freeman—By Respondents—Direct*

of Oregon Trans-Continental under a charter which gave it broader powers than the charter of that company.

Q. And as originally constituted, was it organized for the purpose of operation of railroad enterprises?

Mr. Binford: I object to the question on the ground that it has not been shown that the witness had any personal knowledge of any purposes for which the corporation was organized, other than such as he
8417 may have obtained from the records of the corporation, namely, from the charter or the Articles of In-

corporation; and as to such material, the Charter or Certificate of Incorporation is the best evidence, itself. I might also point out that such copy is in evidence in this case.

Mr. Hamilton: May I make a new observation, Mr. Examiner?

As counsel knows, the Certificate of Incorporation,
8418 generally speaking, is a very broad instrument and does not necessarily state specifically the purposes or, exclusively, the purpose for which any corporation is organized.

Now, I don't think we could produce anyone at this stage who could testify to the organization of The North American Company fifty-one years ago.

I would like to ask the witness a question or two in order to develop what this company's business was to be.

8419

By Mr. Hamilton:

Q. You have testified, Mr. Freeman, that continuously, since 1937, you have been a Vice President of North American? A. Yes.

Q. And as such, you have had access to the books and records of The North American? A. Yes.

Q. And included among the books and records, are there, or are there not, annual reports and other documents indicating the original purpose for which the company was formed?

8420

—6,888—

A. Yes.

Mr. Hamilton: I submit the witness is qualified to answer the question.

The Examiner: The objection is overruled.

Mr. Binford: Exception, please.

The Witness: The original intent was to operate in the field of railroad finance and promotion of electric light and power enterprises.

By Mr. Hamilton:

8421

Q. Now, I believe you have testified that at the time of the organization of North American Company there were included among its assets, certain railroad securities. What disposition was made of those railroad securities? A. They were entirely sold during the early years of the company's history, that is, between 1890 and 1895.

Q. Now, at what stage of the development of the electric industry did the organization of North American occur? A. It was within eleven years of the invention by Edison of the

generation and transmission of electricity for the purpose of incandescent lamps and it was within eight years of the building of the first power station.

Q. That is, the first central generating station? A. For commercial generation, yes.

—6,889—

By Mr. Hamilton:

Q. You spoke of certain securities held by The North
8423 American Company in properties now represented by Wisconsin Electric Power Company. When did the first consolidation of those properties occur? A. In 1890 those properties were consolidated, and that became the first company which generated power, electric power for street railway and general commercial purposes.

Q. Did The North American Company at an early stage of its history enter into a contract with Thomas Edison? A. It had a contract with Thomas Edison under which it became entitled to the use of his inventions for the application of electricity to street railway purposes, and under that
8424 contract it undertook to finance the cost of his experiments during that 5-year period.

Q. And, if you know, at what time was that contract executed? A. It was dated October 1, 1890.

Mr. Hamilton: Please mark this bound volume, consisting of 68 numbered pages, for identification as Respondents Exhibit No. 125.

(Whereupon the document referred to was marked Respondents' Exhibit 125 for identification.)

 8425

The Witness: May I add this to my reply to one of the recent questions: The contract with Edison gave The North American Company the right to the use

—6,890—

of Edison's patents with respect to railways of all descriptions—I think I may have said street railways —and to other important developments in the electrical industry.

By Mr. Hamilton: 8426

Q. Now will you state, Mr. Freeman, what Respondents' Exhibit No. 125 for identification represents? A. It consists of schedules showing the securities issued by The North American Company, North American Edison Company, The Wisconsin Edison Company, Inc., Western Power Corporation; also of dividends paid by The North American Company; and analyses of investments held December 31, 1940 by The North American Company.

It also contains a schedule showing for each of the years from 1915 to 1935, inclusive, the largest debit balance of combined loan and advance accounts of operating subsidiaries 8427 which had debit balances for the greater number of months during the year, that is to say, advances to those companies by The North American Company, The Wisconsin Edison Company, Inc., and North American Edison Company, which were the three holding companies in the system.

Q. North American Edison, Western Power, and Wisconsin Edison were intermediate holding companies, were they not? A. Yes.

Q. And all three have since been dissolved? A. Yes.

—6,891—

8428 *Herbert C. Freeman—By Respondents—Direct*

Q. Has this exhibit been prepared under your direction? A. Yes.

Q. And have the facts set forth been taken from the records of The North American Company? A. Yes, they have.

Mr. Hamilton: I offer the exhibit in evidence as Respondents' Exhibit No. 125.

Mr. Binford: No objection.

The Examiner: It is so admitted in evidence.

8429

(Respondents' Exhibit 125 for identification was received in evidence.)

Mr. Hamilton: May we have a little recess at this time, Mr. Examiner?

The Examiner: Yes, we will have a short recess.

(Whereupon a short recess was taken.)

By Mr. Hamilton:

Q. You stated, Mr. Freeman, the present capitalization
8430 of The North American Company. How is that distributed as among classes of securities? A. It is a simple and well-balanced capital structure, consisting of three series of debentures, issued under one indenture, with variations in the terms of interest rates, maturity dates and redemption prices; two series of serial preferred stock, varying as to dividend rates and amounts to be received in the event of voluntary

—6,892—

liquidation; and one class of common stock.

Q. And what are the ratios of the various classes of securities to total capitalization? A. The debentures amount to

$70,000,000, of 26.4 per cent. of the total capitalization; the preferred stock amounts to $65,136,950, or 24.5 per cent. of total capitalization; and the common stock and surplus amount to $130,172,245, or 49.1 per cent.

Q. And during the entire history of the company, what is the lowest percentage represented at any time by common stock and surplus as compared with total capitalization? A. The common stock and surplus have never been less than 48.5 per cent. of total capitalization.

Q. Now in order to get a general idea of the development 8432
of this security structure, will you indicate, very briefly, the general periods to which issuance of securities fall? A. From 1890 to 1921, there was one class of capital stock outstanding; from 1921 to 1939, there was one class of preferred stock and one class of common stock outstanding; and from 1939 to 1940, there have been two series of preferred stock and the common stock outstanding.

Q. And as to the funded debt of The North American Company, can the issuance of securities representing funded

debt be similarly classified as to periods? A. There has been 8433
funded debt, or similar securities outstanding in nineteen of the fifty-one years of the existence of the company; from 1895 to 1896, there were collateral promissory notes; from 1907 to 1912, there were 5-year collateral trust gold notes; from 1931 to 1939, there was one series of debentures; and from 1939 to 1940, there were three series of debentures.

Q. And what—— A. (Interposing) With the exception of the notes outstanding in 1895 and 1896, on which the interest rate was 6 per cent., The North American Company

has never issued funded debt on which the rate of interest exceeded 5 per cent., and the present debentures bear interest at the rates of 3.5 per cent., 3.75 per cent., and 4 per cent. per annum.

Q. Referring, again, to the issuance of securities, and particularly of stocks of The North American Company, have there been recognizable periods, based on the consideration received upon the issuance of such securities, which you could describe for us very briefly? A. Well broadly speaking, there
8435 have been seven periods, which fall apart rather naturally; from 1890 to 1905, there were, first, the issue of capital stock for the assets of Oregon and Transcontinental, and then some further stock issued for cash; from 1905 to 1907, there was the issue of further capital stock in exchange for

—6,893a—

investments in subsidiaries, and there were also $2,500,000 of 5 per cent. gold notes, which were retired between 1909 and 1912——

Q. (Interposing) Out of the proceeds of the issue of
8436 stock? A. Yes. From 1921 to 1923, common stock was issued for cash, and preferred stock was issued in connection with the acquisition of Cleveland Electric Illuminating Company; and from 1924 to 1933 was the period of stock dividends. During that period, from 1923 to 1934, dividends were paid on the common stock entirely in common stock.

Q. Common stock of The North American Company? A. Of The North American Company. And in 1934, a major part—no, not a major part, a substantial part of the dividends were paid, also in common stock of The North American Company.

 8437

Then, overlapping that period, from 1925 to 1929, and to a minor degree in 1930 and 1931, there were issues of common stock and preferred stock in the acquisition of companies which became subsidiaries.

In 1931 was the first issue of debentures to retire bank loans which had been incurred by The North American Company, chiefly to provide funds to enable the Union Company —that is the Union Electric Company of Missouri—to make its extensive expenditures in the Osage development.

—6,894— 8438

Q. That is the Osage hydro-electric plant, is it? A. Yes.

Then in 1939, North American Edison Company was dissolved, and the debentures of North American were refunded, and at that time the present $70,000,000 of debentures and the 5.75 per cent. series of preferred stock were issued.

Q. Why was North American Edison Company organized? A. It was organized in 1922 to serve as a vehicle for the financing of the acquisition of the Cleveland Electric Illuminating Company.

Q. And why was Wisconsin Edison Company organized? 8439
A. It was organized in 1914 by offering its securities to the stockholders of The North American Company, for the purpose of providing a vehicle for financing the development of the properties in Wisconsin.

It was dissolved in 1924, but prior to that time its properties had, for the most part, been transferred to North American Edison Company.

Q. Have all securities of North American Edison and Wisconsin Edison been retired? A. They have all been retired.

8440 *Herbert C. Freeman—By Respondents—Direct*

Q. Has The North American Company ever issued any stock which did not bear voting rights? A. No. All issues of capital stock by The North American Company have had

—6,895—

voting rights.

Q. And how about issuances of preferred stock, have they similarly had voting rights? A. Yes.

There was only one class of stock with full voting rights
8441 from 1890 to 1921; from 1921 to 1939, there was one class of preferred stock and one class of common stock, and the holders of preferred and common stock were entitled to one vote per share for all purposes; and from 1939 to 1940, there have been two series of serial preferred stock and one class of common stock. The holders of the serial preferred and of the common are entitled to one vote for each share for all purposes, except for the election of directors.

Q. Without going into detail, are there certain special rights with respect to the election of directors in the case of the serial preferred stock? A. Yes. The serial preferred
8442 stock has the right to elect one-fourth of the directors, under normal conditions, and it elects a majority if preferred dividends are in default for twelve quarterly periods.

Q. Now, have there been at various times in the company's history reclassification of its common stock? A. The common stock, which was originally $100 par value, was reclassified in 1921 into one share of preferred stock of the par value of $50 and one share of common stock of the par

—6,896—

value of $50.

 8443

In March, 1923, each share of common stock of $50 par value was split up into five shares of common stock of $10 par value; and then in April, 1927, each share of common stock was changed into one share of no par value stock, which, however, was continued at the value of $10 a share, and at that time the redemption price of the 6 per cent. preferred stock was increased from $52.50 a share to $55 a share.

Q. That applied to the preferred stock then outstanding, did it? A. Yes, sir. 8444

It was felt that this would give that stock a better standing in the market—

Q. And was there a further reclassification of stock in 1939? A. In 1939, the 6 per cent. preferred stock which was then outstanding was reclassified as a series of the serial preferred stock which was created at that time, and the common stock was changed from no par value to $10 par value.

Q. Now, during the entire period of its existence, has The North American Company ever defaulted in the payment of principal or interest on any evidence of indebtedness? A. No, sir. 8445

Q. Has it ever failed during the entire period of its existence to pay preferred stock dividends when due? A.

No, sir.

Q. In other words, there has never been an arrearage on any preferred stock of The North American Company, is that right? A. That is right.

Q. Has any public utility subsidiary of The North American Company ever defaulted on payment of principal or in-

8446 *Herbert C. Freeman—By Respondents—Direct*

terest on any indebtedness issued by it while a subsidiary of The North American Company? A. No, sir.

Q. Has any public utility subsidiary of The North American Company ever defaulted on payment of dividends on preferred stock which has been issued while that company was a subsidiary of The North American Company? A. Well, the Milwaukee Company, the predecessor to the present Wisconsin Electric Power Company, which was known as the Milwaukee Electric Railway & Light Company, issued
8447 $3,500,000 of preferred stock in 1896, and payment of dividends on that stock was not begun until 1900.

Q. That stock was non-cumulative at the time, was it? A. I believe it was. Dividends have been paid quarterly since then without interruption.

Then in the case of Illinois-Iowa Power Company, the dividends on its preferred stock, which had not been issued while it was a subsidiary of North American, went into arrears in 1932, and as of May 1, 1937 that preferred stock

8448 was recapitalized, and the recapitalization was the subject of litigation, and one of the remedies asked by the complainants was that dividends should not be paid on the preferred stock.

Q. I believe there is testimony in the record on that matter. A. Those are the only exceptions.

Q. So that with these two exceptions, your answer to my question would be in the negative, would it? A. Yes, sir.

Q. Now, are there certain non-utility subsidiaries of The North American Company having preferred stocks outstand-

ing on which there is a present arrearage? A. Non-utility subsidiaries, did you say?

Q. Having securities, preferred stocks outstanding with the public? A. There are outstanding 4,344 shares of West Kentucky Coal Company preferred stock, on which arrearages at December 31, 1940 amounted to $40.125 per share. Those are the shares outstanding with the public. The remainder of the stock is owned by The North American Company.

The preferred stock of North American Light & Power 8450
Company, of which 109,255 shares are held by holders other than The North American Company, had arrearages of dividends at December 31, 1940 of $51 per share.

6,899—

Mr. Van Wyck has testified with regard to the 5 per cent. preferred stock of Illinois-Iowa Power Company. There were 461,522 shares held outside of The North American system at December 31, 1940, on which there was an arrearage of $9.16⅔ per share, and that company also had outstanding dividend arrears certificates calling for $24 per certificate, which were held outside of The North American 8451
system to the extent of 465,217 certificates. Those certificates were issued in 1937, in connection with the reclassification of the stock of that company.

Also, Illinois Traction Company had 210 shares of 6 per cent. preferred stock held outside of The North American system, on which arrearages amounted to $48 per share at December 31, 1940.

There is another company, which is a utility company, a small company, the Kewanee Public Service Company. It

8452 *Herbert C. Freeman— By Respondents—Direct*

has 7 per cent. preferred stock outstanding, of which 5,504 shares are held outside of The North American system, and the arrearage amounted to $28 a share.

Q. That stock was issued, was it, prior to the time at which Kewanee Public Service became a subsidiary of The North American Company? A. Yes.

And with regard to all of the North American Light & Power securities that I have mentioned, and securities of

—6,900—

8453 subsidiaries of that company, it should be kept in mind that we did not acquire control until 1932.

Q. Now can you relate the total par or stated value of publicly held preferred stocks of subsidiaries of The North American Company on which arrearages now exist to the total par or stated value, in principal amount, of preferred stocks and funded debt of The North American Company, consolidated, outstanding in the hands of the public at December 31, 1940? A. Including the stocks of Illinois-Iowa Power Company, those stocks on which there are arrearages represent approximately 4.62 per cent. of the total par or

8454 stated value, in principal amount, of preferred stocks and funded debt, consolidated, of The North American Company and subsidiaries.

Q. Are the full dividends now being earned on the preferred stocks of North American Light & Power Company and Illinois-Iowa Power Company for the year 1940? A. Yes, they are, and in both cases.

Q. When were dividends first paid by The North American Company on its common stock? A. The first dividend on the common stock was paid in 1903.

8455

Q. And what has been the record with respect to dividend payments on common stocks since that time? A. They have been paid continuously, either in cash or stock, each year for thirty-eight years, except for the year 1908. They

—6,901—

were omitted in 1908 because of the panic in 1907 and the business depression that followed.

The amounts paid in per cent. of par or stated value have ranged from 3.75 per cent. to 16 per cent.

8456

Q. And as to the aggregate payments in cash on the common stock of The North American Company, what has the total been since 1903? A. The total cash dividends to December 31, 1940 have amounted to $97,071,845.77.

Q. And have there from time to time during the company's existence been dividends paid in other securities, other than common stock? A. There was a dividend paid in 1922, in preferred stock.

Q. Of The North American Company? A. Of The North American Company.

8457

And in 1939 and 1940, dividends were paid in participating units for common stock of Washington Railway and Electric Company. These dividends, together, had a cash value at the date of declaration, of about $4,100,000.

Q. Now, as to dividends paid on common stock in common stock, what has been the total number of shares of common so issued? A. From 1923 to 1934, 5,489,235.945 shares of common stock were issued as dividends on the common stock, resulting in a charge to earned surplus of a total

—6,902—

amount of $59,853,941.80.

8458 *Herbert C. Freeman—By Respondents—Direct*

The market value of those shares, based on the closing prices at December 31, 1940, amounted to $91,258,547.59.

Q. Now, that aggregate figure which you have just given is based on market price at December 31, 1940 and not at time of declaration, is that correct? A. That is true.

Q. As to dividends paid on outstanding preferred stocks of The North American Company, what has been the aggregate amount of such payments? A. On the 6 per cent. preferred stock, the dividends have aggregated $33,056,026.25,
8459 to January 2, 1941; and on the 5.75 per cent. preferred stock, the dividends have aggregated $3,827,068.06 to that date.

Q. Those figures in each case represent actual cash payments, do they not? A. Yes, those dividends have been regularly paid each quarter since the stocks were issued.

Q. Was there a reclassification of common stock in 1901? A. Yes, in 1901 the common stock was reduced to 30 per cent. of the amount previously outstanding; that is to say, one new share of common stock was issued for each 3⅓ shares theretofore outstanding.

—6,903—

8460 Q. Will you illustrate the growth in value, based on market prices of an investment made subsequent to the date of that reclassification which you have referred, in terms of present value? A. Assuming that an investor at that time had bought 100 shares of stock and had retained all stock dividends received since that time and had exercised all his rights to subscribe to new stock, the results would have been as follows:

The original investment would have cost him $92.50 for each share of the par value of $100, that is, $9,250 for a

8461

100-share investment. The exercise of rights to subscribe for additional common stock would have called for an additional investment by him of $14,500, so that his total investment would have been $23,750.

On that investment, he would have received, to January 1, 1941, cash dividends on the common stock of an aggregate of $52,897.37, and cash dividends on the preferred stock of $10,759.50——

Q. (Interposing) The preferred stock to which you have referred being preferred stock received during the course of the period as dividends on common stock or as a result of a reclassification of common stock held, is that right? A. That is right, yes, sir. So that his total cash dividends would have been $63,656.87.

8462

—6,904—

He would also have received special dividends paid in 1939 and 1940, in participating units, for common stock of Washington Railway and Electric Company, a total of 133 units, with a value at the date of declaration, of $2,348.50; so that he would have received in dividends in cash and securities of other companies, of an aggregate amount of $66,005.37.

8463

Q. Now, what rate of return does that indicate on the original investment? A. The average years invested, the weighted average of his investment, to January 1, 1941, would be 32.61 years.

Q. Do you mind explaining your use of the term "weighted average"? A. That is arrived at by taking the number of years for which each individual amount which he invested has been invested from the time of the investment

to January 1, 1941, and dividing by the total amount of the investment.

That average is 32.61 years; so that the dividends in cash and securities of other companies would represent a return of 8.5 per cent. per annum from December 31, 1901 to January 1, 1941, on the average yearly invested capital.

Q. Now, what would be the market value at December 31, 1940 of the securities now represented by the original investment so made in common stock? A. The investment would
8465 now be represented by 4,457 shares of common stock, of $10 par value, and 184 shares of 6 per cent. preferred stock, of

$50 par value. Valuing those at the market values at December 31, 1940, that is to say, 16⅝ for the common and 57 for the preferred, would give a value of $74,097.63 for the common and $10,488 for the preferred, a total of $84,585.63; so that the total market value at December 31, 1940 is more than three and one-third times the amounts of his original cash investment.

Q. The figure of current market value which you have
8466 given, I take it, is in addition to the amount of dividends received on the original investment, either in cash or in participating units of Washington Railway and Electric Company? A. That is correct.

Q. Now, are you able to state the current rate of return on the present market value of the original investment to which you referred? A. The current rate of return, that is, for this purpose treating common stock dividends at the rate recently paid, of $1.20 a share, represents a little over 7 per cent. on the market value of the stocks held, taken at December 31, 1940 prices.

 8467

Q. You have spoken of the stock dividend policy of The North American Company over a period of years. What was the significance of this policy in the operations of The North

American Company system? A. It was a policy that had a very great effect upon the development of The North American Company and its subsidiaries. It was of the greatest possible importance in their development, because it permitted of the retention in the system of all of the earnings during that period, with the exception of those required to 8468 pay the dividends on the securities of the subsidiary companies and on the preferred stock of The North American Company.

Now, during the period from 1923 to 1934, inclusive, the consolidated income of The North American Company, after provision for preferred stock dividends of subsidiaries and minority interests in subsidiaries, but before provision for The North American preferred dividend, amount to an aggregate of $215,148,003.26.

That does not include the undistributed income of the Washington Railway and Electric Company during the pe- 8469 riod from the time of its first acquisition to the first time it was taken in as a consolidated subsidiary, and that amounted to $6,700,199.69. That is the portion applicable to The North American holdings of the common stock of that company.

Adding that amount gives a grand total of $221,848,202.95.

The cash dividends paid on the preferred stock of The North American Company and the dividends which were

paid in 1934, in cash, as I have previously mentioned, on the common stock, for the entire period amount to $27,126,480.08; so that there was retained in The North Amer-

—6,907—

ican Company and its subsidiaries an aggregate of $194,721,722.87.

Now, there were certain charges and credits to surplus, both of the subsidiary companies and of The North American Company during that period, which affects that balance

8471 that was originally transferred to surplus from income; but the net additions to surplus during that entire period——

Q. (Interposing) That is 1923 to 1934? A. Inclusive, yes, amounted to $66,369,286.91, as to surplus of subsidiaries; and $96,212,173.70, as to The North American Company, but as to that figure, with respect to The North American Company, $59,853,941.80 was transferred to capital and capital surplus, and the remainder—the transfer to capital and capital surplus represented the capitalization of the stock dividends paid—and the remainder of $36,358,231.90 remained in earned surplus; so that after all surplus charges, other

8472 than those with respect to the issuance of stock dividends, $162,581,460.61 was allowed to remain in the consolidated enterprise, which represented $29.62 of net assets per share on each of the 5,489,236 shares of common stock issued as stock dividends during that period.

Q. What was the effect on the operations of the system of retaining this surplus within the system? A. It provided that amount of capital for improvements and additions and

—6,908—

for the acquisition by The North American Company of additional investments, without the necessity for any financing.

Q. What was the carrying value at December 31, 1940 of the investments held by North American? A. The total carrying value of investments at December 31, 1940, was $288,285,708.19.

Q. Now, does this figure include advances to subsidiaries, consolidated? A. It includes advances to subsidiaries, consolidated, not current, amounting to $5,008,628.68.

Q. And does it exclude certain short-term investments? A. Yes, there were in addition short-term investments carried at $501,735.54; so that the carrying value of investments, applying adjustments for those two figures I have mentioned, at December 31, 1940, was $283,277,079.51. 8474

Q. You stated, previously, certain periods in the company's history with respect to issuance of securities. Are there other recognizable periods which can be stated with respect to acquisition of public utility subsidiaries? A. There are, broadly, four main periods. There is the initial periods, from 1890 to 1903, when The North American Company acquired its initial investments in the Wisconsin-Michigan area, in St. Louis, and the minority investment in Detroit. 8475

In the properties centering around Milwaukee, the company had acquired an interest at its formation, in 1890. It had increased that investment to approximately 88 per cent. of the stocks of the company operating in Milwaukee by 1895, and by 1905 it owned 100 per cent.

In St. Louis, its first investment was in 1901, and it owned substantially all of the stock of the company operating there by 1906.

8476 *Herbert C. Freeman—By Respondents—Direct*

The minority investment in Detroit, acquired in 1903, represented 14.73 per cent. of the stock of that company.

Q. Outstanding at that date? A. Outstanding at that date.

The Wisconsin group was increased in 1912 by the addition of Wisconsin Gas & Electric Company.

Q. Now, what was the next period of major growth in the ownership of public utility subsidiaries? A. The next period of its large expansion was from 1922 to 1928. That
8477 included the acquisition of control of The Cleveland Electric Illuminating Company, in 1922, and a small investment in Washington Railway and Electric Company, in 1924, a further investment in 1925, and control of that company in 1928.

Then our present minority interest in the Pacific Gas & Electric Company is related to this period, through the acquisition in 1925 of control of Western Power Corporation.

—6,910—

During this same period, we acquired 42.5 per cent. of the voting stock of North American Light & Power Company,
8478 in 1926, which was at that time intended as a minority investment to aid in the development of the Midwestern territory.

Then in 1920 we organized Wisconsin Electric Power Company.

Q. Is that the old—— A. (Interposing) That is the old company of that name.

Q. And why was that company organized? A. It was organized for the purpose of constructing the Lakeside power plant, which was leased to the Milwaukee Electric Railway

8479

& Light Company, the present Wisconsin Electric Power Company.

Q. The capital for this company was supplied, was it, by The North American Company direct? A. The equity capital was; and the company was financed by senior securities.

At that time, the Milwaukee Electric Railway and Light Company would not have been in a position to finance the construction of the building of that station, itself; but in 1938, in connection with the refinancing of The Milwaukee Electric Railway and Light Company, the stock of Wisconsin Electric Power Company was acquired by that company and the companies were merged.

8480

Q. In other words, at that time North American sold its

—6,911—

interest in the old Wisconsin Electric Power Company to the company now named Wisconsin Electric Power Company, is that right? A. That is correct, yes.

Q. And during the period, did The North American Company also organize the company then known as Union Electric Light & Power Company of Illinois? A. That company was organized in 1923, for the purpose of constructing the power plant at Cahokia. That plant was operated by a subsidiary of the Union Electric Light & Power Company of Missouri, as it was then called, under lease.

8481

Now, the stock of that company was sold by The North American Company to the Union Electric Company of Missouri in 1928.

Then in 1925, The North American Company acquired control of the Mississippi River Power Company, and the

8482 *Herbert C. Freeman—By Respondents—Direct*

stock of that company was turned over to the Union Electric Company of Missouri in 1926.

Q. Now, in the case of these three transactions of which you have spoken, involving the disposition by North American of Wisconsin Electric Power Company, Union Electric Light & Power of Illinois, and Mississippi River Power Company, what was the basis on which the ownership of those companies was transferred to the company acquiring the same?

8483 In the case of the stock of Wisconsin Electric Power —6,912— Company, it was transferred to the Milwaukee Electric Railway and Light Company, at the aggregate of the capital plus accumulated surplus of that company up to the date of transfer, and the Milwaukee Company paid for it in its preferred stock, which was acquired at that time by The North American Company.

Q. In other words, am I correct in understanding that the basis was cost plus earned surplus since date of acquisition? A. That is correct.

8484 In the case of Union Electric Light & Power Company of Illinois, the basis was the same; it was turned over at the cost to The North American Company plus the undistributed earnings of Union of Illinois up to the time of the transfer.

In the case of Mississippi River Power Company, the basis was a little different. The North American Company had acquired some of the stock of Mississippi River Power prior to 1925, and on the cost of that stock North American received in addition to cost, 6 per cent. carrying charges on

8485

cost, and as to the stock acquired, I believe it was in August, 1925, which was acquired by an exchange of stock of North American for the stock of Mississippi River Power Company, common stock of North American, there was a short period, I believe from August to December, 1925, for which Union of Missouri paid North American the equivalent of the dividends on the stock issued by North American in acquisition of the remaining stock of Mississippi River Power Company.

—6,913—

8486

Q. Now, during this period of which you have been speaking, was there also the acquisition of the properties now constituting Wisconsin Michigan Power Company? A. Yes, those properties were acquired in 1924.

Wisconsin Michigan Power Company was formed as a reorganization of Peninsular Power Company, and at the time of the reorganization, various properties which had been acquired by the North American Company were merged with Peninsular Power Company.

In that case, the properties were taken over by the present Wisconsin Michigan Power Company, on the basis of a valuation of the properties which was approved by the Wisconsin Commission, and the Michigan Commission.

8487

Mr. Hamilton: This is a good breaking point, Mr. Examiner.

The Examiner: All right, we will recess until two o'clock.

(Whereupon, at 12:22 o'clock p. m., the hearing was recessed to reconvene at 2:00 o'clock, p. m. of the same day.)

—6,914—

8488 *Herbert C. Freeman—By Respondents—Direct*

(2:00 P. M.)

AFTERNOON SESSION

The Examiner: All right, gentlemen, let us resume.

Whereupon, HERBERT C. FREEMAN, having been previously sworn, resumed the stand and testified further as follows:

8489

Direct Examination by Mr. Hamilton (Continued):

Q. You had testified this morning, Mr. Freeman, as to certain acquisitions of subsidiary companies during the period of 1920 to 1928.

Subsequent to 1928 were there any additions of public utilities subsidiaries to The North American System? A. No actual public utility subsidiaries; however, there was the acquisition of control of North American Light and Power in 1932, due to the fact that Middle West were unable

8490 to live up to their obligations to take the additional stock offered from year to year and North American had to take it.

Q. I think Mr. Van Wyck has described the circumstances surrounding that transaction? A. Yes.

Q. Now, as to non-utility subsidiaries, will you state the time of acquisition of companies of that character which have entered into the system? A. In 1905, the control of West

—6,915—

Kentucky Coal Company was acquired. That was originally

8491

acquired with the idea of using it as a source of coal supply for the St. Louis Subsidiaries. As a matter of fact, however, the subsidiaries of North American have taken a comparatively small amount of coal from that property for a number of years and its sales are almost entirely to outsiders.

In 1924, North American Company acquired control, in fact acquired all of the outstanding stock of Sixty Broadway Building Corporation, in which the offices of the company are located, their idea being that apart from it being a good investment, it acted as a protection against possible rent increases and gave office facilities for the company.

8492

Then, in 1924, a company was organized, known as North American Utilities Securities Corporation, as a medium of investment of surplus funds for the North American Company and also to increase the diversification of The North American holdings and engage some additional outside capital.

Q. In general, what have been the characteristics of North American's investment policy over a period of years? A. The most outstanding characteristic, I would say, is the long-term character of the holdings. We have Wisconsin Electric Power, dating back to 1895, and from there, our acquisitions have covered the period up to 1924 and 1926 when we acquired Washington and North American Light

8493

—6,916—

and Power Company, so the holdings have ranged from a period of fourteen to fifty-one years.

Now, another outstanding characteristic has been the diversification, the location in important industrial and other

8494 *Herbert C. Freeman—By Respondents—Direct*

types of territory in different parts of the country and the stability that has resulted from our investments being in large cities. Then, we have the further stabilizing influence of The North American investments in Pacific Gas and Electric and Detroit Edison, which represent additional diversification, and particularly in the holding of P. G. & E., giving us a somewhat more uniform rate of income than we have received from our direct operating subsidiaries.

8495 Q. You spoke of the investment in Wisconsin Electric Power as originating in 1895. You were referring to the reorganization which occurred at that time? A. Yes, it was about that time that we really acquired our one hundred per cent. control,—no, our eighty-eight per cent.

We acquired our first interest there in 1890, but it assumed the proportions of a major subsidiary, I would say, in 1895.

Q. Now, after the specific dates of original acquisition, of securities of the various public utility subsidiary compa-

8496 nies, have there been substantial amounts invested by North American in those companies? A. Yes, the amount of additional investment has been very much greater than the original cost of acquiring the securities which gave us control.

The cost of original acquisitions has amounted to $94,839,116.06, and by original acquisitions I mean the purchase of the securities of existing companies which now represent our investment.

In addition to that, we have acquired properties which have been merged into, or consolidated with, properties which we already owned and our investment in those has amounted

to $74,811,965.98. In each of those cases, part of the investment has been in cash and part through the exchange of securities,—we have issued stock of North American.

Q. And in computing your composite figure, what value have you given the stock of North American Company issued in connection with those acquisitions? A. The value we have given to it has been based on the market price at the time of issuance, but it has not exceeded the market price, and in some cases, I would say that it has been stated at less than the market price. As a matter of fact, however, the proportion of those original acquisitions and of the subsequent acquisitions of properties which have been merged in with the 8498

—6,918—

original acquisitions, represented by securities acquired for the stock of The North American Company, has only been about twenty-five per cent. of the total, or, about seventy-five per cent. has been represented by actual cash invested.

In other words, taking those two groups together, there is over $124,000,000.00, that represents cash,—and $45,000,000.00 represents securities acquired in exchange for stock of North American. 8499

Then, there has actually been invested in additional issues of stock of the companies after their original acquisition, a total of $146,535,670.93.

Now, against these costs of acquisition, there have been cases in which companies have been recapitalized on a basis which gave The North American Company some senior securities and some junior securities and in those cases, the senior securities have been sold and in other cases we have sold the properties which we have acquired to other subsidiaries

8500

and there have been outright sales of securities to outsiders and the aggregate of all this is $36,375,583.03.

Then, at different periods during the life of the company, securities have been revalued and the net effect, at the present time, of those revaluations is that our investments have been written-down by a net amount of $14,264,616.06. Those are the write-downs of securities which we now hold.

—6,919—

8501 Q. Now, during the period in which the subsidiaries of North American Company have been subsidiaries, have large amounts of undistributed earnings been retained by those subsidiaries? A. Yes. Since the acquisition of the securities of our subsidiaries, I am excluding now North American Light and Power Company and North American Utilities Securities Corporation, the amounts of undistributed earnings which we have left in the subsidiaries have totaled $64,115,300.00.

Now, that is in addition to amounts of undistributed earnings of subsidiaries which have been capitalized and
8502 which have been treated as additional cost of investment in the subsidiary companies. That amounts to $16,156,849.32, and that amount is not included in the cost of the properties which I have mentioned above, which represented direct outlay, but it is included in the carrying values of the securities at the present time and is a proper addition to the cost of those securities from an accounting point of view.

Q. Now, in order to make it clear, your last statement, as I understand it,—these figures for undistributed earnings retained excluded any amount of earnings which may have

been retained by subsidiaries of North American Light and Power Company—is that right? A. Yes.

—6,920—

Q. Does that also exclude earnings which may have been retained by Detroit Edison and Pacific Gas and Electric Company? A. Yes.

Q. What is North American's policy with respect to the value at which its investments are carried? A. The policy of North American has been to carry investments at cost, or less. 8504

Q. Well now, Mr. Freeman, will you explain what you mean by that? A. The cost has been regarded as including actual cash investment and a valuation based on market, as I explained before, of securities of North American issued for the purpose of acquiring other securities of subsidiaries on an exchange basis and it also includes the items I have mentioned before, of surplus of subsidiary companies which have been transferred from their surplus to their capital accounts and which is regarded as additional cost to North American of those investments.

Q. Now, in certain instances, have investments been written down below cost? A. Yes, there have been some cases of investments which have been written down. 8505

For example, North American Light and Power Company had accumulated a deficit up to December 31, 1937, applicable

—6,921—

to the holdings of North American in the stock of that company, amounting to $7,918,204.50, and at that time, we wrote down our investment in the common stock of North American Light and Power by that amount and, in effect, took up that amount of loss.

In the case of North American Utilities Securities Corporation, the investments held by that company had depreciated in value as a result of the market slump and in March of 1933 we wrote-down the carrying value of our investment in the preferred stock of that company by $4,296,242.62, which was equivalent to the amount by which North American Utilities Securities Corporation, at that time, wrote-down its investment. That amount was written off against reserve for contingencies which had previously been pro-
8507 vided from earned surplus.

That amount, incidentally, was the proportion of the writedown of the investments of N. A. U. S. applicable to holdings of North American and excluding the proportion applicable to the holdings of the minority common stockholders.

Q. In the aggregate, is the underlying assets value of securities of subsidiaries owned by North American Company in excess of the carrying value of such securities? A. Yes, it is substantially in excess.

Q. Is that also true as to the investment in Pacific Gas
8508 and Electric, and Detroit Edison, and Washington Railway

—6,922—

and Electric? A. Yes, that is true in the case of those investments, also.

Q. Now, you spoke, I believe, of the existence of a net write-down on the books of North American and mentioned a figure. Will you explain that reference, further? A. That write-down has been the result of a number of transactions over the entire life of the company. At one time, there had been some write-ups on the books of the company,——

8509

Q. (Interposing) At what time was this? A. Those write-ups had all occurred prior to 1917. There have been no write-ups on the books since 1917,—and, at that time, the net write-ups amounted to $5,298,295.75.

The maximum amount of write-ups at any time on the books of The North American Company was $9,803,646.60, on December 31, 1906, and that has all now been offset by subsequent write-downs. It has not only been entirely eliminated, but the write-downs are now $14,000,000.00 in excess of any previous write-ups.

8510

Q. And at what date did net write-downs exist, as a positive figure? A. Well, there was an excess of write-downs first at December 31, 1934.

—6,923—

Q. And that situation has continued without interruption since that date? A. That is so, yes.

I don't know if I have mentioned before the exact figure of the write-down.

Q. If you will, please. A. December 31, 1940—$14,264,616.06.

8511

Q. Now, with reference to the investment of The North American Company and Detroit Edison Company, will you state the number of shares owned by North American at December 31, 1940? A. At December 31, 1940, the North American Company owned 244,463 shares of Detroit Edison common stocks. They were carried on the books of North American at $29,822,316.04.

Q. What was the relation of the market price at that date to the then carrying value? A. The market price at December 31, 1940, based on the last sale, was 118, and at

8512 *Herbert C. Freeman—By Respondents—Direct*

that price, the investment amounted to a value of $28,846,634.00 which is about a million dollars below the carrying value. The carrying value of Detroit Edison, on the books of North American, represented ten per cent. of the corporate assets shown by the books at that date and the market value of Detroit Edison represented eight and eight-tenths per cent. of the combined market value of listed securities owned at that time and the carrying value of securities not

—6,924—

8513 listed.

Q. Now, what was the income received from this investment for 1940, and the relation of that income to gross income of North American for the year? A. The income for 1940 from Detroit Edison stock was $1,466,778.00, which represented six and eight-tenths per cent. of North America's corporate gross income for that year.

Q. Are these figures which you have given as to Detroit Edison exclusive of holdings of stock of that company by N. A. U. S.? A. Yes, in each of these figures which I have mentioned, I have excluded one thousand shares of De-

8514 troit Edison which were held by North American Utilities Securities at December 31, 1940. They were carried by North American Utilities Securities at a carrying value of $70,500.00.

Q. As to the investment of North American in Pacific Gas and Electric, will you give us similar information with respect to it? A. At December 31, 1940, North American held 2,002,770 shares of Pacific Gas and Electric Company common stock which were carried by North American at $63,765,418.62. The market price of Pacific Gas and

Electric, at that date, was twenty-seven and one-half. That is based on the last sales price and at that price, the investment amounted to a value of $55,076,175.00. The carrying

—6,925—

value of this investment represented twenty-one per cent. of North American's corporate assets as shown by the books and the market value, which I have mentioned represents sixteen and eight-tenths per cent. of the combined market value of listed securities and the carrying value of securities not listed. 8516

Q. Again, as of December 31, 1940? A. Yes.

Q. Now, will you state the amount of income received from this investment by North American for the year 1940? A. In 1940, North American received $4,005,540.00 in dividends on Pacific Gas and Electric common stock. That figure represented eighteen and one-half per cent. of North American's corporate gross income for the year.

Q. Are these figures which you have given as to the investment in Pacific Gas, exclusive of holdings in that company by North American Utilities Securities? A. Yes, they are. North American Utilities Securities, at December 31, 1940, held 8517 fifty-six thousand, nine hundred shares of Pacific Gas and Electric common, which were carried by them at $1,254,582.30 and those figures are not included in the figure I have mentioned for the North American Company.

Mr. Hamilton: Please mark this table for identification as Respondents' Exhibit No. 126.

—6,926—

(The document referred to was marked for identification as Respondents' Exhibit No. 126.)

8518 *Herbert C. Freeman—By Respondents—Direct*

By Mr. Hamilton:

Q. Will you state what this exhibit represents, Mr. Freemen? A. This exhibit represents a statement for the years 1936 to 1946, inclusive, by years, of the dividends received from Pacific Gas and Electric Company and the Detroit Edison Company by The North American Company, and a statement for each of those years of the gross corporate income of The North American Company and of the debenture interest and preferred dividends of The North American
8519 Company.

Q. This exhibit has been prepared under your direction, has it? A. Yes.

Q. And the facts shown, taken from the records of The North American Company? A. Yes, sir.

Mr. Hamilton: I offer it in evidence as Respondents' Exhibit No. 126.

Mr. Binford: No objection.

The Examiner: It is received under the number mentioned.

8520 (The Respondents' Exhibit No. 126, received in evidence.)

—6,927—

By Mr. Hamilton:

Q. Now, I believe you testified, Mr. Freeman, that the first acquisition of stock by North American in Detroit Edison dated back to 1903 and I believe you also gave a percentage to the total stock outstanding of the Detroit Edison represented by that original investment? A. Yes.

8521

Q. In general, has that relative percentage continued in substantially the same percentage since the date of original investment? A. It has somewhat increased over the years. The percentage owned at the close of the year, 1903, was 14.73 per cent. of the outstanding stock of Detroit Edison Company.

At the present time, the percentage owned represents 19.29 per cent., that latter figure does include the one thousand shares of stock owned by North American Utilities Securities Corporation.

8522

The holdings have not at any time exceeded, at the end of any year, 19.59 per cent., which was at the end of 1928.

Q. I do not believe this record shows the particular service territory of Detroit Edison.

From your information as to the company, could you state, very briefly, and without detail, the general location of the service territory of this company? A. It covers an area around Detroit, Michigan, in the southeastern part of

—6,928—

the State and extending up into what is known as the "Thumb" of Michigan. I can't give the exact area covered, but it is substantially the southeastern portion of the State of Michigan.

8523

Q. Now, have you stated the first date at which an interest in the common stock of Pacific Gas and Electric Company was acquired by North American? A. The acquisition of our holdings in Pacific Gas and Electric resulted from the acquisition by us in 1925 of the control of Western Power Corporation.

8524 Western Power Corporation owned Great Western Power Company, San Joaquin Light and Power Company, and Midland Counties Company. The Great Western Power Company served a territory that was, to a great extent, included in the service territory of the Pacific Gas and Electric Company. There was competition between the two companies. The San Joaquin property adjoined the Southerly end of the service territory of Pacific Gas and Electric. At the time we acquired control of Western Power Com-
8525 pany, that company had a number of projects under way.

Q. By "that company" you refer to what? A. Western Power Company, which called for the expenditure of very considerable amounts of capital so that during the period from 1925 to,—well, to the end of 1929 and the beginning of 1930, that company had invested approximately

$27,000,000.00 in additions and improvements to its subsidiary companies and the greater part of that was represented by indebtedness of Western Power Corporation to
8526 The North American Company.

For example, they had begun the construction of a tie-line from Sacramento, one hundred and four miles south to Merced, in the Southern part of the territory. The purpose of that tie-line was to enable current generated during the early spring run-off in the San Joaquin territory, which was uncontrolled, to be used for generation of current that could be used by Great Western in serving its territory and enabling Great Western to conserve water in its own reservoirs in the North, where the water was controlled. At the same time, Great Western was raising what was known

8527

as the "Big Meadows" dam in the upper reaches of the Feather River, forty-five feet which increased the storage capacity of Lake Almanor from about three hundred thousand acre feet to one million, three hundred thousand acre feet. That water discharges through the North Fork of the Feather River.

They had also entered into a contract with the Feather River Power Company for the construction of a forty thousand kilowatt plant at Bucks Creek, which was to be operated by Great Western under a lease. They were also 8528
building a plant known as the Balch plant on the Kings River in the San Joaquin territory and they were building a thirty-five thousand,—that was a thirty-five thousand kilo-

—6,930—

watt plant,—and they were building a thirty-five thousand kilowatt steam plant in San Francisco in order to have firm power near their largest point of demand.

Now, all of those improvements fitted in perfectly with the requirements of Pacific Gas, and the two properties, in a sense fitted together like a hand and a glove so that it 8529
was a very definite achievement in the direction of integration to bring those two properties together.

—6,931—

We started negotiations with Pacific Gas in 1929 and they were continued, and concluded about March, 1930.

Q. By "we", do you refer to Western Power Corporation? A. Really, the North American Company, speaking for Western Power Corporation, and the necessary Commission approvals were obtained and the transaction was closed on the 12th of June.

8530 *Herbert C. Freeman—By Respondents—Direct*

Now, as a result of that transaction, the outstanding securities and advance accounts of the subsidiaries, the operating subsidiaries of Western Power Corporation which amounted to approximately $67,800,000, were acquired by Pacific Gas against the issue to us, to Western Power,—I should say,—in that case, of 1,825,000 shares of its common stock with a par value of $25 a share.

Q. The stocks of Pacific Gas & Electric Company? A. Yes, which represented a par value of $45,625,000, so that
8531 there was an actual reduction in outstanding capitalization by this transaction of over $22,000,000.

Q. On the books of Pacific Gas & Electric? A. Yes, on a consolidated basis.

In addition to the $23,700,000, approximately, by which the investment in the subsidiaries of Western Power Corporation had been increased during our period of ownership, the North American Company provided funds for the retirement of senior securities of Western Power Corporation which amounted to over $15,000,000,—approximately $15,

—6,932—

8532 500,000,—so that we had improved the situation during our period of ownership by approximately $39,200,000.

The whole result of the transaction was a very constructive job.

Q. From whose standpoint? A. A rounding out of the territory of Pacific Gas & Electric which was regarded with very considerable favor in that State, and I would like to add that, at this point, that those negotiations were conducted entirely upon the basis of our relinquishing our holding company situation with regard to the Western Power

properties and becoming investors in the common stock of Pacific Gas.

Q. Well now, would it be accurate to summarize this transaction by saying that the transaction resulted in a shift from properties possibly controlled by North American to an investment in securities of Pacific Gas & Electric Company? A. That is exactly what happened.

Q. Now, you stated that a certain number of shares of Pacific Gas & Electric were received by Western Power in connection with this transaction. 8534

Under what circumstances did all, or part, of those shares come to North American at a subsequent date? A. A Part of them came to North American as the result of an offer made by Western Power Corporation to its stockholders of

—6,933—

a portion of those shares at a price below the market, to provide funds for the retirement of senior securities of Western Power, and the balance came to North American upon the liquidation of Western Power.

Q. And approximately what was the extent or number of shares so acquired by North American directly upon the 8535 liquidation of Western Power Corporation? A. I should mention that in the meantime, there had been an additional issue of stock of Pacific Gas & Electric. Of the 1,825,000 shares of common stock received by Western Power Corporation, 804,580 shares were acquired by the North American Company at the time of this offering and 365 shares were acquired by minority stockholders of Western Power Corporation. That left Western Power Corporation with about 1,020,000 shares, and in 1931, that corporation subscribed

8536 *Herbert C. Freeman—By Respondents—Direct*

for 102,005 shares of original issue by Pacific Gas & Electric, and at the same time, the North American Company acquired 80,445 shares of original issue.

At the time of the liquidation of Western Power Corporation, which occurred in 1936, that corporation had 1,112,060 shares, of which the North American Company received 1,110,786.31 shares, on liquidation, and the balance went to minority stockholders.

Q. Those are shares of Pacific Gas & Electric you are
8537 referring to now, are they not? A. Yes, I beg your pardon,—

—6,934—

I said the balance were transferred to minority stockholders, —in addition, the North American, itself, delivered a small number of shares as an adjustment to some of them, upon the liquidation.

Q. Now, what benefits, if any, accrue to North American by reason of the ownership of these two minority investments to which you have been testifying? A. The chief benefit, I would say, was stabilization of income, and that is par-
8538 ticularly true with respect to holdings of Pacific Gas & Electric Company stocks. The dividend on that stock, at the time it was acquired, was at the rate of 8 per cent. per annum. That was reduced to 6 per cent. in the latter half of 1933, and it was restored to 8 per cent. again in the last quarter of 1936, so that the income from that holding was comparatively stable.

The dividends on Detroit Edison have not been quite so stable. They were also at the rate of 8 per cent., up to 1932, or '33, and then dropped to 4 per cent., and they have now been increased to 6 per cent. per annum.

8539

Q. Since you are speaking in terms of percentages, perhaps you had better state the par value of the securities of each company, if you will? A. The par value, in the case of Pacific Gas & Electric, is $25, so the 8 per cent. represents a $2 dividend; in the case of Detroit Edison, the par value of it is $100 per share, but the stabilizing influence of those

—6,935—

dividends on the income of North American have been quite appreciable over this period in 1933 and 1934 when the income fell off quite badly from operating subsidiaries.

8540

I might indicate that further in this way: The five-year reported earnings per share of Detroit Edison, from 1936 to 1940, ranged from $6.16 per share to $8.39; and for that same period, the reported earnings per share ranged from $2.55 to $2.84 per share.

Q. Now, the latter reference was to Pacific Gas & Electric, was it not? A. Pacific Gas & Electric,—yes.

Of course, in our income we take up only the dividends actually paid.

8541

Detroit Edison, of course, represents diversification to a considerable extent, as against our other properties. It is, perhaps, affected a little more definitely by changes in industrial condition than our other properties and will also have higher earnings in periods of good industrial activity.

It more nearly approximates Cleveland in that respect.

Pacific Gas is a different type of company. It appears that the Pacific Coast does not respond as quickly to changes in business conditions as the rest of the country. There is generally a lag there and when the change does come, it is

8542 *Herbert C. Freeman—By Respondents—Direct*

not quite so violent as it is in the rest of the country, so, the

—6,936—

two, together, are somewhat complementary and the large holding in Pacific Gas particularly stabilizes the situation.

Q. Does North American take the position that it does not control Pacific Gas & Electric Company? A. It never has controlled Pacific Gas & Electric Company.

Q. Does the North American System similarly take the position that it does not control Detroit Edison Company?

8543 A. Yes, the same is true with respect to that company.

Q. Does the existence of these holdings, these investments, by North American impair the operation of the utility subsidiaries of North American Company? A. Not in any sense. The operations of Pacific Gas have no relation whatever to those of our other subsidiaries.

The operations of Detroit Edison, as such, have no relation, but with Detroit, there has been a certain comity, you might say, between the management of that company and the management of our other companies which has led to an interchange of information, figures as to cost and things of

8544 that kind, and an exchange of experiences and engineering records, but there is no other effect upon the operations of our subsidiaries.

Q. Has that interchange, as to Detroit Edison, been of value to the North American System? A. I would say quite definitely that it has been of value.

—6,937—

Q. What members of the North American organization, as such, devote time and effort to the matters of Detroit Edison and Pacific Gas? A. Mr. Fogarty, who is Chairman of

the Executive and Finance Committee of the North American Company, is a Director of the Detroit Edison Company and spends such time as a Director is required to spend on the business of a company.

Apart from that, the other members of the organization examine the monthly income statements and keep posted as to the developments with regard to Detroit Edison, on account of the investment we have in that company.

The amount of time required is, I would say, inconsequential in relation to the total business. 8546

As far as Pacific Gas & Electric is concerned, Mr. Fogarty and I are both Directors of that company and as such, we receive copies of their Minutes, both of the Board of Directors and of the Executive Committee. The Executive Committee Minutes are sent to us as a matter of courtesy, and we also receive the weekly reports of the electric and gas output, precipitation reports, the reports of expenditures for improvements and additions authorized by the Executive Committee, and the monthly income and balance sheet and statistics.

As far as I, personally, am concerned, I study all of those reports, and the amount of time consumed is not very great. 8547

—6,938—

Neither Mr. Fogarty nor I have visited California for the purpose of attending meetings of Pacific Gas & Electric Company.

Q. In your own case, does the time which you devote to the matters of Detroit Edison and Pacific Gas impair or impede the attention which you devote to the matters of the public utility subsidiaries of North American Company? A. I would say,—not at all.

8548 Q. From your own observations, and speaking more broadly, does the attention which members of the North American organization devote to the matters of Detroit Edison and Pacific Gas & Electric impede or impair the attention which they devote to the matters of public utility subsidiaries of North American Company? A. No,—not at all.

Q. You have referred, from time to time, to North American Utilities Securities Corporation in your testimony.

8549 Will you state the date of incorporation, State in which incorporated, and the business performed by that company? A. North American Utilities Securities Corporation was organized in December, 1924, under the laws of the State of Maryland to engage in a general investment company business, of the management type.

Q. It is a direct subsidiary, is it, of North American? A. Yes.

—6,939—

By Mr. Hamilton:

8550 Q. Now, I think you stated the original purposes for which this company was formed. Will you state what business it does presently? A. At the present time, the company is in an almost static condition, on account of the situation brought about by the registration of North American under the Holding Company Act.

Mr. Hamilton: Will you read back the answer, please.

(The answer of the witness was read back by the reporter.)

By Mr. Hamilton:

Q. Now, in order to get an idea of the function of this company in the holding company system, will you state the original capitalization of North American Utilities Securities? A. It was originally organized with two classes of preferred stock and common stock.

The first preferred stock was a $6 preferred stock, and the second preferred stock a $7 stock.

The $6 preferred stock was first offered through underwriters, to the extent of 100,000 shares, with 100,000 shares of common stock, in units of one share of each stock at $100 a unit. 8552

The North American Company took 60,000 shares of the second preferred stock and 400,000 shares of common stock, for $6,000,000.

—6,940—

The units were originally part-paid, and it was intended to call the unpaid balance from time to time; but in 1927, the holders whose subscriptions were 50 per cent. paid were offered the opportunity to convert the units into fully paid stock, to the extent of 50 per cent. of the stock originally subscribed for by them, and as a result of that, the actual resulting capitalization was 66,548 shares of $6 first preferred stock, 60,000 shares of second preferred stock and 466,548 shares of common. 8553

Of the first preferred stock, 43,584 shares were reacquired and retired by North American Utilities Securities Corporation in 1930, and the balance were redeemed at $105 a share in 1931; so that there is now outstanding only 60,000 shares of second preferred stock and the common stock.

8554 *Herbert C. Freeman—By Respondents—Direct*

Q. Now, were certain holdings by The North American Company of the common stock of the North American Utilities Securities disposed of during the period, and if so for what purpose? A. In 1928 and 1929, there was considerable speculation in the common stock of North American Utilities Securities, and the price of the stock was becoming entirely out of proportion to its asset value. This was called to the attention of the Curb——

Q. (Interposing) By the "Curb" you refer to what? A.
8555 The Curb Exchange in New York. —and also the specialists,

—6,941—

but that seemed to have no effect; and The North American Company, in the interest of preventing the stock, the price of the stock from running away, sold 23,859 shares to try to bring about a more orderly market.

Q. Now, over a period of years, what have been the earnings per share on the now outstanding second preferred stock? A. Approximately $4.50.

Q. All this stock is owned by The North American Com-
8556 pany, is it? A. Yes, sir.

Q. And there is currently an arrearage on this stock, is there? A. At December 31, 1940, there were arrears of $25 a share, and at that date, based on current market quotations, there was no asset value for the common, and the second preferred stock would have been entitled on liquidation to approximately $2,800,000 in excess of asset value, with securities valued on the market at that time.

Q. Now, will you indicate the net earnings of the company for 1940, in dollars? A. For 1940, the net earning

amounted to $279,190. The only expenses that had to be provided for were taxes, of $14,681, and miscellaneous expenses and interest, of $1,775.

—6,942—

No officers' salaries have ever been paid by the corporation, and no directors' fees have been paid since June, 1938; and there are no other operating expenses.

Q. There is no investment advisory service employed by North American Utilities Securities? A. No.

Q. Or other servicing arrangement? A. No. 8558

Q. Very briefly, what is the general nature of the portfolio held by the company? A. It is a well diversified list of securities, representing referred and common stocks of about 120 companies, of marketable securities. The largest holding, which represents one-third of the total assets, is the 56,900 shares of common stock of Pacific Gas & Electric Company, which I have mentioned.

I can give an analysis of those securities, by classes of investment, at December 31, 1940.

Q. Very briefly, if you will. A. The market value at that time was $4,667,865, which consisted of common stocks of 8559 railroads, to the extent of 3.37 per cent.; common stocks of utilities, 42.04 per cent.; preferred stocks of utilities, 1.10 per cent.; common stocks of industrials, 52.33 per cent.; preferred stocks of industrials, 1.16 per cent.

—6,943—

Q. Have there, from time to time, been considered plans of liquidation of North American Utilities Securities? A. We have discussed plans for liquidating it several times, over the past two or three years, and we have submitted one of

those plans, informally, within the last two or three months, to the Securities and Exchange Commission, but——

Q. (Interposing) In general, what was the nature of that plan? A. The plan called, in general, for the surrender to the corporation by The North American Company of its second preferred stock, and part of its common stock, for assets of North American Utilities Securities, and for the retirement of those stocks by North American Utilities Securities.

The basis upon which the surrender was to be made would
8561 have enabled North American Utilities Securities to liquidate, with a return of about $1 a share to the holders of the common stock——

Q. (Interposing) The publicly held—— A. (Continuing) —which represents the only outstanding interest in the hands of the public.

Q. To make clear your statement, is your figure of $1 a share applicable to the publicly held common stock of North American Utilities Securities? A. I do not recall at the moment whether it was to apply only to the publicly held

8562 stock. I think the basis provided for a liquidation to all of the common stock, but the $1 a share which The North American Company would receive would simply reduce the amount which it would have received upon the surrender of its second preferred stock, so that the effect is the same.

Q. This was the basis of the proposal, even though, in fact, a deficit existed with respect to asset value of the common stock? A. Yes.

Q. Was that plan, as so informally submitted, rejected by the Commission, informally? A. The Commission told

8563

us, informally, that they had difficulty in approving a plan of that kind, and it has been dropped for the time being, at any rate.

Q. Does the operation of North American Utilities Securities interfere with the operation of the utility subsidiaries of The North American Company system? A. I would say not at all.

At the time when the company was active, there was of course a certain amount of time spent by certain members of the organization in following the investments, but it did not interfere with the relationship of The North American Company to its operating subsidiaries.

8564

Q. Now, you have also referred in your testimony to a

—6,945—

company which you designated 60 Broadway Corporation. In order that the record may be complete in this respect, would you very briefly give us the facts as to the business done by it, its dates of incorporation as a corporation, and North American's interest in it? A. 60 Broadway Building Corporation was incorporated in 1924, and we acquired the stock of the company in that year. There is one class of stock, $100 par value.

8565

Q. Under the laws of what state was it incorporated, if you know? A. New York State, I am sure.

The first unit of the building owned by 60 Broadway had been erected in 1908, and it was later enlarged to 25 floors.

It is located in downtown New York, in the financial district, and 12 floors are now occupied by the Central Hanover Bank & Trust Company, under a lease to 1954, with certain

8566 *Herbert C. Freeman—By Respondents—Direct*

rights of renewal; and two complete floors and part of three other floors are occupied by The North American Company.

The building is well maintained, and I think it has a good standing in downtown buildings, in spite of its age; and it is in good operating condition.

At the present time it is about 98 per cent. occupied, which is unusually high for office buildings in the financial section of New York.

—6,946—

8567 Q. What was the original purpose of this investment? A. Investment, for one thing, and also as a hedge against possible rising rents, and it was particularly helpful in that respect in the late twenties and early nineteen thirties, when rents in the building were in the aggregate about 40 per cent. greater than they are at the present time.

Now, from 1928 to 1934, when the aggregate rents paid by tenants other than The North American Company ranged from an average rent of $4.42 to $5.25 per square foot, The North American Company paid 60 Broadway from $2.01 to $2.58 per square foot; so that in that respect the ownership
8568 has resulted in substantial savings to The North American Company.

But during that 7-year period, in spite of those low rents which North American paid to 60 Broadway, it received dividends on its investment in the capital stock of 60 Broadway in each year except 1934. The dividends were equivalent to a return ranging from 8.5 per cent. in 1929 to 20 per cent. in 1931.

Q. As of a recent date, what was the total assets of 60 Broadway? A. The balance sheet at December 31, 1940 shows assets of $4,871,832, with a mortgage of $1,918,750.

The investment by the North American Company is $350,000 in the stock, and an open account of $1,659,023.

The net income for 1940, after payment of all fixed charges and taxes, but before payment of interest on the

—6,947—

debt to The North American Company, was $49,293, which represents the return to North American on its entire investment, and represents about 2.5 per cent. on the investment.

Q. Now, is the investment in this enterprise large or small in relation to the total assets of The North American Com- 8570
pany? A. It is quite small in relation to the assets; it is less than 1 per cent. of the total.

Q. On a corporate basis? A. On a corporate basis.

Q. Does the operation of this company interfere with the operations of the utility subsidiaries of The North American Company? A. Not in any way. It does not prejudice the interests either of investors or consumers.

Q. Has it represented over a period of years a source of revenue to The North American Company? A. Yes, it has in every year paid a return to The North American Com-
pany. 8571

Q. And are you able to state the total assessed valuation of the property at a recent date? A. The present assessed valuation is $3,375,000.

Q. Could this property be disposed of at this time without realization of substantial loss on North American's in-

—6,948—

vestment? A. I would say that at this time there would inevitably be a substantial loss due to the depressed state of the real estate market in the financial district in New York.

8572 *Herbert C. Freeman—By Respondents—Direct*

The Examiner: Let us have a short recess at this time.

(Whereupon, a short recess was taken.)

By Mr. Hamilton:

Q. You have also referred, from time to time, in your testimony to West Kentucky Coal Company. Will you state the date of its incorporation and the state under the laws
8573 of which it was incorporated? A. The West Kentucky Coal Company was incorporated in the State of New Jersey in 1905; and The North American Company acquired its interest in the company in that year.

Q. And why was this investment made? A. It was primarily with the idea that West Kentucky Coal Company would serve as a source of coal supply for the electric property in St. Louis, the intention being to barge the coal down the Ohio River into the Mississippi and then up to St. Louis.

It was found, however, that it had more value, really, as a defensive rather than as a direct source of supply for
8574 St. Louis.

Q. Now will you explain what you mean by that observation? A. The ownership of the property represents a source

—6,949—

of supply upon which the companies could fall back, if necessity arose, and to what extent that has improved the bargaining position of the various companies in the purchase of their coal it is difficult to say.

At the present time, of course, with coal prices fixed, it probably does not operate in that way; but there is good reason to think it may have in the past.

Q. Now, in order to get a general idea of the properties operated by West Kentucky, will you state, very briefly, their location and general nature? A. The company owns mineral rights in 73,000 acres, 22,000 of which are held in fee simple.

The properties are in Union, Webster and Hopkins Counties, Kentucky, and there is also a leasehold interest in mineral rights in an additional 2,400 acres, in Union County.

The total present coal reserve approximates 400,000,000 tons, and there are four mines now in operation, two located 8576
at Sturgis and one each at Wheatcroft and Earlington, Kentucky.

Q. And the extent of the tonnage mined, if you will, in 1940? A. In 1940, the tonnage mined was 1,500,000 tons.

The present mines have a capacity of 2,000,000 tons a year on a single-shift basis, and 4,000,000 tons a year on a double-shift basis; and production has been gradually increasing

—6,950—

since October 1 due to mechanization and triple-shifting of the mines, particularly the North Diamond mine.

8577

Q. Does the company own certain miscellaneous properties related to the enterprise, in addition to the leaseholds or acreage to which you referred? A. It owns various houses and stores near the mines; six miles of railroad; rolling stock operated in connection with the mines, and various tugboats and tugs and barges used for hauling coal on the Ohio and Mississippi rivers.

Q. And the total book value of the assets, if you will, at December 31, 1940? A. The total book value at that date was $19,160,829; and the gross revenues for 1940 were

8578 *Herbert C. Freeman—By Respondents—Direct*

$3,814,169; and the net income for that year, before provision for preferred stock dividends, was $42,837.

Q. What is the relation of North American's investment in the company to the total assets of North American, on a corporate basis? A. North American's investment in West Kentucky Coal Company represents 2⅓ per cent. of the total corporate assets of the North American Company.

Q. At one time in the history of West Kentucky, were there electric properties operated by the company? A. There
8579 was an electric property owned by a separate electric company, a subsidiary of West Kentucky—the name, I think,

—6,951—

was West Kentucky Electric Company—and it was sold to Kentucky Utilities Company in 1926. It did not integrate in any way with our other properties; it was an isolated operation.

Q. Why was it disposed of? A. I beg pardon?

Q. Why was it disposed of? A. It was disposed of because it was an isolated operation. We did not want to hold it because it did not fit in with our other properties, and we
8580 made a contract with Kentucky Utilities for the supply of electricity and water for a period of years at the time of the sale.

Q. Has the existence of North American's investment in the company interfered with the operations of the utility subsidiaries of North American? A. I would say not at all.

Q. I believe you may have indicated that from time to time in the past there have been sales to North American subsidiaries. That is a fact, is it not? A. Yes.

Q. Sales of coal? A. Yes.

In the aggregate, they have not represented a major part of the business of the company, but there have been sales from time to time.

—6,952—

The Wisconsin properties have used some of the coal.

In the event of a stoppage of output, or any interference with the coal business, the ownership of that property might be extremely important to The North American Company.

Q. In what sense? A. As forming a source of supply of coal. 8582

Q. Has consideration been given from time to time to disposal of this investment? A. Yes, we have at times, within the last few years, given consideration to that . We have never had any real offers for the property. We have been approached once or twice by people who thought they might be in a position to acquire the property, but it has usually been on the basis of our retaining a very substantial investment in senior securities of some consolidated company.

Q. On the basis of your knowledge of the company, can North American's investment in West Kentucky be disposed of at this time without realization of substantial loss? A. 8583 I should think it was very doubtful whether we could sell it to advantage at this time.

Q. By that you mean a loss would be realized? A. I think almost certainly.

In that connection, of course we have already substantially written down the amount of our advances to this company, and we are carrying the common stock at no value. The only value which we carry for our investment is rep-

—6,953—

8584 resented by the preferred stock and the reduced amount of the advances.

Q. Now, as to the present staff of The North American Company, of how many persons is it comprised? A. There are eight officers, two assistant officers, and ninety-nine employes, of whom nineteen are employed in the stock transfer department.

Q. What is the function of that department? A. It handles all the transfers of stock, both preferred and com-
8585 mon of The North American Company. The head of it is the transfer agent for the company.

Q. Does it also include personnel engaged in such matters as payment of debenture coupons? A. Of the North American Company, yes.

Q. There has been testimony in this proceeding previously as to the existence of a so-called 18th floor organization, which I believe had reference to certain personnel located on the 18th floor of 60 Broadway. What is the present status of this so-called 18th floor organization? A. It has been absorbed entirely by The North American Com-
8586 pany. It was operated by officers of the various subsidiary companies located in New York for a few years, but it was more or less of an experiment and was found to be cumbersome, and we finally decided to absorb the duties and expense.

—6,954—

Q. And as of what date was this change effected? A. I think it was about the 1st of this year.

Q. Now with reference to the present officers of The North American Company, what are the facts with respect to periods of service? A. Eight out of the ten officers and as-

sistant officers have been associated with The North American Company for more than fourteen years, in each case. Three have been with The North American Company, or its subsidiaries, for more than twenty years. Those three are: Mr. Fogarty, who is chairman of the executive and finance committee, who has been with the company for thirty-eight years; Mr. Piske, vice-president and treasurer, twenty-nine years; and Mr. Ralph Moody, now a vice-president, twenty-eight years.

Q. In Mr. Moody's case, does that include service with 8588
various subsidiaries of The North American Company? A. Yes, with the Wisconsin Michigan group of companies. He has been in the New York office now for something over a year.

The treasurer, who retired the beginning of this year, had had thirty-five years' service with the company.

Q. Have you any data as to the rating in financial manuals of recognized standing of the debentures issued by The North American Company? A. The three series of debentures of The North American Company now outstanding
—6,955— 8589
have "A" rating in Standard Statistics, Poor's and Moody's.

Q. In general, what does that rating signify? A. The rating of "A", in general, in each case denotes investment rating.

Q. Now, as to the preferred stocks of The North American Company, have you any data as to their ratings? A. Both series of preferred stock have been given a "2*" rating by Standard Statistics, the "2" denoting stocks relatively well situated, marketwise, and the "*" denoting so-called storm cellar, or defensive stocks.

8590 *Herbert C. Freeman—By Respondents—Direct*

Q. Now when were these debentures to which you have referred offered? A. Well, they were offered publicly early in 1939.

Q. And at what price? A. At 101¾ in the case of the 3½ per cent. debentures, 101 in the case of the 3¾'s, and 101¼ in the case of the 4's.

Q. Are all three series listed on the New York Stock Exchange? A. They are all listed, and the market range since the date of listing has been from 98 to 107¾ for the
8591 3½'s, from 97½ to 106¾ for the 3¾'s, and from 99 to 108⅞ for the 4's.

The call prices are, at the present time, 103 for the 3½'s,

102½ for the 3¾'s, and 103½ for the 4's.

In connection with the prices of those debentures, and the yields, it should be mentioned that the 3½'s are due in 1949, the 3¾'s in 1954, and the 4's in 1959.

Q. Now, as to the outstanding 5¾ per cent. preferred stock of the company, when was it offered and at what price? A. It also was offered early in 1939, at $52 per share, and it
8592 is listed on the New York Stock Exchange, and the range of market prices since the date of listing has been from 47¼ to 59. The call price of that stock is 55.

Q. As to the outstanding debentures, are there sinking funds in each case applicable to each series? A. There are sinking funds for each of the issues, requiring the retirement of 1½ per cent. per year, commencing in 1942, of the aggregate principal amount issued of each series of debentures.

Q. Now, I do not believe you have stated the yields to maturity on the debentures based on the public offering price.

Would you do that? A. The 3½'s, the price for the 3½'s represented a yield to maturity at the offering price of 3.29 per cent., the price for the 3¾'s represented a yield to maturity of 3.66 per cent., and for the 4's, of 3.91 per cent.

Q. At or about the time of issue of the debentures to which you referred, were previously outstanding debentures

—6,957—

of The North American Company redeemed? A. Yes, sir, the 5 per cent. debentures which were then outstanding were redeemed at that time. 8594

Q. And have you any data to indicate the market acceptance of those debentures? A. The call price of those debentures, in 1938, was 103½, and they did not sell below that call price after May 6, 1938. They reached a high of 107⅜ in October, 1938. This latter figure represented a yield to maturity of 4.48 per cent.

Q. For how long a period have the annual reports to stockholders of The North American Company been accompanied by reports of independent auditors? A. Since 1903, the annual reports have been accompanied by reports of independent auditors. 8595

Q. Continuously? A. Continuously, yes.

Q. Now, with respect to other practices to disclosure of information, when were consolidated financial statements first published by The North American Company? A. The accounts were first presented in consolidated form in the report for 1920, and that practice has been continued since that time.

Q. And at what date were consolidated financial statements first furnished to stockholders in annual reports? A.

—6,958—

Perhaps I misunderstood your previous question. I thought I was answering that in saying that they had first been presented in consolidated form in 1920, and continuously thereafter.

Q. Has the company for many years maintained a policy of having audits made by independent auditors of the books and accounts of subsidiaries? A. That practice also was started in 1920, and the reports of certain of the subsidiaries have been accompanied by auditors reports since 1932, and
8597 in other cases since 1934. By that I mean the reports to their stockholders.

Q. But in all cases since 1934, is that correct? A. Yes.

Q. For how long a period has North American distributed annual reports to its own stockholders? A. It has distributed annual reports for its entire period of existence, that is, for 51 years. The first annual report, which was for the year ending May 31, 1891, exists in typewritten form only, as far as we can find at this time. The only copy is a typewritten copy, and it was apparently read to the stockholders at the annual meeting on June 17, 1891.

8598 The second report for the year ended May 31, 1892, is in printed form, and includes the president's letter, commenting on activities and conditions of business during the year, and

gives a treasurer's statement showing the assets and liabilities of the company and a condensed income account.

Q. In what detail are annual reports currently submitted by The North American Company to its stockholders? A. The current annual reports contain a letter by the president referring to the operations and business of the company and

of its subsidiaries, consolidated accounts of the company and its subsidiaries of which 75 per cent. of the common stock and 50 per cent. of the voting control is owned, corporate accounts of the company, and statements of the outstanding funded debt and preferred stocks of the company and its subsidiaries, statistical statements of the properties and territories served by the subsidiaries, and statistical information with regard to the important minority investments of the company.

Q. In addition to the annual reports distributed to North American stockholders, have there also from time to time been interim reports which have been so distributed? A. There have been quarterly reports since September, 1924, and since 1928 they have been described as the president's quarterly letter. These reports have included twelve months' earnings statements, and up to November, 1934, balance sheets also were given, but the balance sheets were discontinued after November, 1934. 8600

Q. Now, generally, what has been the substance of the —6,960— matters covered by the so-called president's letter to which you have referred? A. The president's letter gives comments on the business and operations of the company and its subsidiaries for the quarter, and comparative income statements, which for several years were statements for the twelve months ended, but more recently they have given in addition to the twelve months ended income figures for the quarter ended. 8601

They also give lists of subsidiaries and statistics, and similar statistics for the companies in which we have important minority interests.

8602 *Herbert C. Freeman—By Respondents—Direct*

Q. Is it the practice of North American to address letters to stockholders whose holdings are transferred out of their name? A. Whenever a stockholder's account is closed, a letter is sent to him asking if the disposal of his stock has been due to any of several conditions, and a form is sent to him for him to check off the reason for the disposal of his stock and to add any comments he may wish to add, which is to be folded and mailed back to the company.

Q. Has this been done for many years? A. It has been
8603 done for about 16 years, and the average of replies during that period has been about 47⅓ per cent.

Q. In general, what is the policy of the company, North American, as to furnishing stockholders with information?

—6,961—

A. We have at all times been willing to give stockholders any information they might ask for.

We receive a number of inquiries through the mail. We also have interviews from time to time with the representatives of the standard services and other investment counsel,
8604 advisory services——

Q. (Interposing) That is financial services? A. Financial services—and we have telephone calls, and they are all answered; every letter that comes from a stockholder is answered.

Q. And has that practice been pursued for many years? A. Certainly as long as I have any knowledge, and knowing Mr. Dame, I am sure it goes back at least to 1920. I cannot speak about anything earlier than that.

Q. What policy has been pursued with respect to annual reports to stockholders by subsidiary companies, public util-

ity subsidiaries of The North American Company? A. The Wisconsin Electric Power Company, that is, the company which formerly was the Milwaukee Electric Railway and Light Company, has issued annual reports to its stockholders since 1920.

Q. Well, without going into detail on the particular companies, has there been a general policy with respect to annual reports submitted by the public utility subsidiaries to their

—6,962—

stockholders? A. For a number of years it has been the 8606
practice for the subsidiaries to send annual reports to their stockholders.

Q. My question really relates to a North American policy as to the type of report, detailed information, and so on. Has there been such a policy? A. Yes, the policy has been for several years' past, for those reports to consist of the regular accounts, with certificates of the auditors, and comments by the president of the company upon the business of the company.

Q. Now, in addition to the specific items which you have 8607
already referred to, is it the practice of The North American Company to furnish a detailed statement at its annual meetings by the president of the company? A. That has been a practice for several years past. The statement, which is read to those stockholders who are present at the meeting, is then printed and distributed to the whole list of stockholders.

Q. For how long a period have securities of The North American Company been listed on the New York Stock Exchange? A. The stock of the company has been listed since 1890, and all of the presently outstanding securities are

8608 listed on the New York Stock Exchange, and registered under the Exchange Act of 1934. —6,963—

Q. Has that policy of listing involved many applications over a period of years? A. During the period during which we were paying stock dividends, that is, from 1923 to 1934, we were listing additional common stock every three months, and as a result of that our agreement with the Stock Exchange and the extent of information furnished has been brought up to date very promptly, up to that time; in fact, 8609 I think we have to some extent been the pioneers in the adoption of a number of requirements by the New York Stock Exchange.

Q. Have securities of certain subsidiaries of The North American Company been listed on the New York Stock Exchange for periods of many years? A. The securities of Wisconsin Electric Power, certain securities, have been listed since 1896, and of the Union Electric Company of Missouri, since 1906.

Q. Now, in addition to these sources of information which you have already referred to, are certain reports submitted 8610 to insurance companies and other institutional investors? A. There are reports, which are generally described as the confidential reports to insurance companies, which are furnished every year by all operating subsidiaries with the funded debt outstanding in the hands of the public.

Q. Are these reports detailed in nature? A. Yes, they —6,964—

are rather more detailed than the ordinary annual reports. They classify the income and expenses, and also classify the property accounts and the depreciation reserve accounts.

They give details as to the generating capacity and of projected improvements, and matters of that kind.

Q. What is the function of this report? A. It is to enable institutional investors, who generally hold these senior securities of these companies in large amounts, to keep themselves currently advised of the situation of the companies.

Q. Are certain of the bonds issued by various subsidiary companies of The North American Company qualified as legal investments for savings banks in certain states? A. Yes, some of the outstanding bonds are qualified. 8612

Q. Do these qualifications involve the furnishing of annual reports of various nature to the appropriate authorities? A. Yes; there is, of course, the initial qualification and then the subsequent reports from time to time.

Mr. Hamilton: Off the record.

(Discussion off the record.)

The Examiner: All right, we will recess until ten o'clock tomorrow morning. 8613

(Whereupon, at 4:10 o'clock, p. m., the hearing was recessed, to reconvene at 10:00 o'clock, a. m., Tuesday, April 8, 1940.)

BEFORE THE

Securities and Exchange Commission

Docket No. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.*

8615

Hearing Room 1101,
Securities and Exchange Commission Building,
18th & Pennsylvania Avenue, N. W.,
Washington, D. C.,
Tuesday, April 8, 1941.

Met, pursuant to adjournment, at 10:00 o'clock, a. m.

8616 Before: WILLIAM W. SWIFT, *Trial Examiner.*

Appearances:

S. PEARCE BROWNING, JR., and

CHARLES S. HAMILTON, JR., of Sullivan & Cromwell, 48 Wall Street, New York City, New York, appearing for The North American Company, et al., Respondents.

RALPH C. BINFORD, appearing for the Securities and Exchange Commission.

(10:15 a.m.)

PROCEEDINGS

The Examiner: The hearing will come to order.

Whereupon, HERBERT C. FREEMAN, called as a witness on behalf of the Respondents, having previously been sworn, resumed the stand and testified further as follows:

8618

Direct Examination by Mr. Hamilton (Continued):

Q. Mr. Freeman, have you any data as to the distribution of stockholders of The North American Company at a recent date? A. As of December 31, 1940, there were 73,131 stockholders, distributed among the various classes of stock as follows: 9,322 shareholders of 6 per cent. preferred; 6,124 holders of 5¾ per cent. preferred; and 57,685 holders of common stock.

Q. Now, as to the numerical distribution of the stock of the company, have you any figures to indicate whether or not it has changed or remained unchanged over a period of 8619 years? A. It has remained relatively unchanged over recent years.

Of the holders of 6 per cent. preferred stock, in March, 1935, 91 per cent. held 100 shares or less, and at the end of

1939, 90.6 per cent. held 100 shares or less; and of the holders of common stock, in March, 1935, 84.4 per cent. held 100 shares or less, and at the end of 1939, 85 per cent. held 100 shares or less.

8620 *Herbert C. Freeman—By Respondents—Direct*

Q. Have you any data to indicate the geographical character of the distribution of stock? A. The latest analysis we had by geographical distribution was in March, 1938, and at that time there were holders of common stock in every state, and holders of the 6 per cent. preferred stock in every state but Nevada, and there were also holders of both classes in the District of Columbia, in Alaska, the Canal Zone, Hawaii, the Philippines, Puerto Rico and the Virgin Islands.

8621 Q. Now, as to the type of security holder, has any analysis ever been made along this line? A. In March, 1941, we had some examination made of the types of holders. We have not had a complete analysis made for several years, but the distribution at that time showed many holdings among insurance companies, trustees, guardians, executors, educational and religious institutions and fraternal organizations.

Q. Did it apply to all classes of stock or one class? A. This applied both to common and preferred stock. For example, there was one life insurance company which owned 103,709 shares of common stock and 4,000 shares of 5¾ per cent. preferred stock, and another insurance company

8622

which owned 35,000 shares of 5¾ per cent. preferred stock, and another insurance company owned 15,000 shares of common stock and 6,700 shares of 6 per cent. preferred stock, and numerous other life, fire and casualty insurance companies owned preferred stock and common stock in lots ranging from 500 shares to 5,000 shares.

A number of large universities hold shares of preferred and common stock. One university owned 4,100 shares of

6 per cent. preferred stock and 7,000 shares of common stock, and another university owned 6,000 shares of 5¾ per cent. preferred stock and 2,519 shares of common stock.

We had an analysis made in December, 1940, to determine the number of common stockholders—or rather the number of shares of common stock registered in the name of banking institutions as trustees or co-trustees, and we found there were at the time out of 8,572,626 shares outstanding in the hands of the public, 463,592 shares registered in the names of 326 banking institutions as trustees or co-trustees for 1,296 8624 trust accounts.

Q. Now, have you caused an analysis to be made of the stock distribution of the Cleveland Electric Illuminating Company? A. Yes, I have been furnished by that company with figures relating to the holdings by stockholders other than The North American Company as of March 15, 1941.

—6,969-70—

Q. And what does that analysis disclose as to holdings within the service territory of the Cleveland Electric Illuminating Company? A. The analysis shows that out of 2,178 holders of record of the 2,324,564 shares of its common stock, 8625 there were 346 holders of record owning 31,109 shares who were residents of the territory served by the company.

Q. Those are holdings of record, are they not? A. Holdings of record, yes.

Q. And your figure applies to the common stock of—— A. (Interposing) That relates to common stock.

The holdings in the territory represent 1.3 per cent. of the total number of shares outstanding.

Now, as to the preferred stock, there are in all 4,300 holders of record of the 254,989 shares of preferred stock

8626 *Herbert C. Freeman—By Respondents—Direct*

outstanding, and of those, 1,201 holders of record were residents of the territory served by the company, and they held 60,159 shares, or 23.6 per cent. of the total number of shares of preferred stock outstanding.

Q. These, again, are record holdings, are they? A. Yes, those are record holdings.

Q. At the same date previously specified? A. Yes, sir.

Q. Now, have you had a somewhat similar analysis made

—6,971—

8627 of the distribution of common stock of the Detroit Edison Company in the state of Michigan? A. Yes, sir, I have been furnished with an analysis of the shares outstanding as of February 28, 1941.

Q. And what does that analysis disclose? A. That shows that of the total number of shares outstanding, that is, 1,272,260 shares, there are held by stockholders who are holders of record resident in the state of Michigan, a total of 288,405 shares, which represent 22.6 per cent. of the total number of shares outstanding.

Q. Now, in order to make your statement clear, I under-

8628 stand that as to Detroit Edison the figure relates to the entire state and is not confined solely to the service territory of the Detroit Edison Company? A. That is correct.

Q. May I ask you, Mr. Freeman, whether you know approximately how long in each case, that is, in the case of the Cleveland Company and in the case of Detroit Edison, securities, common stock, of those companies has been outstanding with the public? A. In the case of the Detroit Company, the present company was organized, I believed, in 1902, or early in 1903.

In the case of the Cleveland Electric Illuminating Company, I believe it has had securities outstanding with the public for 50 years. —6,972—

Q. And as to Detroit Edison, have securities, common stock, of that company been outstanding with the public since date of organization? A. Yes, sir.

Q. The Respondents' Exhibit 125 contains a table showing certain advances made by North American to various of its subsidiaries. Would you illustrate the nature and purpose of the more important of those advances? 8630

Mr. Binford: What page of the exhibit is that?

Mr. Hamilton: The table I refer to is page 68 of the exhibit.

The Witness: The table, I might mention, is somewhat limited in this respect, that it only shows the maximum balance due by the subsidiary companies to any or all of the three holding companies; The North American Company, the Wisconsin Edison Company, and North American Edison Company, in any year in which there was a balance owing by that subsidiary to those companies for more than six months during the year. 8631

By Mr. Hamilton:

Q. In other words—— A. (Interposing) So that certain advances that were made for particular purposes which were repaid within a comparatively short time do not appear on that schedule.

Q. Repaid within six months? A. Yes. —6,973—

8632 *Herbert C. Freeman—By Respondents—Direct*

These advances have been made by The North American Company and by these two other holding companies to the subsidiaries over a long period of years, for the purpose of enabling those companies to carry out construction programs without having to go to the public for financing, or to enable them to refinance or do original financing at times when the market was propitious.

The advances by the holding company particularly avoided the necessity of going to the market too frequently
8633 for money.

As an example of that, in 1920 and 1921, The North American Company and Wisconsin Edison Company advanced cash to the Milwaukee Electric Railway and Light Company, which was the predecessor of the present Wisconsin Electric Power Company, from month to month, which resulted in a total amount owing by that company to The North American Company of $8,123,000 in May, 1921.

These advances were to enable that company to take care of its construction expenditures, because it could not at that time sell bonds because of a limitation in its mortgage as to
8634 the interest rate on the bonds. It could not at that time sell bonds except at an interest rate of 5 per cent. or less, and it could not have financed on that basis.

In 1921, a new mortgage was authorized by the stockholders, and $5,000,000 of bonds were sold, and the proceeds

were applied in June, 1921, in part payment of the debt to The North American Company, and the remainder of the debt was not paid off until late in 1922.

As another example, in February, 1926, The North American Company advanced $4,000,000 to the Milwaukee Electric

Railway and Light Company, to enable that company to redeem at maturity $6,500,000 principal amount of 5 per cent. consolidated mortgage bonds.

The advance was carried on open account, and was partly paid off in the next few months and finally settled in June, 1926, when the North American Edison Company bought an original issue of $4,000,000 par value of common stock of the Milwaukee Electric Railway and Light Company, and that company deposited the proceeds with The North American Company. 8636

And as another example, early in January, 1931, The North American Company advanced $5,670,000 in cash to the Milwaukee Electric Railway and Light Company to enable that company to redeem at maturity $6,728,000 principal amount of its 4½ per cent. bonds.

This advance is not on the schedule, because it was a short-term advance to enable that company to have the property released from the mortgage so that it could sell a new issue; and the North American's loan to the company was repaid on the 2nd of February, in 1931, from the proceeds of the sale by the Milwaukee Electric Railway and Light 8637 Company of $15,000,000 principal amount of 5 per cent. first

—6,975—

mortgage bonds.

Q. I take it that the entire proceeds were not required for the repayment of the advance, however, is that correct? A. No; but, incidentally, the company might have had some difficulty at that time in borrowing the full requirement, because it had already borrowed $3,300,000 from Wisconsin banks for the purpose of meeting part of the maturities at that time, and that loan of course was also paid off.

8638 *Herbert C. Freeman—By Respondents—Direct*

In 1923, The North American Company advanced cash to Union Electric Company of Illinois to enable that company to construct the Cahokia power plant. Those advances reached a maximum of $12,232,000, on January 31, 1924, and at that time the Union Electric Company of Illinois sold bonds and preferred stock to the public and sold common stock to The North American Company and reduced the debt, its debt to The North American Company, to about $3,200,000.

8639 That debt was not entirely paid off until December, 1924, and at that time it was assumed by Union Electric of Missouri.

Then one of the most important examples of this assistance in the form of advances was during the period from June, 1929 to September, 1931. The North American Company made continuous advances to Union Electric of Missouri, which reached a maximum of $17,180,000 at about the end of that period; in fact, that went over into 1932.

—6,976—

8640 Those advances were to enable the Union Electric Company of Missouri to build the Bagnell dam and the Osage reservoir, and to construct an addition to the Cahokia plant, and to purchase the River Mines plant from the St. Joseph Lead Company.

During that whole period, successive advances were made, which amounted to an aggregate of $48,000,000, which were liquidated from time to time in various ways.

In December, 1929, the Union Electric Company sold bonds to the extent of $14,860,000, and in September, 1930; February, 1931; and June, 1931, the amount of the advances

was reduced by the sale of additional common stock to The North American Company, and that common stock which The North American Company bought and which was applied against the advances amounted in all to $22,500,000; and then the balance of the loan was paid off gradually over the period up to 1935.

Q. There has been some testimony in the record as to services rendered to the various subsidiaries in connection with financing matters. Would you state very briefly the general scope of the type of service which North American 8642
and its personnel has rendered over a period in this type of corporate function? A. Broadly speaking, those services have consisted in discussing the financing requirements of the various companies with the companies, planning the form of financing, deciding whether it should also include the re-

—6,977—

financing of outstanding securities, the question of not only the timing from the point of view of the market but in later years from the point of view of attempting to do the financing within the period for which the audited statements of the companies were available for registration statements, so 8643
as to avoid the expense of interim audits.

Then, in connection with registrations themselves, the North American organization has reviewed and assisted in the preparation of registration statements under the Securities Act, particularly including a review of the financial statements from the point of view of ensuring adequate disclosure and correct statements.

Q. (Interposing) In that connection, Mr. Freeman, what has your own record been in respect to the various regis-

8644 *Herbert C. Freeman—By Respondents—Direct*

tration statements filed by subsidiaries of North American since the passage of the Securities Act? A. Well, after the passage of the Securities Act, the first real financing was that of the Cleveland Company in 1935, and following that, until a very recent date, when my time has been very much taken up on another matter, I assume I have gone carefully over every registration statement and all of the financial statements of the company.

Q. Did I understand you to say that you assume that you
8645 had, or that you actually had? A. Well, I actually have, yes.

—6,978—

Q. And the one financing which you refer to which you did not cover in detail personally was the Cleveland financing in 1940, was it? A. Yes. As to that, I did review some of the statements very briefly, but not in as great detail.

We have also reviewed the mortgage and charter provisions from the point of view of the impact they have on the companies' operations, and we have assisted in the preparation of bank loan agreements.

Q. (Interposing) Now, why is that important? A. Well,
8646 that is important from the point of view of the complexity that has developed in those bank loan agreements, particularly with respect to the long term bank loans.

They have assumed almost the proportion of indentures, although they are still in the type of bank loans.

We have been instrumental in introducing into the various indentures and into the charters as they have been revised from time to time, new ideas, over a long period, such as the adoption of the open-end mortgage, the issuance of bonds in series, and issuance of preferred stock in series,

and the various other improvements in order to make these instruments more adapted to the operation of the company from the practical point of view; and we have seen that those provisions have been revised and brought up to date and, as far as possible simplified from the point of view of their

—6,979—

operation, from time to time.

We have sat in with the representatives of the companies, and in some cases we have to a certain extent headed up the negotiation with bankers, and we have discussed with bankers the formation of the syndicates; we have assisted in arriving at prices and underwriting terms; we have generally organized the closing details; we have taken care of the closing matters; we have reviewed the Stock Exchange listing applications from time to time, and have discussed with the representatives of the Stock Exchange the various agreements and in some cases the fees and other terms of listing. 8648

Those services have occupied the time, a considerable part of the time of a number of the members of the organization: Mr. Fogarty, who has been, I would say, primarily responsible for financing; Mr. Piske, Mr. Hartel—— 8649

Q. (Interposing) Mr. Hartel is the secretary of The North American Company? A. The secretary of the company.

Mr. Van Wyck, who was associated with the organization in New York for a number of years, and has testified as to his work during that time, and since; I have spent a good deal of time on these matters; and Mr. Preger, the comptroller of the company, has reviewed very carefully all of the financial statements.

—6,980—

8650 *Herbert C. Freeman—By Respondents—Direct*

Many of these details that I have mentioned have arisen particularly since the passage of the Securities Act and the Stock Exchange Act.

Prior to the passage of the Securities Act, practically all of the details were handled in New York. At that time, the period of time occupied in the actual closing of the negotiation for financing and the issuance of the securities was generally much less. The consideration of the financing may have extended over a long period, and it may have come up
8651 several times, but finally, when the conditions were right, the preparation of the final papers and the agreements with the bankers were frequently concluded in a short time, and in most cases the bankers' circular was prepared on the basis of information which we obtained from the subsidiaries and put in the proper form for inclusion in the president's letter to the bankers and the bankers' circular.

Subsequent to the passage of the Securities Act, that has still been true, except that the amount of detail that has to be done on the registration statement generally involves a considerable amount of work by the subsidiaries in their
8652 own offices, before the papers are sent on to us for review, and more recently there have been some cases of financing in which the subsidiary companies have taken a more definite and perhaps more complete part in the arrangements and in the final agreements with the bankers. For example, the

preferred stock financing in 1939 and 1940 of the three Wisconsin companies, that is, Wisconsin Electric Power Company, Wisconsin Gas & Electric Company, and Wisconsin Michigan Power Company, were to a large extent dealt

with locally, and local bankers were largely interested in those financings. In fact, the two small companies were handled entirely by local bankers; and in the case of the large company, there was also an underwriting entirely by local bankers, but predicated upon the acceptance of an exchange offer by a substantial percentage of the holders of the old stock.

Q. Well, in these three instances you refer to, were the basic documents also reviewed by North American? A. Yes, they were. 8654

Q. And advice and assistance given in connection with the consummation of the transaction? A. Yes, to a considerable degree.

Q. Now, you spoke of assistance in connection with execution of bank loan agreements. Can you illustrate the point? A. Well, one of the most important of those bank loan agreements was the Wisconsin Electric Power Company loan, in 1938, the details of which were worked out almost entirely by us in New York, with the banks, and the Union of Illinois and Union of Missouri financing in 1937 and 1938, and in those cases there was one short bank loan for the purpose of enabling the outstanding stock, which was then 8655

~~6,082~~

outstanding to the extent of $13,000,000, to be reacquired by the company, and interims sold for an equivalent amount of new stock.

Q. By "interims" you mean interim receipts? A. Interim receipts.

The new stock could not be delivered until the old stock had been reacquired and its characteristics changed, which

8656 *Herbert C. Freeman—By Respondents—Direct*

required a unanimous vote of the stockholders, and for that purpose a short term bank loan was secured.

There was also a $15,000,000 long-term bank loan, which was arranged for in connection with the refinancing of the bonds of the Union Electric of Missouri.

Q. Well now, in addition to the assistance in connection with transactions involving public offering of securities, has North American over a period of many years assisted in the important corporate readjustments and consolidations
8657 involving companies in the North American system? A. Yes, it has.

Q. Will you state—— A. (Interposing) Many of those have involved a considerable amount of work over extended periods.

I can give some examples of that. In the case of the Light & Development Company of St. Louis, in 1923 to 1924, The North American Company, through a wholly-owned subsidiary, the Edison Securities Company, purchased the entire capital stock of the Light & Development Company of St.

—6,983—

8658 Louis, in March, 1923. That company was a holding company which controlled operating properties in Missouri and other states. It was acquired partly for cash and partly by the issue of stock of The North American Company, which was exchanged for the stock of the Light & Development Company of St. Louis and in part for stock of Union Electric Light & Power Company.

In April, 1923, the Light & Development Company sold four of its operating properties in Missouri to the Union Electric Light & Power Company, and after that the Light

8659

& Development Company disposed of certain properties, which we felt were not related to our then operating subsidiaries, located in Ohio, South Dakota, Illinois, Texas and Kentucky.

Then in August, 1924, the Union Electric Light & Power Company acquired the entire capital stock of the Light & Development Company of St. Louis from Edison Securities Company, and the company was dissolved.

Q. I do not know that we have identified Edison Securities Company. What was it? A. It was a wholly-owned subsidiary of The North American Company, which had no organization of its own. It held securities of various kinds from time to time, and one of its important functions was to provide for the realization of cash for stockholders of The North American Company who wanted cash in lieu of their stock dividends. —6,984—

8660

Q. And that company was liquidated at or about what time? A. I believe it was about 1934. I am not positive as to that.

Another example is in connection with the unification of the transportation properties here in Washington, which occurred in December, 1933.

8661

At that time the Washington Railway & Electric Company transferred the ownership of its transportation properties to Capital Transit Company, the new company that was organized at that time, in exchange for a 50 per cent. interest in the capital stock of Capital Transit, and other consideration, including the assumption of certain funded indebtedness.

8662 *Herbert C. Freeman—By Respondents—Direct*

Capital Transit Company, which was organized at that time, also acquired the properties formerly owned by the Capital Traction Company.

Q. I think the details of the transaction may already appear in the record. Would you indicate what part North American played in connection with the transaction? A. Well, the preliminary steps which led up to that extended over quite a long period, and during that time the officers of The North American Company were in constant discus-
8663 sion of the matter with the management of the Washington Company.

—6,985—

It involved an agreement as between the Capital Traction Company and Washington Railway & Electric Company, as to the general basis upon which they would be willing to bring about the unification, and it then involved the securing of a resolution of Congress to permit of the carrying through of the transaction; and thereafter it included the actual working out of the details of the contract and the consideration to be received by the two companies.

8664 It took a great deal of time of all of our executives, more particularly of Mr. Doolittle, who was at that time a vice president of The North American Company; and later I spent a good deal of time on the matter, too.

Then following the unification of the transportation properties in 1933, the Capital Transit Company acquired the capital stock of the Washington Rapid Transit Company, and there again the officers of The North American Company spent a considerable amount of time on the negotiations.

I, myself, did a great deal of work in connection with that.

8665

Then coming to 1937, in connection with the reorganization of the Illinois subsidiaries of Union Electric Company of Missouri, under which four of those subsidiaries were merged into a fifth subsidiary, which then changed its name to Union Electric Company of Illinois, the present company, all of the outstanding indebtedness and the preferred stocks

—6,986—

of these companies were retired, and the resulting Union Electric Company of Illinois was refinanced by the issuance of $18,000,000 of its common stock and $22,000,000 of first 8666
mortgage bonds to the Union Electric Company of Missouri, and those securities formed a part of the basis for the bond issue of Union of Missouri in that year.

Q. Well now, in this transaction, did North American again take an active part? A. I should say we took a major part in those discussions.

The Examiner: We will suspend here for just a moment.

(Whereupon, a short recess was taken.)

By Mr. Hamilton: 8667

Q. And in the actual consummation of the transaction? A. Yes, although, of course, the final carrying of it out as to the unification of those Illinois subsidiaries was attended to in St. Louis.

Then in 1938, in connection with the refinancing of the Milwaukee Electric Railway & Light Company, which at that time became the Wisconsin Electric Power Company, that company, the Milwaukee Electric Railway & Light Company, acquired from The North American Company all of

the common stock of the old Wisconsin Electric Power Company, which had been organized to construct the Lakeside plant.

At that time, the Milwaukee Electric Railway & Light

—6,987—

Company transferred its transportation properties and business to a new wholly-owned subsidiary, which it formed, called the Milwaukee Electric Railway & Transport Company.

8669 Q. Here, again, I think the actual detail of the transaction is probably in the record, and I would like to get at the function of North American in the consummation of the transaction. A. Well, that transaction was discussed several times. I have one particular personal recollection of it, because I was away on a vacation and I had to come back to New York for a day to sit in on a discussion of it with the officers of the company, who came to New York, and the working out of the final details consumed a considerable amount of time on the part of Mr. Fogarty, Mr. Piske and myself, in conjunction with the officers of the company.

8670 Q. What was the purpose of that transfer of stock by North American to the then Milwaukee Electric Railway and Light Company? A. It was to improve the financial position and credit of the Milwaukee Electric Railway and Light Company.

Up to that time, the Lakeside plant had been operated by the Milwaukee Electric Railway and Light Company under a lease, and that lease rental, while it was limited to a certain percentage of the return on property of Wisconsin Electric Power Company, actually came ahead of the bond

interest on the bonds of the Milwaukee Electric Railway and Light Company.

—6,988—

By permitting them to acquire that stock and liquidate the old Wisconsin Electric Power Company, and acquire its property direct, it not only gave them a larger property base on which to issue their new bonds but it removed that prior charge.

Q. Well, did it not, in fact, permit the refinancing of Milwaukee Electric Railway at that time? A. It was the one thing which made that financing possible at that time. 8672

Q. Had not other attempts been made prior to that time to attempt the financing of Milwaukee Electric Railway without the acquisition of the old Wisconsin Electric Power Company? A. There had been various discussions, but——

Q. (Interposing) Had they been successfully worked out? A. No, no plan had been developed which seemed at all practicable. Of course, there are a great many other examples of assistance of that character, but I think those are fairly representative.

Q. Now, has The North American Company, and has it for many years, given its subsidiaries assistance in connection with the establishment of accounting procedures? A. Yes, it has. 8673

—6,989—

Mr. Preger, our comptroller, has always kept closely in touch with the subsidiary companies, and has passed on to them the benefit of his study of the various accounting classifications and matters of that kind, and results of his discussion with the auditors of the company.

He and I have discussed accounting matters a great deal, and he and I, together, have had numerous discussions with

8674 the accounting officers of the various companies on different matters, both personally and by correspondence.

He keeps in touch with the requirements of the various regulatory commissions and the Stock Exchange and matters of that kind, and passes on the results of his experience and study to the subsidiaries.

As far as possible, of course, we try to bring about uniformity, but obviously a subsidiary is subject to the requirements of its own regulatory commission.

8675

(Pause for the shifting of reporter.)

—6,990—

The Witness: In that connection, I should like to emphasize that our policy has consistently been that of requiring full disclosures with respect to our own accounts, and of advising the subsidiary companies along those same lines. We have tried to see, in our review of their finances, that that policy is carried out.

In recent years, the development of the notes that have been attached to financial statements has been quite a marked feature of disclosure, and we have gone over those and discussed them at considerable length, in many cases, with subsidiaries.

8676

I think I mentioned yesterday that it was in furtherance of our policy that the subsidiaries introduced auditor's certificates into their annual reports.

By Mr. Hamilton:

Q. How about inclusion of surplus accounts in the financial statements? A. I was going to speak of that. There had

8677

been a practice for a great many years among,—I was going to say among companies, generally, of publishing income statements and balance sheets, but not necessarily of surplus accounts. However, we felt that the inclusion of a surplus account was a necessary part of the presentation of accounts to stockholders, and in the case of our own company, that was reflected in the annual report, I think, as early as 1923, and we have recommended to the subsidiaries that they include

—6,991—

8678

it in their annual reports, and that has been done for a number of years.

Q. Is assistance also given in connection with monthly reports, in connection with the preparation of budgets? A. The assistance in connection with the monthly reports has been largely to the extent of the detail that should be given in the reports and the form of them. The subsidiary companies are making monthly reports which not only give a comparison with the same month of the previous year, but also with the budget, and we have assisted them, to a considerable extent, first, in the preparation of the budget and the manner in which the budget should be prepared, and also in the form of presentation of the results in comparison with the budget.

8679

Officers of the North American Company have visited the various subsidiaries and discussed their budgets with them before they were adopted, and made various suggestions.

I was speaking, principally, of the operating budget.

There are also the construction budgets, which, of course, have to be looked at from the point of view not only of a formal presentation, but as to what expenditures are to be

authorized, and what can be deferred, what additions—which ones are required to be made to meet the conditions as they arrive, and so on, and the officers of the North American Company have at all times kept in close touch with the subsidiaries on the matter of construction budgets.

—6,992—

We have also had officers in New York who were Engineers and who could discuss those matters in the terms of engineering language with the officers of the operating
8681 subsidiaries.

Q. Is there an Auditor with the North American Company, and, if so, what does he do? A. The Comptroller is, of course, to some extent, the Auditor, too, of The North American Company as such; but, in addition to that, we have a man who is known as Auditor, whose business it is to organize the internal audit systems of the subsidiary companies where organizations are necessary. Perhaps it is too much to say, organizations; they have all had internal auditing departments, but we felt that there was room for improvement, possibly, in the work they were doing, particu-
8682 larly in the uniformity of the work as among the various companies, and the auditor has made a study of their methods and of the scope of work being done, and has advised with them and visited the offices of all of the operating companies. We believe that the internal audits have been definitely improved and standardized as a result of his work.

There have been meetings of the accounting officers of the various companies to discuss these things as a group; to exchange ideas and to assist one another in formulating the plans and defining the scope of the auditing work, and the

Auditor of the North American Company has attended those

—6,993—

meetings.

Q. Does North American Company assist in the preparation of Original Cost studies by the subsidiaries where required? A. Yes; our assistance there has been chiefly in the nature of a review of the reports prepared by the Research Department and Accounting Departments of the various companies. Those reports have involved a tremendous amount of work by accountants and engineers and that work has 8684
necessarily had to be done originally by the force of men employed by those companies; but when the classifications have become available, we have discussed that with them, and I know that Mr. Preger and I have sat down and gone over them, and the Accounting Department has advised them as to the treatment of different items, and Mr. Doolittle has also participated in that work in connection with the companies here in Washington, of which he is still a Director.

Q. Now, is assistance also given in such matters as depreciation studies? A. Yes. That has been one of the divisions of the accounting work in which Mr. Preger and I, 8685
particularly, and the present officers of the company, have

—6,994—

participated. Mr. Doolittle also used to participate in those discussions, and there the work has been along the lines of studying the subject from time to time and discussing it with local commissions and trying, as far as the subject will permit, to reach some degree of uniformity of treatment.

Q. Now, as to matters regarding compliance by the subsidiaries with regulatory statutes, is assistance also given by North American in this respect? A. Yes. In that re-

8686 spect, Mr. Piske and Mr. Hartel have been the officers of North American Company who have devoted the most time to that; that is, the studies of the various laws and regulations issued under those laws,—the requirements of the Federal Power Commission, the Securities and Exchange Commission, and the other regulatory bodies.

This included a study of the Securities Act of 1933 and the regulations under it; the Securities and Exchange Act of 1934, and the Holding Company Act of 1935, and, of course,
8687 it extends not only to registrations, but to such matters as proxy solicitations, and matters of that kind.

The financial connections of Directors are studies, and all the procedure necessary in connection with the acquisition and sale of securities and property and the elimination of subsidiaries and various reports that have to be made, are advised upon. —6,995—

Q. Is assistance similarly given in connection with the review of applications to State Commissions for authority to issue securities? A. Yes. Wherever there is a matter of financing, which, of course, necessarily requires an applica-
8688 tion of that kind, copies are sent to us in New York, and they are reviewed, by several of us in fact, and Mr. Piske and Mr. Hartel particularly, and I also make a practice of reviewing those, but not in as great detail as they do.

Q. Now, I think you referred to services rendered in connection with compliance with the Securities and Exchange Act of 1934. What does that involve? A. Originally, there was the preparation of Form 10, Application for Registration; and following that, the Annual Report Form, which is Form 10-K; the monthly reports on Form 8-K, where there

have been changes in control,—and Annual Reports on Form 1-MD for companies issuing securities registered under the Securities Act, but not under the Exchange Act.

Q. Are their applications in various forms, reviewed by North American? A. Yes, initially it required a great deal of attention, but it has now become more standardized, from year to year, and we are able to review them with the expenditure of less time,—but they are all reviewed.

—6,996—

Q. In all these matters, has it been the experience of 8690
North American that the subsidiaries rely heavily on North American for this type of assistance? A. Yes, that is a correct statement.

Q. As to certain fiscal matters, has assistance similarly been furnished to subsidiaries, and if so, in what respects? A. Particularly in connection with those subsidiaries which have securities listed on the various stock exchanges, and of course all our major subsidiaries have listed securities.

We review the listing application, the printing of those things I think is required to be done in New York, and we negotiate for that with the printers and attend to it. There 8691
is a certain amount of negotiation required with the various exchanges as to the fee payable.

Q. Does listing on the New York Stock Exchange require agreement on the part of the applicant company with the Exchange? A. Yes. They are quite comprehensive agreements.

Q. Those agreements have been entered into, have they, in the case of North American subsidiaries so listed? A. Yes.

Q. Is assistance given to the subsidiaries in connection with compliance with these agreements? A. Yes. We keep

8692 in touch with the subsidiaries as to the filing of the reports called for by those agreements, notices of corporate action

—6,997—

on various matters and so on. Mr. Piske and Mr. Hartel have been the officers who have been chiefly attending to those matters.

Q. Again in this respect has it been your experience that the subsidiaries rely heavily on North American for this type of service? A. That is so.

8693 Q. Are there other corporate matters in which North American renders assistance to subsidiaries? A. On a great many matters which might be described as of a secretarial character, Mr. Piske and Mr. Hartel, and some of the other officers of the company, review their proxies, their notices of stockholders meetings, and they have assisted them at various times in working out forms of presentation of their agenda for their meetings,—their minutes their procedure for annual meetings, and various matters of a secretarial character.

8694 These things of course, cannot be entirely uniform, but we do try to give each subsidiary the benefit of the experience of the other companies, and of ourself.

Q. Now, in connection with the operating matters, what assistance is given by North American to the subsidiaries? A. May I revert to one matter in connection with that last question? That is, in connection with the modernization of By-Laws. There, again, uniformity is not entirely prac-

—6,998—

ticable, but as far as is possible, we try to see that the By-Laws are those best adapted to the operation of the com-

pany, and we have helped them to modernize their By-Laws, from time to time.

Will you repeat the question, please?

(Whereupon the pending question was read by the reporter.)

The Witness: The North American Company has also had certain officers who have been engineers, and who could discuss with the executives of the operating companies matters of an engineering character, con- 8696
struction budgets, matters of that kind, or major projects involving engineering questions,—and so forth. At times, I think some of those projects have been perhaps initiated by the New York officers, but at any rate, they are discussed.

Then, in connection with the relation of the subsidiaries with the local Commissions, the officers of the North American Company have been of assistance in discussing those matters, from the point of view of broad policy.

The rate policies of the subsidiaries have been dis- 8697
cussed constantly by the officers of the North American Company with the subsidiaries.

Q. With what end in view? A. To carry on our policy of the lowest rate consistent with the general situation. I can refer to these things in connection with the personnel who have been chiefly responsible for them.

—6,999—

Mr. Dame, for example, who was the President of the North American Company from 1921 until 1933,—he was

President at the time of his death, but had, for a short time
8698 been Chairman of the Board of Directors while Mr. Gruhl was President. Mr. Dame was an engineer and an operating man, so that he was particularly qualified to discuss all these major projects, and relations with Commissions, and so on, with the officers of the subsidiaries. Mr. Gruhl, who became Assistant to the President of the company in 1912, and later, Vice-President and General Manager, and was President at the time of his death in January, 1933, was originally a Com-
8699 mission man in Wisconsin.

Q. Do you mean by that associated with the Commission? A. On the staff of the Commission in Wisconsin. He was of very great assistance to the officers of the subsidiaries, in connection with commission regulations and general operating matters. He and Mr. Dame worked very closely, when they were both alive, and practically all of the major projects of the subsidiaries were discussed by the executives with them, that is, by the executives of the subsidiaries.

Of course, during that time Mr. Fogarty was the officer who was primarily interested in matters of financing; Mr.
8700 Doolittle, who is also an engineer, was an officer of the company from 1923 to 1936.

Q. He is now a director of the North American Company?

—7,000—

A. He is now a director of the North American Company, and also of the Washington companies, Washington Railway & Electric Company, and Potomac Electric Power Company and Capital Transit Company, and he has remained in very close touch with us since 1936, and has assisted on various matters since that time. He paid particular attention to

construction budgets and to a number of these matters of corporate reorganization which I have mentioned, particularly those having to do with these Washington properties, and with the St. Louis properties.

Mr. R. G. Smith was on the staff of the North American Company from 1921 to 1935 and I think he was, for several years, Assistant Vice-President of the company. He had had experience with the Wisconsin Commission and was also an engineer. He was the head of our statistical department, and kept in close touch with the various operating reports 8702
of the subsidiary companies, and generally assisted Mr. Doolittle in his work with the subsidiaries.

Mr. J. B. Black, who is now President of the Pacific Gas & Electric Company, is also an engineer and an operating man. He had been in charge of the operations of the Great Western Power Company, which was a subsidiary of Western Power Corporation, and was President of that company at that time,—excuse me, I am not sure he was President, but he was the chief operating officer of that company at the time we acquired Western Power Corporation, and in 1926 he became Vice-President of the North American Com- 8703
—7,001—
pany.

Q. And acted in that capacity until what date? A. Until 1935,—at the end of 1935. Then Mr. J. D. Mortimer was an engineer and an operating man, and his connection with the North American Company goes back longer than any of the others. He first became associated with the company in 1909 and was President of the Company up to the time of his retirement in 1920, and then he became associated with the company again in 1933 and continued up to 1938.

8704 In those early years, of course, we only had the St. Louis and the Wisconsin companies and he spent a great deal of time actually on the properties. In fact, I believe part of the time he was President of the subsidiary companies, as well as of the North American Company.

More recently, from 1933 to 1938, he was the man to whom we looked for the chief contact with the subsidiaries on operating matters, and he discussed matters of construction budgets and major projects with them.

8705 Then, in 1940, Mr. Ralph Moody, who had been with the Wisconsin group of companies for a great many years, was brought on to New York, and first became Assistant to the President, and later, Vice-President of the company. He is an engineer and an operating man, and can talk to the operating officials of the companies in their own language, and

—7,002—

understands their problems thoroughly.

Mr. Lindseth, who has testified in this proceeding, was associated with the Cleveland Electric Illuminating Com-
8706 pany for a few years as,—I believe he was called Assistant to the President.

Q. I think his title appeared in the record. Does he assist Mr. Moody? A. In September, 1940, we asked the Cleveland company to release him to us so that he might become assistant to Mr. Moody.

Q. Are the North American Company and its subsidiary holding companies subject to the Uniform Classification of Accounts for holding companies provided by the Securities and Exchange Commission? A. They are.

Q. And do they conform to such classifications of accounts? A. Yes, they do in all respects.

Q. In its entire history, has the North American Company had a service company providing management, construction or other services for compensation? A. No. We have not had a service company of any kind. There was a short period, from the latter part of 1924 to 1928, when we held the stock of an engineering company which performed services for outsiders, and was engaged by one or two of the

—7,003— 8708

subsidiaries of the North American Company to do work for them, but we disposed of that stock in 1928.

Q. Was the issuing of the presently outstanding 5¾% Preferred Stock and presently outstanding Debentures of the North American Company authorized by the Securities and Exchange Commission under the Holding Company Act of 1935? A. The issuance of those securities was authorized in January, 1939, by the Securities and Exchange Commission.

Q. Are you able to state the range of earnings, on a corporate basis, per share, of North American Company over a period of years? A. For the period from 1923 to date, the 8709
earnings per share of North American Common Stock on a corporate basis have been from 93 cents a share to $2.86 per share.

Q. In each case have consolidated earnings been in excess of corporate earnings? A. Yes.

Q. During that entire period? A. Yes.

Q. During this period, have dividends ever been paid on North American stocks in excess of corporate earnings for the particular years? A. No, they have not been; during that

period of years we were paying stock dividends I am and including those on the basis on which they were capitalized, —that is, during part of that period, I should say.

—7,004—

Q. Are you able to state the coverage for 1940 on the outstanding Debentures and Preferred Stocks, of North American Company on a corporate basis? A. The coverage in 1940, and by that I mean the number of times the Debenture interest was earned, was seven times, and the Preferred
8711 Stock dividends were earned more than four and one-half times.

Q. After providing for Debenture interest? A. Yes.

Q. Have all contracts within the holding company system involving the sale of stock by North American or North American Edison to any public utility company in the system been approved by the respective State Commission to which the particular public utility companies were subject. A. They have.

Q. Has the North American Company ever received payment from the public utility subsidiaries for construction
8712 work or for equipment or materials? A. No, it has not.

Q. Has it received payment for services rendered? A. For a period of years, there was an apportionment of the cost of the North American organization under which, on the basis of tests made from time to time, the proportion of the time spent by the various departments on North American

—7,005—

matters purely was applied to the total salary cost of the departments, and the balance representing the time spent by those departments on the affairs of the subsidiaries was

in the aggregate, apportioned among the subsidiaries roughly in proportion to their gross revenues.

Q. Now, when was this arrangement discontinued, if it has been? A. It was discontinued in November, 1935.

In case I have not been sufficiently explicit, I will say that a part of that apportionment represented a part of the salaries of the officers of the North American Company, but as to that, it represented a smaller proportion of their salaries than it did of the salaries of the rest of the organization. 8714

Q. Did the services rendered under the arrangement include such matters as stock transfer and fiscal agency service? A. As to that, there were specific charges made for services as fiscal agent, based, as nearly as could be, on the fees charged by trust companies in New York for similar services, and based upon the volume of securities to which the various work related.

Those charges were not in excess of what the cost would have been if done for the subsidiaries by a trust company.

Q. If you happen to know, does the requirement of the —7,006— 8715

New York Stock Exchange with respect to listing of stocks thereon include a requirement that there be a New York transfer agent? A. There must be a transfer agent located south of some particular street in New York,—I have forgotten which one it is.

Q. To your knowledge, has the North American Company ever prevented a rate reduction by any of its subsidiaries? A. No.

Q. Has it ever attempted, to your knowledge, to force an increase in rates by any of its subsidiaries? A. No, not to

8716 *Herbert C. Freeman—By Respondents—Direct*

my knowledge. I do not believe there ever have been increases in rates, except during the period of the last great war, when some adjustments upwards were made by the various subsidiaries.

Q. Have you any statistics to indicate the relative relationship between the dividends paid by the public utility subsidiaries of the North American Company, over a period of years, to the earnings available for dividends of those companies during those years? A. There has been prepared,
8717 under my direction, figures showing the percentage which the dividends paid have represented of the amount available for dividends during the period of fifteen years from 1925 to 1939 for the four groups of companies which constituted the subsidiaries of the North American Company during that

—7,007—

period.

Q. These groups being what? A. Wisconsin-Michigan group, Missouri-Illinois-Iowa group, the Ohio group and the Washington, D. C. group.

Q. By the "Missouri-Illinois-Iowa group", are you refer-
8718 ring to Union Electric Company and subsidiaries? A. And the St. Louis County Gas Company. A. And what do those statistics disclose? A. They show that during the fifteen-year period from 1925 to 1939, the Wisconsin-Michigan group paid, as dividends on Common Stock, 76.17 per cent. of the earnings available for dividends; that the Missouri-Illinois-Iowa companies paid 76.09 per cent. of the earnings available; that the Cleveland Electric Illuminating Company paid 65.78 per cent., and the Washington companies paid 58.17 per cent. The average for these four groups is 69.05 per cent.

Q. Is that an arithmetical average? A. That is a an arithmetical.

Q. Have you data on the same subject matter with respect to the record of other public utility companies not subsidiaries of the North American Company? A. I have had data prepared from the manuals for eight independent companies.

Q. What manuals do you refer to? A. Poor's Manuals of Utilities. The eight companies are the Hartford Electric

—7,008— 8720

Light Company——

Mr. Binford: (Interposing) Mr. Examiner, I object to any statement as to dividend policies of utility companies not involved in this proceeding as being wholly irrelevant and immaterial.

We have no evidence of their performance and a full investigation of the conditions existing with respect to such companies, I think would prolong a hearing of this sort indefinitely, and beyond the physical possibility of completion. 8721

The Examiner: Doesn't this objection go to the same point you raised against the four sheets embraced in Respondents' Exhibit No. 124?

Mr. Binford: Yes, it does.

Mr. Hamilton: May I make a few remarks on that?

The Examiner: You may.

Mr. Hamilton: I believe the evidence is entirely relevant for a number of reasons: For one reason, it shows a contrast in dividend policies between companies which are generally acknowledged to be so-

8722 called leading independents and the dividend policies in this particular holding company system. It therefore is relevant as showing the conservative nature with which the enterprise constituting the North American system has been conducted. It is relevant as showing, by inference, at least, that the North American Company has not adversely, as a holding company, obstructed the dividend policies of its sub-

—7,009—

8723 sidiaries. The information is stated to be over a period of fifteen years, and to be based in the case of the so-called independents, on published financial statements and is therefore the best evidence, under the circumstances, from which any inference as to the conduct of the North American business, favorable or otherwise, may be arrived.

The Examiner: I don't understand that he is objecting to the source.

Mr. Hamilton: That is right. It bears again on the relevancy as providing a basis of comparison and

8724 the fairness of comparison.

Mr. Binford: Mr. Examiner, in accepting this type of testimony, we would, in effect, be recognizing these companies selected by the respondent, I suppose with considerable care, as standards by which to judge the fairness and policy of North American and its efficiency, and I believe that could not be done without a great deal of evidence as to these companies and the peculiarities of their individual situations which might affect their efficiency or their rates.

8725

I insist on the objection.

Mr. Hamilton: May I also point out that, in general, that type of comparison has been used by the Federal Power Commission, I don't say necessarily with respect to dividend matters, but certainly with respect to operating policies and costs, where the report of one company might be compared with the

—7,010—

reports of a number of certain other holding companies.

8726

Mr. Binford: I think that the principle is right, generally speaking, but this happens to be a proceeding with relation to a particular system.

Mr. Hamilton: If I am correct, the Commission, itself, has used a somewhat similar basis of comparison in not dissimilar cases.

The Examiner: Off the record.

(Discussion off the record.)

The Examiner: I suggest that you proceed with your line of examination, and then, if Mr. Binford desires, he can move to strike, and I will dispose of the question later on, both as to the admissibility of this testimony and the four sheets from Respondents' Exhibit No. 124.

8727

Mr. Binford: I have no objection to that procedure, understanding from counsel that this will not be an extended line of testimony consuming a great deal of time, and that, as the Examiner stated, I shall have a right to move to strike the testimony at the conclusion thereof.

8728 *Herbert C. Freeman—By Respondents—Direct*

The Examiner: All right. I understand the testimony will take about five minutes, so you may proceed.

Mr. Hamilton: Will the reporter read the pending question?

(Whereupon, the pending question was read by the reporter.)

—7,011—

The Witness: Hartford Electric Light Company,
8729 Commonwealth Edison Company, The Detroit Edison Company, Public Service of Northern Illinois, Boston Edison Company, Consolidated Gas, Electric Light & Power Company of Baltimore, Pacific Gas & Electric Company, and Southern California Edison Company.

By Mr. Hamilton:

Q. Now, what do these data disclose? A. These data disclose that for that group of eight companies, the average for the entire group of the percentage of dividends paid on Common Stock of the earnings available for dividends dur-
8730 ing the fifteen-year period from 1925 to 1939 was 77.73 per cent., as compared with the 69.05 per cent. for the four North American groups.

It also shows that the average for the North American groups is lower than seven out of the eight independent companies and higher than only one, the Public Service of Northern Illinois, and that each of the four groups of the North American subsidiaries shows a lower percentage than the average for the eight independent companies.

Q. Now, I notice that you have included in your group of eight companies, Detroit Edison and Pacific Gas & Elec-

tric Company. If those companies were excluded from the computation, what would be the effect upon the averages given? A. The effect would be to increase the percentage of

—7,012—

dividends shown by the average for the remaining six independent companies.

In other words, the percentage for the Detroit Edison Company and for the Pacific Gas & Electric Company is lower than the average of the percentage for the entire eight companies, so that the comparison would be more in favor 8732
of the North American groups.

Q. Do the depreciation policies pursued during this period have a bearing on the amount of earnings shown to be available for dividends? A. The amounts of depreciation taken necessarily had a bearing on the amount available for dividends.

Q. Can you state the relative figures on depreciation with respect to the two distinct groups which you have referred to during the period?

Mr. Binford: Mr. Examiner, it is understood, I presume, that the same objection applies to all questions and answers along this line of interrogation,— 8733
that is to say, other companies not included in this proceeding, and questions as to their policies.

Mr. Hamilton: I think that is understood.

Mr. Binford: And I will make the same objection and move to strike.

The Examiner: I think that is understood.

The Witness: With respect to depreciation, the percentage of gross earnings of the four North Amer-

—7,013—

8734 *Herbert C. Freeman—By Respondents—Direct*

ican groups on a consolidated basis for the fifteen-year period from 1925 to 1939, inclusive, is 11.76 per cent. of the gross earnings; the average for the eight independent companies for that same period is 10.55 per cent. For the year 1939, alone, the percentage for the North American group, on a consolidated basis, is 12.57 per cent. of gross revenue, and—the average percentage for the independent companies, is 11.86 per cent. of the gross revenue.

8735

Q. Now, again, if you will, if Detroit Edison and Pacific Gas & Electric Company were excluded from the so-called independent groups, in arriving at your depreciation, what effect would that exclusion have on the figure you have already mentioned? A. The effect, both as to the fifteen-year period, and as to the year 1939 would be to improve the comparison from the point of view of the North American group of subsidiaries. The percentage charged by both Detroit Edison and by Pacific Gas & Electric Company is higher than the average for the group of eight independent

8736 companies.

Mr. Binford: Mr. Examiner, I understand that that concludes that particular line of questioning to which objection has been made, and I therefore move, at this time, to strike all questions and answers, since my last objection, in so far as the same relate to the data concerning companies not a party to this pro-

—7,014—

ceeding, upon the same grounds as those stated before in the objection.

The Examiner: Very well, I will reserve ruling on this motion and will dispose of it at the time I dispose of your objections to the admissibility of the four sheets embraced in Respondents' Exhibit No. 124.

Mr. Hamilton: Please mark this series of tables consisting of four sheets for identification as Respondents' Exhibit No. 127.

(The document referred to was marked for identification as Respondents' Exhibit No. 127.) 8738

By Mr. Hamilton:

Q. Please state what this exhibit represents, Mr. Freeman. A. This exhibit represents a statement of the capital structure of the utility operating subsidiaries, and of North American Light & Power Company and Washington Railway & Electric Company, intermediate holding companys, as of December 31, 1940, showing the respective amounts of capital of each class and of surplus, the percentage which each bears to the total capital and surplus, and the part or stated value of each class of capitalization owned by the North American Company, and the percentage which that ownership represents of the total capital of each of the operating subsidiaries. 8739

Q. Has this exhibit been prepared under your direction, —7,015— and have the facts shown therein been taken from the books and records of the company? A. That is correct.

Mr. Hamilton: I offered this exhibit in evidence as Respondents' Exhibit No. 127.

Mr. Binford: I would like to ask a question or two, if I may.

8740 *Colloquy*

Mr. Freeman, this exhibit covers only utility operating subsidiaries?

The Witness: Except that it does include North American Light & Power Company and Washington Railway & Electric Company, which are intermediate holding companies.

Mr. Binford: It also appears to include the Milwaukee Electric Railway & Transport Company, which is not a public utility within the meaning of the

8741 Public Utility Holding Company Act?

The Witness: That is correct. We treat it as a utility, since it is in the street railway business. As to Washington Railway & Electric Company, the percentages of that company's ownership in the securities of its subsidiary companies are shown, and as to North American Light & Power Company, the percentages of that company's ownership in the securities of its operating subsidiaries, and Illinois Traction Company's investment in its operating subsidiaries are also shown.

8742 Mr. Binford: I have no objection.

—7,016—

The Examiner: Very well, the table is received as Respondents' Exhibit No. 127.

(Respondents' Exhibit No. 127 was received in evidence.)

Mr. Hamilton: Please mark this as Respondents' Exhibit No. 128, for identification.

(The document referred to was marked for identification as Respondents' Exhibit No. 128.)

By Mr. Hamilton:

Q. Please state what this table represents, Mr. Freeman? A. The table represents an analysis of the consolidated balance for common dividends and surplus by operating subsidiary companies for the ten-year period from 1930 to 1939, inclusive, showing annual deviations from the ten-year average figures. The table is brought down to the balance for common dividends and surplus, but it shows, at intermediate totals, the consolidated earnings available for interest 8744
charges and dividends of the North American Company and North American Edison Company, and also the consolidated and the corporate balances available on other bases,—that is, for interest charges and dividends and also for common dividends and surplus.

Q. Has this exhibit similarly been prepared under your direction, and have the facts shown therein been taken from the records of the company? A. They have.

Mr. Hamilton: I offer the exhibit in evidence as

—7,016a—

Respondents' Exhibit No. 128. 8745

Mr. Binford: No objection.

The Examiner: It is admitted under the number mentioned.

(Respondents' Exhibit No. 128 was received in evidence.)

Mr. Hamilton: Please mark this graph, for identification, as Respondents' Exhibit No. 129.

(The document referred to was marked for identification as Respondents' Exhibit No. 129.)

8746 *Herbert C. Freeman—By Respondents—Direct*

By Mr. Hamilton:

Q. Mr. Freeman, does this graph, Respondents' Exhibit No. 129 for identification, express in graphic form the information set forth in the table, Respondents' Exhibit No. 128? A. It does, as to the items that are described in that table as "Balance for Common Dividends and Surplus of Subsidiary Companies"; and also as to the items in this table described as "Total Consolidated Earnings Available for
8747 Interest Charges and Dividends of the North American Company and North American Edison Company".

Q. I note a line appearing somewhat below the center of the graph marked "O".

What is the relative relationship of that line to the other lines shown on the graph? A. The lines on the graph are plotted in such a way as to show the percentage deviation from the ten-year average in each of the ten years indicated

—7,017—

on the graph, and the "O" line marks the division between the point of excess over the average and of deficiency under
8748 the average.

Q. In each case, then, it represents the ten-year average to which all other lines are related? A. That is true.

Mr. Hamilton: I offer the graph in evidence as Respondents' Exhibit No. 129.

Mr. Binford: No objection.

The Examiner: All right, it is so admitted.

(Respondents' Exhibit No. 129 received in evidence.)

By Mr. Hamilton:

Q. Will you state the significance of Exhibits 128 and 129? A. The exhibits show that the fluctuation in the income available for the security holders of North American Company over this ten-year period has been less than the fluctuation in the balances available for the Common Stock of the companies in the North American system, taken in the aggregate; by that I mean that the arithmetical average of the variations in the balance available for common dividends and surplus of the subsidiaries has shown wider variations 8750
than the variations in the balance available for security holders of the North American Companies and North American Edison on a consolidated basis; and, that the variations in the individual companies have been greater than the

—7,018—

variations in the balances available for security holders of the North American Company and of North American Edison Company, in a majority of the years covered in the graph and in the estimate.

Expressing that in figures, the statement shows that the 8751
arithmetical average of the deviations of the seven subsidiary companies for the ten-year period has been 26.02 per cent.; while the average deviations in the consolidated balance available for interest and dividends of the North American Company and North American Edison Company combined, has been only 16.54 per cent., and that the number of companies which show a wider variation than the average shown by the balance available for interest and dividend of North American and North American Edison Company is 4 and the number showing a smaller deviation is 3.

8752 *Herbert C. Freeman—By Respondents—Direct*

Now, as to the maximum variations during the period, in excess of the average, the arithmetical average for the seven companies is 58.88 per cent., while the maximum deviations in excess of the average is only 46.50 per cent. in the case of the consolidated balance available for dividend and interest of North American and North American Edison Company combined.

As to the deviations below the average, I am speaking now of maximum deviation, the arithmetical average for the
8753 seven companies is 42.62 per cent., which compares with only 26.35 per cent. in the case of the consolidated balance available for interest and dividends of the North American

—7,019—

Company and North American Edison Company combined.

The number of companies which show a wider deviation than the North American and North American Edison Company combined, on the high side is only three, as against four which show a smaller deviation on the high side.

Now, on the other hand, the number of companies which show a wider deviation on the low side is five as against only
8754 two companies which show a smaller deviation on the low side, as compared with the deviation shown by the North American Company and North American Edison Company combined.

Q. In order to clarify the basis of the consolidation, during what period is, or has been Washington Railway & Electric Company, and subsidiaries, consolidated in the account of North American Company. A. Washington Railway & Electric Company was excluded from the consolidation in the accounts for the year 1939, but for the purpose of this table

it has been included. The reason for its exclusion was that in 1939 our percentage of voting control dropped below, slightly below, 50 per cent., but nevertheless we still held substantially more than 75 per cent. of the common stock at that time.

Q. Now, as to North American Light & Power Company, was it included in the consolidation during the period? A. No, we have excluded North American Light & Power from

—7,020—

this figure for 1939, as that is the only year during this period 8756
in which it was consolidated, as, up to that time, we had not had more than 75 per cent. of the common stock.

Q. Actually, it is excluded for the entire period of ten years? A. That is true.

(Discussion off the record.)

By Mr. Hamilton:

Q. Mr. Freeman, have certain companies named as parties in this proceeding been dissolved, or otherwise disposed of, prior to the commencement of the proceeding? A. Prior 8757
to or subsequent to?

Q. Prior and subsequent to the commencement of the proceeding. A. There are eleven such companies.

Q. Now, has Washington & Glen Echo Railroad Company been dissolved, and if so, at what date? A. That company was dissolved on February 23, 1939.

Q. Has St. Louis & East St. Louis Electric Railway Company been dissolved, and if so, at what time? A. It was dissolved in July, 1939.

8758 *Herbert C. Freeman—By Respondents—Direct*

Q. And similarly, have St. Charles Electric Light & Power Company, Lakeside Light and Power Company, and Chicago & Illinois Valley Railroad Company been dissolved? A. Those three companies were dissolved, the first two in

—7,021—

November, 1940, and the third in April, 1941.

Q. Mr. Van Wyck, I believe, has previously testified as to the dissolution of four subsidiaries of Illinois-Iowa Power Company, so I won't ask you questions with respect to those

8759 companies.

Have Wired Radio, Inc., and Wired Rediffusion Developments, Ltd., ceased to be subsidiaries of North American Company, and if so, under what circumstances? A. Those companies ceased to be subsidiaries of the North American Company on April 1, 1940, when the stocks of Wired Radio, Inc. were delivered to Associated Music Publishers, Inc., which, at that time, was not a subsidiary of the North American Company——

Q. And is not now? A. And is not now a subsidiary—in accordance with the contract to deliver the stock.

8760 Q. At that time, North American parted with its ownership, did it, of the stock of Wired Radio, Inc.? A. Of Wired Radio, Inc., and Wired Radio owned the stock of Wired Rediffusion Developments, Ltd.

Q. Has Wisconsin General Railway ceased to be a subsidiary in the North American Company since the institution of these proceedings, and if so, at what date and under what circumstances.

The Witness: Off the record, please.

—7,022—

(Discussion off the record.)

8761

The Witness: Wisconsin General Railway ceased to be a subsidiary of the North American Company on September 25, 1940, when its assets were transferred to its parent company, Wisconsin Electric Power Company.

By Mr. Hamilton:

Q. And is the stock of Wisconsin General Railway, as so representing an interest in this corporate shell still held by Wisconsin Electric Power Company? A. No, the stock of this company has been sold for a nominal consideration to a private individual who is not affiliated with the North American Company.

8762

Mr. Hamilton: May the record show that I have here handed to Commission's counsel certified copies of certificates of dissolution of all companies which have been referred to in Mr. Freeman's testimony as having been dissolved, and including, in addition, the four subsidiaries of Illinois-Iowa Power Company, as to which Mr. Van Wyck testified, and which are,— Bloomington & Normal Railway, Electric & Heating Company; The Brighton Electric Light and Power Company; The Decatur Light, Heat and Power Company; and The Elkhart Electric Light Co.

8763

Certified copies of certificates of dissolution of all these companies are so exhibited with the exception of Chicago & Illinois Valley Railroad Company, which, according to Mr. Freeman's testimony, was dissolved

8764 *Herbert C. Freeman—By Respondents—Direct*

in April, of this year, and for which, at this date, we have been unable as yet to secure a certified copy.

I see no point in burdening the record with these documents and I ask that the record may show that they have been examined.

May I also add, that in the case of Washington & Glen Echo Railroad Company, the evidence of dissolution offered, or rather, exhibited, is a letter from the Maryland State Tax Commission, presented in
8765 photostat form, stating, among other things, that the charter of that company was forfeited on February 23, 1939, for nonpayment of taxes.

The Examiner: Off the record.

(Discussion off the record.)

By Mr. Hamilton:

Q. Now, Mr. Freeman, what are the policies of the North American Company with respect to the operation of its holding company system? A. I believe, if I were to sum-
8766 marize those policies briefly, at this time, I would say that they were to build up a relatively few sound, well-organized and most efficiently operated public utility subsidiaries which would, and could, render the most efficient service at the lowest cost to the consumer, consistent with an adequate return on the capital invested; to make each one of those companies a part of its own community, with the most local-

ized management possible; to make each one of those companies a sound financial structure with protection for all classes of its security holders, and with adequate information

to those security holders on the operations of the company; to maintain full cooperation at all times with the local state regulatory commissions; to increase and develop the public use of and benefit from the services rendered by those subsidiary companies; to make sound long-time investments, with proper regard to geographical diversification for the North American Company, itself, and thereby to achieve soundness and stability for the security holders of the North American Company.

Now, those policies have been in force for a great number 8768
of years. I testified that I joined the North American Company in 1927 and those policies were in force for many years before that time, and, it is as a result of those policies that we have achieved the outstanding character of the utility subsidiaries of the company, and the outstanding services which they have rendered to the communities they serve.

Q. Are the public utility subsidiaries of North American going to need financial and financing aid in the future?

Mr. Binford: That is objected to as calling for a guess or a conclusion from the witness. 8769

By Mr. Hamilton:

—7,025—

Q. From your knowledge, Mr. Freeman, as to the present operations, past developments and from your own knowledge as to prospects for future improvement, and having in mind the development of the art and state of the art, are you able to answer the question? A. I can say, confidently, that that will be the case. I think it is proper to draw conclusions from the experience of the past several years.

8770 *Herbert C. Freeman—By Respondents—Direct*

At the present time, we are following somewhat the same pattern that was followed during the last war. There is a considerable increase in the demand for electric power and that is certain to call for investment of additional capital in the operating companies, but beyond that, the experience following the last war was that the requirements for capital to take care of the extraordinary increase in the demand for electric service over the decade following the war were very great. In the case of certain of our companies, the gross
8771 revenues over the ten years period following the war increased from two to three times, and having in view the fact that it has required, on the average, about $5.00 of invested capital for every dollar of gross revenue, and that that ratio shows a tendency to increase, due to lower rates and to greater refinements of services demanded by the public, I think it is inevitable that all the companies will need very substantial amounts of capital within the next decade.

—7,026—

Mr. Hamilton: That is all I have of Mr. Freeman, at this time.

8772 Mr. Binford: In view of the limited nature of Mr. Freeman's statement, I will not insist upon my objection.

The Examiner: Very well.

We will recess until three o'clock this afternoon.

(Whereupon, at 1:00 o'clock, p. m., the hearing in the above entitled matter was recessed until 3:00 o'clock p. m. that same day.)

—7,027—

AFTERNOON SESSION

The Examiner: You may proceed, Mr. Hamilton.

Mr. Hamilton: I would like to submit, at this time, to the Examiner, a motion on behalf of the North American Company to dismiss certain parties to this proceeding, on the basis of the evidence heretofore introduced, and, with your permission, we will file an appropriate number of copies with you, at this time.

The Examiner: Very well. I will reserve the 8774
matter for the action of the Commission on this motion.

(The documents in question were handed to the Examiner.)

Mr. Hamilton: I would like, also, if I may, to ask Mr. Freeman one or two more questions.

The Examiner: All right.

Whereupon HERBERT C. FREEMAN, a witness having been previously sworn, resumed the stand and testified further as follows: 8775

Direct Examination by Mr. Hamilton (Resumed):

Q. Mr. Freeman, is the North American Company engaged in the business of sending, or transporting, or causing to be sent, or transported, goods, merchandise, or services in commerce with foreign nations or among the several states, or any other kind of interstate commerce? A. No.

—7,028—

Q. What use of the mails, or other instrumentalities of interstate commerce, does North American Company make?

8776 *Herbert C. Freeman—By Respondents—Direct*

A. It makes use of the mails incidental to the business of a holding company.

Q. And what is its business as a holding company? A. The business of investing in, owning and holding securities.

Mr. Hamilton. Please mark this exhibit, consisting of four sheets, for identification as Respondents' Exhibit No. 130.

8777 (The document referred to was marked for identification as Respondents' Exhibit No. 130.)

By Mr. Hamilton:

Q. What does this exhibit represent? A. The exhibit consists of a list of offerings of securities to the public through bankers, and to institutional investors from September 14, 1920, to January 18, 1933, the date of the last such offering prior to the passage of the Securities Act of 1933; also a list of offerings of securities to the public through bankers and to institutional investors from July, 1935, the date of the
8778 first offering subsequent to the passage of the Securities Act of 1933,—to date.

Q. I notice certain abbreviations appearing on the exhibit, such as "N. Y. S. E.". Will you state what those abbreviations refer to? A. That abbreviation appears under

the head of "Stock Exchange Listing", and it means that those securities are listed on the New York Stock Exchange.

Q. Has this exhibit been prepared under your direction, and have the facts shown been taken from the records of the

company? A. It has been prepared under my direction, and the information in it is derived from the records in the possession of the company. This relates to offerings of securities by the subsidiary companies.

Q. Does it include, for example, offerings by such intermediate holding companies as North American Edison Company and North American Light & Power Company? A. It does not include them.

Mr. Hamilton: I will offer that in evidence as Respondents' Exhibit No. 130. 8780

Mr. Binford: No objection.

The Examiner: The exhibit is so admitted in evidence.

(Respondents' Exhibit No. 130 was received in evidence.)

Cross Examination by Mr. Binford:

Q. Mr. Freeman, in what capacity did you first become associated with the North American Company? A. As Vice-President, and I became a Director and member of the Executive Committee at about the same time. 8781

—7,030—

Q. That was about April, 1927? A. I actually took up my position, I think, about the first of July, 1927. I may have been elected in April.

Q. Prior to your association with the North American Company, had you ever been associated with, or employed by, a public utility holding company? A. Only in the capacity of a public accountant; I had never been employed actually, as a staff employee of any holding company.

8782 *Herbert C. Freeman—By Respondents—Cross*

Q. In other words, such work as you had done in this connection had been as a public accountant and employed for a particular job, is that it, rather than in a continuous position. A. That is so.

Q. Had you specialized in holding company or public utility accounting? A. No, my public accounting experience was of a general, broad character.

Q. I understood that from April 1921, until you became associated with the North American Company, you were con-
8783 nected with the National Cloak & Suit Company? A. That is true.

Q. Your work with that company was of an accounting nature, as well as of an executive nature? A. No, it was entirely in an executive capacity. The accounts were under

—7,031—

the Comptroller or the Treasurer of the company; I had very little contact with it,—just as the other executives did.

Q. Did you have experience in the flotation of security issues in connection with your work with the National Cloak & Suit Company? A. I don't believe there were any issues
8784 of that company while I was an executive of the company. I had had contact with certain security issues for that company as a public accountant. That company was a client of my firm.

Q. Prior to your association with the North American Company, had you actively participated in any other than an accounting capacity in the negotiation or flotation of any security issues? A. No, but of course my connection with security issues, as an accountant, had brought me very directly into contact, not only with the contracts involved,

but with the bankers, and I participated in a very great number of discussions with regard to statements and prospectuses and matters of that kind.

Q. Had you had experience in the preparation of documents in connection with financing to be submitted for the approval or examination of state security commissions prior to your connection with the North American Company? A. No, I had given testimony that was used in at least one case

before a State Commission, but I do not recall that I was 8786
ever engaged in the preparation of documents to be filed with a Commission.

Q. Well, you did not practice before any State Corporation Commissions, or Commissions exercising any regulatory jurisdiction over security issues, did you? A. No, sir.

Q. What, in general,—what was the scope of your duties when you first entered the North American organization as Vice-President? A. I became involved at once in the general activities of the company; I had no duties specifically allocated to me. All of us worked pretty much as a team 8787
there, and one was apt to be called in on almost any matter that came up.

It is fair to say that on account of my previous experience, I was engaged more in finance and accounting matters and very little in operating matters.

Q. The Comptroller, for instance, would come more nearly into your jurisdiction than the engineering department, if there had been one at that time, isn't that true? A. Yes, I think that is so. When you say "jurisdiction", I had no actual authority with respect to the Comptroller,—the

8788 Comptroller is a fairly independent officer, but in discussing accounting matters, he would, perhaps more naturally discuss them with me.

—7,033—

Q. But there was no division, as among officers, of particular categories of the work of the company, is that true, as between the President and yourself, let us say. A. Well, there were certain natural divisions which resulted from the men's previous qualifications. Matters that had to do with
8789 operating or engineering questions would more naturally have been taken up with the President, Mr. Dame, who was an engineer, and Mr. Doolittle, Vice-President, who was an engineer. My contact with matters of that kind, particularly at the outset, would be quite incidental.

Q. I believe you testified that you familiarized yourself with the purposes for which North American Company was formed, and with its activities prior to the time you became connected with it, through its records, and possibly other sources, after you became connected with the company,—that is true, is not not? A. That is true.

8790 Q. Mr. Dame became President in 1921, did he? A. Yes.

Q. Whom did he succeed as President of the North American Company? A. I think he directly succeeded Mr. Mortimer, or Mr. Wetmore, I am not quite certain as to which of those two he succeeded.

Q. Was there any change in the personnel of the Board

—7,034—

of Directors of the North American Company in 1920 or 1921? A. In 1921 there was a very substantial change in the composition of the Board of Directors.

Q. Will you state what that substantial change was? A. My recollection is that Mr. Harrison Williams, Mr. Dame, I believe Mr. Anson W. Burchard, and Mr. Wells, became directors at that time. I don't recall what other changes there were.

I can furnish you with the details of that change, or those changes, if you wish, later.

Q. Would it be correct to say that there was a change at that time of the dominant personnel of the directorate and management, or of the directorate, anyway? A. Yes, I think 8792 that is so.

Q. The gentlemen whom you named as having become members of the board at that time were newcomers to the system, were they not? A. Yes, they were.

Q. From your examination of the records of the company, and your inquiries into its history prior to your connection with it, are you able to state whether any changes of policy became effective after such change of control? A. I doubt if there was any really essential change in policy. What change there was probably related more to the building up 8793 of the local administration and management of the com-

panies. Prior to that time, and at that time, of course, there were only two groups of companies involved, the St. Louis group and the Wisconsin group, and the chief executive officers of the North American Company had spent a good deal of time on the properties, and the properties were, to a much greater extent, managed by them than they were subsequent to that date.

8794 *Herbert C. Freeman—By Respondents—Cross*

Mr. Dame's policy was rather one of decentralization and of increasing the importance of the local administration.

Q. It was also a program of expansion, was it not, and the acquisition of new operating properties? A. There were acquisitions, following that date; I should say that they did represent a policy of further diversifying the interests of the company.

Q. Or, in other words, not confining the interest of the company to two general geographical areas in which it had
8795 theretofore operated? A. That is true.

Q. Do you know what the number of the personnel of the North American Company was in 1920 or 1921, roughly? A. I haven't any idea.

Q. I believe you testified that at the present time there are eight officers and two assistant officers and ninety-nine employees. A. Yes.

—7,036—

Q. Could you say whether in 1920 and 1921 the personnel was larger than that, or smaller? A. I don't actually know,
8796 but my belief is that it was probably smaller. After all, the number of companies involved was smaller and I know of no reason why there should have had a very large organization in proportion to the extent of the investment.

Q. Now, since 1921, has there been any change of personnel of the Board of Directors within any one short period comparable to the change of which we have spoken? A. No, nothing comparable to that change. The changes since then, have, in several cases, resulted from the death or retirement of individuals, the most definite change, I would say, has resulted from some of the implications of the Holding Com-

pany Act, but even so, it did not result in any such change in the Board as would represent a major change,—it was just related to certain individuals.

Q. There has been nothing in that connection which you characterize as a change of control? A. No, not of that class.

Q. Or the personnel of the control? A. No.

Q. Now, the gentlemen who came upon the Board of North American Company in 1920 and 1921 for the first time had not been active in the operation of public utilities, had 8798
they, or do you know? A. Yes. Mr. Dame certainly had been

—7,037—

active in the operation of public utilities. Mr. Williams had been active rather in the holding company end, and not in the direct operations of utilities.

The others who came on at that time were men engaged in general business activities.

Q. And with the exception of Mr. Dame, they have not been engaged in the actual operation of utilities, that is, to the extent of any major portion of their time being devoted to such an activity? A. It is my recollection that is so. I 8799
don't know that I have told you all of the changes, I don't think I have, but I don't remember any others who would be regarded as operating men, although, now that I come to think of it, Mr. Robert Lindsay became a director at some time, it was in the early 20's, and he was, of course, an operating man,—he was President of the Cleveland company.

Q. You have spoken of certain so-called investments of the North American Company, including some investments in the Pacific Gas & Electric Company.

8800 *Herbert C. Freeman—By Respondents—Cross*

Could you state, briefly and rather roughly, just what the service area of Pacific Gas & Electric Company is? A. It extends from the,—at the present time,—from, I think, Eureka, which is the most northerly part on the Coast in

—7,038—

California, and that would be north central California, and the southern extremity in southern central California, would be about Bakersfield.

Q. Is that in Santa Barbara County? A. I can't tell you
8801 what county, but about Fresno, Bakersfield, Merced, and so forth,—in the south central portion.

Q. Are the activities of that company, as a public utility company, confined to the State of California? A. Entirely.

Q. How far distant are the nearest portions of the territory served by it to the nearest point in the service area of any other company of the North American Company system —approximately? A. The nearest point would, of course, be the western extremity of the Kansas Power & Light properties, and I judge that is about 1,200 or perhaps 1,400 miles.

Q. There is, of course, no connection of any kind between
8802 the physical facilities of Pacific Gas & Electric Company, and that of any other company of the North American System? A. No.

Q. And in the case of Detroit Edison Company, that service area is not contiguous to the service area of any other company in the North American system? A. Not actually

—7,039—

contiguous; of course we have properties in the State of Michigan, but in the northwestern area.

Q. Northwestern, and distinguished from the southern? A. Yes.

Q. There are no transmission lines owned by any of the North American subsidiary companies which connect with any of the electric utility facilities of the Detroit Edison Company, are there? A. No, there are not.

Q. Nor do any of its transmission lines connect with any generating station of any other subsidiaries of the North American Company? A. No, sir.

Q. The utility operations of that company, namely, the Detroit Edison Company, are confined to the State of Michigan, are they not, and to the lower peninsula of that 8804
state? A. I believe that is so. I don't know whether they transmit any power across the state line or not.

Q. Do you know, approximately, the size of the Detroit Edison Company, as indicated by its book assets? A. The property and plant are about $325,000,000, I believe,—$329,000,000; its total assets are $363,500,000.

Q. Do you have similar figures with respect to the Pacific Gas & Electric Company? A. They are approximately $700,000,000.

—7,040—

Q. That figure represents—— A. (Interposing) Prop- 8805
erty and plant, approximately $742,000,000, and the total assets are $790,000,000.

Q. You spoke of the Sixty Broadway corporation. Approximately how much of the space in this building is occupied by the North American Company? A. There are two complete floors, and parts of three other floors, and the building, in all, has twenty-five floors.

Q. Except for the small proportion of space in this building which is vacant, the remainder not occupied by the North

American Company is occupied by persons not affiliated with the North American Company, is that true? A. That is true. May I qualify that? Are you using "affiliated" in a technical sense, or as I would use it?

Q. I don't know how you would use it, but suppose I am using it in a technical sense. A. By that I mean,—part of the building is occupied by companies who may, I believe, own more than 5 per cent. of the stock of the North American Company,—I am not quite sure as to that.

8807 Q. That is, who may, in the aggregate, own more than that. A. Yes.

Q. Would you name those companies, please? A. That would be Central States Electric Corporation, American

Cities Power & Light Corporation, and Blue Ridge Corporation.

Q. Does Mr. Williams also have an office in that building,—individually? A. Mr. Williams, as Chairman of the Board of North American, is furnished with an office by the company.

8808 Q. But he has no office separate and apart from his offices furnished as Chairman of the Board? A. Not individually, I think. I don't know of any office apart from that which the North American Company provides for him.

Q. I believe you testified that twelve stories of that building are occupied by the Hanover Bank & Trust Company? A. That is true.

Q. I think you further testified that one purpose which existed in respect to the acquisition of this building, and one result achieved was the creation of a hedge against possible

advances in rentals in the district in which the building is situated, is that true? A. That is what happened. It was bought because it was thought that it would be a good investment, and the fact that it was a good investment was what resulted in its acting as a hedge against increasing rental costs.

Q. Would you say the word "hedge" was appropriate there. As a matter of fact, isn't the gamble about the same

—7,042—

when you buy the building as it is when you have to be on 8810
the other side with respect to renting from time to time,—would you consider that a real hedge? Aren't you just as liable to be holding the equity when rents are low, and lose in that respect, as you would be if you were renting, and might have to meet the disadvantages of higher rent, but also receive the advantages of low rent periods? A. Well, an investment situation is always apt to change.

Q. Yes. A. And has changed in real estate in the past several years, and in the years following the acquisition of Sixty Broadway, there were times when a great many people were buying buildings purely to be sure of having an office. 8811

Q. But rather as a hedge, since you assumed that ownership would be more profitable than depending on rate changes for the composition of your rent expenses, isn't that right? A. There is more involved than that. You can't always be shifting your office just for the purpose of getting the best rent that is available, and the fact that you do own a building gives you what amounts to a hedge against unreasonable rentals. It protects you from the necessity of moving from time to time, and particularly in a case such as Sixty Broad-

way where you have long leases with very large and responsible tenants, it very definitely serves the purpose of a hedge which is protected to a very great extent on the down side.

—7,043—

In other words,——

Q. (Interposing) You believe that the disposition of No. Sixty Broadway, at the present time, would result in a loss to the North American Company? A. I feel that it
8813 would, based on the general situation with respect to real estate in financial New York.

The thing that might militate against that, to some extent, is the existence of these long term leases. In other words, a purchaser who perhaps would not look at another building at all might look at Sixty Broadway at the present time, but I don't think he would be apt to pay us as much as our investment in the building amounts to.

Q. As to that, possibly the advantage of the hedge, if you call it that, may have been offset by the decrease in the capital investment in so far as it is recoverable. A. If we were
8814 forced to liquidate at this time, that might be true.

Q. Do you foresee, or anticipate, a change of conditions which might enable you to dispose of the building on more favorable terms? A. Personally, I cannot see that the financial situation is going to remain as stagnant as it is at the present. If this country is going to progress, we are bound to have more financial activity, even in New York City, and when that happens, the value of Sixty Broadway will come back.

—7,044—

8815

Q. But if you sold now, I am referring to Sixty Broadway property, the result would be rather the enforced recordation of a loss already sustained upon your books; wouldn't it be the realization of a loss that actually has been suffered by reason of the decrease in realty values? A. We are perhaps caught in a cycle that affects real estate in New York City, and if you liquidate any investment at the bottom of a cycle, you are bound to sustain a loss. Real estate in New York is practically at the bottom of the cycle, there may have been just a very slight improvement, but it is an 8816
improvement more in tenancy than it is in rentals. But I don't think it is fair to look upon any investment in view of what it might bring at the bottom of a cycle such as that.

Q. You have characterized this present period as the probable bottom of a cycle, in the ordinary sense of a business cycle? A. I believe that based on the general improvement in business activity which I think will eventually be felt in real estate.

Q. You have spoken of the West Kentucky Coal Company and its subsidiaries. I believe you stated that in that case, also, a present sale would necessarily entail the realization of a substantial loss on the investment of North American Company, is that true? A. I believe that it would. 8817

—7,045—

Q. Do you anticipate a change of conditions which would enable the North American Company to realize a greater proportion of its investment, or a larger proportion than at the present, in the realization of this property in the near future? A. How near in the future that might be when that would come about, I could not say. There is a very sub-

8818 *Herbert C. Freeman—By Respondents—Cross*

stantial value in the assets of that company. The realizable value depends,—or is bound up so much with general business activities that I think it would only be in a period of fairly good general business activity that we should be likely to be able to realize anything like the value at which we carry it on the books.

Q. Would you say that at the present time, under existing legislation, the ownership of West Kentucky Coal Company benefits any of the operating utility subsidiaries of the
8819 North American Company,—that is to say, the ownership by North American Company of this coal property? A. It is hard to say whether there is an element of benefit there. If there is, it is possibly a psychological benefit based on some improvement in trading position which it may give to our subsidiaries.

Now, as I suggested, the fixing of prices for coal somewhat militates against that, but if there should be a stop

—7,046—

in the coal supply, I mean strikes, or causes of that kind, the ownership of those mines might be very important.

8820 Q. Now, are you familiar with the reasons which impelled the management of the North American Company to make their investment in 1925 which resulted in the obtaining of control of Western Power Corporation? A. I think the investment was made because it was regarded to be a favorable form of investment for the company. I don't think there were any reasons which impelled them, as you say, other than that. There was a situation there in which there was obviously the opportunity for the building up of a great property and they took that opportunity and made

the investment, and then, having completed their job, as it were, in that property, they carried it through to the logical conclusion and sold it to the one company with which it could be integrated to a very great advantage to both the Pacific Gas & Electric properties and to the properties of Western Power.

Q. Well, there was no loss sustained by the North American Company either? A. Regarding the proposition as a whole, there was a very substantial profit.

8822

The Examiner: Let us have a short recess.

(Whereupon, following the taking of a short recess, the hearing was resumed.)

—7,047—

Q. When was the sale of the California property, controlled by North American, made to Pacific Gas and Electric Company? A. The basis of the transaction was agreed to in March 1930, but there had to be certain commission approvals obtained and the completion of the transaction was early in June 1930.

8823

Q. During that period of approximately five years in which control was exercised by North American Company over the Western Power Corporation properties a program of expansion and construction was carried out, was it not? A. It was.

Q. And capital was furnished in large part by the North American Company? A. Entirely by the North American Company. My recollection is that the North American Company increased the investment in subsidiaries of Western Power Corporation by upwards of $23,000,000 during that

8824 *Herbert C. Freeman—By Respondents—Cross*

period in the form of capital or advances and those advances were canceled at the time of the sale to Pacific Gas and Electric Company.

Q. And the facilities so erected were in large part in competition with those of Pacific Gas and Electric Company? A. The greater part of them were, yes. There was some expansion in the southerly properties which were not in direct competition with Pacific Gas, but the development in

—7,048—

8825 the northern properties was directly in competition with them and of course the tie-line between the northern and southern properties might be regarded as somewhat in competition.

Q. So that a point was reached at which it was obviously in the interests of economy, taking the two systems together, that the Pacific Gas and Electric properties and those so controlled by the North American Company be operated together, is that true? A. Yes, from the point of view of economy, and I think in the public interest. There was economy of course not only in the elimination of competition

8826 but in the actual operation of the property.

Q. And you would say the North American Company was largely responsible for bringing this condition about, as well as for bringing about the actual integration in respect to ownership of the two sets of properties? A. I would say the North American Company had a very large part in that. It was naturally of mutual advantage and both sides worked on it to bring it about.

Q. Didn't the management of Western Power Company, prior to the time the North American Company made its in-

vestments in that company, have a program of expansion upon that later developed by the North American Company? A. I have no knowledge as to that.

Q. You don't know that as far back as 1922 such a

—7,049—

program had been discussed and considered by the officials of the Western Power Corporation? A. Of the Western Power Corporation?

Q. Yes. A. That was——

Q. (Interposing) Or the Great Western, the companies 8828 then in control of the properties acquired by the North American Company in 1925. A. Perhaps I didn't understand your question. I thought you asked me if I knew that the Pacific Gas and Electric Company had expansion plans.

Q. No, the other company. A. I beg your pardon. I think I testified yesterday that these expansion plans had to a large extent been under way at the time we made our investment, but it was the opportunity for the investment which those plans required which made the purchase to a large extent attractive to the North American Company. In other words, there was a big development job to be done, and 8829 if it was done well it would in all probability be a profitable one.

Q. Would it be an unfair statement to say that the North American Company was influenced in its investment in the Western Power Corporation properties by the probability that through its ability to furnish additional capital for construction purposes it could create a physical situation in

—7,050—

territory served by Western Power Corporation wherein a

sale on a profitable basis to Pacific Gas and Electric Company would be almost a foregone conclusion? A. No, I don't think that would be a fair statement. Those two companies could run along on an independent basis almost indefinitely.

Q. This wasn't, then, a 5-year adventure out there, made in the hope of so building up the Western Power properties that they might be sold at a profit to Pacific Gas and Electric because of the increasing competition which they afforded to
8831 Pacific Gas and Electric? A. Not to my knowledge. I don't think that was the controlling interest in any sense.

Q. Nor do you think it was a factor in the determination to make the initial investment? A. No, not to my knowledge.

Q. Reverting again to the organization of the North American Company, would you please state the names of the eight officers of the North American Company and their respective positions? A. Mr. Harrison Williams, Chairman of the board of directors; Mr. E. L. Shea, president; Mr. J. F. Fogarty, chairman of the executive and finance committee; Mr. F. H. Piske, vice president and treasurer; Mr.
8832 Ralph F. Moody, vice president; myself, Herbert C. Freeman, vice president; Mr. Reed Hartel, secretary; Mr. P. D.

Preger, controller.

Q. And the two assistant officers, will you state their names and positions, please? A. Mr. R. K. Nunn, assistant treasurer, and Mr. J. C. Johansen, assistant secretary.

Q. Which of these men whom you have named have had public utility engineering experience? A. Mr. Ralph Moody.

Q. Any others of the officers or assistant officers? A. No.

Q. How are the 99 employees of North American Company classified in regard to their functions? A. There are 22 employees in the controller's division; four in the treasurer's division; 37 in the secretary's division; 19 in the stock transfer division; 8 in what we call the operating division; and there are 9 executive secretaries.

Q. What are the duties of the 8 persons employed in the so-called operating division? A. They keep in touch with matters of construction budgets, matters of that kind. They include a rate expert; they include, for example, Mr. Lindseth, who has testified in this case, and who is assistant to Mr. Moody. They are the people who are more directly involved in keeping in touch with the reports which come in from the subsidiary companies, other than those of a purely

8834

—7,052—

accounting character.

Q. Would you state the names of those eight persons and their respective titles, if any? A. I can give you the name of five of those; the other three are secretarial and filing help and people of that kind. The five are Mr. Elmer L. Lindseth, Engineer; Mr. W. C. Heise, Engineer; Mr. Charles E. Neil, rate specialist; Mr. Earl C. Sandmeyer, executive assistant; and Mr. E. M. Thierry, assistant to the president.

8835

Q. This division is under the supervision of Mr. Moody, is it? A. Yes; in that connection, though, Mr. Sandmeyer and Mr. Thierry report also directly to Mr. Shea, the president of the company.

Q. How long has Mr. Shea been president of North American Company? A. Since early in 1940; I can't remember the exact date.

8836 *Herbert C. Freeman—By Respondents—Cross*

Q. In what business was he engaged prior to the time he became president of the North American Company? A. He was an executive officer of one of the large oil companies.

Q. Had he ever been an executive officer of any utility company or utility holding company, so far as you know? A. So far as I know he had not.

—7,053—

8837 Q. You have testified as to assistance given by the officers of the North American Company in connection with certain financing by subsidiary companies; in cases in which such assistance has been given has it been the usual custom of the North American Company to secure the assistance of counsel by which I mean attorneys at law in connection with such financing? A. Counsel for the North American Company has, I believe, in almost every case either attended to the legal details or has been in touch with the legal details, together with counsel for the individual operating company.

Q. Where would you draw the line between legal details and other details in such a connection? A. Did I mention other details?

8838 Q. No, but I did. What would you say were the legal details as distinguished from any other details? I thought you mentioned legal details. A. The other details involve the development of the plan of financing, the determination of the time, the determination of the bankers to head the syndicate, and the composition of the syndicate, the supervision of the preparation of all the necessary applications and registration statements, financial statements, discussions with bankers and the eventual of negotiation of the terms; assistance in appearances before regulatory bodies, the arrang-

ment of the details of closing. I think that about covers it.

—7,054—

Q. What officers of the North American Company usually appear before regulatory bodies on behalf of subsidiaries? A. I don't think that officers of the North American Company have appeared before any regulatory bodies in connection with actual financing. Those appearances are made by the executive officers of the subsidiary companies themselves, but the North American Company officers have very frequently discussed financing in a preliminary way with, 8840
for example, the Securities and Exchange Commission. They have also made appearances—I will mention just one instance—before the Wisconsin Commission, for example, in connection with the financing in 1938. Mr. Doolittle appeared on behalf of the North American Edison Company in connection with the transaction under which the old Milwaukee Electric Railway and Light Company acquired Wisconsin Electric Power, and that, of course, was one of the details of the financing at that time.

Otherwise the service which the North American Company renders is in the preparation for the appearances and 8841
the ground work which is laid for them.

Q. Are you familiar with the work of any of the so-called independent service companies in the public utility field? A. No, I am not.

Q. Therefore you do not feel competent to make any comparison or contrast with the work performed by the North

—7,055—

American Company in respect to its subsidiaries on the one hand, with, on the other hand, the work done by such service

companies for their clients? A. My only basis of comparison would be the importance of the transactions involved. I don't know of any important cases in which those services have been engaged that would compare with the financing operations of our subsidiaries.

Q. Now you know Mr. Van Wyck who assisted in this case? A. I know him very well.

Q. Have you read his testimony in this proceeding? A. Yes.

8843 Q. Do you know whether or not there is any present member of the personnel of the North American Company who has had experience in indentures and indenture financing comparable with what Mr. Van Wyck has recited as his own experience in that respect? A. Not in the technical details of setting up the indenture. I think from the point of view of the principles to be covered in the indenture and the points to be safeguarded, Mr. Fogarty's experience is equal to that of Mr. Van Wyck's and Mr. Pisky has had very considerable experience along those lines, and I myself have had about 14 years of experience dealing with those ques-

8844 tions, but Mr. Van Wyck's experience has been somewhat unique because as counsel he has been engaged in the actual

drafting of the provisions. We act only as critics of the provisions after they are drafted, and as people to suggest provisions and modifications of existing provisions.

Q. Since Mr. Van Wyck's assumption of his present duties with the North American Light and Power Company has the drafting of indentures of North American subsidiaries which are not subsidiaries of North American Light

8845

and Power Company been left more largely to counsel than was the case while Mr. Van Wyck was still active among such other subsidiaries of the North American Company? A. I think Mr. Van Wyck has had a great deal to do with the drafting of the Union Electric indenture and I think of some of the papers in the Wisconsin Electric financing. He has testified to that. Apart from that the rest of us, as I say, have rather acted as critics; the actual drafting has been done by counsel, both Sullivan and Cromwell, and counsel for the individual operating companies.

8846

Q. The North American Company as such is not subjected to regulation by any regulatory body other than the Securities and Exchange Commission, is it? A. I don't know that it could be called a regulatory body. Of course we are subject to the laws of the State of New Jersey, corporation laws. We have to comply with the requirements of the New York Stock Exchange, but there is no governmental body

—7,057—

which exercises regulatory supervision of us.

Q. You submit no reports to any public utility commission or any State or to any commission of any State occupying a situation in respect of utilities such as is ordinarily occupied by a public utility commission or public service commission? A. No.

8847

Q. So except as you have stated, the nature and extent of the expenditures of the North American Company and of its activities is not subject to restriction or regulation by any State bodies, governmental bodies? A. The nature of its expenditures I would say is subject to regulation and restriction by the Securities and Exchange Commission, but otherwise there is no regulation.

8848 Q. I believe you stated that the North American Company officers and personnel assisted the managements of the several subsidiary public utility companies in respect of appearance before State regulatory bodies, is that correct? A. I don't believe I said so much in connection with appearances, but we have reviewed the applications filed by the various subsidiaries with the various State regulatory bodies in connection with financing and matters of that kind. I think there may have been other occasions where we have
8849 assisted in actual appearances. The one I mentioned of Mr.

—7,058—

Doolittle's appearance is one, but at the moment I can't recall others.

Q. But you would feel free to do so if you considered that the interest of the subsidiary involved and the interest of the North American Company, isn't that true, in the absence of any positive law or regulation to the contrary? A. I don't think the question has ever come up. I don't know what standing we would have before a State regulatory body unless we were in some way a party to the transaction and as
8850 to that we have always stood ready to appear wherever it was necessary, but the matters presented to the Commissions in which we were parties on one side as, let us say sellers of securities, have always been sufficiently explained in the papers filed and by the appearances of the subsidiaries themselves, and to my recollection it has not been necessary for us to make appearances. I might mention one instance where the tax commission of the State of Wisconsin called for our service in connection with the taxes of the Wisconsin Company, but that was an isolated case, as far as I have any knowledge.

Q. Does the North American Company engage in any activities directed to the benefit of public relations between its subsidiaries and the public served by them? A. We try to advise them on matters of reports and relationship with stockholders and with the public, but chiefly through the

—7,059—

medium of their reports. Mr. Thierry whom I have mentioned deals with all of our own reports and stockholder correspondence, and matters of that kind, and the building of good relations in that way, and he reviews all of the re- 8852
ports and statements made by the subsidiary companies and looks at them from that point of view, and gives them the benefit of his experience.

Q. Is the North American Company a member of or does it contribute to any association or other organization which carries on any campaign or publishes any literature designed to improve the relations existing between consumers and public utility companies? A. No.

Q. Mr. Freeman, will you please turn to Respondents' Exhibit 125, at page 68? This page purports to be a schedule of certain debit balances of combined loan advance accounts 8853
of operating subsidiaries of the North American Company, Wisconsin Edison Company, Inc., and North American Edison Company, for the years more particularly set forth in the caption to the table. With respect to the advances and loans which are reflected in part by this table, was it the custom of the North American Company to charge interest upon the advances so made? A. Yes.

Q. Can you state the rate of interest and the manner in which the same was determined? A. During the period from

—7,060—

1915 to the middle of 1920 the general practice was to charge interest on advances at the rate of 6 per cent. per annum, but from October 1915 to October 1916 the rate in some cases was 5 per cent. per annum. From August 1920 to April 1922, following the rise in interest rates which began about the middle of 1920, the rates charged were in excess of 6 per cent. They averaged approximately 7¾ per cent. in seven months during this period, and went as high as 8⅛ per cent. during five months of the period.

8855 During the last nine months of 1923 the rate charged was 6⅝ per cent. In the latter part of 1930 the rates were reduced from 6 per cent. to 5½, 5 and in some cases 4½ per cent., but during 1928 and 1929 when call money rates were very high the charge to subsidiaries was restricted to 6 per cent., which was substantially lower than the call rate.

Q. What was the latest period covered in your statement just made as to interest rates? A. This covered the period down to 1930. Subsequent to 1930 the only substantial advances were those to Union Electric Company of Missouri. I have no record with me of the rates charged to that com-

8856 pany since 1930, but my recollection is that it was not more than 4½ per cent., but I shall be glad to furnish that for you if you wish to have it.

Q. Are there any present advances due to the North

—7,061—

American Company from its subsidiaries? A. There have been no advances to subsidiaries since the end of 1935.

Q. Are there any amounts presently owing on account of advances made to subsidiaries? A. No. I meant to imply that in my answer.

Q. Then in respect to advances the table which you have submitted comprises all matters which would be shown upon it according to its caption, even if the date were extended to 1935, to the present time? A. That is correct.

Q. Now I asked you relative to the interest rates charged by North American Company, as to what those rates were and how computed. I believed you answered what they were but did you answer as to how the rate was arrived at? That is to say, was it the ordinary rate for commercial bank loans prevalent at the time of the advance, or at the time of the 8858 collection of the interest, or how was it determined? A. It was somewhat in excess of the rate which the North American Company paid during part of that period when it was a borrower. Up to 1923 as compared with the rates which I have mentioned there was a differential of about 1.2 per cent. in favor of the North American Company. From 1924 to 1935 the North American Company was not so apt to be a borrower during that period. During that entire period the

—7,062—

average of the rates charged to subsidiaries was just over 5½ per cent. and the average paid by the North American 8859 Company during those months in which it was itself a borrower was 5.7 per cent.

Q. When you speak of periods during which the North American Company was itself a borrower, you mean to exclude only borrowings, current funds, rather than upon funded debt? A. Yes. I am afraid I made a misstatement in that last answer. What I meant to say was that the average rate charged to the subsidiaries during the months during that period from 1924 to 1935, when the North American

8860 Company was itself a borrower, was 5.7 per cent., but the rates paid by the North American Company on its borrowings in those months, which were not a great part of the period, averaged 3.9 per cent., so that in those particular months there was a differential in favor of the North American Company of 1.8 per cent.

Q. When you speak of the rates paid by the North American Company you mean the rates paid upon bank loans as distinguished from rates paid upon funded debt as repre-
8861 sented by debentures? A. That is true; during that period the North American Company of course had outstanding debentures on which it was paying 5 per cent. That is during part of that period.

Q. The table of which we have been speaking includes accounts due to Wisconsin Edison Company, Inc., and to the North American Company, as well as to the North American

—7,063—

Company. What policy was pursued by the Wisconsin Edison Company, Inc., with respect to interest collected by it upon advances of the character here shown to its sub-
8862 sidiaries? A. The statement I have made is intended to apply to all of the advances during this period. I don't think there was any difference in the treatment by the three companies.

Q. Was the rate of interest charged to subsidiaries determined by the addition of an overage or additional figure to the rate paid by the parent company making the advance? A. No, not specifically.

Q. You speak merely of the relations borne and not of the method of determining the rate itself, then? A. I don't think there was any specific differential that was applied but

the fact that a differential was justified was considered because the North American Company was, of course, borrowing on loans with a definite payment date, whereas its advances to subsidiaries might run on almost indefinitely until the company to which the advance was made was in a position to finance or until the North American Company itself took common stock against the advances which it had made.

Q. In this table to which we have been referring, balances favorable to the advancing companies are all that are shown. 8864
Is it true that from time to time the debit bounced around the other way, that is to say the subsidiary companies would

—7,064—

have on deposit funds with the parent? A. There were periods during which some of the subsidiaries had credit balances.

Now was interest paid upon those credit balances by the North American Company? A. Yes.

Q. Could you state the rates at which that interest was paid? A. The rates varied from time to time during the period. In 1915 they were credited with interest at three 8865
per cent. There was one month there where the rate varied or the rate was in some cases 2½ per cent. In 1916 and 1917 where there were advances, where there were credits, the rate was 2½ per cent. In 1919, 1920 and 1921 the rate was in some cases 2 per cent.; in other cases 2½ per cent., but in certain cases during 1921 the rate was as high as 7.8 per cent. That was on, I think, balances held for short periods for use in the call money market.

In 1922, 1923 the rates varied from 2 to 3 per cent. They became 3 per cent.—there was nothing lower than three per

cent. at the end of 1923. 1924 and 1925 and 1926 they varied from 2 to 3 per cent. up to the middle of 1926. The latter part of 1926 they varied from 2 to 4.8 per cent. 1927 they varied from 2 to 4.4 per cent. In 1928 they varied up to as high as 8⅛ per cent. 1929 up to 9 per cent. That was

—7,064a—

during the period of high rates in the call money market. In 1930 the call money market dropped very appreciably and the rates varied from 2 during the most of the year up
8867 to 4¼ per cent., and during the latter part of the year down to as low as 1½ per cent. That was when the call money rate was 2 per cent.

In 1931, 1932 the rate varied from something over 2 per cent. to 1½ per cent., 1 per cent.; at the end of 1932 the call money rate dropped to 1 per cent., and there was a credit in that month of ½ of 1 per cent. In 1933 there were only credit balances during the first three months of the year. The first two months credits were ¼ of 1 per cent. against a call money rate of 1 per cent., and in March for some reason the call money rate went up to 3.3 per cent. and the credit
8868 was at the rate of 2.9 per cent.

During that period the intention was to follow the call money rate on cases where the deposit was left with the North American Company primarily for use in the call money market, where they had surplus funds.

Q. To follow the call money rate but not to equal it? A. But not to equal it; no, it was somewhat below the call money rate.

Q. Roughly, could you say about how much below the call money rate the average rate paid upon such deposits

was during the period of high money rates? A. Well, I can't

—7,065—

give the call money rates back of 1920. They are not readily available. In 1921 I have a record of some call money rates; for example, in January and February when we allowed some of our companies as high as 7.8 per cent., call money rates were 6.7 per cent. and 7.2. Later months during the year the call money rates averaged 5.5 per cent.; one month 5, another month a little over 5 per cent., and during that period whatever the credit balances were we were allowing 8870 only 2 to 2½ per cent. In 1922 and 1923 the call money rates varied from 3¾ per cent. up to 4.9 per cent., and 5.1 per cent. in 1923.

I have mentioned call money rates in some of the years from 1924 on. We really began to follow the call money market reasonably closely in 1928 when it began to go up. In that year there were differences of from 2/10 of a per cent. to a little less than a half of one per cent. between the rates allowed and the call money rates.

In 1929 there were differences of varying amounts. For example, in January when the call money rate was 7.5 per 8871 cent. the rate allowed was 6.4 per cent., and in July when the call money rate was 9.23 per cent. the rate allowed was 8.47. After that the call money rates began to drop and the variation between the rates credited and the call money rates in some cases disappeared, and in other cases was not more than ½ of one per cent.

—7,066—

Q. How did the aggregate of deposits by the companies with their respective parents, that is the North American Company and the other two companies which appear on the

caption of the table we have been discussing compare with the aggregate of advances on loans made to the subsidiaries by the parents? A. There were only three companies which had—perhaps I should say four—credit balances for any extended period, from 1915 to 1935. The Milwaukee Light, Heat and Traction Company, which was one of the constituent companies in the Wisconsin area had balances in 1919, '20 and '21 ranging from $871,000 to $947,000. In '22 and '23 those dropped to $117,000 and then disappeared.

8873 The St. Louis County Gas Company had credit balances from 1925 to 1931. They were of no consequence after 1929, when they were $293,000. The highest balance was $745,000. Union Electric of Missouri prior to the period when our advances to that company began to be very heavy had credit balances during a period of years from 1922 to 1928. They varied in amount from $849,000 in one year, and in one year, 1928, they amounted to $9,258,000. The Wisconsin Electric Power Company, which also had had debit balances over a long period of years, up to 1928, had credit balances from 1929 to 1932. Those varied from $3,429,000

8874 in 1932 to $8,510,000 in 1929.

Now that company had developed credit balances in two

earlier years. Wisconsin Gas and Electric Company had a credit balance in one year, 1929, of $3,813,000, but in the early years this company had debit balances. Those are the main facts.

Q. I assume that from time to time situations would exist in which one of the subsidiaries would have a credit balance and another one would have a debit balance at the same time, is that true? A. Yes, in some years that was so. The dif-

ference between the two cases being that we had to stand ready to pay them the credit balances whenever they called for them. It would have been more difficult for us to collect the balance from the company which owed us the money; we might have had to take common stock for it; it would depend entirely upon their ability to finance at that particular time.

Q. I suppose since these companies were subsidiaries you would have some voice and consideration with respect to when they made their calls, would you not? A. Not entirely. After all, they have to provide facilities and they are not in 8876 position always to delay the building facilities. They may have to have the money.

Q. Would it be correct to say that prior to 1935 any substantial portion of the income of the North American Company was derived from interest charged upon advances and loans to subsidiaries? A. In excess of interest paid, you

—7,068—

mean?

Q. I didn't include that deduction; without including that deduction if they were properly deductible. A. I haven't any actual figures to show that but it is obvious that based 8877 on the amounts of the advances shown in the exhibit, page 68, that the interest received by the North American Company could not have represented a very large proportion of its income. After all, until we get up to the year 1932 the aggregate did not exceed $17,000,000. At that time it appears that we were charging approximately 5½ per cent. on the average, covering a period. I don't know what the rate was in the year 1932 itself, but I should think, based upon what I have testified with regard to the year 1931, that it was probably lower than 5½ rather than higher, so that in that

particular year the interest on $17,000,000 would have amounted to about $935,000, and at that time the total income of the North American Company was probably in the neighborhood of $25,000,000.

Q. Of course the overage between the amounts paid as interest upon deposits made by subsidiaries with the North American Company and the rate at which the North American Company was able to place that money in the call market, was also income to the North American Company?

8879 A. Not also income; that would be included in the amount which I have mentioned. That was the gross.

—7,069—

Q. I was speaking before the gross income received by the North American Company from interest paid by its subsidiaries to it by reason of advances made by the other subsidiaries. I am now speaking of the other side of the picture, the profit to the North American Company in the reloaning upon the call market of money obtained from its subsidiaries at a lower rate; that also was a factor in the North American gross income, was it not? A. Yes, during the period

8880 when we were lending money in the call market, but that was not a very extended period. I have given figures showing the call money rates as applied to rates which we were crediting to subsidiaries over a long period, but we were not lending money in the call market during all of that period. My impression is that we probably only had call money loans out in two years during that period.

The Examiner: It is now 5:15 and we will recess until 9:30 Wednesday morning.

(Whereupon at 5:15 p.m. the hearing adjourned until 9:30 a.m. Wednesday, April 9.)

—7,070—

BEFORE THE

Securities and Exchange Commission

DOCKET NO. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.*

Hearing Room 1101,
Securities and Exchange Commission Building,
18th and Pennsylvania Avenue, N. W.,
Washington, D. C.,
Wednesday, April 9, 1941.

Met, pursuant to adjournment, at 10:00 o'clock, a. m.

Before: WILLIAM W. SWIFT, *Trial Examiner.*

Appearances:

S. PEARCE BROWNING, JR. and CHARLES S. HAMILTON, JR., of Sullivan and Cromwell, 48 Wall Street, New York, New York, appearing for the North American Company, et al., Respondents.

RALPH C. BINFORD, appearing for the Securities and Exchange Commission.

8884 *Herbert C. Freeman—By Respondents—Cross*

PROCEEDINGS

The Examiner: Let us proceed, gentlemen.

Whereupon, HERBERT C. FREEMAN, a witness called on behalf of the Respondents, having been previously sworn, resumed the stand and testified further as follows:

Cross Examination by Mr. Binford (Continued):

8885 Q. During these periods of high call money which you have mentioned, would it be correct to say, Mr. Freeman, that the North American Company acted as a conduit by which the subsidiary utility companies, having available cash, were enabled to place such cash on favorable rates of interest in the money market in New York? A. I don't think I would characterize it in that way, because I don't recall to what extent the North American Company actually placed money on the call market at that period. My recollection is that it didn't amount to very much.

8886 Q. It was sufficiently substantial, however, to cause the management of The North American Company to feel that they could afford to pay interest to the subsidiaries on this so-called deposit at a rate measured in part, but lower than the call money rate? A. I think the feeling rather was that whatever happened in the call money market, that the rate

—7,072—

of interest should bear, at that particular time, some reasonable relation to the call money rate.

Q. But you do not recall why the feeling existed? A. I can't say to what extent money was placed in the call money

market at that time; the amounts involved, after all, are not very great.

Q. The tendency of high call money rates, in its effect upon subsidiary utility companies which might have a choice between the employment of funds for the development of their utility systems, or the employment of such funds in the call money market through the North American Company, would be to cause the management of the subsidiary utility companies to place their funds at this high rate of interest, rather than to employ them for the additions and betterments to 8888
their systems, would it not? A. I don't think that would be a controlling factor. Utility companies must make additions and betterments, and, in good time, before the demand develops, and they would be guided rather by the question of cost of construction at the time, and the particular time when the demand would be likely to develop, rather than by what the money might earn as money.

Q. Isn't there normally, however, a marginal field within which improvements and betterments do not have to be made and funds which can be employed profitably elsewhere are consequently not drawn upon? —7,073— 8889

Mr. Hamilton: Will the reporter repeat that question?

(Whereupon, the pending question was read by the reporter.)

By Mr. Binford:

Q. (Continuing)—that is, for the purpose of betterments and improvements. A. I don't know just what you mean by "normally a marginal field"; the situation usually is that

8890 *Herbert C. Freeman—By Respondents—Cross*

the utility company tries to provide capital to meet its requirements over a reasonable time in the future,—that time may be a longer period or a shorter period, according to the money market at the time, and according to the rapidity at which the demand develops,—by that I mean, utility companies may, if the money market is favorable at some time, finance a little ahead of the requirements, and at other times, they may, because of favorable construction costs, develop a little ahead of the immediate requirements. I don't think
8891 there is what you might call a normal condition there. The condition has to be met from time to time.

Q. Possibly I can illustrate that by an example:

Let us suppose that a utility company feels that the improvement of a certain transmission system, or line, is desirable for future development, but not essential to be made at any given moment. Suppose, further, that such utility company has on hand such available cash with which to make the intended improvement. Now, isn't it true that the man-

—7,074—

agement of a utility would be less likely to expend that
8892 money at the present moment, let us say, in the improvement of this transmission line, and the consequent possible increase of its rate base, if it can temporarily employ these available funds at, let us say, 7 per cent., or some figure higher than the rate base in the call money market? Wouldn't the inclination be to defer making the improvement while that opportunity for a large interest existed with respect to these available funds? A. I still say, in spite of your example, that the rate of possible earnings on cash, as cash, would not be a controlling factor.

After all, all of us in the industry are utility-minded; we are not thinking of those things from the point of view of lending money; that is not our function, and I don't believe any management would speculate on the possible cost of construction changes during a period when it might manage to earn a few hundred or a few thousand dollars on money that was lent out at call money rates.

Now, by that I don't mean that they will rush in and do construction work that is not needed, and I believe the record of all our companies shows that they do attempt to finance 8894 their requirements ahead of the demand actually developing. That, at times, means that they have a certain amount of cash on hand, and naturally, if there is an opportunity to use that cash, they use it to the best advantage, entirely con-

—7,075—

sistent, however, with its requirement for utility purposes.

Q. You indicate that the management of The North American Company has not been interested in the loaning of money, primarily, but primarily in the utility interest prices. Nevertheless, the functions which the North American Company has to perform in regard to making advances 8895 to subsidiaries is shown by the exhibit to which we have been referring, and in the receipt of the so-called deposits from such, somewhat approaches commercial banking, or did it not, during such a period. A. No, I don't think it at all approached that kind of business.

Q. Except for the restricted clientele, what restriction could be drawn? A. No, we did not advance this money to our subsidiaries primarily from the point of view of what that money would earn as money; we were thinking of providing our subsidiaries with the capital that they required

8896 *Herbert C. Freeman—By Respondents—Cross*

for their construction and other needs, from time to time, under conditions which would enable them to finance their requirements permanently to the best advantage at some time in the future, knowing that in the last analysis, if they could not finance in any other way, that we always stood in a position to take Common Stock for these advances, or for part of them, and the record shows that we did actually ex-

—7,076—

tinguish some of these advances by taking Common Stock
8897 for them.

Now, as to the other side of it, where they had financed their own requirements a little ahead of time and had some cash which they did not immediately require in the normal conduct of their business, we did assist them to the extent we could in earning some return on that money, but it was not at all from the point of view of what you might call the commercial banker.

Q. How have the financing requirements of the subsidiaries of the nature formerly taken care of by this system of advances been met since 1935? A. They have been met,
8898 very largely, by direct financing by the subsidiaries themselves, and in part, by the use of their own funds representing reserves made out of income and in part, by undistributed earnings, from time to time.

Q. And as to temporary requirements such as I understood were those primarily satisfied by the advances prior to 1935, have those requirements been met, in part, by bank loans made directly by banks to the subsidiaries since the cessation of the practice of advances? A. To a very limited degree,—you are speaking now of short term bank loans, as

distinguished from these long term loans which are shown in the schedules of financing?

Q. Speaking of both. A. There have been some long term

—7,077—

loans, such as the $15,000,000 bank loan obtained by the Union Electric Company of Missouri, and the bank loan secured by Wisconsin Electric Power Company at the time of its refinancing in 1935, but there has been practically no short term borrowing by any of our subsidiaries.

My recollection is that in only one case, one of the minor 8900
subsidiaries, has there been any bank borrowing, and that amounted to a matter of two or three hundred thousand dollars,—I don't recall any other.

Q. How do the rates of interest on long and short term bank borrowings by subsidiaries compare, since 1935, with the rates previously charged by North American Company to subsidiaries for advances? A. The subsidiaries did not begin to make any of these loans until the money market had got to a point where that money could be obtained very cheaply. The $15,000,000 loan of the Union Company, for example, could be obtained on a per cent. basis, which 8901
was better, as an actual interest rate, than the basis on which the company could sell its mortgage bonds at that time, and it also afforded a way by which permanent financing on a long term basis could be done at some time in the future without incurring the expense that would have been involved in calling long term bonds, so that it is not possible to compare the experiences during a period of low money cost

—7,078—

which prompts that kind of financing, to a certain extent,

8902 *Herbert C. Freeman—By Respondents—Cross*

with the experience during a period where the requirements are not permanently financed because money rates are high.

Following the Union loan there have been one or two other loans, long term bank loans placed on even more favorable rates, and the Wisconsin Company, having made one long term loan, was able to readjust the rate of interest on that very loan, at a lower rate later on.

Money rates, at the present time, as you know, are very low and have been for the past three or four years and they
8903 have, during that period, for the most part, shown a tendency to get cheaper.

Q. Do you know whether or not the subsidiaries to whom advances were made from time to time by The North American Company, could have at such times, have borrowed such sums to meet their then requirements from commercial banks. A. At times, I know that the amount of our advances have been in excess of what the companies could possibly have secured from the banks and I think at any time when we were advancing the money it was more to their advantage from the general maintenance of their credit to obtain the
8904 money from The North American Company than to obtain it from banks.

Q. Did they obtain it at a higher cost than they would have paid to the banks if they had borrowed from the banks?

—7,079—

A. I am sure they did not. And, in effect, the amount of the borrowings was such that it would to some extent have strained the banking credit of a company. You just can't compare the money rates at all.

Q. But you made no comparison by looking in the record, in that respect, or from your own knowledge? A. I have

already testified that the rates which we were charging the subsidiaries bore a reasonable relationship to the rates which we, ourselves, were paying to the bank. Now, at the time when we were borrowing money from the banks, we had no funded debt at all; that was before the issue of our debentures, and I don't think that the subsidiaries could have borrowed to as good advantage as The North American Company, at that time.

Q. The reasonable relationship you speak of is the relationship shown by the figures heretofore given in the course 8906
of cross examination as to the rates paid? A. Yes.

Q. Do you know anything as to any efforts made by the subsidiaries during this period when they received advances from North American Company in the way of attempting to secure money from outside interests, namely, from banks, in lieu of receiving advances from North American? A. No, I have no knowledge of that.

Q. Do you know whether they did, or did not, in general,

—7,080—

attempt to obtain loans in lieu of advances from the company, that is, loans from outsiders, banks. A. No, I do not. 8907

I do know that in many instances the amount of our advances was in excess of what the banks in the company's territory could have lent them.

Q. Was it, at times, in excess of their immediate needs, the immediate needs of the subsidiaries? A. No.

Q. In other words, you would say it was not the practice of the North American Company, when it had idle funds, to make an advance to a subsidiary for the purpose of using the funds? A. Definitely, no.

8908 *Herbert C. Freeman—By Respondents—Cross*

Q. The salaries paid to the officers of North American Company are set forth in each case, are they not, in the U-5-S Report filed with this Commission? A. I believe they are.

Q. You spoke of a contract entered into by The North American Company with Thomas A. Edison in 1890, relative to financing certain works of Mr. Edison for a period of five years, in return for which certain uses of his inventions and patents was obtained by North American. Were other com-
8909 panies under North American parties to that contract, too, or did other companies have similar contracts with Mr.

—7,081—

Edison? A. No other companies were parties to our contract with Mr. Edison, to the best of my knowledge, and I have no knowledge as to whether he had similar contracts with other companies.

As to that particular type of contract, I believe not.

Q. The right to use his patents and inventions to the extent granted in The North American Company was not
8910 exclusive of The North American Company, was it? A. I don't know. I do know that that was a particular type of contract which related to the application of electric power to railroads, and my understanding is that that was somewhat exclusive to The North American Company.

Mr. Villard, of course, had been quite close to Mr. Edison, and was a great believer in the use of electric power for automotive purposes. He was interested in railroads, and it is my impression that that contract was intended to give The North American Company certain rights which other people could not enjoy with respect to that application of electricity.

Q. You have given certain figures relative to the percentage, or proportion, of earnings available for Common Stock dividends of the subsidiaries of North American Company, which have been actually taken up by way of dividends.

Now, in respect to those particular companies——

The Presiding Officer: (Interposing) New York is calling Mr. Freeman, so we will suspend for a few minutes.

—7,082— 8912

(Whereupon, following the taking of a short recess, the hearing was resumed.)

By Mr. Binford:

Q. (Continuing) Now, for example, the Union Electric Company of Missouri, can you state what proportion of the earnings of that company available for Common Stock dividends have been actually paid in as Common Stock dividends during the last five years?

Mr. Hamilton: Would counsel clarify that ques- 8913
tion of dividends?

By Mr. Binford:

Q. Can you state what proportion of the earnings of that company available for Common Stock dividends have been actually paid in as dividends, on Common Stock during the past five years? A. My statement related to a fifteen-year period, and I don't think it is entirely fair to relate a figure of that kind to too short a period, because, after all, one

8914 accumulates surplus during some years in order that it may be available during other years and during other years it may not be necessary to accumulate surplus. I don't know whether I have got the figures relating to any of these companies for individual periods. I should have to refer to the account of that company to determine what that was.

—7,083—

Q. You are unable to answer the question as phrased, at the present time? A. I am unable to answer the question about the Union Company now, yes.

8915

Q. Speaking generally, but again with reference to Union Electric Company of Missouri, isn't it true that during the past five years practically all of the earnings available for dividends on Common Stock have been paid to The North American Company in actual cash dividends? A. I should have to look at the accounts of the company to answer that. I can only answer it in a general way with respect to the last one or two years. I do know that during the last one or two years a substantial proportion of the earnings of that company have been paid out. You are speaking now of a five-year period and I can not answer it specifically with regard to a five-year period.

8916

Q. Can you answer it with regard to any particular period since 1935,—any shorter period? A. I have already indicated that my recollection is that during the last two or possibly three years a substantial proportion, very nearly all of the earnings have been distributed in the form of cash dividends,—I can't speak further than that.

Q. Now, with respect to the earnings of the Potomac Electric Power Company available for dividends upon Com-

mon Stock at that time, has the larger proportion of those

—7,084—

earnings been paid up to its parent, Washington Railway & Electric Company, since 1935 than would be indicated by your fifteen-year figure? A. I believe the proportion for the last five years would be larger than it was for the entire fifteen-year period.

In that case, however, it has to be kept in mind that we have accumulated very large surplus,—that company has a surplus, at December 31, 1940, of over $31,000,000, and 8918
earnings have been allowed to accumulate in that company, as they have in all our companies, during periods when, for example, The North American Company was paying stock dividends.

The stockholders of The North American Company are entitled to some return on their investment, and during the period when we were paying stock dividends, it was for the specific purpose of providing, in that way, for the requirements of the operating companies, and during that period, we allowed a very large amount to accumulate in the surpluses of those companies. 8919

Now, that cannot continue indefinitely. One accumulates a surplus in order that the earnings of later years may be available for distribution, and certainly with respect to the Potomac Electric Power Company, one of the problems has been that the size of their surplus is so great that it is almost

—7,085—

an embarrassment.

Q. You state that the purpose of the accumulation of surplus is that earnings of later years may be available for

8920 *Herbert C. Freeman—By Respondents—Cross*

distribution during such years. Hasn't it always been true that one purpose of leaving a portion of the earnings available for dividends upon Common Stock in operating companies is to provide, in part, for the growth and development of those systems and necessary equity expenditures and investments essential to such growth and development? A. That is one purpose, and I think that purpose has been very fully recognized by The North American Company. The Schedule which was filed as an exhibit yesterday shows that
8921 the Common Stock investment, both Common Stock and surplus, in all our companies is very satisfactory.

Q. You would not state that the period of growth or development in respect to the electric utility companies has come to an end, would you? A. By no means, and I think a period of possibly rather intensive growth is beginning, has already begun.

During the period from 1931 until 1936-37, I think the average utility company was able to provide for its requirements out of its reserves, which it made out of current income, provided their reserves were at the rates which The
8922 North American Company has provided during that period.

—7,086—

Q. But to the extent that a motive or purpose which you suggested might have actuated the management of The North American Company in leaving a certain proportion of earnings otherwise available for Common Stock dividends in the subsidiary operating companies, that factor still exists, does it not?

The Witness: Will the reporter repeat the question?

8923

(Whereupon, the pending question was read by the reporter.)

The Witness: Yes, I would say it still exists. It is a factor which fluctuates from time to time. It is of considerable importance during times of large expansions; it is of no importance at all during periods when expansion can be taken care of out of current reserves, and it is of varying importance at other times.

8924

By Mr. Binford:

Q. Isn't it true that since 1935 the proportion of earnings of subsidiary companies of The North American system which have been left with the earning companies, rather than drawn out by way of dividends, have been much less than it has over the fifteen-year period as a whole, which you have heretofore mentioned? A. It has been less,—I don't think it is fair to say that it has been much less.

—7,087—

8925

I could give you a figure for the North American system, as a whole, for the last five-year period.

Q. I would like to have a figure, if you will. A. I cannot give it as to specific companies, and I would like to make this comment in connection with it:

That the percentage which The North American Company has drawn down from its utility subsidiaries during the last five years of the period which I covered was less than the percentage drawn down by the eight independent companies during the preceding five-year period which was a period of some considerable difficulty for utility companies.

8926 *Herbert C. Freeman—By Respondents—Cross*

During the five years from 1935 to 1939, for The North American utility subsidiaries, as a group, 85 per cent. of the balance available for dividends on Common Stock was paid to North American Company in the form of dividends or to minority stockholders of those companies that had minority stock holdings outstanding, and they are entitled to some return on that capital, and during the preceding five years from 1930 to 1934, the eight independent companies paid out 87.4 per cent. of their earnings in the form of dividends.

8927 Q. Now, does the figure which you have just given with relation to The North American Company compare with similar figures which you gave yesterday with reference to the taking up of dividends over the fifteen-year period? A. The figure for the fifteen-year period was 69.1 per cent.

—7,088—

Q. During the fifteen-year period,—then the figure which you gave for that period on direct examination is somewhat misleading as to the recent policies of the company, isn't that true? A. No, it shows the long-range policy which has been to build up these companies, and during these past few

8928 years, these companies had passed the very severe period from 1930 to 1934 and had got into a period when the depressed conditions were not on them to the same extent, neither had the requirement for additional capital borne down on them to the extent that it is beginning to now, and may, for the next few years.

So that, this is entirely consistent with our long range policy, and it simply represents the advantage we have had during one period of paying out a larger proportion of earnings because of the fact that we have refrained from paying out so large a proportion during earlier years.

8929

Q. In Exhibit No. 128, which is in tabular form, and 129, which is in the form of a graph, you have set forth the consolidated earnings available for interest charges and dividends of The North American Company and North American Edison Company from 1930 to 1939, inclusive of both years, together with a picturization in the case of Exhibit 129, of the deviations from the ten-year average in respect to certain named companies.

—7,089—

8930

Now, as to Exhibit No. 129, which is the graph, has there been any weighting of the data shown in respect,—for example, Wisconsin Electric Power Company and subsidiaries, as to the amount of earnings involved as distinguished from the fluctuations of such earnings? A. The weighting of those earnings is reflected in the consolidated earnings available for interest charges and dividends of North American. After all, the North American Company is a weighting of the results of the constituent companies, but from the point of view of the investor, the investor does not go out and buy a weighted range of stocks, he goes and buys 100 shares of one stock and 100 shares of another, or maybe 10 shares of one and 10 shares of another. He is getting the benefit of the weighting, if he buys North American; but if he buys individually, he is just as likely to buy 100 shares of St. Louis County Gas as he is to buy 100 shares of Wisconsin Electric Power, if those stocks are available.

8931

So that, what this study tries to show is that from the point of view of an investor who buys individual companies, or buys stock in several companies, he fares better, on the average, if he is an investor in the securities of North Ameri-

8932 *Herbert C. Freeman—By Respondents—Cross*

can Company than if he buys on his own judgment stocks of individual companies which may be available in the market, related, of course, to the stocks of the companies which are owned by North American.

Q. Now, the unbroken red line on Exhibit 129 which

—7,090—

represents, according to the legend, Wisconsin Electric Power Company and subsidiaries, shows an extreme high point in the extreme lefthand corner of the chart, and there
8933 are marked deviations from the black line representing the consolidated earnings figure. There is no way, by looking at this chart, is there, by which one can tell what proportion of the consolidated earnings is represented by the earnings from Wisconsin Electric Power Company and subsidiaries?

In other words, by the red line, that might represent either ten cents or a million dollars, or any figure. It merely shows the fluctuations there. A. The chart is merely a graphic representation of the figures on the schedule which is the previous exhibit, and the figures for Wisconsin Electric Power are shown in this schedule.

8934 We could not, of course, express both figures and trends in the one chart.

Q. Washington Railway & Electric Company and subsidiaries, shown by the green line, shows less fluctuation, does it not, than the consolidated figure line? A. Yes. Obviously, the consolidated line represents a combination of figures and it is almost to be expected,—it is to be xpected that some of those figures will fluctuate more than the consolidated line, and some will fluctuate less,—that is why the consolidated line is represented, to some extent, as an—

average. —7,091—

8935

And, the fact nevertheless remains that an investor who had to choose, in 1930, what stock he would buy, would quite possibly have bought Wisconsin Electric Power and not have fared so well. He might possibly have bought Washington Railway & Electric, and in that case, he would have fared better, but there is another factor that enters into that:

This chart is prepared at the end of the period looking backward. We have to think of the position of an investor at the beginning of this period, looking forward, and he hasn't the power to tell what these figures are going to show over 8936
that succeeding ten-year period,—and if he could have gone back to a previous ten-year period to get the figure then, and had looked at that figure and bought the stock which might have been more favorable than another, then the stock he chose might not have been as stable over the next ten years as it had been in the past ten years, but if it had been, the chances are that he would have had to pay a premium for that stability.

Now, he gets that stability as a component part of his investment in North American.

8937

Q. Without the payment of a premium? A. Yes,—he may pay a premium for the North American stock, based on the judgment of investors that a consolidated picture such as North American will tend to be more stable than individual investments in individual companies.

—7,092—

That is quite possible, but, he will not pay a premium for one stock which may not be justified, based on the experience over succeeding years, and he will be spared from some of that,—of the fortunes of individual stocks which he can't prevent.

8938

Q. Of course, however, I presume that the combination of an investment of erratic earning power with an investment of stable, established and somewhat consistent earning power does not result in any advantages of stability, does it?

The Witness: Read the question back, please.

(Whereupon, the pending question was read by the reporter.)

The Witness: That question can only be answered
8939 from the point of view of a given moment of time. Who can say, at this time, what securities are in companies of erratic earning power, and what, in companies of stable earning power, as applied to the next ten years. I am speaking now of utility companies.

By Mr. Binford:

Q. And can anyone say that within the next ten years the erratic nature of the earning power may not be rather accentuated by the combination, rather than decreased by it?

In other words, the behavior of one company in respect
8940 to earnings necessarily offsets the behavior of another. Isn't it true that a depression in one may simultaneously occur with a depression in another, in their earning power? A.

—7,093—

One may speak only from past experience in that way, and it may happen that all companies will suffer, as they did in 1932 and 1933. They did not, however, suffer in the same proportion, and the combination of several companies will always give an experience that lies between the extremes of those various companies, and to that extent, stability can be achieved.

You cannot guard, by any combination, against conditions which affect all companies in the same way. You can only do so to the extent of smoothing off the effect of those changes by a combination of several companies.

Q. And as you add the number of companies in your portfolio, you necessarily increase the probability that one of them will be bad in performance? A. I would not say "probability".

Q. Possibility? A. There is always a possibility, no matter how well you pick your company, that it won't do as 8942
well as other companies, that something may be wrong.

Q. And that possibility increases in direct proportion as you increase the number of your companies in which your investments are placed? A. No, that would only be the case if the companies were selected haphazardly, but if the companies were selected with reasonable good judgment, with the expectation of their being held over an extended period,

—7,094—

you will have some cases that, in spite of you, will turn out badly, perhaps, but you don't certainly increase your risk in 8943
the sense I gathered you implied in your question, just by the number of companies that you hold.

Q. Now, referring again to the chart, Exhibit 129, I notice that the consolidated earnings represented by the black line upon that chart is stated to be Consolidated Earnings Available for Interest Charges and Dividends for The North American Company and North American Edison Company.

Since the figure for interest charges is a fixed figure, and the figure left for payment of dividends is a residual figure,

8944 *Herbert C. Freeman—By Respondents—Cross*

I presume that a line showing only consolidated earnings available for dividends, that is to say, after the deduction of interest charges, would show considerably more fluctuations than the black line on the chart, is that true? A. I will have to look at the figure to check on that.

Q. Isn't that necessarily true? A. It depends on how your average works. You are talking of averages, and not specific figures, and I never like to generalize about averages without studying the figure.

8945 I would not want to answer your question without study.

Q. Without studying the figures, isn't it a necessary conclusion that any change is reflected first in the amount of earnings available for dividends before it is reflected,—

—7,095—

rather, it is reflected to a greater extent and greater percentage in the amount available for dividends that it is in the larger amount of fixed charges plus amounts available for dividends? A. Let's look at the figures, they are here.

Before I do that, however, I want to point out one thing and it is an important factor in connection with this

8946 presentation:

That we are looking at this thing from the point of view of a cross section of the investors in The North American Company. After all, The North American Company consists of debenture holders, Preferred Stockholders and Common Stockholders and the importance of stability is just as great for the debenture holders as it is for the Common Stockholders. It is greater, in fact, because the Common Stockholder knows that he is taking a more speculative position. Now, beyond that, an investor in the Common Stock of North

American Company would be very limited as to the amount of investment he could make in the stock of these individual companies.

It is only if you take a cross section of the investment, and as you say, the Common Stockholder is a residual investor in a situation of that kind, when considering the debentures and Preferred Stock. The holder of Common Stock, if he wanted to go out and buy the same proportion in the stocks of these individual companies, would have to make an investment representing a cross section not only of his 8948

—7,096—

own Common Stock investment but of the senior capital over that particular investment, so much Preferred and so much for debentures and so on, and unless he does that, his ability to match the investment in the stocks of these subsidiary companies is limited to that extent, and his risk is accordingly increased, because instead of being able to buy the stocks, let us say, of two of those companies, and, in a sense, averaging his risks, he might only be able to invest in the stock of one company and that might happen to be at the beginning of some particular ten-year period where that 8949 company was going to run into difficulties.

Now, if you still want me to give the figures as to the results to the stockholder, the Common Stockholder, I will be glad to do that.

Q. If you please. A. The figures that are represented by that heavy black line are the figures described in about the middle of the chart Total Consolidated Earnings Available for Interest Charges and Dividends of The North American Company and North American Edison Company. Now, it was in order to make the steps in this table as simple as pos-

8950 *Herbert C. Freeman—By Respondents—Cross*

sible that we next arrived at the consolidated balance available for common dividends and surplus, that is, after deducting the interest charge and Preferred dividends of the holding companies. That is in that next line.

—7,097—

Now, as to that, the average deviation during the ten-year period from the ten-year average was 25.68 and that compares with an average deviation for the ten-year period for the eight constituent companies of 26.02. In other words,
8951 on that extremely severe test, the experience of the consolidated picture is still somewhat better than the average of the constituent companies.

Now, as to the maximum deviation of that particular line of figures on the plus side, you will see 74.15, which is shown by the figures for the year 1930. The maximum deviation on the plus side of the average of the seven companies is 55.07; also for the year 1930. So that, there is some advantage for the eight constituent companies above the average.

8952 Now, as to the maximum deviation below the average, the maximum for the consolidated figure is 42.13, which is shown by the figure for 1934, and the maximum deviation below the average for the eight constituent companies is 40.80, which is shown also for that year, 1934, so that there is practically no difference.

Q. Now, according to the same table, Exhibit No. 128, the ten-year average deviation of the consolidated available earnings available for interest charges and dividends of The North American Company and North American Edison is

16.54, is that correct? A. Yes, that is for interest charges

—7,098—

and dividends, consolidated.

Q. And that is the deviation reflected in the black line on the chart, 129? A. That is true and the fairest basis of comparison,——

Q. (Interposing) That contrasts, then, with the ten-year average deviation of 25.68 which would be applicable if the consolidated earnings were shown available for dividends as distinguished from the interest charges and 8954
dividends? A. Yes, and that is the most unfavorable comparison on this schedule, and yet, it is still better than the average for the eight constituent companies.

Now, we have two other bases of comparison on this same schedule, one is Corporate Balance Available for Common Dividends and Surplus, and the percentage of deviation from the average for ten years is only 17.71, as against 26.02 for the eight constituent companies, and the Corporate Earnings Available for Interest Charges and Dividends shows an average deviation for the ten-year period of 9.63 as against 8955
26.02 for the eight constituent companies.

So that, on any basis of comparison, the consolidated, that is to say, The North American figures, are more favorable than the eight constituent companies, and it just happens that the most unfavorable comparison which represents the maximum risk in the North American situation, that is, of the Common Stockholders, is not much better, but it is better.

—7,099—

Q. I believe you characterized the investment of North American Company in Pacific Gas & Electric Company as

a stabilizing influence upon the income of North American Company, is that true? A. That is true.

Q. And to a lesser degree, you so characterized the investment of North American Company in Detroit Edison? A. Yes, to a lesser degree.

Q. By which I presume that you meant in the case of each of these companies it includes the income received from the investment therein with the income received from the subsidiary, or other subsidiaries, of The North American
8957 Company, resulted in a more consistent and less varying rate of return upon the aggregate of the investment represented. A. It is one of the factors that has made the experience of North American Company, itself, more favorable than the experience of the constituent subsidiaries.

Q. So, if the income received from Pacific Gas & Electric Company by The North American Company has been more consistent and stable than the income received from companies which it admittedly controls—— A. (Interposing) We control the companies but we do not control the influences affecting those companies, and it so happens that the
8958 Pacific Coast tends to show a lag in changes in business

—7,100—

conditions, and on the whole, it does not seem to suffer as severely or with such a wide degree of variation as the rest of the country.

Q. Would you say the same thing as to Detroit? A. No. I indicated that as to Detroit, the element of stability was substantially less.

Q. But, nevertheless, you characterized that investment as a stabilizing influence? A. Well, to some extent. During

a part of this period the dividends from Detroit have been as high as eight per cent. and they dropped to four per cent.; then they came up to five and six per cent. They are now at six per cent.

Now, obviously, the drop from eight to four per cent. was a rather severe one, and that does somewhat militate against the stabilizing influence at that particular time. It depends upon when you start. If you start at the point where the dividends were four per cent., then the fluctuation you have upward from four to six per cent. may be a little more stable 8960 than the fluctuation upward in the case of one or two others of our companies.

Q. The fluctuations downward of Detroit Edison Company came at about the same time as a decrease in earnings on the part of Cleveland Electric Illuminating Company, did it not? A. At substantially the same time, I would say.

Q. The two companies are subject to a great number of

—7,101—

the same forces, in so far as economic conditions may affect their earnings, are they not? A. To a large extent, they are; they are in somewhat the same industrial territory. 8961

Q. Mr. Freeman, you spoke in some detail yesterday of the widespread distribution of North American Company shares of stock, pointing out that shares were held in every state in the union and other places which you named.

What proportion of those shares are usually represented at a stockholders' meeting of The North American Company? A. That has varied, of course, according to the requirement for a quorum, but where we have needed a two-thirds vote, we have received, I think, as high as,—I believe as high as 76 per cent.

Q. That was in 1939, I think that was the last occasion? A. 1939, yes. For the annual meeting where we needed only a 50 per cent. vote, I think the average representation has run between, say, 56 and 60 per cent. I am speaking now entirely from memory.

Q. Was that true of 1940? A. The stockholders' meeting in that year, 1940?

I believe we received between 55 and 60 per cent. of each class of stockholders.

8963 Q. You say "received"; you mean proxies representing that amount were given to the management? A. Let me

—7,102—

correct that.

I am speaking now entirely from memory. I believe that in 1940 we received upwards of 60 per cent. of common stock and a lesser proportion of preferred stock.

Q. At the stockholders' meeting in 1940, for example, what number of shares were represented by persons other than proxies elected by the management of North American? A. A negligible per cent.

8964 Q. Did it amount to 1 per cent.? A. I don't believe it did.

Q. Were you present at that meeting? A. Yes.

Q. How many others were present? A. Well, last year there were about 60 people, I should say.

Q. Who were the officers or persons designated by the management as proxies in the form of proxies sent out to the shareholders in 1940? A. I don't remember that. I believe I was one of the proxies and I think most likely the others were Mr. Shea and Mr. Fogarty, but I am speaking from memory.

 8965

Q. And you gentlemen who were proxies exercised proxy power in accordance with directions from the Board of Directors? A. Yes.

Mr. Binford: I have no further questions to ask Mr. Freeman at this time, but I will reserve the right

—7,103—

to recall him for further cross examination if it appears desirable, before the close of these hearings, although I have no present thought that it will be needed. 8966

Mr. Hamilton: I have a little redirect.

Redirect Examination By Mr. Hamilton:

Q. You were asked a question about percentage of proxies, and so on, at the annual meeting of North American.

Doesn't the company comply with the proxy regulations of the Securities and Exchange Commission? A. It does.

Q. And such matters as directors to be elected, and at certain dates in the past, questions of designation are required, or were required, weren't they, by those rules, to be enclosed in proxy statements submitted in connection with the solicitation? A. That is so. 8967

Q. You were asked a certain number of questions as to the proportion of earnings available for dividends of the subsidiary companies actually paid out during the period 1935 to 1940.

When I said "paid out", I am referring to paid out on the Common Stocks. Was there, during this period 1935 to

8968 *Herbert C. Freeman—By Respondents—Redirect*

1940, a Federal Statute with respect to the undistributed profits? A. As to the taxes?

—7,104—

Q. Right. A. Undistributed profits were covered by a provision in the Revenue Act during that period.

Q. Was the effect of that statute, roughly speaking, to impose a penalty for failure to declare dividends? A. That was the effect.

8969 Q. You were also asked whether or not The North American Company, as such, was subject to regulation by any State Regulatory Commissions, and I believe you answered that it was not, with a minor caveat as to the New Jersey State Corporation Laws.

In answering the question, were you aware of the existance of certain statutes in various of the states in which subsidiaries of The North American operate relating to so-called affiliate relationships, or affiliate contracts? A. I was aware of the existence of such laws; I did not make any reservation with regard to it in answer to the question.

8970 Q. In the past, certain transactions involving The North American Company, on the one hand, and subsidiaries of The North American on the other hand have been, have they not, the subject of applications to various state regulatory authorities? A. That is so.

—7,105—

Q. And also the subject of approval by those regulatory authorities? A. Yes.

Q. You were also asked as to the dates on which Mr. Shea became President of The North American Company.

8971

Did he, prior to election as President of The North American Company, serve as a director of that company? A. He did, he had been a director since, I believe, November, 1938, and had been a member of the Executive Committee. He became President in December, 1939, I believe.

Q. In discussing the personnel of The North American Company in response to specific questions, you used the term, I believe, "non-executive secretaries". Simply for the purpose of clarification, will you state whether or not that term comprehended secretaries to executives? A. That is another way of expressing it.

8972

Q. You were also asked which of the present officers of The North American Company have had engineering training.

Is it necessary, Mr. Freeman, to have a degree of Bachelor of Science in Engineering from M. I. T. in order to be able to understand or consult with operating problems of utility subsidiaries of The North American Company? A. From the point of view of operations, I would say definitely not.

Q. There are some questions of business judgment, are

—7,106—

8973

there not, in the operations of these companies? A. Most of the operations involve the exercise of business judgment.

Q. When you have devoted your life to the business of the conduct of these properties, that is, your business life, in the course of time do you get a certain familiarity with its operations?

Mr. Binford: Objected to on the grounds that it has not been shown that Mr. Freeman has devoted his life to operating problems.

Mr. Hamilton: I will qualify that.

8974 *Herbert C. Freeman—By Respondents—Redirect*

By Mr. Hamilton:

Q. During the period of fourteen years of service with The North American Company, Mr. Freeman, haven't you necessarily acquired a certain familiarity with these problems? A. I have, to a very great extent, and I have brought to them, I think, an experience gained during the previous twenty-five years.

Q. You have testified as to the length of service of certain
8975 of the other officers of North American Company, namely, Mr. Fogarty. Will you state again, how long he has been connected with The North American Company? A. Mr. Fogarty has been connected with The North American Company for thirty-eight or thirty-nine years.

Q. As a matter of fact, do you happen to know whether

—7,107—

his first job was with The North American Company? A. Yes, he has told me that.

Q. From your knowledge of Mr. Fogarty's service, are you able to state whether that length of service on behalf
8976 of The North American Company has equipped him to discuss these problems of these various subsidiaries? A. Unquestionably I should say that there are very few men better equipped to discuss any of the problems of the subsidiaries.

Q. Have you stated the length of time during which Mr. Piske has been connected with The North American Company? A. Yes, Mr. Piske, I believe, has been connected with The North American Company for twenty-nine years.

Q. Do you know whether or not Mr. Piske similarly started out his business career in The North American Company? A. I believe he had some experience before that.

Q. On the basis of your knowledge of Mr. Piske, would your answer as to his capacity to discuss problems with subsidiaries,—would it be the same as your answer in relation to Mr. Fogarty's qualifications? A. It would differ only as to degree. I think Mr. Fogarty's experience has been broader and it has been longer.

Q. Have you stated how long Mr. Sealy, formerly the Treasurer of North American, had been connected with The North American Company? A. He had been connected with

—7,108— 8978

The North American Company for thirty-five years at the time of his retirement at the end of last year.

Q. At the earlier stages of Mr. Sealy's career, had he been connected with subsidiaries of The North American Company? A. He had been connected with the Wisconsin group of companies, also with the West Kentucky Coal Company.

Q. And similarly, as to Mr. Sealy, on the basis of your knowledge as to his ability, would your answer generally be the same as you have previously given for Mr. Fogarty and Mr. Piske? A. Yes. 8979

Q. Do you regard at least certain of the executives of the operating subsidiaries as being successful operators from the standpoint of results achieved and from the standpoint of the services rendered by their respective companies by which they are engaged? A. I believe The North American subsidiaries are operated by as fine a group of men as will be found in the industry.

Q. Now, are you speaking as to personalities, Mr. Freeman, or as to results? A. As to ability and results accomplished.

8980 *Herbert C. Freeman—By Respondents—Redirect*

Q. Are all those you have mentioned persons of engineering training? A. No, not all of them.

—7,109—

Q. Can you mention a few who are not? A. As to Presidents of operating companies,—Mr. Crawford, in Cleveland, has not had any technical engineering training.

Q. Notwithstanding that, do you think that he runs his business pretty well? A. I am sure he does.

Another example, Mr. Neal, the President of the Potomac
8981 Electric Power Company; he also has not had technical engineering training.

Q. Mr. Doolittle is a director of The North American Company, isn't he? A. Yes.

Q. Has he had engineering training? A. Yes.

Q. Mr. Way is a director of The North American Company, is he? A. Yes, sir.

Q. This is the same Mr. Way who was also President of the so-called Wisconsin-Michigan group of companies? A. That is so; he has been a director of North American Company for several years.

8982 Q. He has had engineering training, has he not? A. He is very highly regarded as an engineer.

Q. Mr. Moody is a director of The North American Com-

—7,110—

pany, isn't he? A. Yes.

Q. Has he similarly had engineering training? A. Yes.

Q. And is Dr. McClellan a member of the Board of Directors of North American Company? A. Yes.

Q. And he similarly had engineering training? A. Yes.

Q. Counsel asked you certain questions as to payments of dividends by Union Electric Company of Missouri since

1935 and also with respect to Potomac Electric Power Company since 1935. He did not refer, however, to the (4) Milwaukee Electric Railway & Light Company.

What dividends were paid by it on its Common Stock in 1935. A. There was no dividend on the Common Stock of that company in 1935.

Q. And in 1936 similarly? A. Similarly, no dividend.

Q. And in 1937. A. There was no dividend that year.

Q. And in 1938? A. I don't believe there was a dividend in that year. I believe the resumption of dividends in the 8984

—7,111—

case of that company was in 1939.

Mr. Hamilton: That is all of Mr. Freeman.

Mr. Binford: I would like to ask one or two more questions in response to Mr. Hamilton's questions.

Recross Examination by Mr. Binford:

Q. You have named several of the directors of The North American Company and have spoken of their engineering experience. 8985

How many directors has The North American Company? A. Twelve.

Q. How many of those directors are salaried officers or employees of subsidiary companies of the North American system? A. Four.

Q. Is there a "Executive and Finance Committee of the Board of Directors of North American Company? A. Yes.

Q. Who are the members of that Committee? A. Mr. Fogarty is Chairman, Mr. Harrison Williams, Mr. Shea, Mr. Murnane, and I are the other members of the Committee.

8986 *Herbert C. Freeman—By Respondents—Recross*

Q. Does that Committee meet frequently. A. Fairly frequently; we meet whenever the necessity arises and we meet regularly, I would say, about once a month.

—7,112—

Q. How often does the Board of Directors meet? A. That varies; they meet, let me put it this way: The intention is that they should meet every month. Occasionally we miss a month if there is no occasion to call these busy men from out of town into New York.

8987 Q. Is the normal and usual procedure for the Executive and Finance Committee to prepare an agenda or formulate proposals to be acted upon by the Board of Directors? A. There is no broad practice of that kind, in the sense of your question. There are matters which are taken up by the Executive Committee, and then are placed on the agenda for the Directors' meeting following it, but not all of the matters that come up at the Directors' meeting are first passed upon by the Executive meeting.

In other words, there is an entirely distinct agenda for the Directors' meeting.

8988 Q. Would you say that the major portion of the business transacted by the Board of Directors is first brought to the attention of the Board of Directors by the Executive Committee? A. No, I don't think that is the case.

Mr. Binford: I have no further questions, at this time, subject to the usual reservations.

Mr. Hamilton: I object, Mr. Examiner to the reservations. —7,113—

The Examiner: The record will show these reservations and I will refrain from making a ruling until the controversy gets more acute.

Mr. Browning: I will call Mr. Myers.

Whereupon, DANIEL W. MYERS, a witness produced on behalf of the Respondents, having been first duly sworn, was examined and testified as follows:

Direct Examination by Mr. Browning:

Please give your name? A. Daniel W. Myers, of Cleveland, Ohio.

Q. What is your business? A. Investment banking.

Q. Are you a partner in Hayden, Miller & Company? A. Yes. 8990

Q. What is Hayden, Miller & Company? A. It is a partnership.

Q. Is it an investment banking house in Cleveland? A. Surely.

Q. How long have you been in the security business in Cleveland? A. Since 1899.

Q. What was your first connection in it? A. Ambrech Brothers & Company, which I left in 1906 to go with Hayden,

—7,114—

Miller & Company, becoming a partner in Hayden, Miller & Company about 1911. 8991

Q. You have been a partner in Hayden, Miller & Company since 1911? A. Yes.

Q. What is the position of Hayden, Miller in the securities distributing business in Cleveland? A. I think, over the years, and today, we are the principal investment distributing house in Cleveland.

Q. As a member of that firm, and in view of your security business experience, are you acquainted with the Cleveland security market? A. That is all I know,—is marketing, how

8992 *Daniel Myers—By Respondents—Direct*

much can you sell, and at what price,—that is all I have done for the last forty-two years.

Q. Mr. Myers, did your firm have participation in the issue by the Cleveland Electric Illuminating Company in 1935 of $40,000,000 First Mortgage 3¾ per cent. bonds? A. Yes.

Q. Will you tell us to what extent? A. $600,000 in the underwriting, $400,000 in the firm bonds, in the selling group position.

8993 Q. In the $50,000,000 issue of the Illuminating Company in 1940, did your firm have any participation? A. Yes,

$500,000.

Q. How did the bonds of the 1935 issue go in Cleveland? A. My recollection is that to the extent of our $400,000 participation, they sold well.

Q. What about the 1940 issue? A. We had the distinct impression that the bonds were over-priced at 105½.

Q. Did you get all the bonds you wanted? A. Yes. As

8994 it turned out, I think we had about $150,000 more than we needed to have to meet the demand of our market.

Q. How many security houses are there in Cleveland, Mr. Myers? A. Principal houses, I should say about eight.

Q. Is your firm the largest? A. In personnel, no. I would like to say that we are the best and with respect to high grade bonds such as you have referred to, I think we are the largest distributor in the Cleveland market.

Q. Now, Mr. Crawford has already testified here that the total of the 1940 issue which was placed through Cleveland

houses was $2,500,000, which would include the $500,000 sold through your firm.

Were your sales all made in the service area of the Illumi-

—7,116—

nating Company. A. No, I can't tell you exactly, but our territory,—we cover northern Ohio, hit the high spots in Cincinnati, and a little territory in western Pennsylvania, and so I can't tell you just how many went into there.

Q. But a part of your $500,000 bonds went well beyond the confines of the Cleveland area? A. Yes. 8996

Q. Could you have sold the latter amount in the Illuminating Company's service area? A. No.

Q. Could you handle a $10,000,000 issue of Illuminating bonds? What would be the limit? A. As I understand your question, you are asking me how much the Cleveland market could take if it had the combined distributing power of all the Cleveland houses, the eight principal dealers and all of the small dealers, and with respect to the average bond issue, which has a favorable market aspect, that is, local color in our market, the limit is about two and a half million dollars.

Q. That is, if I understand you correctly, assuming a 8997 good market, the maximum amount which all of the Cleveland dealers could sell would be about two and a half million dollars? A. In this kind of a bond.

—7,117—

Q. That is right. Now, is the limit due to any element in the reputation of Cleveland Electric Illuminating Company in Cleveland? A. No, I don't think so; it is rather to the amount of purely investment funds in the Cleveland market.

Q. What is the reputation of Cleveland Illuminating Company in Cleveland? A. I should say,—excellent.

8998 *Daniel Myers—By Respondents—Direct*

Q. Turning to Preferred Stock, Mr. Myers, the testimony in this case shows that the Illuminating Company sold Preferred Stock in 1920 and 1921 in Cleveland,—did your firm sell any part of that Preferred Stock? A. The eight per cent. Preferred, yes.

Q. Could you tell us how much your firm sold? A. In the period from September, 1920, to November 30, 1920, we sold 5,500 shares.

Q. What was the maximum commitment? A. 2,500
8999 shares; the rest of it was taken down as we sold it.

Q. So that you never assumed a commitment, even for the 5,500 shares total. A. No.

Q. You took stock down and sold it on a retail basis. A.

—7,118—

Yes.

Q. What was the situation with respect to the 6 per cent. Preferred which was sold from 1923 to 1925? A. No Cleveland house made any commitment in that 6 per cent. issue. We were offering it on a selling agency basis at what looks now like a rather handsome commission.

9000 Q. Do you recall what that commission was? A. It says here (referring to document) "3 per cent.", that is, without commitment,—that is pretty good pay.

The Examiner: We will suspend for a moment.

(Whereupon, following the taking of a short recess, the hearing was resumed.)

—7,119—

Q. What amount of preferred stock of the Illuminating Company could the Cleveland market absorb today, Mr. Myers? A. About five million on the single offers.

Q. On that again you are speaking of all of the Cleveland market? A. I am speaking, rather, of the whole Ohio market rather than the Cleveland market. You understand the distinction between, say, the two and a half million limit under favorable market aspects in the bonds yielding the lower return and the higher absorptive capacity of our market in the preferred stocks, which is characteristic of a rather newly developed and non-discriminating market.

Q. Mr. Myers, the testimony in this case shows that the North American Company owns 1,847,908 shares of the common stock of the Illuminating Company. Can you place that stock in the service area of the Cleveland Electric Illuminating Company? A. Not anything like 1,847,000 shares. 9002

Q. What amount of that common stock do you think you could place? A. Do you mean today or under normal market conditions?

Q. Under the market conditions which you have had for some time and which you expect to have for some time. A. If you were talking about today, it might be 15,000 shares. If you were talking about more normal market conditions, my

—7,120— 9003

estimate of the absorptive power of the Cleveland market within a 30-day period would be somewhere around 75,000 shares.

Q. When you say "Cleveland market," there again are you including all of Ohio? A. Yes.

Q. Are the securities of a public utility the type of investment for which a broad market exists in Cleveland? A. No. But there again it is simply that we haven't the broad market for any high-grade security yielding the minimum return.

Q. Is there any difference in that respect between Cleveland on the one side and such cities as Boston and New York on the other? A. Oh, distinctly so. It all goes back to the development of a real investment demand in a rapidly developing industrial territory, where long after I came into the business, all of the men of large wealth in Cleveland were actively engaged in business, and still are to a large degree. You don't get the strictly investment demand until the money gets into the hands of a second or third or fourth generation.

9005 The businessman, in other words, who sees himself making a large return in his own activities does not quite understand that when he invests money he is going to get a minimum return over a long period of years. So that the pity of it is that at the present time our real investment

—7,121—

market is largely limited to endowments and trust funds with, of course, a distribution to domiciled banks and in a degree to the one savings bank that we have in Cleveland.

Now, I could not guess at what the relation would be between this investment money and the total wealth of Cleve-

9006 land; but in comparison with Boston, where you have the accumulations building up over the years, the amount available there for the purchase of bonds of this sort might easily be ten times over the demand that we have in Cleveland.

Perhaps I could put it this way: If you could imagine—and it is only guesswork—that, we will say, 10 per cent. of the Cleveland wealth—of course, that is exaggerating—was available for investment in bonds of this kind, in Boston it might easily be over 50 per cent. They have not there, of course, anything like the rapidly growing investment develop-

ment which we have had for the last forty years in Cleveland, which has afforded the preferred opportunities for men of money in the Cleveland market.

Q. Do you see any likelihood of any immediate change in the present situation with respect to the limited market in Cleveland for public utility securities? A. In the immediate future?

Q. Yes. A. No. Over the years there would be a tendency to increase the amount available for investment.

—7,122— 9008

Q. Mr. Crawford testified that the Illuminating Company's construction budget is running at the rate of about ten million dollars each year, so that the company may need to have five or ten million dollars of new money each year. In your opinion can the Cleveland market supply that amount of new money to this Cleveland Electric Illuminating Company? A. No possibility.

Mr. Browning: That is all.

Mr. Binford: I have no questions. I make the same reservation as heretofore made in respect to other witnesses. 9009

(Witness excused.)

Whereupon, DUNCAN R. LINSLEY, called as a witness on behalf of the Respondents, after being first duly sworn, was examined and testified as follows:

Direct Examination by Mr. Hamilton:

Q. State your full name and address. A Duncan R. Linsley, New York City.

9010 *Duncan R. Linsley—By Respondents—Direct*

Q. Are you associated with the First Boston Corporation? A. I am.

Q. In what capacity? A. I am a vice president, director, and member of the executive committee.

—7,123—

Q. Will you state your business experience? A. I graduated from the Massachusetts Institute of Technology with the degree of Bachelor of Science in 1922, and in the fall of that year entered the employ of Harris Forbes & Company, be-
9011 coming a member of the corporate buying department in the spring of 1923.

Harris Forbes & Company, and its earlier predecessor, N. W. Harris & Company, had for a great many years been prominently identified with the financing of public utility companies. I think as a matter of fact they were the earliest house to finance such utility companies.

I remained with that organization, becoming a director in 1929; and when the Chase Forbes Corporation was formed in 1931, became a vice president of that corporation.

9012 When the First Boston Corporation took its present form in June 1934, I became a vice president and director of that corporation, and have been with them ever since.

Q. What does the First Boston Corporation do? A. The First Boston Corporation is a publicly held investment banking firm. Its business may be divided roughly into two categories: First, a day-to-day trading business in United States Government securities and in municipal and state obligations, and in corporate bonds, such as public utilities, industrials, and railroad; and in Canadian securities; and,

second, in the underwriting of new issues of such securities

—7,124—

and their distribution to the public.

Q. Do you have branch offices at various points throughout the country? A. We do. We have major offices in New York, Boston, Chicago, Philadelphia, and in ten other cities in the United States.

Q. Will you give us some idea of the extent of the underwriting business which the First Boston does? A. I think 9014
probably it is a safe statement to say that because of the training and experience of some of the members of our organization we have tended more to the financing of public utility companies in issues that are registered with the Securities and Exchange Commission than any other party.

An indication as to the size of our business is given in the Securities and Exchange Commission's Release No. 536, which shows that during 1940 the First Boston Corporation led other firms in the country in the amount of underwriting participations for issues originating under the Securities Act, the amount of our participations aggregating approxi- 9015
mately $97,000,000 or about $25,000,000 in excess of the next nearest firm.

An examination of the release also shows that the First Boston Corporation ranked first in managing the greatest amount of new issues, with approximately $237,000,000 or $30,000,000 in excess of the amount managed by the next leading firm.

—7,124a—

Q. Will you give us some idea as to the extent of public utilities issues in which the First Boston has headed or par-

ticipated? A. Under date of February 5, 1941, the Securities and Exchange Commission published a report covering the issuance during the 6-year period beginning with 1935 and ending with 1940 of all securities of electric and gas utilities of which the Commission has a record under either the Securities Act of 1933 or the Public Utilities Holding Company Act of 1935. An analysis of this report for the 6-year period shows that the aggregate participations of the First Boston Corporation during such 6-year period amounted to some-
9017 thing over $500,000,000 of electric and gas utility securities, which I believe was in excess of any other house in the country; and our firm participated in 205 of these issues. We headed 69, appeared second in 51, and third in 25 of such issues.

Q. Will you illustrate the issues of particular public utility companies which the First Boston has headed? A. We have headed the financing for more than forty companies scattered throughout the United States.

Q. That is since what date? A. Since the Securities Act has been in effect. Some of the more important would in-
9018 clude the Boston Edison Company, The Narragansett Electric Company of Providence, the Rochester Gas & Electric Corporation, the Duquesne Light Company, the West Penn

Power Company, Pennsylvania Power & Light Company —the latter two were joint managements with other houses—the Washington Gas Light Company, Toledo Edison Company, Indiana and Michigan Electric Company, Wisconsin Public Service Corporation, Wisconsin-Michigan Power Company, Wisconsin Gas & Electric Company,

Kansas Power & Light Company, Iowa Power & Light Company, Missouri Power & Light Company, and the Southern California Edison Company.

Q. Now, in your capacity as executive of the First Boston have you personally assumed primary responsibility in behalf of that company in the negotiations in a number of these transactions to which you have referred? A. I have. But the duties of a director and member of the executive committee, of course, includes passing on all commitments which the firm takes; and in addition, in connection with the origination and the purchase of utility securities I have had the primary responsibility in quite a few of these issues. 9020

Q. As to what issues of subsidiaries of the North American Company have you had primary responsibility on behalf of the First Boston Corporation? A. Practically all in which the First Boston Corporation headed the financing.

Q. And those you have already stated, have you not? A. I believe they are included in the list which I mentioned.

—7,126—

Q. In addition to these instances in which the First Boston has headed the particular financing, have there been other issues of North American subsidiaries in which the First Boston has had a participation? A. There have. 9021

Q. Will you illustrate just a few? A. I believe it is a safe statement to make that we have been a major underwriting company in practically all of the issues of subsidiaries of the North American Company with the exception of the Potomac Electric Power Company; and in quite a few of those issues we have had second position.

9022 *Duncan R. Linsley—By Respondents—Direct*

Q. In addition has the First Boston had participation in the security issues of the North American Company itself? A. We have.

Q. Both as to the debentures and the preferred stock? A. Yes, sir.

Q. And also as to the common stock distribution in 1938? A. Yes, sir.

Q. Based on your experience in connection with the financing transactions of the North American Company and
9023 subsidiaries, to which you referred, are you able to express any opinion as to the savings or economies which those subsidiaries have obtained in ther financing operations by reason of being subsidiaries of the North American Company? A. I have.

—7,127—

Q You are able to express such an opinion? A. I am.

Q. Will you do so? A. My experience in connection with, let us say two issues that I followed closely on behalf of my firm, namely, the Kansas Power and Light Company and the
9024 Missouri Power and Light Company—as a result of my experience with them I am of the opinion that there were decided savings to those companies because of their being affiliated with the North American Company and having the benefit of the experience of the executives of that organization.

Q. You spoke of issues of the Kansas Power and Light Company. Will you give us a little more facts in that regard? A. Prior to 1935 the two major properties which are now a part of the Kansas Power and Light Company, namely, Kansas Power and Light Company and the United

9025

Power and Light Corporation of Kansas, were not at all well known from a credit point of view, and their securities were not held by the more informed buyers.

Kansas Power and Light Company had its origination as a means of financing the old Tecumseh plant. It was purely a generating company, and in time gradually broadened the type of its business to include the distribution of electrical energy as well as generation, and also got into the gas business.

—7,128—

9026

The United Power and Light Corporation of Kansas—I remember in the middle 20's several issues of bonds for that company which the old Harris organization handled, which took three to four weeks before they were disposed of. It was a question of going out and finding buyers and educating them on what the company was.

In 1935 there were five companies, I believe, put together through a merger or consolidation to form the present Kansas Power and Light Company, which included the United Power and Light Company of Kansas; and at the time there were eight separate bond issues on the constituent companies bearing coupon rates of 5 and 6 per cent., aggregating approximately $25,000,000 principal amount.

9027

An analysis of the institutional holdings of the bonds of the Kansas Power and Light and United Power and Light, two of the major constituent companies in the consolidation, as taken from Poor's Insurance Company Holdings as of the end of 1934, that is, as of December 31, 1934, which was published in their edition of 1935, shows that only slightly over $2,000,000 of the obligations of those two companies were held in institutional hands throughout the country. That includes in addition to the life insurance companies, of

9028 *Duncan R. Linsley—By Respondents—Direct*

course, fire, casualty companies and various funds of societies of one kind or another.

As I have indicated, the credit was unknown.

—7,129—

Under North American supervision a plan was worked out for the consolidation of these properties and the creation of $30,000,000 of first mortgage bonds, first mortgage 4½ per cent. bonds, which were sold at the end of 1935 at a price of 103 to the public.

9029 That sale was effectuated only after considerable work on the part of our organization in talking, prior to the distribution, with a great many institutions in various sections of the country. I personally, for example, made trips to places like New England, Hartford, various institutions in and around New York City, Philadelphia, Milwaukee, getting what we called the build-up for introducing that credit to the public.

And I may say that one of the important factors and one of the things that was very helpful in arriving at the successful sale of those issues was the fact that the Kansas Power and Light Company was controlled in the North American

9030 system, and the assurance of that management meant a great deal to the frame of mind in which the buyers approached the issues.

Q. Did the fact that Kansas Power and Light Company was a subsidiary of the North American Company in your opinion improve the credit position of its securities offered in 1939? A. It did. In 1939 a plan was devised for the refunding of the 4½ per cent. bonds through a new issue of $26,500,000 of first mortgage 3½ per cent. bonds.

—7,130—

9031

Those bonds were sold to the public at a price of 108½, which was the highest premium that any public utility offered security had been sold at with the exception of two very small issues. One, as I recall it, was Newport Electric, which was about $300,000 principal amount; and the other was the Madison Gas & Electric, which was done as a private deal, and which, as I recall, was about one million dollars.

That was the highest offered price of any issue on record up to that time.

9032

I am convinced in my own mind that while, of course, I think the First Boston Corporation had a lot to do with it. I think that the fact that the Kansas Power and Light Company was a part of the North American Company system did help materially in achieving the results that we were able to—the aid of that plus good salesmanship on our part.

Q. Did the same practice exist in connection with the preferred stock financing in 1940? A. Yes.

Q. Would your opinion be the same with respect to that financing? A. It would.

9033

Of course, in the case of the preferred stock financing the bulk of it involved an offer of the new 4½ per cent. preferred stock to the existing stockholders of the Kansas

—7,131—

Power and Light Company.

Incidentally, the price of the preferred stock of 103 was exactly the same dollar price that the first mortgage bonds were sold at in 1935, which shows, in addition to probably some improvement in the market, the long way the Kansas Power and Light Company had gone in establishing its credit generally throughout the country.

9034

Q. What is the present market price of that preferred stock? A. The preferred stock at the present time is quoted at about 102½. Approximately thirty days ago it was quoted as high as 106 bid.

Q. Is that the first Kansas public utility sale of 4½ per cent. preferred stock? A. It is the only one.

Q. Have there been other preferred stock issues of other Kansas Public utilities in this year? A. There have.

Q. By what company or companies? A. There was a

9035

recent issue of the Kansas Electric Power Company of 5 per cent. preferred.

Q. You also referred to the financing transactions involving securities of the Missouri Power and Light Company. Did the fact that the Missouri Power and Light Company was at the time of those transactions a subsidiary of the North American Company improve its credit position? A. It did.

—7132—

In the case of the Missouri Light and Power Company, that company likewise was virtually an unknown credit prior to the time the deal was done in December, 1936, which

9036

involved the sale of $9,000,000 of first mortgage 3¾ per cent. bonds and 15,000 shares of 6-dollar preferred stock.

The Poor's 1936 edition of the Insurance Company Holdings as at the end of 1935 shows that about $1,800,000 of bonds to be redeemed were held in so-called institutional hands.

Following the practice of introducing the credit, I again personally made these trips to talk to institutions. Other members of our organization also talked with a great many of them; and I can recall distinctly that the opinion was ex-

pressed to me by one or two of the buyers that they would not consider purchasing these bonds at the premium of 102 were it not for the fact that the Missouri Power and Light was a part of the North American system; and it was that factor really that in the last analysis was to a large degree responsible for the investment of certain funds in that company.

Q. Is the element of geographical diversification in the North American system an element of value to the North American Company's securities? A. In my opinion it is. 9038

During the middle 20's the North American Company

securities were highly regarded by the investment public generally; and the combination of the conservatism of their policies, together with the geographical distribution of the properties which led to the belief that there would be a stability of income, made the North American securities very popular with the investing public; and relatively that popularity still exists today.

Q. Does absence of diversification in the case of securities of other holding companies constitute a source of weakness? A. I think it does, in my opinion. 9039

Q. Will you illustrate? A. I think one example, without reflecting in any way on the company, is the case of the Standard Gas & Electric Company debentures, 6 per cent. debentures, which for a period of some time sold in a range between 75 and 80 per cent. of par. They have been a little higher more recently.

I am of the opinion that the fact that the Standard Gas derives nearly 50 per cent. of its income from the common

9040 stock dividends of the Philadelphia Company, operating in and around Pittsburgh, has contributed to the discount at which those debentures sell, on the fear that if Standard Gas for one reason or another would be deprived of that income or there was a substantial reduction in it, the margin available to cover the fixed charges would be drastically reduced.

—7,134—

I don't remember the figures exactly, but I believe that the cash income of the Standard is approximately $6,000,000,
9041 and that the interest charges are approximately 4½ million dollars. So that the elimination of the dividend income from the Philadelphia Company would, of course, have a very serious effect; and I am of the opinion that that fear is reflected in the flotation for those securities.

Q. Has First Boston in recent years headed the underwriting group in connection with the offerings of public utility common stocks? A. We have, either alone or jointly.

Q. Will you mention a few? A. We headed the underwriting group which offered the Washington Gas Light common stock to the public. We were joint manager in the
9042 distribution of 160,000 shares of the West Penn Power common stock, and a joint manager in the issuance to the public of approximately 714,000 shares of the Indianapolis Power and Light Company common stock, a major portion of which was distributed as portfolio assets, I believe you would call it.

Q. Have you any data in those instances to indicate the extent to which these common stocks were placed originally in the States in which these utilities operated? A. I have.

—7,135—

I might add that it has been a practice of our organization upon the completion of a piece of financing to send out a questionnaire, not only to the members of the underwriting group, but also to the selling members, asking them for their retail distribution by States. We have kept records to show where the securities have eventually found their resting place on the original or final distribution.

In the case of Indianapolis Power and Light Company, which involved a dollar offering of approximately $16,000,000, there were 93 underwriters in the business. There were 9044
761 dealers throughout the country invited into the selling group, and there were about 470 additional dealers that actually took down stock for sale. So that there was a total of close to 1,300 investment firms which participated in the offer.

Q. In that connection, if I may interrupt: In forming the underwriting group and also the selling group, was any effort made to insure participation by Indiana dealers? A. There was. It was the urgent request of the management of the company that practically all of the responsible houses in Indiana be included in the business as underwriters, and 9045
that as much stock be placed in the State as could be sold, without, of course, damaging the success of the deal. Obviously, you cannot burden one State with too much stock and have it sold back on other markets or else it ruins your distribution. But every effort was made to comply with that

request.

The average sale in this operation was approximately 90 shares of stock, and the records show that the retail distri-

9046 *Duncan R. Linsley—By Respondents—Direct*

bution in the more important states was approximately as follows, expressed in percentages:

In New York State 24.4 per cent.,

In Illinois 15.6 per cent.,

Indiana, 11.7 per cent., or approximately 90,000 shares in Indiana——

Q. That is, for the entire State? A. That is correct, or something over $2,000,000 of the dollar amount of stock.

9047 Massachusetts 10.6 per cent., Pennsylvania 5.4 per cent., California 4.3 per cent., and so on down.

Q. What happened in the case of the Washington Gas Light offering? A. In the case of the Washington Gas light we undertook in August of 1934 to sell 362,000 shares principal amount. There were 35 underwriters. There were 695 dealers invited into the selling group, of which 251 accepted the invitation and 444 politely declined.

Around 300,000 shares were distributed at that time and in January the remaining 60,000 shares were underwritten by 33 underwriters with approximately 240 dealers invited

9048 into the business.

—7,137—

The record of distribution of those two obligations shows the distribution as follows: New York 24.2 per cent., District of Columbia 21.6 per cent., or approximately 80,000 shares of stock; Massachusetts 10.9 per cent.; California 6.1 per cent.; Illinois 4.5 per cent.; Connecticut 4.4 per cent.; Maryland 4.4 per cent.; Pennsylvania 4.0 per cent.

In this case, as in the case of the Indianapolis Power & Light Company, the management requested that every consideration be given to local houses; and I believe it is a

fair statement to say that the dealers in and around Washington had every opportunity to sell as much of that stock as the market would take.

Q. Now, in the transactions involving the bond issues by North American subsidiaries, have you any data to show the extent of placing the bonds in the States in which those companies operated? A. I have.

Q. Will you give us the facts? A. These percentages refer to the retail sales by both underwriters and selling group members. In the $30,000,000 issue of first mortgage 4½ 9050
per cent. bonds of the Kansas Power and Light Company there were 13 underwriters and 480 dealers invited into the selling group, of which 476 accepted.

Q. Did those include all responsible Kansas houses? A. They did.

—7,138—

Our records show that the distribution by States was approximately as follows: New York 43.8 per cent., Massachusetts 10 per cent., Illinois 8.4 per cent., Pennsylvania 7 per cent., New Jersey 3½ per cent., Wisconsin 3.2 per cent., California 2.9 per cent., Connecticut 2 per cent. 9051

Those constituted 81 per cent. of the distribution.

It shows that $121,000 of the principal amount of the bonds were sold in the State of Kansas, or .4 per cent., less than one-half of one per cent.

Q. Were the Kansas underwriters or dealers allocated in this case all the bonds that they could take? A. All the bonds that they asked for. Yes.

In the deal of July, 1939, which involved the sale of $26,500,000 first mortgage 3½ per cent. bonds of the Kansas

9052 *Duncan R. Linsley—By Respondents—Direct*

Power and Light Company, there were 36 underwriters, and 441 selling group members.

The distribution figures show that retail sales were: New York State 33 per cent., Massachusetts 7.2 per cent., Illinois 6.4 per cent., Pennsylvania 7.9 per cent., New Jersey 7 per cent., Wisconsin 6.3 per cent., California 3 per cent., Connecticut 6½ per cent., constituting in those States approximately 78 per cent. of the distribution. $175,000 principal amount of bonds were retailed in the State of Kansas or
9053 approximately six-tenths of one per cent.

Q. Was the same policy pursued with respect to attempts

—7,139—

to get local participation and local placement of the bonds? A. We attempted to follow that policy in Kansas.

Of course, you understand that in the last-named deal the bonds were approximately on a 3 per cent. basis. There just was not a demand in that State for that very low interest rate for a 30-year period.

Q. Now, can you give us briefly the comparable data as to the financing transactions of the Missouri Power and Electric and Wisconsin Gas and Electric and Wisconsin-
9054 Michigan? A. In the $9,000,000 of Missouri Power and Light first mortgage issue there were 12 underwriters and 48 members of the selling group. The retail distribution shows New York State 28 per cent., Massachusetts 10.6 per cent., Illinois 8.7 per cent., Missouri 8.3 per cent., Wisconsin 5 per cent., and Vermont 3.8 per cent., which accounts for approximately 65 per cent. of the total retail sales.

I might add that prior to that piece of business being done we sent one of our men into the territory, who spent about

two weeks' time with members of our St. Louis office talking about the virtues of the Missouri Power and Light Company. We put on a special drive to see what we could do in the way of distribution in that State, which I think accounts for the fact that that amount of bonds went into the State of Missouri.

Q. Could you state the percentage of bonds that did go

—7,140—

into that State? A. Yes. About 8.3 per cent.

Q. And that included St. Louis as well as the entire 9056
State? A. Yes. It included St. Louis.

Q. Very briefly, what were the results in the case of the Wisconsin Gas and the Wisconsin-Michigan as to placement in Wisconsin? A. In the Wisconsin Gas & Electric ten-and-a-half-million issue 16.4 per cent. of the bonds were retailed in the State of Wisconsin, with approximately 43 per cent. in New York State.

Q. The Wisconsin figures include the entire State? A. The entire State. The bulk of the sales would probably be in and around Milwaukee.

Six States accounted for about 85 per cent. of the distribu- 9057
tion.

In the case of the Wisconsin-Michigan Power Company likewise there was a ten-and-a-half-million-dollar issue, with 12 underwriters and with 96 selling group members. 16.6 per cent. of the bonds were retailed in the State of Wisconsin, with 44.6 per cent. being sold in New York State.

Those bonds, I might add, were legal for savings banks in New York State at that time. We were in a market where

9058 *Duncan R. Linsley—By Respondents—Direct*

the savings banks and trust funds in New York were active

—7,141—

buyers of these high-grade utility securities.

Q. Do you happen to have the percentage of the placement in the State of Michigan in the case of the last-named company? A. I can get it if you want it, in the record, which is right here.

Q. Will you do so? A. There were $43,000 principal amount of bonds sold in the State of Michigan at retail, or
9059 four-tenths of one per cent.

Q. In these last two named cases, that is, Wisconsin Gas and Wisconsin-Michigan, was every effort made to obtain the greatest possible local placement? A. There was.

Q. On the basis of the First Boston's experience what would you say as to in what States the best investment markets exist? A. Of course, it follows really the law of supply and demand. Our records show that for the 6-year period from 1935 to 1940 the First Boston Corporation headed syndicates involving the distribution of about a billion and two hundred millions of securities. The entire
9060 retail distribution by States of that amount of securities expressed in percentages was as follows: New York State 32 per cent., Massachusetts 12.2 per cent., Pennsylvania 10.4 per cent., Illinois 6.8 per cent., California 4.7 per cent.,

—7,142—

Connecticut 4¼ per cent., Wisconsin 3.6 per cent., and New Jersey 3.4 per cent.

Q. These percentages relate, do they, to the underwritings and participations of all members of the selling groups or the underwriting groups in each case? A. That is correct.

Q. They are not simply the First Boston's distribution? A. It is all underwriters and selling group members who pursuant to our request have answered the questionnaire regarding the geographical retail distribution of the securities.

It is rather interesting to note that the first three States of New York, Massachusetts, and Pennsylvania accounted for 54½ per cent. of the total buying, and that the eight States which are mentioned accounted for about 77 per cent. of the total distribution. 9062

Q. Has it been your experience that it is harder to sell public utility common stock than it is to sell public utility bonds or preferred stock? A. Very much so.

I think there is one thing that is interesting in connection with that question about the North American diversification of their property, and that is the fact that in spite of the conditions that have been existing today, a study of the article entitled "Fifty Stocks Investment Trusts Pre-

—7,143—

fer," which appeared in Barron's Financial Weekly of February 10, 1941, shows that of a list of fifty stocks that were 9063 held in investment trusts, the five most popular stocks are as follows: Chrysler Corporation was held by 45 trusts, Montgomery Ward by 41, Kennecott Copper by 41, North American by 40, Union Carbide and Carbon by 40; and if you go down the list it is rather significant, I think, to find that the American Gas & Electric Company common stock is held by 27 trusts; the Commonwealth Edison Company, which in the trade is looked upon as one of the most popular utility equities today, is held by 18 investment trusts.

9064 Q. Those are the only utility holding companies, I suppose, or are there others? A. No. There are included in the list of the fifty, lower down, at the end of the list, Niagara Hudson Power common and the Commonwealth and Southern preferred stock.

But the thing that is striking is the fact that the North American today ranks right up with the leading stocks in the country as being the most popular with a type of buyer that is pretty well informed on current conditions.

9065 Q. And that is the North American common stock, is it? A. That is the North American common stock.

While I don't know what is in the minds of these investment groups, I am of the opinion that the combination of the regard in which the management is held together with

—7,144—

the diversification in their earnings power, is probably largely accountable for that size holdings.

Mr. Hamilton: That is all.

9066 (Whereupon a recess was taken from 12:55 to 2 o'clock p. m.)

AFTER RECESS

The hearing was resumed at 2 o'clock p. m., at the expiration of the recess. DUNCAN R. LINSLEY, the witness on the stand at the time of taking the recess, resumed the stand and was examined and testified further as follows:

Cross Examination By Mr. Binford:

Q. Mr. Linsley, you spoke of the attractiveness in the 20's of the securities of the North American Company from 9068
the standpoint of diversification of the holdings of the North American Company. Do you know what the diversification of holdings consisted of at that time of that Company of which you spoke? A. I believe, just from memory, without having refreshed my memory, that in the middle and late 20's with the exception of the North American Light and Power group of properties, that the major properties were substantially the same as they are today.

—7,145—

Q. Do you feel that the additional investments made in North American Light and Power Company by the North 9069
American Company in the period subsequent to 1930 increased the attractiveness of the North American Company securities by reason of the diversification effected? A. No. I wouldn't necessarily say so. I think that the increased investment in the North American Light and Power Company to some extent at least was brought about by conditions over which the North American Company had no control.

Q. However brought about, the result was a distribution of the investments in the aggregate for the North American

Company over a greater spread of properties than it was theretofore? Is that correct? A. That is correct.

Q. In other words, a greater spread of diversification of the investments sold? A. Well, you might say, a greater geographical diversification. But, if my memory is correct, from the standpoint of the North American Company proper, they haven't had any benefits in the form of income from their equity holdings in the North American Light and Power group.

9071 Q. So diversification in and of itself does not necessarily result in benefits to a holding company, does it? By diver-

—7,146—

sification I mean geographical diversification. A I think that geographical diversification is of considerable value to a holding company. Of course, with that you have got to have good management, intelligent management. You have also got to have materials with which to work. I mean by that that you have got to have materials in the operated operating, which, after all, are the source of earnings and earning power to the security holders, the original source of

9072 such earning power.

Q. Prior to the investment by the North American Company in the North American Light and Power Company system the North American operating properties were very largely in large urban and industrial centers, were they not? A. That is correct. But scattered geographically.

Q. But the principal operations were, I believe, in St. Louis, Cleveland, Washington, D. C., and in Milwaukee? A. In Milwaukee, and to a certain extent there was a diversity of income from their holdings on the Pacific Coast, of

which the most important city, of course, would be San Francisco.

Q. And, of course, there was present a further investment in the Detroit Edison Company, which was also operated in an industrial section of the country? Isn't that true? A. That is correct.

Q. What was the period covered by your statements relative to the participation of the First Boston Corporation

in utility underwritings? A. Which underwriting do you 9074
mean? My statement about the aggregate of what we have done or the statement with respect to the North American financing?

Q. The North American financing. A. Since the inception of the Securities Act of 1933.

The first issue headed by the First Boston Corporation of a subsidiary or affiliated company of the North American system was in November, 1935, at the time the $30,000,000 of bonds of the Kansas Power and Light Company first mortgage bonds were sold.

Q. That syndicate was headed, you say, by the First 9075
Boston Corporation alone? A. The First Boston and Dillon Read and Company.

Q. When was the First Boston Corporation organized? A. That is a little complicated story, but briefly, it took its present form in June, 1934.

Pursuant to the Banking Act of 1933 the security affiliates of national banks were required to be dissolved, and a deal was worked out with the First National Bank of Boston and with the Chase National Bank whereby the First

of Boston Corporation, which was then in existence as a security affiliate of the First National Bank of Boston, changed its name to "The First Boston Corporation" and its stock was offered to the stockholders of the Chase and the stockholders of the First National Bank of Boston; and in

—7,148—

turn the stockholders of each would have the right to subscribe to not more than 45 per cent. apiece under the terms of the Banking Act; and at that time certain executives and
9077 personnel that had formerly been with the Harris organization joined with the personnel of the First Boston to form what I call the First Boston Corporation when it took its present form in June, 1934. That may sound a little complicated, but in essence that is what the transaction was.

Q. What was the next issue of the North American system in which the First Boston Corporation participated? What, rather, was the first after the formation of the First Boston Corporation? A. You mean now any participation rather than our having headed the business?

Q. Yes. But not excluding that which you headed. A.
9078 I believe the first issue was the $40,000,000 principal amount of the Cleveland Electric Illuminating Company, then called the general mortgage (now first mortgage 3¾ per cent. bonds due 1965, which were offered to the public on July 15, 1935. I believe that that was the first North American Company subsidiary financing in which the First Boston Corporation participated as one of the underwriters.

Q. What was the extent of the participation of the First Boston Corporation? A. I don't believe that I have that record available with me.

—7,149—

9079

Q. Do you recall who headed the underwriters, the syndicates? A. Dillon Read Company, and I believe from memory that the First Boston Corporation appeared in second position in the business.

Q. What was the next issue of the North American Company or its subsidiary companies in the underwriting of which the First Boston Corporation participated? A. The next issue of a subsidiary of the North American Company in which the First Boston Corporation participated was the $30,000,000 first mortgage bond issue of the Kansas Power 9080
and Light Company, which I referred to a few moments ago, which was offered on November 25, 1935.

Q. And that was the issue in which the First Boston Corporation shared with Dillon Read? A. That is correct. The First Boston appeared as leader of the financing, but managed the issue jointly with Dillon Read and Company.

Q. What was the next issue of the North American system in which the First Boston participated? A. I believe the next issue was an issue which First Boston Corporation headed, namely, $10,500,000 of first mortgage bonds of the Wisconsin Gas & Electric Company, offered to the public 9081
on April 20, 1936. This issue was headed by the First

—7,150—

Boston Corporation.

Q. Not with any other underwriting firm? A. That is correct.

Q. And the next issue of the North American Company system in which the First Boston Corporation participated as underwriter was what? A. When you refer to the system, I am excluding the issues of the Pacific Gas & Electric Com-

pany and the Detroit Edison Company, in which the North American Company has a substantial minority interest.

The next issue we did not participate in, which was the Potomac Electric Power, which was offered in June, 1936.

Q. Do you know what underwriting firm managed that issue? A. As I recall it from memory, those bonds were offered for competitive bidding.

Q. Under a rule of the Public Utilities Commission of the District of Columbia? A. That is my recollection.

9083 The next issue which the First Boston Corporation participated in was one which we headed, namely, $10,500,000 of first mortgage bonds of the Wisconsin-Michigan Power Company, offered July 31, 1936, such issue being managed by the First Boston Corporation alone.

Q. Will you take up the next one?

—7,151—

Mr. Hamilton: There are quite a good many of them.

By Mr. Binford:

9084 Q. How many of these issues were there of the North American system in which you participated since the date of the organization of your corporation, approximately? A. I couldn't tell you the number without referring to the records. I believe that we have participated in, as I testified before, practically every issue with the exception of the Potomac Electric Power.

Q. Do you recall how many of those issues were headed in respect of underwriting by firms other than the First Boston or Dillon Read? A. I don't recall. I wouldn't want

to answer that without looking over the entire list to make sure.

May I inquire whether counsel's question is limited to situations where the First Boston itself has headed the participation or whether he refers to all of the North American?

Q. The question as stated referred to those only in which the First Boston participated. A. I couldn't give you the answer to that without looking it up.

Q. Do you recall a single instance in which an issue was made through underwriters in which either Dillon Read or 9086
the First Boston Corporation was not a principal underwriter or manager? A. Yes, I do, now that I think of it. The

—7,152—

issue of Wisconsin Gas & Electric Company 4½ per cent. preferred stock in July, 1939. The issue of Wisconsin-Michigan Power Company 4½ per cent. preferred stock in December, 1939. The issue of Wisconsin Electric Power Company 4¾ per cent. preferred stock in May, 1940. If my memory is correct, these three issues were headed by houses other than Dillon Read or the First Boston Corporation.

Q. In each instance the house heading the issue was a 9087
local dispensing house, was it not? A. I believe that the house heading the issue was The Wisconsin Company.

Q. And the preferred stock was issued in connection with an exchange in each of those cases for previously outstanding preferred stock largely held within the State of Wisconsin? A. That is my recollection, although I am not certain whether there was in any of these cases any stock offered for cash.

Q. But insofar as national distribution had been considered, that is, distributions which were not largely within one State, do you recall any instance in which Dillon Read

9088 *Duncan R. Linsley—By Respondents—Cross*

or First Boston Corporation have not headed the underwriting syndicate involved? A. I do not remember any at the moment.

—7,153—

Q. In connection with the underwriting of bond issues does the First Boston Corporation in cases in which it is a principal underwriter assist in the formulation of the plan of financing adopted, that is to say, the indenture provisions and matters of that kind? A. We do.

9089 Q. To what extent do you assist the issuing company in that respect? A. The practice varies a great deal in different cases, so that you cannot make a general statement that would be applicable to all situations. In general it is our practice, preliminary to doing a piece of business, to have thorough discussions in our own organization as to the form of the financing, as to the market prices which might be realized or the types of securities to be offered, and as to a general outline of the major indenture provisions which we feel are necessary.

9090 These items, of course, we are in a position to have an opinion about due to our day-by-day dealings in securities. We are familiar with where the market exists at the moment in particular types of securities, what the market is willing to pay for those types of securities, and what the market demands in the way of what they consider appropriate indenture provisions.

It is then usually the practice to sit down and discuss

—7,154—

in some detail with the company officials different aspects in connection with the financing of the enterprise. There

are a great many points of difference that are discussed pro and con. Oftentimes we find from experience that there are certain quirks to mortgage provisions that they have learned by experience can be improved upon to simplify the operation under the indenture or to save expenses. There is a general exchange of ideas with the company officials which after a period of time results in the child being born.

Q. Now, do insurance companies and other institution investors from time to time seem to acquire a liking for new types of indenture provisions with which they have become 9092
familiar or which they have formulated? A. They do.

Q. Have you kept in touch with that tendency upon the part of institution investors? A. We have.

Q. How large is your staff? A. We have approximately 400 employees.

Q. Among those employees are there any persons who specialize with indenture provisions? A. Yes. There are, I should say, probably eight or ten individuals.

Q. In connection with underwriting bonds issued under indentures, do you employ attorneys at law in your under- 9093
—7,155—
writing operations? A. We do.

Q. Do you have such counsel regularly retained? A. Not regularly retained. We use several firms for that work.

Q. You, of course, select the firms with regard to their corporate experience and ability? A. That is correct.

Q. What is the largest utility bond financing that you recall that your company has participated in in which the issuing company was not a subsidiary of a registered holding company? A. On October 9, 1940, the Southern California

9094 Edison Company issued $108,000,000 principal amount of first and refunding mortgage of 3 per cent. bonds, which financing was headed by the First Boston Corporation. I believe that is the largest issue that we headed to date. We have also participated as one of the major underwriters in the financing of the Commonwealth Edison Company.

Q. What was the time of the issue of the Commonwealth Edison Company in which you participated? A. There were several deals during 1938 and, I believe, 1939; but, as I
9095 recall now, those were small. The large Commonwelth Edison Company was the private deal done directly with the insurance companies.

—7,156—

Q. In respect to the private deal done direct with the insurance companies do you recall the amount involved? A. As near as I can recollect, it was about $114,500,000.

Q. Do you recall the cost of the money to the company? A. Not offhand. No, sir.

Q. Would you state approximately what it was, as near as you can recall? A. I don't recall. It doesn't show in the
9096 report of the Public Utilities Commission and the Securities and Exchange Commission. I recall now why it doesn't because it was neither registered under the Securities Act nor under the Public Utilities Holding Act. I don't happen to remember offhand.

Q. Do you happen to remember offhand how the price paid for the money securities at this private sale compared with the price being paid by other utility companies for money at the same or at approximately the same time? Was it lower or higher than was being paid by subsidiaries of

other holding companies of at all comparable characteristics? A. I do remember that there was a lot of talk at the time about the price at which the issue was sold, and a feeling on the part of a great many people that the company could have done better with a public distribution of the securities. It just happens that I knew at the time that the war clouds were gathering abroad, and there was no telling what might

—7,157—

develop from a market point of view over the period of 90 days' time, and that the management of the Commonwealth 9098
Edison Company after considering the matter very thoroughly decided that they should move with speed, and they chose to do a private deal because by the time they got through registering that deal and waiting the 20-day period, perhaps 60 days or 90 days might elapse and they might miss the market.

That, incidentally, was prior to the time that the Securities and Exchange Commission worked out the mechanics for acceleration of the registration statements.

I also recall that while the money did look as though it 9099
was a little higher than could be obtained, I personally had some sympathy with the management of the Commonwealth Edison Company's point of view, because the outlook was so dark abroad that it was a pretty moot question as to whether the management wanted to gamble on a 30-or 60-or 90-day delay; and the only way you can tell you are right is looking at it in retrospect.

Q. Do you think that the Commonwealth Edison Company had to pay a higher price for the money which it secured through this bond issue than it would have had to pay if it

had been a subsidiary of a registered holding company? A. I don't see how you could really answer that question. It is really little hypothetical.

—7,158—

Q. Yes. It is hypothetical. A. I don't know how you would answer it, frankly.

Q. Don't you have any opinion upon that subject? A. I know that the Commonwealth Edison Company is from a credit point of view very highly regarded among in-
9101 vestors.

Q. You say it is so regarded in spite of the fact that it is not a subsidiary of a registered holding company, or is the fact that it is not a subsidiary of a registered holding company—does that have nothing to do with the question? A. I think it is highly regarded because of the fact that it is servicing a very important section of the country, namely, in and around Chicago; and its policies have been conservative.

Q. Its last bond issue, the Cleveland Electric Illuminat-
9102 ing Company, received a very good price for its bonds, did it not, in comparison with the price obtained by other companies? A. It did.

Q. Do you attribute that fact to the credit standing of that company or to the prestige associated with its holding company connection? A. I think that the credit standing of that particular company plus the fact that over a long period of years it had the benefit of the North American

—7,159—

Company management were responsible for getting the price that it did.

9103

Q. You mean that it probably reached its credit standing because of the efficiency of the previous North American management, that is, the North American management brought it up to the position which it occupied at the time of this bond issue in respect of credit? Is that it? A. I think that credit is not created overnight. Credit only results over a period of time, and I think that the fact that it was managed by the North American Company had a lot to do with establishing that credit over a period of years.

9104

Q. It is your opinion that if the North American Company were not the majority stockholder of the Cleveland Electric Illuminating Company, the credit of the Cleveland Electric Illuminating Company would decrease? A. Well, that is a rather difficult question to answer. From the standpoint of the senior credit, and by that I mean the first mortgage bond credit, that is already established today. When you get down to the step when it is your equity credit, all of which goes to make up you equity credit—by equity credit I mean the preferred and common stock—with respect to common stock, I am certain that one of the most important factors that would have to be answered if that common stock were publicly distributed, let us say, would be the manage-

9105

—7,160—

ment aspect of it. At least, that has been our experience in the reaction in the minds of investors in some of these other common stock fields that we have had anything to do with.

Just for example, there was a great deal of discussion, and has been a great deal of discussion, on that point in this issue that was offered today of the Connecticut Light and Power Company.

9106 Q. Mr. Hamilton asked you several questions bearing upon diversification as a factor in investment value. In your answers you cited the Standard Gas and Electric Company system as a case in which there was a large concentration in that company in one particular locality, namely, in and around Pittsburgh. It is true, is it not, that until recent months the Standard system has controlled the San Diego Gas & Electric Company, operating in and around San Diego, California, and the Mountain States Power Company oper-
9107 ating in the Pacific Northwest, and the California-Oregon Power Company, likewise operating in the Pacific Northwest? A. It is true that they have until recently had control of those properties. But, if my memory is correct, for quite a period of time they received no income on either Mountain States or California-Oregon Power Company; in the case of Mountain States because of the fact that that company had arrearages on their preferred stock, and likewise in the case

—7,161—

of the California-Oregon, that it had arrearages and, I think, still has on its preferred stsck, so that there was no
9108 income coming to the Standard Gas and Electric Company on those equities.

So that while they had title to those assets, there was no diversification with respect to those as far as income is concerned.

Q. The Standard System also controls the Northern States Power Company of Minnesota and the Northern States Power Company of Wisconsin, does it not, operating in those respective States? A. I am pretty certain they don't control the Northern States Power Company of Minnesota. All

9109

that stock is owned by the Delaware Company, and they have no voting control of the Delaware stock. They certainly haven't been getting any income on it.

Q. You know, however, that the companies which I have named are subsidiaries of the Standard Gas and Electric Company within the meaning of the Public Utility Holding Company Act and are subject to regulation thereunder? A. I presume so. I don't know just what the definition of a subsidiary company is in the Holding Company Act. It is certainly an affiliated company. But in the case of the Northern States Power Company of Delaware, there is no voting control there, and there is no income coming to Standard

9110

—7,162—

from those holdings.

Q. Of course you are confining your answer to the present time as distinguished from the past? A. Yes. But to the best of my knowledge and belief, there has not been any income for some years on that. That is, I mean, certainly not in the last three or four years.

Q. When you spoke of the Standard System as being one not characterized by diversification, you were referring to the fact that its income had practically ceased in respect of any properties except those in the Pittsburgh area? A. No. I meant——

9111

Q. In that its original investment had not been made on a deliberate geographical basis. A. No. I meant that the income is, and has for some period in the past been, to a great extent dependent on the income from the Philadelphia area, and that there is no geographical distribution of income, as there has been for some of the properties.

Q. Even though there is geographical distribution of the investments? A. Even though there may be some geographical distribution of the investments. But, as near as I can recollect, it has always been true that the bulk of the Standard income has come from the Philadelphia area.

Q. By Philadelphia area you mean the area served by

—7,163—

the Philadelphia Company? A. The area served by the subsidiaries of the Philadelphia Company, which in itself is a

9113 holding company.

Q. Is there a term in general use in investing banking circles of "historic position" with reference to the relationship of an underwriting firm to the issuer? A. There is.

I might add that the general feeling, I know, insofar as our firm is concerned, is that if we have done a good job for the company in the past, and have worked, as we feel we do, in the interests of the company in trying to secure prices that are fair both to the company and to the investing public, that certainly that performance of service should be an element of consideration when the next piece of business comes

9114 along.

Q. Would your firm likewise hesitate to approach a prospective issuer with a view to heading an underwriting when you knew that for many years past another investment house had usually headed its issues, that is, the issues of this particular prospective issuer? A. If we felt that a company had a favorable relationship with a banking house over a long period of years, and that house had performed for the company, we would not go out and aggressively try to take the business away from them. At the same time, it

would not preclude us from talking with the company and

—7,164—

giving the benefit of whatever ideas we had. On the other hand, if we felt that a house had not performed, or had reasons to believe that they had not performed, we would have no hesitancy about talking to the company about it.

Q. Do you consider that the First Boston Corporation and Dillon Read and Company or either of them occupy a historical position of leadership in respect of issues by companies of the North American System? A. I think that 9116
both Dillon Read and Company and the First Boston Corporation have done over the years what I consider some good jobs for various companies in the North American Company system; and I would naturally hope that when a new piece of business came along, the management of the company involved would at least be in a receptive frame of mind.

Q. You would expect in fact first consideration, would you not, for your two firms? A. But, of course, with this new rule—what is it—Rule 50—going into effect, I think that it is sort of an academic question.

Q. The rule has not yet gone into effect. A. It is going 9117
into effect on May 7, isn't it?

Q. Yes, if I recall correctly.

But, leaving the rule as to the future out of consideration, you would normally expect in the case of a new issue by a North American Company that your firm or that of

—7,165—

Dillon Read would be given first consideration?

Mr. Hamilton: I ask that the question be clarified as to whether the question contains the assumption that the rule does not exist in the future.

Mr. Binford: It contains an assumption that at the time of operation the rule has not yet been in effect.

Mr. Hamilton: Is the question limited, then, to any possible transaction between the present and May 7, 1941?

Mr. Binford: Yes.

A. I would be very much disappointed in between now and May 7 if, for instance, the Kansas Power and Light Company wanted to do a piece of financing and they would not
9119 come to us about it.

By Mr. Binford:

Q. Do you think Dillon Read would feel similarly in that respect? A. I don't know. Dillon Read would have to speak for themselves.

Q. But you do know what the historical practice is? A. Oh, I do know. As I say, we would be very much disappointed, although they (the Company) have a perfect right, and always have had, to deal with anyone that they please
9120 about picking the people that they want to do business with. We feel, however, and we would like to believe, that the

reason they select the First Boston Corporation is that they have been satisfied with the jobs that we have done for them in the past. We like further to believe that they have known the members of our organization over a long period of years and have confidence in what we tell them.

Mr. Binford: I have no further questions. I would like to make the same reservations as heretofore made in respect of other witnesses.

9121

Mr. Hamilton: The usual objection, Mr. Examiner, if you please. That is all.

The Examiner: All right. The record will show that.

(Witness excused.)

Whereupon, F. W. DOOLITTLE, being called as a witness on behalf of the Respondent, and after being first duly sworn, was examined and testified as follows:

9122

Direct Examination by Mr. Browning:

Q. Will you give your full name and address to the reporter? A. F. W. Doolittle. Garden City, New York.

Q. Will you please outline briefly your education and business experience, Mr. Doolittle? A. I graduated from Princeton University in 1905 with the degree of B. A., and

—7,167—

from the University of Colorado with the degree of Bachelor of Science in civil engineering in 1907; and in 1911 received an advanced degree in engineering.

9123

My early professional experience, some of which was in vacations, comprised field and office work in connection with the maintenance department of the Union Pacific Railroad; steel and concrete structural design for the Chicago, Milwaukee & St. Paul Railroad; operation and construction work mostly in the field with the Boston Consolidated Mining Company of Utah; and operation and construction work with the Consolidated Coal and Coke Company in Colorado.

In the fall of 1908 I went to the University of Illinois as instructor in mechanics and hydraulics. After a year there

9124 I spent a year as instructor in structural engineering at the University of Colorado. The three following years, 1910 to 1913, I was assistant professor of mechanics in the College of Engineering at the University of Wisconsin; and also covering the same period and extending into the fall of 1913 I was engaged in research and case work for the Railroad Commission of Wisconsin, dealing primarily with transportation costs in connection with freight and passenger rates.

In the fall of 1913 I became the first secretary with the
9125 title of Acting Secretary of the Public Utilities Commission of Illinois.

Sometime about the middle of the following year, after a

—7,168—

brief job with the Milwaukee Electric Railway and Light Company, which is now the Wisconsin Electric Power Company, and which incidentally formed my first contact with the North American System, I went to New York as director of the Bureau of Fare Research of the American Electric Railway Association.

My work with this bureau terminated at the end of the
9126 year 1915, and from the beginning of 1916 until sometime in 1923 I was consulting engineer on retainer throughout practically the whole of the period, as I recall it, from the North American Company or its subsidiaries, and devoted perhaps half of my time during that period of upwards of seven years to the work of the North American group of properties.

The balance of the time was devoted to work for other companies, practically all of which were public utilities operating railway, gas, electric, heating, and such businesses, although I did some work during that period also for the Chicago, Milwaukee & St. Paul Railroad.

9127 From the beginning of 1923 and continuing until, I believe, December 1, 1936, at which time I retired, I was vice president of the North American Company. From 1926 to 1936 I was a member of the executive committee; and from 1935 to date a director of the North American Company. And during the period from 1923 to 1936 I was an officer and director of various of the subsidiaries and affiliated companies in the North American group.

9128 I retired as an officer of all companies in the North American group in 1936, but have since that date been on retainer with the North American Company as a consultant in general problems that arise; and I have also continued as a director of their affiliated companies in Washington, that is, the Washington Railway & Electric Company, the Potomac Electric Power Company, and the Capital Transit Company. I am also a director of the Illinois Terminal Railroad Company.

9129 My service as director has not been continuous with the Washington affiliates of the North American Company, as I have been away from this part of the country from time to time; and, at least in the case of the Capital Transit Company, the vacancy created by my absence was filled in my absence, and then I was re-elected upon my return.

During my association with the North American group of properties, which began in 1914, but which has been practically continuous from 1923 to date, my activities have been primarily concerned with engineering and operating matters as distinguished from corporate financing matters; although the North American Company officers throughout

9130 *F. W. Doolittle—By Respondents—Direct*

the whole of my contact with that company operated to some extent as a committee, that is to say, the lines of authority and interest have not been precise in all cases.

As an example, certain of the officers who are not engineers have passed on operating and engineering problems;

—7,170—

and I in turn have participated in the negotiation of bank loans and of such matters, although my attention was by virtue of my prior experience primarily devoted to problems
9131 of engineering and operation.

Q. Mr. Doolittle, are you familiar with the operations of the Station Advisory Operating Committee and the Intercompany Electrical Committee? A. Yes. I have followed the work of those committees practically from their inception.

Q. When were the committees first formed? A. The Station Advisory Operating Committee held its first meeting in February, 1921, and the Intercompany Electrical Committee in March of the same year. Both meetings were held in Cleveland, and the organization meetings were attended by Mr. Ruffner, at that time a vice president of the North
9132 American Company.

Q. What was the origin of the two committees? A. The setting up of these two committees grew out of a desire on the part of the officers of the North American Company to obtain the best possible technical results through the interchange of experiences of the operating men on the several properties.

As the first step Mr. Ruffner, who prior to that time had operated the St. Louis County Gas Company and subsequently the Union Electric Light & Power Company, was

brought to New York by Mr. Mortimer, the president of the

—7,171—

North American Company, for the purpose of promoting the exchange of experiences and the best possible engineering practice amongst the operating properties.

I cannot say whether Mr. Mortimer or Mr. Ruffner or Mr. Gruhl, who was at that time also an officer of the North American Company, first conceived the idea of the Intercompany Electrical Committee as a means to the end. I do know that out of this group of men this result came. 9134

Q. What has been the membership in these committees? A. Originally the Milwaukee Company and the St. Louis Company, subsidiaries of the North American Company, in which Central States had a substantial investment, that is, the Central States Electric Corporation, together with the Cleveland and Youngstown, also owned by the Central States Electric Corporation, together with Detroit, in which the North American Company had a large interest.

Q. Were there any substantial changes in the membership? A. Yes. In 1923 the representative of the Youngstown property went off the committees. 9135

Q. Did that action take place after any change of control of the Youngstown properties? A. Yes. That took place at the time the Central States Electric Corporation sold its interest in Youngstown.

In 1929 the Potomac Electric Power Company, after the

—7,172—

North American's acquisition and after certain developments, had representatives on the two committees.

Representatives of the Great Western Power Company and the San Joaquin Light and Power Corporation became members of the Intercompany Electrical Committee.

Q. That is, only as to that committee? A. Yes. Only the Intercompany Electrical Committee.

At the time of the acquisition by the North American Company of an interest in the Western Power Corporation, which was the parent company of the Great Western and San Joaquin at that time.

9137

These representatives went off these committees about 1931 or 1932.

Q. Was that following any sale by the North American of its interest in the Western Power Corporation? A. Yes, I don't recall the date, but I think it was about 1930 that the North American Company disposed of its interest in Western Power to P. G. & E.

Representation of these western companies, the Great Western and San Joaquin, was confined to the Intercompany Electrical Committee, because those two California companies had no comparable steam generating properties with the other subsidiaries of the North American Company, their generation in California being primarily very high-head hydro.

9138

I think that covers the changes in company membership.

—7,173—

There have, of course, been numerous changes in the individuals who represented these companies as men died or for other reasons it was necessary to appoint successors.

Q. Can you tell us generally how the organization of the committees has functioned? A. The committees choose

9139

their own chairman. This office of the chairman has rotated from time to time among the committee members.

The committees each have a secretary, it being the same man in each case, however, who handles certain statistical work for the committee, its minutes, its notices of meetings, and functions generally in the capacity of secretary.

Q. Where are the meetings held? A. Almost always on one or the other of the operating properties, rotating, but varying the place of meeting occasionally when some important piece of equipment is to be brought into service, or 9140
when for some other reason the members of the committee may happen to be brought together elsewhere. But generally speaking the meetings are held on the properties; and they frequently are arranged so that an inspection trip of new or special apparatus of some sort can be combined with the other subjects handled at the meeting.

Q. Are these committee meetings valued by the respective company officials? A. I think they are very greatly. They are particularly valued because under the way these com-

—7,174—

9141

mittees are set up and functioning we have men of large experience and ability of substantially coordinate corporate position, free to discuss their problems with each other, and they understand that it is the desire of the heads of their companies that they shall speak frankly on their failures as well as their successes.

Q. Are the meetings informal? A. Yes.

Q. Is this informal and free interchange a matter which is easily secured? A. No. It is most difficult to secure.

9142 *F. W. Doolittle—By Respondents—Direct*

I might illustrate with certain problems that I faced as Director of the Bureau of Fare Research of the American Electric Railway Association.

This was a department of a membership organization set up for the purpose of studying in general two things: First, the relative advantages of regulation by contract, that is, by ordinance, and regulation as a continuous process under a state regulatory commission. The other matter of primary consideration was a study of the basic costs of transporta-
9143 tion in an effort to determine what were the points of weakness and what were the points of strength from an economic standpoint in city transportation as rendered by street railway as compared with other forms of transportation which were then first coming into use, such, for example, as the

—7,175—

so-called jitney, which was the prototype, shall we say, of the modern bus.

It became evident after several months that the value to the owners and operators of the various railway companies which they hoped to get from the studies, as to full
9144 and complete information on costs and on problems of regulation, was not to be forthcoming. The men operating these companies were busy with their day-to-day problems. There was no financial interest back of them which would suggest to them that perhaps they should cooperate fully to their own advantage.

The net result was that after about six months I went to Milwaukee, which I think has one of the longest records of regulation by a state commission, and to Cleveland, which has, I am sure, the most interesting history of attempts to

regulate by contract bargaining; and assembled a small staff in each place, and practically lived on those properties until I could get together the information which was necessary.

Both companies were extremely anxious to get the results and were interested in the results of my studies. Once having reduced them to manuscript form, they then went after me and corrected me in several instances in misconceptions which I had. But, if left to them, I should never have been able to get the information.

I had similar experiences as chairman of committees on 9146
—7,176—
valuation and depreciation of the American Electric Railway Association and as a member of the Accounting Committee and of the Railroad Electrification Committee of the National Electric Light Association.

Those are illustrations of the difficulty of getting a full and frank and free discussion of the successes and failures on a totally cooperative basis.

Q. I take it that you feel that there is a difference between a general industrial committee or committee between non-affiliated companies, and the North American intercompany committees? A. Yes. A very distinct difference. 9147

Q. Does the common financial interest have anything to do with the success of the North American intercompany committees? A. I think that is a controlling factor.

Q. In your opinion will those committees continue if the present ties are broken? A. No. I am sure they would not.

Q. Do you know of any group similar to the North American intercompany committees which exists among non-affiliated companies? A. No. I don't know of any, and

9148 I think over the years I would have known of them if they were in existence. But a categorical answer is no. I do not know of any such.

—7,177—

Q. Do you think that the possible loss of personnel would be a factor militating against such a committee existing among non-affiliated companies? I should add that by loss of personnel I mean the possibility that one of the non-affiliated companies might attempt to acquire personnel of 9149 another. A. I think that is a rather real danger, although I didn't have any idea that that was what you were getting at in the question when it was originally asked. An operator is always reluctant to let his best-grade men parade their excellence before other possible employers. Unfortunately there is from time to time what might be termed pirating of personnel, and I should think that might be a very real reason why an operator might be reluctant to let his men whom he considers especially valuable display their proficiency before other employers.

Q. Do you consider that the North American intercom- 9150 pany committees constitute any stimulus to the participating engineers? A. Oh, I think so. Membership on those committees is not only of an educational value to the members through the contact that they have with other members of the several committees; but, since there is to be a full and frank discussion of the results, and since the results are constantly reduced to statistical form and circulated to the other companies, it is quite natural that the members of the

—7,178—

committee are going to be stimulated to do their very best

at all times and not be caught, if possible to avoid it, in any unfavorable comparison.

Q. I believe you said a moment ago that informality was difficult to achieve. Have you at times tried to encourage the atmosphere of informality? A. Yes. Definitely. And that has been achieved in my judgment to a considerable extent by first keeping the personnel on each committee made up of men of about the same position in their respective companies.

I might say in addition that, although the officers of the 9152
North American Company from time to time, as well as officers of the subsidiary companies from time to time, have met with these committees, it has never been as a presiding officer, and never with the idea of controlling the discussion; but rather to indicate in a rather casual way the fact that we appreciate the excellent work that has been done, and we hope that they enjoy it, and we want to have them continue to do it as a permanent thing.

Q. Mr. Doolittle, do you have with you a set of minutes of the two committees? A. Yes.

Q. Will you please produce them? 9153

(The witness produced two suitcases full of documents.)

—7,179—

Q. These copies that you have with you constitute a complete set of the minutes of the two committees? A. Yes.

Q. And these are copies of those in the records of the North American Company? A. That is correct.

Q. Mr. Doolittle, I hand you the minutes of the 110th meeting of the Station Advisory Operating Committee held

9154 *F. W. Doolittle—By Respondents—Direct*

on June 18 to 19, 1934, at Milwaukee, Wisconsin. Are you familiar with these minutes? A. Yes.

Q. Are these minutes typical and was this meeting typical of the other meetings held over the years? A. Yes. I think it is. The subject matters covered seem to be a fair sample of the various matters considered at the meetings over the whole period of existence of the committee.

Q. We understand that different matters are taken up at different meetings, but my question was directed to whether
9155 the general scope of the minutes, the general nature of the matters covered, was fairly typical. A. I think so.

Mr. Browning: I offer these minutes in evidence as Respondent's Exhibit 131.

Mr. Binford: I object to the reception in evidence of the proffered exhibit in the absence of a statement

—7,180—

of counsel for the Respondents as to what issue in these proceedings this exhibit is directed to.

The exhibit on its face purports to be a record of certain proceedings of the Station Advisory Operating
9156 Committee, at which representatives of the Cleveland Electric Illuminating Company, the Milwaukee Electric Railway and Light Company, the Union Light and Power Company, the Potomac Electric Power Company, and the Detroit Edison Company were present. The evidence heretofore adduced on the part of the respondents in this proceeding has affirmatively shown that no two of these five organizations represented at this meeting and upon this committee can be considered as constituting together or in connection

with any one or more of the companies so represented a single integrated system.

So that this proceeding has reached the point at which it seems irrelevant and immatgrial to bring in any further evidence as to cooperation between these independent systems as bearing upon the question of what is a single integrated system or as bearing upon the question of what, if any, systems might be retained as an additional system to any integrated single system which might be held as its primary 9158
system by the North American Company.

If Mr. Browning and Mr. Hamilton care to state what evidence or effect of value is to be given to this proffered exhibit in connection with any issue in this

—7,181—

proceedings, possibly my objection might be withdrawn. But in the absence of any statement of that character the exhibit on its face is irrelevant and immaterial.

Mr. Browning: We are offering the exhibit for its bearing on all issues in the case; but we should con- 9159
sider it relevant, Mr. Examiner, among other things, for its bearing under subdivision A of Section 11-B 1. It is our position that the combination of these companies in these committees has resulted in substantial economies to the respective companies; and we consider this evidence relevant as bearing on that subject.

Mr. Binford: Mr. Examiner, the evidence as heretofore given in this case as to the localities and operations of these companies geographically is such that

9160 it would seem that the retention of any one of the admitted subsidiaries as an additional system to the Union Electric Company of Missouri as a principal system——

Mr. Browning: Isn't that something that we are going to argue later?

The Examiner: Isn't that something that the Commission has to decide and that you are going to argue as to the state of the record?

9161 Mr. Binford: I think not. I think that is a question of law as to the interpretation of B of Section 11(b)(1) as to whether or not a system not located in

—7,182—

a State adjoining the State of operation of the original system or States contiguous thereto can be retained in any event regardless of the degree of cooperation which may have heretofore been achieved between several systems of that character so distant from each other. That is stating it roughly, but I believe that that was the point that I wish to make.

9162 Mr. Browning: If the Examiner please, the construction of paragraph B is a matter that we understand has been argued at some length before the Commission and is to be passed upon by the Commission and presumably ultimately by the courts. As we all know, various constructions of that subdivision have been made. It seems to me that that is a question of law which should be reserved.

The Examiner: I think these minutes have relevancy, particularly in view of what has been ad-

duced as evidence in the very early stages of this proceeding. I recall, Mr. Binford, that you cross-examined at some length about the make-up of these Station Advisory Operating Committees. The record in evidence shows, I think, that this exhibit has relevancy; and I will receive it under the number mentioned.

Mr. Binford: I respectfully except to the ruling.

(The document referred to, being the minutes of the meeting of the Station Advisory Operating Committee held June 18, 1934, was received in evidence and marked "Respondents' Exhibit 131.") 9164

—7,183—

By Mr. Browning:

Q. Mr. Doolittle, I now hand you a copy of the minutes of the 37th meeting of the Intercompany Electrical Committee held on October 27th to 29th, 1931, at St. Louis, Missouri. Are you familiar with these minutes? A. Yes.

Q. Are they fairly typical of the minutes of the Intercompany Electrical Committee? A. In my judgment they 9165 are.

Mr. Browning: I offer these minutes in evidence as Respondents' Exhibit No. 132.

Mr. Binford: I would like to ask a question or two concerning these.

The Examiner: All right.

By Mr. Binford:

Q. Mr. Doolittle, the minutes which you have just identified as Respondents' Exhibit for identification No. 132 pur-

port to reflect the proceedings of the Intercompany Electrical Committee at a meeting held on October 27th to 29th, 1931, at St. Louis, Missouri. Do you know when these minutes were written? A. I can't answer precisely, but in the normal course of events those minutes are received in the North American office, I should say, not more than two weeks after the date of the meeting.

—7,184—

Q. Was that true in 1931? A. Yes, to the best of my
9167 recollection. Illness on the part of the secretary or some other untoward circumstance might delay them, but the minutes are received currently.

Q. And that has been true ever since the formation of these two committees of which you have been speaking? A. Yes.

Q. To your knowledge was this paper, Respondents' Exhibit for identification No. 132, prepared by the secretary of the meeting which it purports to record? A. The minutes were in the normal course received month by month or promptly after the meetings from the secretary's office in
9168 Cleveland. To the best of my knowledge and belief the secretary compiled them from notes taken at the meeting and had them mimeographed in his office and distributed.

By Mr. Browning:

Q. Is it the standard practice of the secretary to mail a copy of each meeting to each of the members of the North American Company or the members comprising the committee? A. Yes. That is the customary practice, the standard practice.

Q. That has gone over a 20-year period? A. At least since 1923, eighteen years.

By Mr. Binford:

Q. The mimeographed copy offered in evidence is a copy

—7,185—

recently made from the original record as prepared by the secretary? A. No. I think it is an original, one of those originally made by him at the time, an extra copy from his files. 9170

Q. Made in mimeographed form at that time? A. At that time. Yes, sir.

By the Examiner:

Q. Is that true of the previous exhibit? A. Yes, sir. That statement would cover also Respondents' Exhibit 131.

Mr. Binford: I object to the reception in evidence of the proffered exhibit on the same grounds as objection was made to Respondents' Exhibit 131.

The Examiner: I will receive it in evidence as Respondents' Exhibit 132, and you may take an exception. 9171

(The document referred to, being minutes of a meeting of the Intercompany Electrical Committee held October 27-29, 1931, was received in evidence and marked "Respondents' Exhibit 132.")

Mr. Browning: I would like to state for the record, Mr. Examiner, that we have with us here a complete set of the minutes of the two committees as compiled

9172 *F. W. Doolittle—By Respondents—Direct*

over the years; and that, while I am entirely willing to offer the entire group of minutes, it seems to me that it would unduly burden the record.

—7,186—

For that reason and that reason alone I have offered the minutes of the meetings which we consider to be fairly typical.

I should also like the record to show that we are delivering to the staff this complete set of minutes;
9173 and if the staff wishes to offer the minutes of any individual meetings, we shall be glad to have that done.

The Examiner: Very well. The record will so show.

By Mr. Browning:

Q. These minutes which you have, Mr. Doolittle, show that the meetings of these committees have continued from 1921 up to the present time? A. That is correct.

By the Examiner:

9174

Q. Are all these minutes recognized as the official minutes of these committees as kept by the North American Company as well as the secretary of the committees? A. Yes.

By Mr. Browning:

Q. Could you state, Mr. Doolittle, what are the dates of the last meetings in the case of each committee? A. The date of the Intercompany Electrical Committee was November 12 to 13 in Washington, D. C.

Q. Was that in 1940? A. 1940. And in the case of the Station Advisory Operating Committee it was February 19

—7,187—

and 20, 1941, in St. Louis, Missouri.

Q. Are you familiar, Mr. Doolittle, with the statistics interchanged by the constituent companies through the two committees? A. Yes.

Q. Have you brought with you a typical set of such statistics? A. Yes. 9176

Q. Will you produce them?

(The witness produced a number of documents.)

Mr. Browning: Mr. Examiner, again I should like to state for the record that if we attempted to offer in evidence all of the statistics exchanged through these committees, there would be literally thousands of documents. Accordingly, we will avoid burdening the record by submitting a typical set.

By Mr. Browning: 9177

Q. Mr. Doolittle, I hand you a sheet entitled "Comparative Station Operating Data, Period of July 1940 to June 1941, Inclusive." Is this one of the statistical reports exchanged among the constituent companies through the Station Advisory Operating Committee? A. It is. It is prepared monthly in the office of the Secretary of the Committee from data submitted to him by the members of the committee; and when so prepared, circulated to all of the

—7,188—

9178 *F. W. Doolittle—By Respondents—Direct*

members of the committee and to the North American Company.

Q. This, then, is a monthly report? A. That is true.

Q. Have these reports been so exchanged for many years? A. Yes.

Q. In substantially this form? A. In substantially this form since the beginning of the committee, except, of course, for the fact that some power plants which were represented in the 20's are not in operation now, and certain new ones do
9179 appear in these figures. But the substance of these tabulations is the same.

Q. And this is a fairly typical example of this particular form of report which has been circulated for many years? A. Yes.

Mr. Browning: I offer the report in evidence as Respondents' Exhibit 133.

Mr. Binford: I object to its reception in evidence on the same grounds as those interposed to Exhibits 131 and 132 of the Respondents.

9180 The Examiner: The exhibit is received in evidence under the number mentioned.

(The document referred to was received in evidence and marked "Respondents' Exhibit 133".)

—7,189—

Mr. Binford: Exception.

By Mr. Browning:

Q. These column headings on this table refer to power plants, Mr. Doolittle? A. That is correct.

9181

Q. And they are respectively Lakeside and Port Washington of the Wisconsin group? A. Yes.

Q. Cahokia of the Union group? A. Yes.

Q. Ashtabula and Avon of the Cleveland group? A. Yes.

Q. Conners Creek and Trenton Channel of the Detroit Edison Company? A. Correct.

Q. And Buzzards Point of the Potomac Electric Power Company? A. Yes.

9182

Q. I now hand you a sheet entitled "S. A. O. C. Comparative Operating Expense Data." Is this a typical report exchanged through the S. A. O. C.? A. Yes. Under identical conditions as described with respect to Exhibit 133. In this case the exhibit deals with operating expenses. In the case of Exhibit 133 the basic engineering data were dealt with, such as kilowatt hours and British Thermal Units.

—7,190—

9183

Q. And again is it true that this form of report has been used in substantially this form over the years? A. This form or its equivalent under slightly different arrangement has existed for many years.

Q. This is also a monthly report? A. That is true.

Q. And this is a fairly typical example? A. Yes.

Mr. Browning: I offer it in evidence as Respondents' Exhibit 134.

Mr. Binford: I object to the admission in evidence of the proffered exhibit on the same grounds as stated in connection with the reception of the last exhibit.

The Examiner: I receive it as Respondents' Exhibit 134.

9184 *F. W. Doolittle—By Respondents—Direct*

Mr. Binford: Exception.

(The document referred to was received in evidence and marked "Respondents' Exhibit 134.")

By Mr. Browning:

Q. Mr. Doolittle, I now hand you another statistical report entitled "Station Advisory Committee—Comparison of Unit Totals—Production Costs, Month of January, 1941." 9185 Is this another statistical report interchanged through the S. A. O. C.? A. Yes, under the same general conditions as stated with respect to Exhibit 133 and 134, except that in

—7,191—

this case, that is, in the case of Exhibit 135, there are figures derived by the secretary from the basic figures reported to him and tabulated in Exhibits 133 and 134.

Q. Is this also a monthly report? A. That is correct.

Q. And is this a fairly typical example? A. It is.

Mr. Browning: I offer it in evidence as Respondents' Exhibit 135.

9186 Mr. Binford: I would like to ask a question or two with regard to this exhibit.

The Examiner: All right.

By Mr. Binford:

Q. How long has this been a monthly report, Mr. Doolittle? A. Since substantially the beginning of the committees in 1921. I can't state positively just when it was begun in this form, but it is certainly of fifteen years standing.

Q. Then for at least fifteen years reports of this character in substantially the form shown by the proffered exhibit have been prepared and distributed monthly? A. Yes. That is correct.

Mr. Binford: I object to the proffered exhibit upon the same grounds as stated with reference to the last five preceding exhibits.

—7,192—

The Examiner: This last-mentioned exhibit is admitted under the number mentioned. 9188

Mr. Binford: I respectfully except.

(The document referred to was received in evidence and marked "Respondents' Exhibit 135.")

By Mr. Browning:

Q. Mr. Doolittle, I hand you another form of statistical report entitled "Station Advisory Operating Committee—Yearly Weighted Average Performance Data—Steam Generating System—Year 1940." Is this another statistical report interchanged through the Station Advisory Operating Committee? A. That is correct. This tabulation is made annually by the secretary of the Station Advisory Operating Committee from data furnished him currently during the calendar year; and upon its completion it is circulated to the members of the committee and to the North American Company. 9189

Q. Is this a report that has been circulated for many years? A. I am not sure how long this annual summary in this form has been circulated. I am familiar with it for a

9190 *F. W. Doolittle—By Respondents—Direct*

number of years in this or substantially similar form. It is my recollection that it is not so old in continuous submission as the basic efficiency tables prepared monthly and circulated monthly to the operating companies.

Q. At any rate, it has been circulated for a number of

—7,193—

years? A. Yes.

Q. Is this particular example a fairly typical one? A. Yes.

9191 Mr. Browning: I offer it in evidence as Respondents' Exhibit 136.

Mr. Binford: Same objection upon the same grounds as noted to the last exhibit.

The Examiner: I make the same ruling and receive it as Respondents' Exhibit 136.

Mr. Binford: I respectfully except.

(The document referred to was received in evidence and marked "Respondents' Exhibit 136.")

9192 *By Mr. Browning:*

Q. I hand you another table, Mr. Doolittle, entitled "Station Advisory Operating Committee—Analysis of Coal Samples Submitted by Cleveland—January 10, 1941." Will you explain for us what this table is? A. In determining the thermal efficiency of a power plant the accuracy of the measurement of the British Thermal Units in the coal as fired is, of course, of fundamental importance. The same sample submitted to a number of different chemists will be reported by them as having slightly different value in terms

of B. t. u.'s per pound due to the difficulties of precise measurement of temperature rise in the calorimeter where

—7,194—

the coal is tested.

Each month one of the five companies represented by column headings in this exhibit marked "137" sends a sample of coal to each of the other companies as well as to its own chemist. Each then independently tests the coals and sends the result back to the secretary of the Station Advisory Operating Committee, who thereupon compiles the data as 9194
reported in this Exhibit 137.

In this particular case it will be observed that the sample which the Cleveland chemist tested at 13,920 B. t. u.'s per pound dry was tested by Detroit at 13,930 B. t. u.'s per pound dry, by the Milwaukee chemist at 13,940, the St. Louis chemist at 13,900, and Washington at 13,920.

Incidentally, the maximum variation there is 20 B. t. u.'s out of a total of 14,000, which shows very close agreement. I cannot say positively, but it is my recollection that the Bureau of Mines accepts coal tests as accurate which run within 50, which would be more than twice the variation 9195
shown here.

I might add also that in the beginning, when these sheets were first made up, and before the different chemists had developed a greater uniformity of technique, these variations ran substantially higher. While I haven't examined these very many times in the last five years, I am also under the impression that the variations shown here are perhaps a little bit better than the average practice gotten in this group

—7,195—

9196 *F. W. Doolittle—By Respondents—Direct*

of companies. I think maybe 30 B.t.u.'s would be a fair average variation.

The February sampling was done by another company and the December one by another company, and similar reports made up for comparison. So about twice a year it gets around to each company, and each chemist is put on the spot.

Q. Do I understand correctly, then, that this report is a typical example of the form of reports interchanged? A. Yes.

9197 Mr. Browning: I offer it in evidence as Respondents' Exhibit 137.

Mr. Binford: I would like to ask a question or two about it.

The Examiner: All right.

By Mr. Binford:

Q. What are the meanings of the initials "J. M. G: E. S." in the lower left-hand corner of this exhibit? A. I suspect that the "J. M. G." are the initials of Mr. Gerber, who is the secretary of the committee. The "E. S. is probably his stenographer. The "13" I don't know. It probably represents the
9198 number of copies.

Mr. Binford: I object to the proffered exhibit on the same grounds as those stated with respect to the reception of the last exhibits.

—7,196—

The Examiner: I receive i as Respondents' Exhibit 137.

Mr. Binford: Exception.

(The exhibit referred to was received in evidence and marked "Respondents' Exhibit No. 137.")

By Mr. Browning:

Q. Mr. Doolittle, I hand you a tabulation of statistical data entitled: "Intercompany Electrical Committee—Comparative Data on Circuit Interruptions and Equipment Failures." Is this a report which is circulated among the constituent companies through the Intercompany Electrical Committee? A. Yes.

Q. Do you know how long this report has been in circulation or a report in some such form? A. I cannot state with any degree of positiveness just how long this has been going. 9200
The data in this particular compilation goes back to February, 1937, the figures being for 12 months, running for the first 12-month period, ending in January, 1938. So the initial information goes back to February, 1937. That makes it about four years. But it is my impression that this has been going on since about 1930 in this form, although I cannot state that with any degree of positiveness.

Q. It is a form of report currently circulated? A. Oh, yes.

Q. And is this a fair example of such reports? A. Yes.
—7,197— 9201

Q. Is this an annual report? A. No. This is a monthly report.

Mr. Browning: I offer it in evidence as Respondents' Exhibit 138.

Mr. Binford: Same objection as made to the last previous exhibit on the same grounds.

The Examiner: This exhibit, consisting of 22 blueprint pages, is admitted under the number mentioned.

Mr. Binford: I respectfully except.

9202 *F. W. Doolittle—By Respondents—Direct*

(The exhibit referred to was received in evidence and marked "Respondents' Exhibit 138.")

By Mr. Browning:

Q. Mr. Doolittle, I hand you another set of statistical tables consisting of five sheets entitled "Analysis of Electrical Losses and Efficiencies, Calendar Year, 1939." Is this another set of statistics currently exchanged through the Intercompany Electrical Committee? A. Yes.

9203 Q. Is this an annual report? A. Yes.

Q. Could you tell us whether this has been exchanged over the years? A. The substance of this report has been exchanged for practically since the inception of the committee. I think the form has been modified somewhat.

—7,198—

You will note that it deals step by step with the electrical efficiencies beginning with the net system output, carrying down the losses through transmission, conversion, transformation, distribution, to the total system, followed by a summary which carries the basic figures back to 1928.

9204 This would suggest to me that this particular type of comparison has been running now about fourteen years, because the initial date here is 1928. But in slightly different form but not wholly comparable it undoubtedly was compiled from the very inception of the committee, because it goes to the final answer of your distribution and transmission system efficiency.

Q. Is this report typical of the practice that has been followed for a number of years, at any rate since 1928? A. Yes.

Mr. Browning: I offer the report in evidence as Respondents' Exhibit 139.

Mr. Binford: Same objection as that interposed to the last exhibit, on the same grounds.

The Examiner: This exhibit, consisting of four pages and the title sheet, five in all, is admitted under the number mentioned.

—7,199—

Mr. Binford: Exception.

(The document referred to was received in evidence and marked "Respondents' Exhibit 139.") 9206

By Mr. Browning:

Q. Mr. Doolittle, are these statistics so interchanged among the companies, of value? A. Yes. They are of very great value.

In the first place, they point directly to the strength and weaknesses of the practices of the various engineers and put them on notice before their fellow engineers. It is a distinct stimulus to an engineer to have comparable unbiased and fully revealing figures available to the men under him 9207 on his own staff; and I am satisfied that the availability of these figures over the years has contributed substantially to the excellent performance that the production departments of the companies, as well as the distribution departments, have obtained.

The Examiner: At this point we will recess until tomorrow at 10 o'clock.

(Thereupon, at 5 o'clock p. m., an adjournment was taken until the next day, Thursday, April 10, 1941, at 10 o'clock a. m.)

—7,200—

9208

BEFORE THE

Securities and Exchange Commission

File No. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.*

9209

Hearing Room 1101,
Securities and Exchange Commission Building,
18th and Pennsylvania Avenue, N. W.,
Washington, D. C.,
Thursday, April 10, 1941.

Met, pursuant to adjournment, at 10:00 o'clock, a. m.

9210

Before: WILLIAM W. SWIFT, *Trial Examiner.*

Appearances:

S. PEARCE BROWNING, JR., and CHARLES S. HAMILTON, JR., of Sullivan & Cromwell, 48 Wall Street, New York, New York, appearing for The North American Company, *et al.*, Respondents.

RALPH C. BINFORD, appearing for the Securities and Exchange Commission.

PROCEEDINGS

The Examiner: The hearing will come to order.

Whereupon, F. W. DOOLITTLE, a witness produced on behalf of the Respondents, having been previously sworn, resumed the stand and testified as follows:

Direct Examination by Mr. Browning (Continued):

Q. You testified yesterday, Mr. Doolittle, with respect to 9212
certain statistical information exchanged about the operating companies through the medium of the Station Advisory Operating Committee and Intercompany Electrical Committee, and identified various examples of statistical sheets so interchanged.

Could this statistical information be secured by the operating companies in any other way? A. No. It is information compiled from original records on a somewhat different basis than any data of that sort formally repo ted to commissions, but portions of it, of course, are available in reports to commissions, but on the whole, no such consistent 9213
body of statistics and cost analyses are available.

Then, of course, there is always the problem of interpretation of the Uniform Classification of Accounts in different jurisdictions and by different bodies, as a result of which varying technical practices in accounting and statistical

work grew up in the different jurisdictions. These, of course, do not affect the validity of the balance sheets and income accounts, but would make extremely difficult the functional

9214 *F. W. Doolittle—By Respondents—Direct*

cost studies which the members of the Committee made in behalf of their companies, as was indicated yesterday in regard to the Station Advisory Operating Committee and the Intercompany Electrical Committee.

Q. Are you familiar with the combined operation of the various businesses, by various subsidiaries in The North American Company System? A. Yes.

Q. For example, are you familiar with the operations of the electric, gas and transportation business in the Wisconsin
9215 Group? A. Yes.

Q. Have you any experience with State regulation of public utilities? A. Yes. I have been on the staff of two Commissions, the Wisconsin Commission and the Illinois Commission, and I have also appeared before various other State Commissions, representing utility companies.

Q. Does the combined operation of several businesses such as the example I mentioned in any way create any problem for State regulation? A. Yes. It creates problems both for regulation and operation, but problems no different

—7,203—

9216 in kind, and, in my judgment, even less in a degree than the problem which arises from joint serving of domestic, industrial and commercial customers in the electric business from the same generating plant.

So far as I know, no one has yet evolved a theory of peak load responsibility which has achieved anything like general acceptance. That problem is inherent in the use by different classes of customers of the same facilities, such as a generating plant. The problems arising from the joint operation of railway, gas, electric, for example, or the freight and pas-

senger business of a steam railroad are problems of the same kind,—that is, the assignment to several services of their fair portion of the properties jointly used and similarly, the assignment to the costs of operation incurred in the interest of more than one service; for example, the maintenance of the railroad track over which both freight and passenger trains run.

The use of a general office building, in which the affairs of more than one type of service are administered, be they different classes of electric service or gas and electricity. 9218

The problems are inherent in the diversity of the contribution of the cost of the several customers to the total cost of the company, and not to the fact that one customer may receive electric service and another, gas service.

—7,204—

Q. In other words, if I understand you correctly, while the combination of businesses may create problems, they are essentially the type of problems which it is a commission's business to regulate? A. That is correct.

Q. And that there is no particular difficulty inherent in 9219 this type of problem? A. No, and no more difficulty in connection with this joint business than would be in connection with the problem of rendering a single type of service such as the electric or gas.

Q. In other words, to avoid any problem, you should have one generating plant, one transmission line and one customer? A. That would relieve us of many of the problems.

Q. And then you would not need any commissions? A. No, and no managers either.

9220 *F. W. Doolittle—By Respondents—Direct*

Q. Are your view in this connection,—they would apply to other examples of combined businesses in The North American system such as, for example, the St. Louis County Gas Company in the Union Group? A. Yes. A good illustration is a steam heating and electric service in other places such as Cleveland, where there is a joint use. The Missouri Company happens to be separately incorporated.

Q. So that a combination of businesses doesn't impair the State regulation? A. I don't think it does.

9221 —7,205—

Q. Mr. Doolittle, can you explain for us the function of the holding company in operating matters under the North American scheme of operation? A. Well, the North American scheme, ever since I have been associated in any way with the holding company, or its subsidiaries, has had for its major objective the development of as skillful an operating organization as it was possible to get.

Q. Operating organization where? A. On the operating properties, and to maintain no operating organization by the holding company, itself. That is, the North American or-
9222 ganization never tempted to supplant the operating organization of the holding company.

Q. Of the what? A. Of the local management, I should say, but to supplement the skills of the operating company's management by what might be termed a consultative process. The utility industry has certainly not been static, particularly the electric business has shown very great changes, very great developments over the last twenty-five years and so far as I can see, there is no present tendency to end the development. That means that in such a dynamic industry, as com-

pared with one more static, there is a constant change and unless such change is recognized, an operating company tends to become stagnant.

—7,206—

There is no opportunity for local comparison. A dry goods store or a grocery store is stimulated by its contacts with other men and other industries of a like nature in a community, but the operator of a power plant of a utility company, for example, has no local means of keeping himself up to date and stimulated such as these other industries 9224 of which there are likely to be several in any community.

A considerable part of my duties for a number of years was to discuss both in New York and on the operating company's property, with the operating heads and engineers of those departments, new aspects of old problems and new problems which arose, and to help those men reach sound conclusions. After all they were their conclusions when reached; they were not mine.

We are dealing here, partly, with technical matters but we are also dealing with people, and it is a rather delicate 9225 situation, nonetheless, one of fundamental importance and of greatest value to avoid operating a man's property for him and at the same time, to give him the maximum stimulus and help in reaching a sound conclusion; because, unless when these conclusions are reached, they are his and he really believes them, you are not going to get maximum performance in the carrying out of the plans developed.

I might perhaps elaborate on this but I think that is the nub of the matter that The North American Company believes in the highest possible technical skill on the part of

—7,207—

its management, it believes in furnishing those men with such consultation, both on their properties and in the New York office as will keep those men thinking clearly, keep them abreast of the times, and enable those operating men to reach, for themselves, the conclusions which are the wisest.

I think it is fair to say that in many instances, the opportunity of the head of an operating utility to discuss his problems with a sympathetic and, I hope, a reasonably well informed person who has the financial interests of the oper-
9227 ating company at heart, is of greatest value.

Q. It was this theory of the function of the holding company that resulted in the organization of The North American Company, itself? A. That is true. The North American organization consisted of men of experience and judgment, with such a staff of a statistical and secretarial nature that the North American officers could keep themselves informed as to developments, tendencies in costs and performance on the various properties, but without such that there would be a temptation to actually design a boiler or a power house which, after all, eventually had to be operated by the
9228 man on the property and not by the North American staff.

Q. If I understand you correctly, the theory was, in effect, that the heads of the respective operating companies

managed their properties and the function of the North American executives was to consult and advise with them? A. That is correct.

Q. In carrying out this theory, did you talk to the heads of the properties? A. Very frequently.

9229

Q. For many hours? A. Yes, for days at a time, both in New York, Cleveland, St. Louis, Milwaukee, Washington, and so on.

Q. Could you give us any example of the way the process works? A. Well, one matter that arose some years ago had to do with the expansion of the Cleveland territory beyond the Cleveland corporate limits. The advent of roads, the building up of suburban properties adjacent to Cleveland, and other forces, tended to make that territory along the south shore of Lake Erie, from the Pennsylvania line practically all the way across the State, much more homogeneous than it had been. The President of the Cleveland Company, at that time, had been many years in Cleveland and he had rather fixed ideas that the Cleveland Electric Illuminating Company should serve approximately the City of Cleveland and the adjacent suburbs.

9230

I had some conversations with the President of that Company, at that time.

—7,209—

Q. That was Mr. Lindsay? A. Mr. Robert Lindsay. I participated in the discussions in which Mr. Gruhl, an officer of The North American Company, also participated, and I have no doubt that there were discussions on this matter in which I did not participate, but in any event, it was our judgment, in New York, that the territory which should have the Cleveland service was no longer the immediate vicinity, —the City of Cleveland and its immediate environs, but a substantially greater area, which, by that time, was practically as much a part of the City of Cleveland as one of the nearer suburbs had been ten or fifteen years before.

9231

9232

Eventually, Mr. Lindsay reached the same conclusion and at that time certain properties lying between Cleveland and Ashtabula were integrated with the Cleveland system, power sources established in the newly acquired area, and the whole area is now, from a service and rate standpoint, a single area.

That is typical of the kind of thing under discussion, I, myself, had a number of discussions, running over a considerable period of time, with the President of the Potomac Electric Power Company with respect to the form of rates

9233

that that Company should adopt.

It had been a Mr. Ham's theory that a flat rate of so many cents per kilowatt hour, without regard to quantity, had in the past met the needs of Washington and would likely continue to be a satisfactory scheme.

—7,210—

I felt rather strongly on the matter that the incentive type of rate was important; Mr. Gruhl did, also, and eventually Mr. Ham decided to retain, I believe, Stone & Webster, to make a report on the rate situation. Following that, Mr. Ham concluded that a promotional form of rate would, in

9234

the long run, serve the community, and the Company, better than the flat rate system.

A slightly different sort of a situation arose prior to my becoming an officer of The North American Company. When I was retained by one of the subsidiaries and I had a problem, with respect to certain valuation and rate cases in which I, at the suggestion of the head of the company for which I was working, came to New York to discuss the matter with Mr. Gruhl who, prior to that time, had had a great deal of experience in Wisconsin and Missouri and had for a number

of years, been a member of the staff of the Wisconsin Commission. I did that and received the suggestions and advice but ultimately Mr. Way and I had to make up our minds as to what we were to do.

My reason for mentioning that was that at other times I had been engaged by the Chicago Elevated Railway Company to go before the Illinois Commission in substantially the same sort of case, that is, valuation and rate proceeding and there was no holding company and no financial interest back of that that I could go to. We worked out our problems 9236
as best we could and I think we did a good job but I would

have greatly appreciated the help Mr. Gruhl might have given us in the Chicago Elevated case.

Q. Are matters of the type you mentioned such as the development of the Cleveland Company's territory and the change in the Washington rate schedule important matters to those operating companies, and a very important question, have the companies and the public benefited from the adoption of the views which The North American Company officers advocated? A. Certainly the service and rates in Cleve- 9237
land Electric Illuminating territory represented a distinct advantage to their customers and I think the expansion of territory has made the financial status of the Cleveland Company, through greater diversification, better than it would have been had it confined itself to the narrow limits of the City of Cleveland.

As to the rate situation, in Washington, I am sure that the promotional form of rate which has increased the use per customer so markedly, has resulted in lower costs and constantly lower rates, forming an element of value to the

9238 *F. W. Doolittle—By Respondents—Cross*

community that is well recognized, certainly in the industry, and among those connected with the company, and I feel that it is safe to say that it is generally appreciated in the community.

Q. This consultative process which you discussed is

—7,212—

something which goes on more or less constantly? A. Yes, with different companies and different problems on different days, but it is constantly going on.

9239 Q. Is such a consultative process a source of value to the operating companies? A. I am sure it is. As I say, I availed myself of this when I was working for the Milwaukee Company, the result of operations of these different companies have been so outstanding and all point to this conclusion and I am satisfied, myself, that it is of great value to the companies.

Q. Do you consider that a common financial interest is essential to the process? A. Yes.

Mr. Browning: That is all.

9240 *Cross Examination by Mr. Binford:*

Q. Mr. Doolittle, you spoke yesterday of the Inter-company Electric Committee of the North American system? A. Yes.

Q. Who is the Secretary of that Committee? A. Mr. Gerber. Mr. Gerber, of Cleveland.

Q. Is Mr. Gerber also Secretary of the Station Advisory Committee? A. Yes.

Q. That is, I believe it is known as the Station Advisory

—7,213—

Operating Committee? A. Right.

Q. Where is Mr. Gerber's office? A. Cleveland, with the Cleveland Electric Illuminating Company.

Q. Does Mr. Gerber receive a salary or compensation for his work in connection with the two committees you have named? A. Yes.

Q. From whom does he receive such a salary or compensation? A. I can't speak from the record today, but originally, and I assume today, his salary is divided between the participating companies, that is, the companies which have membership on these two committees. 9242

Q. Does he devote his entire time to the work of these two committees or the work incident to their functioning? A. I can't answer that, but I think he has no other important duties.

Q. Does he draw compensation for the performance or the discharge of duties other than for system committees? A. I think not.

Q. How are the expenses incident to Mr. Gerber's work for these committees paid, such as the expenses incident to the compilation and distribution of the reports and other 9243

—7,214—

data which are interchanged? A. I can't answer that question.

Q. Is Mr. Gerber an engineer? A. I think he had engineering training; I am sure he had statistical training, but he is not otherwise engaged in engineering work than the work of these committees.

Q. Has he been secretary of these committees since their inception? A. Since quite early, I believe there were one or

9244 *F. W. Doolittle—By Respondents—Cross*

two short term secretaries that preceded him, but it is substantially true that he has been secretary of these two committees for most of their twenty years of existence.

Q. I believe you stated that in 1936 you retired, as an officer of The North American Company, but you have continued as a director of that company? A. Yes.

Q. And are presently a director? A. That is true.

Q. Are you retained in a consulting capacity by The North American Company at the present time? A. Yes.

9245 Q. And you receive compensation for your activity in this respect? A. Yes.

Q. What proportion of your time, since 1936, have you

—7,215—

usually spent on the affairs of The North American Company? A. That would be extremely difficult for me to estimate. Normally, when I am at home, at Garden City, I am in the office perhaps twice a week,—that doesn't mean that I go in and do a day's work at a desk twice a week, but that I meet the officers and discuss various matters with them. A considerable part of the time, however, I am away

9246 from New York and at other times, such as this, I may be continuously engaged for several days or perhaps several weeks on some particular matter.

I am afraid I would be unable to estimate the percentage of my time devoted to The North American Company any more accurately than that.

Q. Prior to your retirement as an officer in 1936, you devoted your entire business time to the activities of The North American Company? A. Yes, that is correct.

Q. I believe you heard a part of Mr. Freeman's testimony yesterday and today? A. Yes, I heard a portion of it.

9247

Q. I think Mr. Freeman gave the names of the members of the Board of Directors of The North American Company, who were also compensated officers or employees of subsidiary companies of the system.

Since you are a member of the Board of the North American I suppose you know what members of that Board are paid officers or employees of The North American Company?

—7,216—

A. Yes.

9248

Q. Will you please state their names.

Mr. Browning: (Off the record).

The Witness: As I have stated, I am a director of The North American Company and am on retainer; Mr. Fogarty is Chairman of the Executive and Finance Committee, a paid officer of The North American Company; also, Mr. Freeman, Mr. Moody, Mr. Piske, Mr. Shea, and Mr. Williams.

By Mr. Binford:

9249

Q. Now, that leaves how many members of the Board of Directors of The North American Company who are not paid officers or employees of The North American Company or of a subsidiary company thereof? A. Only Mr. Murnane.

Q. What is Mr. Murnane's occupation, other than a Director of The North American Company? A. He is engaged in the investment business.

Q. Upon his own account or as a member of a firm, or otherwise? A. I can't answer that, he has associates, and whether they are a firm or what their relationship is, I don't recall. I would have to refresh my memory.

Q. But his associates, so far as you know, are not otherwise connected with The North American Company? A. No.

—7,217—

Q. Nor any of their affiliates? A. No. I don't know them.

Q. Is there representation upon the Board of the preferred shareholders of The North American Company? A. Yes. I am a Director elected by the proxies of the preferred shareholders.

Q. You are? A. Yes.

9251 Q. And who are the others so elected? A. Let the answer show that I do not know.

Q. How long did you say you had been a Director of The North American Company? A. Since 1925.

Q. There was no representation of the preferred stock on the Board of The American Company until a time subsequent to January 1939, was there? A. Relatively a recent date, I can't state that it was first after the 1939 meeting, but it was not far from that.

Q. So, prior to 1939, you were elected by the vote of the common stockholders? A. That is true.

9252 Q. And you said that you do not know who the other representatives of the preferred stockholders are? A. I am not sure which of the other directors are the other so-called preferred stock directors.

—7,218—

Q. Then, you can't state whether there was any change in the personnel of the Board of Directors of The North American Company as the result of the amendment of the charter of that company in 1939 which purported to give representation upon the Board to the preferred shareholders?

A. I don't recall what changes were made at the 1939 meeting, and I am not able from memory, therefore to say whether there was any change in the composition of the Board at that time and if so, for what reason.

Q. Were any Directors elected in the year 1940? A. Yes. There are one-third of the Directors elected at each annual meeting.

Q. Did you designate, by yourself or in consultation with anyone else, the names of persons who were to be nominated for the Board of Directors as representatives of the preferred 9254
stock in 1940? A. The question of Board membership has become one of increasing difficulty in recent years. We have lost counsel from our Board, we have lost bankers from our Board, we have suffered through death, loss of the older men of the organization, and in each case we have found difficulty in securing men of background and experience and I think it is safe to say that the problem of getting competent men,—I know in my own case that has been the uppermost problem,—whether that man was designated a nominee of the preferred stock or of the common stock. I, myself, personally, have been in my small way, a considerable more of 9255
a preferred stockholder than a common stockholder and I assume that was one of the reasons for my appearing as a nominee for election by preferred stock proxies. Probably the proxy statement sent out would throw additional light on this subject.

In view of the holding of stock by the directors, I can't say that positively, but I think so.

Q. I don't believe that you answered my question fully.

The Witness: Will the reporter please read the question?

9256 *F. W. Doolittle—By Respondents—Cross.*

(Whereupon, the pending question was read by the reporter.)

The Witness: No, I can't recall that I had any part in any such designation.

Q. Who selects the nominees, or who did in 1940, as representatives of preferred stock and as representatives of common stock on the Board. A. As a practical matter, the officers and directors canvass the situation among themselves, as the Committee of the Whole, and out of their discussions come suggestions that certain people be asked if they will stand for election. I cannot be more specific than that.

9257

Q. I presume that discussion, up to the point of the canvass, takes place in New York and among the officers and directors located in New York, primarily, isn't that right? A. Undoubtedly most of such discussions take place in New York and the officers and directors who live in New York are most likely to be present at any discussion, but the directors who live elsewhere are often in New York and on such occasions participate, of course, in the discussions.

9258

Q. You were retained in a consulting capacity by The North American Company.

Just what are your duties in this connection? A Hold myself available for consultation with officers of the company on such problems as they care to discuss with me.

Q. Those problems are primarily of an engineering and operating nature, are they? A. Yes. Rate matters, which of course are a part of operations,—there is rarely any dis-

cussion with me as a director on matters of finance. Those questions won't normally be discussed with me. The question of value of properties, as operating entities, their earning power, their probable future, I have spent some time, a good deal of time, in the past four and one-half years in considering, on the basis of trips through the territories, the reports of the companies, their probable possibilities for future growth, the strength and weaknesses of properties, both of those whose securities are in the fortfolio of North American and other contiguous properties, or properties in other 9260

—7,221—

parts of the country, so while I eliminated from the matters which I would be likely to discuss, or which would be discussed with me, questions of finance, etc., I want specifically to include the questions of values of securities based on their possible productivity.

Q. Your acquaintance with the day to day operation of the system properties and The North American Company has, of course, been less intimate since your retirement as an officer in 1936? A. Correct.

Q. Than it was theretofore? A. That is correct. 9261

Q. At the time of the first investment by The North American Company in North American Light & Power Company, you were active in the affairs of The North American Company? A. Yes.

Q. And I presume you made some investigation as to the underlying values of the operating properties involved in this investment? A. I was junior officer, lately come to the company then, and I, myself, made no field examination of the properties.

9262 *F. W. Doolittle—By Respondents—Cross*

Knowing the general territory being served, I was in, of course, on some of the discussions.

Q. What position did you occupy with The North American Company when The North American Company became

—7,222—

the dominant investor in North American Light & Power Company?

Mr. Browning: Will counsel define what he means by giving the year? Do you mean the year 1932?

9263

Mr. Binford: I am speaking of 1932.

The Witness: I was a vice president of The North American Company at that time.

By Mr. Binford:

Q. At that time, did you make an investigation into the status of those properties from any point of view of The North American Company? A. You referred to 1932 at which time The North American Company——

Q. (Interposing) It has been stated that the Insull interests failed to live up to a certain contract which they had entered into in respect to North American Light & Power Company stock issues, and The North American Company, pursuant to its obligation under such contract became the holder of more stock than anyone in respect to common stock. A. Subsequent to that occasion that you mentioned, I spent more time in Chicago and on the property of North American Light & Power Company than before because at the time The North American Company became increasingly responsible for the future of that situation, but I made no examination

9264

of or report on the physical property of North American
—7,223—
Light & Power Company in 1932, in specific answer to your question.

Q. Nor at any subsequent time? A. From 1932 on to 1936, I was on all the physical properties, from time to time, that is the physical properties of the subsidiaries of North American Light & Power Company and was in frequent touch with the operating men so that from that time on, my contacts with their operations were more detailed than they 9266
had been theretofore.

—7,224—

Q. Prior to 1932, was the management and supervision of the operating properties comprised within the North American Light & Power Company system left, by the North American Company, largely to Middle West Utility Company? A. The management of North American Light & Power Company was entrusted to the Board of that company on which there was equal representation of the North American Company, and Middle West, together with an advisory committee composed of, I believe, two operating men 9267
from North American properties and two from the Insull properties. The offices of the North American Light & Power Company were in Chicago, the offices of the Middle West Company were in Chicago, and the offices of the North American Company were in New York.

Q. When you refer to "Insull" and "Insull Interests", you are referring to Middle West Company and affiliates, is that right? A. That is true. Under their geographical situation, I think it is safe to say that the management of North

9268 *F. W. Doolittle—By Respondents—Cross*

American Light & Power Company had more frequent and more intimate contact with and access to the Middle West group than it had to the North American group whose offices were located in New York.

Q. As a matter of fact, isn't it true that the Middle West holding company organization supervised the activity of the operating companies of North American Light & Power Company in very much greater detail than was the practice of the North American Company with respect to its direct

9269 —7,225—

operating subsidiaries?

The Witness: Read that back, please.

(Whereupon, the pending question was read by the reporter.)

The Witness: No, I don't think so; except as I have explained, incidental to the geographical location there were more frequent and more intimate contacts, but so far as I know there was no more of a formal attempt to manage on the part of Middle West than

9270 there was on the part of North American Company.

By Mr. Binford:

Q. You are presently an officer of Illinois Terminal Railroad Company? A. Yes—no. I am a director.

Q. Would you say that there has been an improvement in the financial and physical condition of the operation properties of the North American Light & Power Company group since 1932? A. On the whole—yes.

9271

Q. And how would you say that had been effected,—what would you consider as among the principal factors in that change? A. In the first place, immediately after 1932, Mr. Fogarty, vice president of the North American Company began to devote a substantial part of his time to the financial problems of the North American Light & Power Company group of properties and also to the problem of operating personnel.

—7,226—

9272

As the result, a rather large office force in Chicago which had rendered management services under contract to the North American Light & Power Company and subsidiaries was gradually eliminated. The problems of management were placed back on the operating heads of the companies and they were given advice and consultation after the pattern that had been used by the North American Company.

Following the improvement of the financial situation and improved credit of companies such as Kansas Power and Light, the problems incident to the integration of that property out of a number of predecessors were cleared up. As the result of these and other similar things, the condition of

9273

these properties, physically,—their financial set-up and so on, has been steadily improved.

Q. In taking over control and supervision of the North American Light & Power Company, did you notice any great advantages that had been achieved, or obtained by the operating companies of that system which you directly attributed to the holding company management which it had enjoyed before? A. Well, I was not familiar with the properties before they were assembled by the Studebaker group in 1920, or thereabouts, and I would have little means of judging what

9274 *F. W. Doolittle—By Respondents—Cross*

change had come about or what progress had been made up to the date we are using to define North American Company's more active participation,—that is, 1932.

—7,227—

Q. But, as you have outlined, The North American Company management felt it desirable and acted upon that feeling to reform the existing organization, somewhat? A. Yes, the form of it was changed to more nearly conform to the practices and policies of the North American Company in
9275 dealing with its associated companies, operating companies.

Q. Was the practice of having certain of the heads of operating companies upon the Board of Directors of North American Light & Power Company, in order that the advantage of their advice and consultation might be received, continued as it had been theretofore? A. I would have to refresh my memory on the membership of The North American Light & Power Company Boards; I can't answer that question from memory.

Q. Well, that practice has been subsequently adopted in the case of The North American Company's Board, itself,
9276 hasn't it? A. At the moment, it is very evident in the composition of the Board of Directors of the North American Company. In years past, operating heads of subsidiary companies have been members of the Board, I don't recall any time in which a larger proportion of the operating heads were members of the Board than now, unless it is prior to 1920, when I think the president of the Milwaukee Company and president of the St. Louis Company were each members of the North American Board, in which case there was 100

—7,228—

per cent. representation on the Board. It fluctuates, as a practice, but it is a good practice in my opinion.

Q. One purpose served, I presume, by such inclusion of officers of operating companies upon the Board of the parent is that the directors have at their meetings sources of first-hand information as to operations which would not be otherwise available? A. That is true, and on general business, industrial and economic conditions in the territories served by those operating subsidiaries.

—7,229— 9278

Q. Do you have any knowledge of the extent of the supervision of The North American Company over its subsidiaries in respect to their public relations,—by which I mean, their dealings, in this instance, with public boards, regulatory bodies, and their opposition to or sponsorship of legislation affecting their interest? A. Any matters affecting, in the judgment of The North American Company officers, the permanence of the value of the investment or earning power of the subsidiaries is a matter which would be discussed with the men operating that property and under that heading would come various trends,—trends in economic and in 9279 social thought in the various communities,——

Mr. Binford: (Interposing) Mr. Examiner, I have been called before the Commission on another case and I wonder if we could have a fifteen minute recess?

The Examiner: All right, we will recess for fifteen minutes.

(Whereupon, following the taking of a fifteen minute recess, the hearing was resumed.)

9280 *F. W. Doolittle—By Respondents—Cross*

Mr. Binford: Will the reporter repeat the last question?

(Whereupon, the question asked by counsel immediately prior to the taking of the recess was read by the reporter.)

Mr. Browning: Had you completed your answer, Mr. Doolittle?

The Witness: No, I do not think so.

9281 Mr. Browning: Well, complete it at this time.

—7,230—

The Witness: (Continuing) ——and legislations growing out of such trends.

By Mr. Binford:

Q. Are you familiar with the fact that there is a suit presently pending in St. Charles County, Missouri, wherein relief is being sought, in part, by forfeiture of the charter of the Union Electric Company of Missouri, and of the right of that company to continue to do electric utility business within the State of Missouri? A. I am advised that an action 9282 of that sort has been brought.

Q. Do you know the grounds asserted as the basis for the relief sought in that suit? A. I can't express them in legal terms, but it is my understanding that the allegations made were, of improper influence of Governmental process.

Q. Do you know any more particularly what Governmental process was supposed to be influenced, under the allegation? A. I am not familiar with the details of it.

Q. Does the Board of Directors of The North American Company make it its business to familiarize itself with such

instances as I have mentioned, of conflicts between local regulatory, or local prosecuting officers and its operating company? A. Yes, in the first instance, the officers', and the

—7,231—

reports are made to the Directors on these matters and questions are asked of the officers by the Directors. The Company does make an effort to inform itself on these matters.

Q. Do you know whether or not there have been other instances in the past few years of charges of improper conduct against officers, or former officers, of the Union Electric 9284
Company System in relation to alleged undue Governmental influence, or in that general field? A. Yes, there have been, and there have been certain changes in the operating personnel of the properties serving the St. Louis District as a result of those charges.

Q. As a matter of fact, this Commission did some investigatory work on this general subject matter, did it not, in the Union Electric Company field? A. Yes.

Q. Were any facts brought to the knowledge of the Board of Directors of The North American Company as to practices along the line which I have suggested which it 9285
did not approve? A. Yes.

Q. Have any similar practices of which the Board of Directors of North American Company did not approve been brought to the attention of that Board in respect to any other companies in the System within the past two or three years? A. One other, and that is, as I recall, Illinois-Iowa Power

—7,232—

Company.

Q. As a matter of fact, in certain of these instances indictments have been entered, or returned, against certain

9286 persons, based upon activities alleged to have been engaged in by those individuals while they were connected with operating companies of The North American System, is that true? A. That is true.

Q. The activities complained of in these various proceedings, or investigated therein, did not reach the attention of the Board of Directors of The North American Company, as far as you know, until Governmental investigation was begun? A. I think that is true.

9287 Q. To what do you attribute the fact that such incidents or such practices do occur and develop without reaching the attention of The North American Company's Board of Directors? A. The process of leaving the management to local officers and advising and consulting with them is, as I have said, a very delicate one because it involves personalities as well as, or as distinguished from, the physical materials in the engineering field.

In the particular cases which you mentioned, I can only say that the local management,—that the management became too completely localized.

9288 One of the most difficult problems in management is that of securing an assistant, or assistants, who, themselves,

assume a correct portion of responsibility.

In other words, a chief engineer who has an assistant under him finds that an assistant of most value does not run to the chief with every minor problem, nor, on the other hand, does not trust his own judgment on matters in which he is incompetent.

Now, those human relationships are in a delicate balance and my only answer is, that that management, over a certain

period of time, became too highly localized and was not acting on the consulting advice and suggestions of the officers of The North American Company.

Q. The North American Company, through the sponsorship of the Committees which you have mentioned, and otherwise, is of course highly interested in the efficient development and operation of the utility properties, I suppose, but I suppose it is likewise true that it is interested, to some extent, in the manner from a public welfare point of view, in which results are achieved as well as the results themselves? A. That is very true. 9290

Mr. Binford: I have no other questions of Mr. Doolittle at this time. However, I reserve the right to recall him for further examination if it appears advisable in the future course of the hearing.

Mr. Browning: As usual, we object to the reservation.

The Examiner: I will refrain, as usual, from ruling

—7,234—

until the occasion arises. 9291

Redirect Examination by Mr. Browning:

Q. Mr. Doolittle, when the facts regarding the Union situation, about which counsel has just asked you, were brought to the attention of the officers and Directors of The North American Company, did they immediately change the executive management of the Union Company? A. Those men were pulled out of their positions operating the properties that were under them.

9292 *Elmer L. Lindseth—By Respondents—Direct*

Q. And new executive management sent to St. Louis? A. That is true.

Mr. Browning: That is all.

Mr. Binford: The same reservation.

Mr. Browning: I will recall Mr. Lindseth.

Whereupon, ELMER L. LINDSETH, a witness produced on behalf of the Respondents, having been previously sworn, resumed the stand and testified further as follows:

9293

Direct Examination by Mr. Browning:

Q. Mr. Lindseth, referring to Respondents' Exhibit No. 124, do you wish to add anything to your testimony with respect to Sheet "E" of that exhibit? A. Yes, I do. The

—7,235—

exhibit related to the comparative bills in communities of various size groups and for a range of average use per month of the companies in The North American System, as related to the average of all other companies in the State

9294 in which those systems operate.

In describing this exhibit, I failed to mention and give adequate credit in the case of Wisconsin Electric Power Company to the fact that the average charge for electric energy is different from the bills, as computed from the rate schedules as filed, due to the operation of the plan which a previous witness for that company has described as the so-called "10-for-1" plan, under which users of electric energy receive that energy at a cost per month lower than the filed bills when they conform, or meet certain conditions specified in the plan.

Specifically, a footnote should be added at the bottom of the exhibit as follows:

f—Without giving effect to "10 for 1" plan of Wisconsin Electric Power Company.

The footnote applies to four horizontal lines of data in the exhibit and the appropriate reference should appear at the following points in the table:

1. In the 4th line after the words "TNACo. present properties" under the caption "WISCONSIN-MICHIGAN SYSTEM". 9296

2. After the 8th line following the words "Average, com- —7,236— bined TNACo. systems above" under the caption "ABOVE SYSTEMS COMBINED".

3. In the lower half of the table after "TNACo. present properties" following the caption "WISCONSIN-MICHIGAN SYSTEM".

4. In the last line of the table after the words "Average, combined TNACo. systems above" under the caption "ABOVE SYSTEMS COMBINED". 9297

The Examiner: The Sheet, as originally admitted in evidence, is amended in accordance with the witness's request; that is, Sheet "E" to Respondents' Exhibit No. 124.

By Mr. Browning:

Q. If I understand you correctly, Mr. Lindseth, the situation in substance, was that the comparison in this Sheet "E" was unfair to the Wisconsin properties of The North

American Company System, since it utilized for those properties the nominal rate without giving effect to the substantial reductions therein, in actual practice under the "10 for 1" plan? A. Yes, that is so. Under the "10 for 1" plan, as has been described in this proceeding, reductions from the filed rates are given to consumers who meet certain requirements, the principal of which is an increased use in energy relative to that used in the previous year. The benefits of the plan are extended to users in several rate classifications
9299 and in communities of all sizes and this particular exhibit —7,237— relates to residential consumers in those communities.

The effect of the operation of the plan in 1938 was a saving to all residential consumers of more than $728,000,—in 1939, the saving was more than $685,000, and as a result, it is correct to say that the comparison as filed in Sheet "E" is less favorable to the combined North American properties in the Wisconsin-Michigan System than actually is the case, due to the fact that this very substantial saving to residential consumers was not included in the calculations.

9300 Q. Mr. Lindseth, I hand you a sheet containing four maps, entitled: "The North American Company Evolution of Electric Transmission in Certain Areas—Showing Lines of 26.4 kv. and Over, as of the Years Shown".

Were these maps prepared under your supervision and the data thereon taken from the records of the respective companies? A. Yes, sir; that is so.

Mr. Brewning: I offer this series of maps in evidence as Respondents' Exhibit No. 140.

Mr. Binford: No objection.

9301

The Examiner: Let the exhibit come in under that number.

(The document referred to was marked as Respondents' Exhibit No. 140 and received in evidence.)

—7,238—

Mr. Binford: May I ask a question or two in regard to this exhibit?

Mr. Browning: Certainly.

9302

Mr. Binford: Are the transmission lines shown on Respondents' Exhibit No. 140 transmission lines owned by subsidiaries of The North American Company?

The Witness: Well, subsidiaries as defined,—how? Not all these are so-called consolidated subsidiaries of The North American Company.

Mr. Binford: Well, are they all owned by companies within The North American holding company system?

9303

The Witness: With two exceptions,—yes; and in those two cases, rights over the lines for the transmission of energy are retained under lease.

The significance of those is shown in the north central portion of Illinois, the two lines shown "dotted" which have been described by a previous witness in this proceeding and which are owned by the Commonwealth Edison Company interests, but over which, by contract, the Illinois Iowa Power Company

9304 has rights for the transmission and delivery of energy; and a second case is that of the Central Illinois Light Company's transmission lines running from Peoria, Illinois, or a point just south of Peoria, Illinois, known as Junction "A", southward to a point on this transmission line known as Fancy Prairie, on which the Central Illinois Light Company has built, or rather, has installed conductors on towers which had been existing and those conductors have been leased
9305 to the Illinois-Iowa Power Company for their exclu-

—7,239—

sive use. Title, in that case, probably resides in the Central Illinois Light Company, but the sole use is by the Illinois-Iowa Power Company.

Those are the only two exceptions.

Mr. Binford: That is all I wanted to ask, at this time.

By Mr. Browning:

9306 Q. I should like the witness to explain one further point on this exhibit:

The lines on this exhibit are the same, irrespective of their capacity, so long as they are over 26.4 kv., is that correct? A. Yes, that is correct.

Q. And during the periods shown by the respective maps, is it a fact that in additon to the building of new lines, that in many cases old lines were strengthened and made of higher voltage? A. That is emphatically the case. For example, in Kansas, in the territory of the now Kansas Power and Light, and which, in this series of maps, was

9307

the territory of predecessor companies merged into the Kansas Power and Light, many of the lines shown on this exhibit as transmission lines were first constructed at 33,000 volts. As the demand for energy increased,—and as the requirements of transmission became increasingly exacting,—those very lines were changed from 33,000 volts to 66,000 volts, in many cases, and changed from wood pole construc-

—7,240—

tion to steel towers. That is a characteristic of transmission line evolution, without apparently being indcated on the maps.

9308

At the present time, in the territory of Illinois-Iowa Power Company, transmission lines of 66,000 volts are being rebuilt to 132,000 volts. The map will, in this case, indicate no apparent change although the processes of evolution in transmission which are going on constantly are actually in operation.

The significance of these maps is very clearly one that an electric utility system is never in a static state, that neither perfection nor completion is ever reached, and as load demands and service demands increase, those demands are met by construction and rebuilding of existing lines, or the construction and building of new lines to meet those needs.

9309

A striking advance in the service to this territory represented on this map is demonstrated by this series.

Mr. Browning: Will you please mark as Respondents' Exhibit No. 141, for identification, this series of three sheets entitled: "The North American Company

9310 *Elmer L. Lindseth—By Respondents—Direct*

Comparison of Average Residential Monthly Bills in Cities of 50,000 Population (a) and More, Served by Privately Owned Electric Utilities".

Mr. Lindseth, from where did you obtain the data used in making up this exhibit?

A. These data, throughout, are obtained from a series of

—7,241—

Federal Power Commission reports entitled "Typical Elec-
9311 tric Bills in Cities of 50,000 Population and More."

Q. And the exhibit was compiled under your supervision from data so obtained? A. Yes, it was; and by the methods which are used by the Federal Power Commission in the preparation of these specific data.

Q. The averages are shown for companies not subsidiaries of registered holding companies,—are all such companies privately owned in the country? A. Serving cities of 50,000 population and above,—yes.

Mr. Browning: I offer these tables in evidence as
9312 Respondents' Exhibit No. 141.

Mr. Binford: Mr. Examiner, I do not wish to be in the position of admitting the relevance and materiality of these comparisons without more analysis than is shown supporting the validity of the comparisons.

However, I make no objection to the reception of this exhibit in evidence at this time.

The Examiner: Very well. It is admitted under the number mentioned.

(Respondents' Exhibit No. 141 received in evidence.)

By Mr. Browning:

Q. Are you generally familiar, Mr. Lindseth, with the testimony offered in this case for the Respondents? A.

—7,242—

Within the definition of "generally familiar",—yes.

Q. Since the testimony has been offered with respect to the various operating companies, have any of them arranged to furnish electricity to customers beyond their service areas, as shown by the testimony heretofore introduced? A. Yes, that is the case. 9314

Q. Well, to complete the record here, will you tell us what are those cases? A. Under the very rapidly increasing loads incident to the execution of the Defense Program, it has become necessary, in a number of cases, for The North American Company subsidiaries, and properties in The North American's System, to extend its facilities to meet defense needs in territory usually not considered a part of the territory of these subsidiaries.

Specifically, for example, the United States Navy Department has very markedly increased the capacity and output of a Naval powder plant at Indian Head, Maryland, some thirty miles south of here, on the Potomac River, on the left bank. 9315

This plant, which has been in existence for some time, has heretofore been served with power, or received its power requirements from a power plant owned by the Navy Department there. However, because of engineering reasons, the capacity of their plant was not able to be increased and the Navy Department sought to purchase the necessary energy for increased requirements.

—7,243—

9316 *Elmer L. Lindseth—By Respondents—Direct*

The territory is served by a utility not a member of The North American Company System, which was quite unable to handle the very large requirement requested by the Navy, —7,000 kilowatts,— and the Navy Department approached, and entered into negotiations with the Potomac Electric Power Company for the construction of a transmission line from Washington, specifically from the Bennings Plant, to Indian Head, Maryland, a distance of about thirty miles.

9317 The Navy Department chose not to have the local utility buy this energy from the Potomac Electric Power Company and have the local utility build this transmission line; rather, the Navy Department insisted and the local utility, Maryland Light and Power Company, agreed to have the Potomac Electric Power Company construct this transmission line outside of their normal service territory to meet this defense need.

The facilities provided are a 66,000 volt transmission line, being built at a cost of $600,000, all of which is being provided by the Potomac Electric Power Company. The term of the contract is five years, but the rate is based on a twenty-

9318 year amortization of the investment on the part of the Potomac Electric Power Company, but no provision has been made in the contract for reimbursement to the Potomac Electric Power Company in the event of cancellation of the contract at any time after the five-year contract period.

This is one illustration of a specific answer to your ques-

—7,244—

tion,—where the presence of a strong operating property such as Potomac Electric Power Company has made possible the construction of these vital defense needs in an adjoining

9319

territory where the local power company, by virtue of its capacity and size, is unable to meet the requirements imposed on it.

Q. Tell us of another case. A. There are two or three other illustrations in the territory of the Union Electric Company,—one of which is the power supply for Camp Fort Leonard Woods, near Rollo, Missouri.

This site, of 35,000 acres, was chosen for the Army Training Camp, the electrical demand for which was 7,000 kilowatts. This site is 100-miles southwest of St. Louis, 9320
and is served by two local utilities and an R. E. A.,—the Missouri General Utilities Company and the Missouri Electric Power Company, together with the Laclede Co-operative. However, the requirement of 7,000 kilowatts was quite in excess of any of these suppliers to meet, and only the Union Electric Company whose transmission line passed within 23 miles of the Camp had adequate facilities to meet with such requirements.

The U. S. Army Engineers worked in conjunction with the engineers of the Union Electric Company and have ar-
ranged for the Union Electric Company to provide facilities 9321
on its electric transmission line, the construction of a sub-station there, and the building, by a contractor with funds, in this case, provided by the Government through the R. E. A., to deliver energy from the transmission line of

—7,245—

the Union Electric Company to the Army Camp.

Now, much of the engineering was done by the Union Electric engineers and in this case, they are selling the energy at their transmission line, although serving a load 23 miles distant.

9322 *Elmer L. Lindseth—By Respondents—Direct*

Another case, again affecting the Union Electric Company of Missouri, relates to the Weldon Springs T. N. T. plant which also is outside of the service territory of the Union Electric Company. This, too, is a Government project and is on 20,000 acres of land northwest of St. Louis,—and is for a T. N. T. plant which it is hoped to have in service by September 1st, this year, a very fast construction schedule.

An isolated power plant to be built on the site was quite out of the question, even with Government priorities, from
9323 a construction point of view.

The demand is for an immediate 5,000 kilowatts, up to 8,000 kilowatts, with a likelihood of a 12,000 kilowatt demand in the near future.

The territory is served by a local utility, The East Missouri Power Company, which is wholly unable to supply a load of such character, and again, the Army representatives approached the engineers of Union Electric Company, and those engineers have made the necessary calculations, engineering, designing, and are providing a sub-station, in this
9324 case, and about 6 miles of transmission line are to be built

by the Union Electric Company.

The local power company not only was unable to handle the major requirement of the ultimate project, but was even unable to handle the amount of energy required by the contractors during the construction and it has been necessary for these contractors to provide portable Diesel generating equipment to furnish even the necessary lighting for the night work.

9325

A third case, in this instance in or near the territory of the Mississippi River Power Company, is the Government shell loading plant at Burlington, Iowa, properly known as the Burlington Cartridge Loading Plant.

Here, the Government will erect a power plant of its own to furnish the steam necessary for the production of energy, but requires 3,000 kilowatts of emergency standby service. The local utility serving the area, the Iowa Southern Utilities, was unprepared to handle a load of this magnitude and the Mississippi River Power Company was approached and has agreed to furnish the necessary 3,000 kilowatts of standby service.

9326

These three or four instances illustrate the long range planning, thinking, and financing and construction program of The North American Company and the constant providing of facilities not only necessary to meet current needs, but with adequate flexibility and foresight and forward planning to meet extraordinary needs as have arisen from the Defense program.

—7,247—

9327

Mr. Browning: That is all I have.

The Examiner: We will recess until 2:00 o'clock.

(Whereupon, at 12:40 o'clock, p. m., the hearing in the above entitled matter was recessed until 2:00 o'clock, p. m., that same day.)

—7,248—

9328 *Elmer L. Lindseth—By Respondents—Cross*

AFTERNOON SESSION

The Examiner: All right, gentlemen.

Whereupon, ELMER L. LINDSETH, called as a witness on behalf of the Respondents, having previously been duly sworn, resumed the stand and testified as follows:

Cross Examination by Mr. Binford (Continued):

Q. Mr. Lindseth, in connection with the correction which
9329 you indicated would be made to Sheet E of Exhibit 124 of the Respondents in order to show that the figures there set forth in respect of the Wisconsin Electric Power Company did not give due credit to that company in that the so-called "10 for 1" plan for that company was not reflected, did you make any investigation into any factors which might lead to a similar conclusion in regard to the non-North American companies which are included in the stated averages shown on the table; that is, did you investigate to see whether or not such other companies which in the comparisons made might be entitled to have some adjustment of the figures
9339 shown here because of promotional plans employed by such companies? A. The circumstances are these: These data are in all cases precisely as reported by the Federal Power Commission on representations of the companies reporting.

—7,249—

In the case of The North American system companies reported, they are in all cases the filed schedules as reported to the Federal Power Commission.

In no case that I know of, nor that has been brought to my attention, is there in use a plan similar to the Wisconsin "10 for 1" plan. The situation is just that.

Q. You do not know of any factors, whether similar to the so-called "10 for 1" plan or dissimilar, which might affect the figures involved in these several stated averages in any similar manner to that in which you sought to correct the figures given for the North American companies in Wisconsin? A. The particular work that was done on this table was done by a rate specialist in my office at The North American Company, who is one of extremely wide experience in rate matters, many years ago was a rate specialist with the Colorado Public Utilities Commission, has been for a 9332
number of years a member of the rate committee of the Edison Electric Institute, and now is, in his capacity as rate specialist at the North American Company, a person abreast of and intimately familiar with rate practices of virtually all companies in the country.

He has supervised the taking off of these data from the Federal Power Commission reports, has made or supervised these calculations, and discussed this thing a great many

times with me when we were laying out and developing this study, and to his knowledge and his experience, which is 9333
much broader than mine, no such case has come to his attention.

Q. So that the only correction for deviations from the filed rates which you have seen fit to make in this table is the deviation in respect of the North American subsidiaries indicated, namely, Wisconsin companies? A. And in the case of the Wisconsin Michigan system, only in the case of the Wisconsin Electric Power Company, which is the only one of those three companies which has the "10 for 1" plan in operation.

9334 *Elmer L. Lindseth—By Respondents—Cross*

Q. Now, with respect to Respondent's Exhibit 140, which purports to reflect the evolution of electric transmission in certain areas served by The North American Company subsidiaries, of course, except to the extent that you noted in your answers to the questions I have already asked you upon this exhibit, no transmission lines not owned by operating companies of The North American Company System are shown on the exhibit? A. Is your question directed to what lines in addition to those we discussed this morning might be
9335 shown?

Q. Yes. I understand there are none. A. Other than the two lines we discussed this morning, to my knowledge there are none.

—7,251—

Q. Of course, as far as that portion of the exhibit designating the situation in 1910 is concerned, it is impossible to tell from an examination of the exhibit what transmission lines exist in the territory which were not owned by subsidiaries of the North American system? A. Well, that comment would prevail not only as of 1910 but throughout the
9336 entire period of evolution. Lines owned by companies other than those in the North American system are not, of course, shown.

Q. And no distinction is made upon the exhibit purporting to show the evolution of these electric transmission lines as between transmission lines acquired by North American companies and transmission lines constructed by North American companies? A. No such attempt is made, no.

These lines will include the lines built by all predecessor companies of the present North American properties.

Q. So that possibly this exhibit might be more properly captioned as the evolution of ownership of electric transmission lines by The North American Company within certain areas, is not that true? A. No, I do not believe I could quite agree with that, because these drawings have been, in all cases, sent to the field to be checked by the engineering departments of these companies, and they do faithfully reflect those lines which were present in the areas now served

—7,252—

by the present company in the North American system. 9338

So that a blank spot in the middle of Missouri, in the 1910 map, may be taken as adequate evidence that there were no such lines there in 1910, whether of our ownership or the ownership of any predecessor company now making up either the Union Electric of Missouri or Missouri Power & Light.

Mr. Binford: I have no further questions to ask of Mr. Lindseth and do not expect to have any further questions; however, I would like to make the same reservation as heretofore in respect of further cross examination.

9339

Mr. Browning: As usual, we object to the reservation.

Redirect Examination by Mr. Browning:

Q. Mr. Lindseth, I am not sure that the record is entirely clear as to what this map purports to show. If I understand the situation correctly, the map shows the transmission lines which existed in those service areas at the time in question, even though they were owned by a predecessor company? A. That is a correct understanding.

9340 Q. So that, in other words, the map which is captioned "1910" shows all of the lines which existed in those service areas at that time, and similarly in the case of each of the other maps? A. That is correct.

—7,253—

Q. And you want your testimony in response to Mr. Binford's questions to be so understood? A. Yes.

Mr. Browning: Off the record.

(Discussion off the record.)

9341

By Mr. Browning:

Q. Am I correct, Mr. Lindseth, in understanding that the map is intended to relate only to the present service areas of the subsidiaries, in other words, that you are not purporting to show either the presence or absence of lines outside of those service areas? For example, no lines are shown in the state of Minnesota; you are not purporting to show either the presence or absence of lines in Minnesota? A That is correct.

9342 Q. What you are purporting to show is the development of transmission in the present service areas of the subsidiaries, and therefore you have shown all lines which existed in that area on the respective dates, whether owned by present companies or by predecessor companies? A. That is correct.

Mr. Binford: I would like to ask one or two questions that I failed to ask a moment ago.

The Examiner: All right.

—7,254—

Recross Examination by Mr. Binford:

Q. With reference, Mr. Lindseth, to Respondents' Exhibit 141, I note that the figures given there purport to be for cities of 50,000 population and more served by privately-owned electric utilities. You have no comparable figures in respect of cities of like population served by publicly-owned utilities, have you? A. The data are, of course, all available from the original source, the Federal Power Commission typical electric bills in cities of 50,000 population and more. 9344

Q. Why do you restrict your comparisons here to privately-owned electric utilities? Is the comparison more or less favorable than if you included the municipally-owned utilities, in respect of the North American subsidiary companies showing? A. Well, that cannot be determined,—and refer to a comparison of bills between a city served by a privately-owned utility and a city of similar size served by a publicly-owned utility,—because of the inadequacy of municipal or publicly-owned rates, as a basis of estimating the total cost to the consumer.

For example, there is a very marked tax differential, well known, as between publicly-owned utilities, which pay ordinarily no taxes, and privately-owned utilities, which do, and 9345

of necessity include in their bills and charges enough revenue to meet their tax bill.

Q. Well, conceding that there are such different factors involved as to raise doubt as to the propriety of the comparison, yet nevertheless is it not true there are numbered among the cities which have the lowest rates, of the classes

9346 shown on Exhibit 141, cities which are served by municipally-owned or governmentally-owned utilities, that is, conceding that you may have an argument as to whether or not that is a proper comparison or not, but leaving that argument aside for the moment? A. If we speak of the bill alone——

Q. Yes. A. (Continuing)—and which, of course, anyone conversant with rates and charges in the industry knows is in the case of publicly-owned utilities only a part of the
9347 cost of service to the consumer. There are but 21 cities in this size group which have publicly-owned plants. Among those twenty-one are certainly some which do have a lower bill to the consumer for a given amount of electricity than some of the subsidiaries of registered holding companies, some of The North American Company system properties, or some of the companies not subsidiaries of registered holding companies, but the inadequacy of the comparison is obvious.

—7,256—

The bill for electric service alone is only a part of the cost of service to a consumer when he takes service from a
9348 publicly-owned body.

Q. But if the bill alone were taken into consideration and municipally-owned and other governmentally-owned services were taken into account in the Exhibit 141, the rates would average lower than they do as now computed, is that not true? A. Well, I think it might then be necessary to add an additional column, because these columns, none of them are so captioned as to permit the inclusion of a publicly-owned utility under any of these headings.

Q. Do you know whether the electric utility system in Chattanooga is publicly or privately owned, Chattanooga,

Tennessee? A. Yes, Chattanooga, Tennessee is one of the cities in this group served exclusively by a publicly-owned utility.

Q. Are not the rates there the lowest or next to the lowest of any in a city of over 50,000 population in the United States? A. There are included in this table, as a basis for comparison, in the column "Subsidiaries of All Other Registered Holding Companies," a city which has lower rates than Chattanooga, Tennessee.

Q. What city is that? A. Cincinnati, Ohio. 9350

—7,257—

Q. Which is served by what system? A. Columbia Gas & Electric, Cincinnati Gas & Electric Company.

Q. Is there included within this tabulation any city of over 50,000 population served by the North American system which has lower rates than the city of Chattanooga? A. A. The city of Cleveland, Ohio, with which I am quite familiar, has rates, at 15 kilowatt hours per customer, which are 60 cents per month. No city in the United States, either publicly or privately, has a lower rate at 15 kilowatt hours per month than does Cleveland, either the rates of the 9351 Cleveland Electric Illuminating Company or the municipal plant at Cleveland, both of which are equal.

Q. Is that true as to 25 kilowatt hours per month, and 100 kilowatt hours per month, and the classifications shown upon your Exhibit 141? A. That would not be true at any of those three uses.

Q. So that comparisons may be favorable or unfavorable to a large extent depending upon the units of kilowatt hours per month that you choose at the point at which to make the comparison, is that not true? A. The fallacy to which

9352 *Elmer L. Lindseth—By Respondents—Recross*

you refer is a fallacy which fails to consider the range of uses and an average of a substantial number of companies.

This exhibit purports to do only one thing; it purports

—7,258—

to compare the rates and charges for the average of twelve cities served by The North American Company with the rates and charges in 186 cities of 50,000 population and more served by privately-owned utilities.

It indicates, for example, that throughout the range of
9353 use, from 25 kilowatt hours per month to 250 kilowatt hours per month, the average rates of the twelve cities served by The North American Company are very substantially lower than the rates served by cities of that size class, whether served by subsidiaries of other registered holding companies or companies not subsidiaries of registered holding companies.

It is seen, for example, that companies not subsidiaries of registered holding companies charge 30 per cent. more for the same amount of energy than do North American Company properties. That is the purpose of the exhibit, and
9354 that is demonstrated herein.

To compare a publicly-owned utility, subsidized in substantial measure in its cost of service, is not a part of this exhibit, nor is it a valid comparison; but these companies are all private enterprises, doing business in industrial and other metropolitan communities of this size class, under substantially equal conditions, the American competitive system; they are within the ability to compare, and especially the more so when we consider averages of very substantial number, such as twelve North American Company cities, almost

—7,259—

one hundred cities subsidiary of registered holding companies, and thirty or forty cities served by companies not subsidiaries of registered holding company.

Q. But you are not prepared to state that the companies compared have uniform rate schedules, that is to say, that the point of decrease per kilowatt hour, let us say, in a block system, is the same in the case of each company in the table, or anything of that character, as I believe you have already illustrated by your statement relative to taking Cleveland at 15 kilowatt hours per month and making a comparison; 9356
that is to say, the change in rate per kilowatt hour occurs, does it not, at different points in the rate schedules of these different companies that are listed? Do I make my question clear? A. Well, it is a pretty long question by now. Perhaps we could have it read back.

(Whereupon, the pending question was read back by the reporter.)

The Witness: With regard to the uniformity of rate schedules, and any feeling on my part that these companies might serve under schedules which have a 9357
break, so-called, at a uniform point, I can say unequivocably, of course, that these have a wide variety of such schedules and that they do not in any sense of the word have a uniform point at which the rates do

—7,260—

reduce.

Q. Now, the cities of 50,000 population or over, the statistics concerning which enter into the figures shown on Exhibit 141, include all cities of 50,000 population or over

9358 *Elmer L. Lindseth—By Respondents—Redirect*

in the United States which are served by privately-owned electric utilities, or do they not? A. Yes, the 186 cities included as of 1941 are all the cities in the United States of population of 50,000 or above served by privately-owned utilities.

Q. And that means all not served by municipally or governmentally-owned electric utilities? A. That is right. There are thirteen additional cities not included in this table served exclusively by municipal or other publicly-owned
9359 utilities.

Mr. Binford: Subject to the reservation heretofore made, I have no further questions of Mr. Lindseth.

Further Redirect Examination by Mr. Browning:

Q. Mr. Lindseth, are the categories of kilowatt hours shown here, that is, 25, 100 and 250, standard categories used by the Federal Power Commission for comparative purposes? A. Yes, they are.

Q. Is that the reason that you picked them? A. That is.

9360 Q. Counsel asked you about comparisons with publicly-

owned utilities. If your companies paid no taxes, were subsidized as to capital and did not need to maintain honest depreciation accounts, could your rates be lower?

Mr. Binford: Objected to, on the ground that no proper predicate has been laid for the hypothetical question propounded, and that no such facts have been shown to exist, particularly as to inadequate depreciation, that is, in respect of any particular

publicly-owned electric utility system, or of publicly-owned electric utility systems in general.

The Examiner: Objection sustained.

Mr. Browning: Mr. Examiner, I submit that it is a well known fact that many public utilities take no depreciation, or inadequate depreciation. It is a matter of common knowledge.

The Examiner: Does not that really call for a conclusion of the witness?

Mr. Browning: Counsel is pressing or is attempting to press a comparison which is obviously unfair. 9362

If the North American companies paid no taxes, it would obviously make a tremendous difference.

Mr. Binford: It has not been shown in this record——

Mr. Browning: (Interposing) I want to show, by asking this witness.

Mr. Binford: (Continuing) —that the municipally-owned utilities do not pay the equivalent of some taxes in some form.

—7,262— 9363

Mr. Browning: I think counsel knows.

The Examiner: Let us go back and read the question as propounded.

Mr. Binford: I insist upon the objection.

The Examiner: I beg pardon?

Mr. Binford: I insist upon the objection.

The Examiner: I understand. I want to reconsider it and see what the question was as originally made.

9364

Will you read the question, please?

(Whereupon, the pending question was read back by the reporter.)

The Examiner: Off the record.

(Discussion off the record.)

The Examiner: In view of the discussion which has followed, I think that question, after hearing it reread, should be rephrased. I concede that part of it may be proper and relevant and part not.

9365

I will let you rephrase it, Mr. Browning.

By Mr. Browning:

Q. Mr. Lindseth, do you know that many, if not all of the publicly-owned systems pay no taxes? A. Yes, I know that to be a fact.

Q. If the North American companies paid no taxes, could they reduce their rates materially? A. Yes, they could.

9366

I have here, as of 1940, the relationship between the

—7,263—

taxes paid by the electric utilities of several of our properties as related to the electric operating revenue of those properties.

In the case of the Union Electric Company of Missouri and subsidiaries, for example, as of 1940, the taxes charged to electric operations were equivalent to 18.7 per cent. of electric operating revenue.

9367

In the case of Missouri Power & Light Company, the taxes charged to electric operations were 16.5 per cent. of electric operations.

In the case of Kansas Power & Light Company, the taxes charged to electric operations were 20.2 per cent. of electric operating revenues.

Another group here, in the Wisconsin Michigan system, the electric, so-called electric taxes, that is, those taxes charged to electric operations, were $6,400,000, which were equivalent to 22.4 per cent. of electric operating revenues.

9368

Were these properties exempt from those taxes and were the rates and charges throughout reduced on an ad valorem basis, that is, assuming that the electric taxes were spread equally over all classes of business, the system could show the same net operating income, the same net for common, that now prevails, with a reduction of 22.4 per cent. in rates.

I can say unequivocally that were these privately-owned utilities in Exhibit 141 exempt from taxes, due to that alone

—7,264—

their rates would be below the average for electric utilities in the country.

9369

Were they further to benefit from grants from the Federal Government in the amount of 45 per cent. of the cost of additions built subsequent to the date when the Federal Government began subsidizing such plants and were such capital available free of charge, without taxes, without interest, then the comparison would be even far more favorable to electric utilities because of the inherently more economical operation and greater efficiency.

Mr. Browning: That is all.

9370 *Elmer L. Lindseth—By Respondents—Recross*
David Friday—By Respondents—Direct

Further Recross Examination by Mr. Binford:

Q. The conclusion, from what you last said, which you make is, is it not, inevitably that by reason of their freedom from taxation, municipally-owned plants should, if efficiently operated, be able to supply electric current to consumers at substantially lower rates than privately-owned plants? A. With free capital in the amount of 45 per cent. of the cost of plants and with freedom from taxes, which
9371 might average 20 per cent. of electric operating revenues, and under your further hypothetical premise, which is rather difficult to concede could happen, namely, that they should be under a basis of equal efficiency or economy, then obviously for the same net income that property which has exemption from taxation and free capital must have lower reve-

—7,265—

nues.

Q. I take it you believe in private ownership of electric utility systems? A. That is a valid conclusion.

9372 Mr. Binford: No further questions.

Mr. Browning: That is all.

(Witness excused.)

Mr. Browning: Dr. Friday.

Whereupon, DAVID FRIDAY, called as a witness on behalf of the Respondents, having first been duly sworn, took the stand, was examined and testified as follows:

Direct Examination by Mr. Browning:

Q. Will you give the reporter your name and address, please? A. My name is David Friday, and my address is 4525 Garfield Street, Washington, D. C.

Q. What is your present occupation, Doctor? A. My present occupation is that of a consulting and advisory economist and official in some research organizations.

Q. How long have you been a research and consulting economist? A. Merely that?

—7,266—

Q. Merely that. A. Well, since 1925.

Q. What positions do you hold at the present time in the general field of economics and social sciences? A. I am at the present time director and chairman of the board of the 9374
National Bureau of Economic Research, and I am on the general economics committee of the Social Science Research Council; the principal one, as chairman of the board of the National Bureau of Economic Research.

Q. How long have you been a director of that organization? A. Since its inception, that is, some 21 years now.

Q. And were you president of it? A. Yes, I was president of it for two years, from 1938 to 1940.

Q. Can you tell us any economic organizations of which you are a member? A. Well, I am a member of the American Economic organization and Econometrics Society, that is, 9375
of Great Britain, and American Statistical Association.

Q. Are you a member of the American Academy of Social and Political Sciences? A. I am a member of the American Academy of Social and Political Sciences, yes, sir.

—7,267—

Q. Will you summarize, briefly, your experience in the field of economics and the social sciences? A. Well, I was educated at the University of Michigan and graduated there in 1908, and was made an instructor there in economics, in

that year, and taught economics; and from 1908 to 1911, I also taught a course in public finance there, in two of those years.

In 1911, I undertook the courses in accounting and retained one of the advance courses in economics and a course in public finance.

In 1912, I became an associate professor there in economics and finance, and in 1913, a full professor, and in 1914, became secretary of the courses in commerce. That
9377 was the administrative position at the head of the commerce courses there.

I left the University of Michigan in 1916, and went to New York University, where I was in charge of the graduate courses in value and valuation and also the course in public finance; and in 1917 I became head of the department of economics at New York University.

I left the University work in 1918, in the spring of 1918, April, 1918, to come to the United States Treasury, as economic and statistical advisor there, and plan the war
9378 taxes.

From there I went, in September 1918, to the Telegraph

and Telephone Administration, which was in the Post Office Department, under Postmaster General Burleson, and was advisor in the matter of awarding compensation,—determining compensation for the telegraph and telephone companies during the period of government control, which lasted from January, 1918 to July, 1919.

In September, 1919, I returned to the University of Michigan, as professor of economics and finance, and had

charge of the courses in credit, price levels and business cycles. I remained there until the summer of 1921, when I became president of Michigan Agricultural College, and I was president there for two years, until 1923.

At the end of that time I came to Washington, D. C., and became director of research in the National Transportation Institute, and also lectured at Brookings Graduate School in public finance, and I was there until 1925, when I went to Europe.

Q. Have you acted as advisor to any governmental or 9380
state commissions or authorities? A. Yes.

I was economist in 1911 to the Commission of Inquiry into Taxation. That was a special legislative commission of inquiry appointed.

In 1912 I was advisor to the Attorney General of the state in a 2-cent passenger rate case which he was trying.

—7,269—

In 1914, I was employed by the State Railroad and Public Utility Commission in connection with some matters in electric utilities, particularly Consumers Power Company. I 9381
wrote a corporate history of the Consumers Power Company for the commission there and determined its going value, and later in the year 1914 I was employed by the same commission in the matter of the reorganization of the Pere Marquette Railroad and rewrote the property accounts and income accounts and made a valuation of all their land and right-of-ways in charge of that valuation.

In 1918, as I said, I was with the United States Treasury planning war taxes, and then I went with the Postmaster General.

9382 *David Friday—By Respondents—Direct*

In recent years I have been purely in advisory work and have been employed by the United States Government in various valuation cases involving taxes, particularly.

Q. Did you act as economist for various industries in connection with the N. R. A.? A. Yes. During the N. R. A., the formulation of the codes, I was employed by the retail industries, that is, the National Retail Dry Goods Association and the hardware group, shoe retailers, hardware retailers, and was the economic advisor in connection with the
9383 formulation of that general retail code.

I was also employed by the Retail Tobacco Dealers Association, and was their economist in the matter of the formu-

—7,270—

lation of the code and the marketing agreement.

I might say that in 1921, when we had the Congressional inquiry into agriculture, I was employed as an economist to that committee in its work.

—7,271—

Q. Doctor, from 1910 to date have you appeared as a witness on various economic matters before various courts
9384 and commissions? A. Yes, I have.

Q. Will you mention briefly some of your writings in the field of economics and social science? A. Well, I was teaching at the University of Michigan and I published a book on Reading in Economics. In 1920 I published a book on Profits, Wages & Prices. I also published and prepared Problems in Accounting. I was teaching in that field.

Q. Have you written articles on economic subjects for various magazines? A. Yes.

Q. What professional journals? A. Professional journals, The Journal of Political Economy which is a Chicago University publication; the Quarterly Journal of Economics which is a Harvard publication; The American Economic Review which is an organ of the American Economic Association and The Annals of Social and Political Science. I was assistant Editor on the last named publication from 1921 to 1927, The Annals of Social and Political Science.

Q. Have you also written articles in general magazines on economic subjects? A. Yes. 9386

—7,272—

Q. Can you give us some names? A. The Atlantic Monthly, Manchester Guardian Commercial which is published in Manchester, Review of Reviews, World's Work, the Saturday Evening Post. I wrote quite a number of articles for the New Republic, in fact, I was a contributing Editor on that magazine from 1922 to 1926.

Q. Doctor, will you please mark this printed document titled "Area of Region" as Respondent's Exhibit No. 142.

The Examiner: No. 142 9387

By Mr. Browning:

Q. Did you prepare this report, Respondents' Exhibit 142 for identification? A. I did, yes, sir.

Q. Did you have the assistance of Dillon Glendinning? A. Yes, sir.

Q. Will you tell us who Mr. Glendinning is? A. He is a special research assistant in economics in the graduate school of Princeton, and held that position during the past year.

9388 *David Friday—By Respondents—Direct*

Recently he has been appointed fellow in social sciences for the coming year.

Q. Does this report accurately represent your views on the subject matter contained therein, Doctor? A. Yes, sir.

Mr. Browning: Mr. Examiner, just before offering this report as an Exhibit, I should like to state that our purpose in offering it in this form was to meet the Commission's request for saving time. It made

9389 no difference to me whether we examined the witness on the subject matter as to his views on the matter, or submitted a written report, but we have taken the second alternative in view of the Commission's express desire to save time.

In offering it in evidence I am, of course, in effect offering it as a written statement of the evidence which Dr. Friday would give if questioned to each statement contained in the report.

With that understanding as to the purpose I offer this report as Respondents' Exhibit No. 142.

9390 Mr. Bindford; I object on the grounds, first, it would appear that the exhibit consists of conclusions and opinions of the writer thereof as to matters which must in of themselves be ultimate conclusions in this proceeding to be made by the Commission rather than to be submitted as purportedly evidentiary matter; secondly, numerous statements of fact, that is to say, of broad ultimate fact, for example, the statement of the number of passenger cars, the number of trucks owned on farms, appearing on page 19 of the Exhibit,

9391

that is merely an example, are set forth in this booklet, while no proper predicate has been made for the making of such statements by this witness.

This is an unsworn publication. If it is to be permitted to be submitted and received in evidence in this case, it would appear that the only manner in which it could be properly received would be as a

—7,274—

brief or argument rather than as an exhibit in evidence.

9392

Now, as the Examiner will have noted, this booklet is fairly lengthy. There are ten exhibits there too. This is the first time that counsel for the Division have been favored with a copy of it and I therefore wish to reserve the right after examination of the booklet to further particularize the ground of the objection thereto if necessary, but it seems to me apparent that if this work is to be used in this proceeding, its proper reception is not by way of evidence; not conceding, however, that it could be received as a brief, but if it is receivable as anything it seems to me that is the character in which it should be received.

9393

Mr. Browning: Taking up counsel's objections as I understand them, the first was that the report contained ultimate conclusions. What this report is, of course, is the report of an expert economist.

Mr. Binford: I object to the use of the term "Report". There has been no sworn statement in this testimony that this is a report of anything. On its

9394 *Colloquy*

face it purports to be an interpretation of the phrase —area or region, presumably as used in the Public Utility Holding Company Act of 1935, in fact, the first paragraph of the pamphlet so indicates.

The Examiner: Let counsel finish his argument, Mr. Binford; then you can make one.

Mr. Browning: A report on the economic significance of the region and the reason that we are sub-

—7,275—

9395 mitting it is that one of the tasks of the Commission, and ultimately the courts, will be the construction of this statute. Now one of the phrases in the statute is the phrase "Area or Region". We are submitting this evidence as to the economic view of a region so that its relevancy is obvious.

Counsel objects that there are numerous statements of facts. I submit that the statements of fact contained in the report are only those which Dr. Friday could testify as an economist, and as I stated, my endeavor had been to accept the invitation of the

9396 Commission. The Chairman at the last hearing asked if we could submit something in report form and we do it and the practice is immediately attacked.

A further objection was made that the statement was unsworn. We have asked the witness to state under oath as to whether the report states his views. That was reaching the same result as if we had testified as to all the matters contained in the report.

As to counsel's final remark that he might, or might not have further objections after a thorough

examination of the report, it might well be advisable to take a short recess while both counsel and the Examiner examine it because it is really quite brief, and finally may I say that counsel's whole argument goes again to the weight of the evidence.

The Examiner: Now Mr. Binford, do you want to renew your comments about whether this is a report, and have you anything further to say?

—7,276—

Mr. Binford: Yes. This appears to be, as far as a 9398
brief survey of it will show, an attempt to urge certain interpretations of the phrase "Area of Region" as used in Section 2 (a) (29) of the Public Utility Holding Company Act of 1935. In fact, in the introduction of the report, the second sentence is as follows: "We are concerned here only with the meaning of the phrase 'Area or Region' as used in the above mentioned provision of the Act," referring to Section 2 (a) (29).

If that isn't a subject for a legal argument, I don't 9399
know what it is, and as far as Chairman calling for any invitation or issuing any invitation for submission of reports, I am not in agreement with counsel for the Respondents if his impression of that request was that reports be submitted by that name which in effect were briefs. The question in issue is one of law as distinguished from a summary of facts which might be proper for the Examiner to receive in evidence. We might as well receive in evidence mere books, law review articles, treatises by economists other than

9400 *Colloquy*

Dr. Friday, and specimens of political science as well as legal arguments not written by economists as to receive this. It is wholly argumentative and based upon the opinion of these two gentlemen who appear to be the authors as to the meaning of the words of the statute. There is no place in evidence for it whatsoever.

Mr. Browning: Could I clarify the issue. Of course counsel and I are going to argue later before the

9401 Commission as to the proper construction of the sec-

—7,277—

tion of the statute. There is no question about that. The purpose of this report is to put into the record the economic meaning of the word. We will argue later as to the entire question of statutory interpretation. We certainly are entitled to put in economic evidence on that subject.

Mr. Binford: May I ask if counsel also intends to furnish lexicographer to introduce further evidence as to the meaning of words.

9402 The Examiner: Well, gentlemen, on objections of this sort the rule contemplates that they should be in short form, and I have let you gentlemen make these statements in order that your position is made clear in the record. Now we will go off the record for a while. Before doing so, I want to say that I will accept counsel's invitation to examine this for a few minutes and it might be well for the counsel for the Division to do so likewise, so we will go off the record while we look at this, while we review this article.

(Whereupon a short recess was taken.)

The Examiner: I will reserve a ruling as to the admissibility of Respondents' Exhibit 142 for identification. 9403

Mr. Browning: Just to have the record clear, Mr. Examiner, for your ruling on the matter, I understand that counsel's objections are not directed to the form, that is, the fact that a written report is offered in lieu of detailed testimony with questions and answers, but it is rather to the contents of the docu-

—7,278— 9404

ment itself.

Mr. Binford: That is correct.

By Mr. Browning:

Q. Doctor, you have stated that the report accurately reflects your views on the matters set forth therein? A. Yes.

Q. May I ask you specifically whether the map 10 annexed to the report specifies your views as to the correct limits of the middle west region.

Mr. Binford: I object upon the grounds that it is not shown that the correct bounds of any middle west region has been stated or implied in the question at issue in this case, therefore, the question calls for material that is irrelevant and immaterial. 9405

The Examiner: I will let him answer. I overrule the objection.

Mr. Binford: Note my exception.

The Witness: It does, yes.

Mr. Browning: That is all.

9406 *Colloquy*

Mr. Binford: I have no questions to ask of the Doctor at this time pending the ruling of the trial examiner upon the offer of Respondents' exhibit for identification, No. 142, and I reserve the right for cross examination.

The Examiner: Very well, the witness may be excused.

(Witness excused.)

9407 The Examiner: Before adjoining, I would like to get from Mr. Binford something further on the ques-

—7,279—

tion of the admissibility of the four sheets, Respondents' Exhibit No. 124, and the testimony of Mr. Freeman on related matters, as to which I have reserved a ruling.

Mr. Binford: Mr. Examiner, the last that was said by way of argument in that connection was Mr. Browning's remark to the effect that the argument made by me was one which should be fundamentally

9408 addressed to the weight to be given to the exhibit rather than its relevancy. I can't concede that position. What this exhibit does is to bring into this present case the size of industries for comparison with the size of North American Company and I presume of certain of its divisions, that is to say, the North American System rather than the corporate organization, which are proof of nothing but the fact that there are other organizations in the world as large, or larger than the North American Company.

9409

That doesn't without an examination into the efficiency of the operation of these companies, their manner of operation, tend in any way to prove that size increases efficiency, or decreases efficiency, or has any other bearing upon the operation of the company.

If this material is relevant, then it would be only appropriate and just that the inquiry be extended further into the intricacies and detail of the operations of these companies.

9410

The Examiner: I agree the point is whether or not these sheets and the testimony to which you objected is relevant; whether it will open up additional fields,

—7,280—

other fields, strikes me as being besides the point. The question is whether this is relevant or not, and not to whether it is going to open up other lines of investigation, other fields.

Mr. Binford: I was pointing out the latter point as showing not only was it irrelevant in the ordinary acceptance of the term, but it was irrelevant in that

9411

it had little meaning standing alone, that is, these data have little meaning standing alone, and could be relevant only in any acceptance to the term by the inclusion of such additional matter that it is beyond the bounds of possibility that such additional matter could be brought into a proceeding of this kind. I suppose that some fact can have some relevancy to any other fact in the world, but from a legal sense, one isn't relevant to the other.

9412 *Colloquy*

The Examiner: I don't know that it would necessarily open up any new fields. I was just thinking out loud for the moment. Have you anything further to add Mr. Browning?

Mr. Browning: Yes. I must say that the argument that the evidence which is offered goes into a new field as an objection to the relevancy is an argument that I have never heard before. I simply don't see what it has to do with its relevancy. The question is—
9413 does the evidence offered bear on the issues in the case. One of the major issues in this case could be paraphrased as—how big is too big? Our position is that you can't decide that question in a vacuum and any one before deciding it, deciding the question, should

—7,281—

start with an open mind and shouldn't just arrive at the decision by bringing down some answers from the blue sky. For example, as regards area, people have preconceived notions what is big. One of the reports recently prepared by the staff was very much con-
9414 cerned about the size of the U. G. I. area, which I believe was some three hundred odd miles square. The Kansas Power & Light Company, as the testimony in this case has shown, has one operating division that has three thousand square miles in it and they don't think anything of it in Kansas. Now, I don't think that we can decide these things in a vacuum. We have got to have some information, some bases of comparison. I submit that these figures which we have submitted are obviously relevant; they make you think about size. For instance, one of the tests of

9415

size which might be employed is number of employes. I don't think that the Examiner any more than I did realized the number of employes a great many of these leading businesses have. I can conceive of a person who had not gone into the matter believing that $5,000,000 would be a big utility; it represents only a generating unit today.

I really think that counsel's objection is directed to the weight which is a matter of argument later.

9416

Mr. Binford: May I gave you an illustration of what I mean?

The Examiner: Yes, Mr. Binford.

Mr. Binford: Suppose that a doctor diagnosing a case tells a lady that she is over weight and should reduce. It certainly seems to me that it doesn't aid

—7,282—

in his diagnosis or his treatment for the lady to point out that Mrs. Jones in the next town was just as fat, or more than the patient.

9417

The Examiner: If that is an apt illustration, it doesn't weigh much then, does it?

Mr. Binford: It doesn't weigh much but it is so irrelevant it shouldn't be in.

Mr. Browning: May I develop that. The Doctor's opinion on the lady's weight is based upon his knowledge of the weight of both men and women in thousands of cases with complete statistical information in front of him as a result of which he reaches his opinion. If counsel's hypothetical patient told the doctor that there were a number of people her weight who were more healthy since they had gained that

9418

weight, or who were perfectly healthy and gained that weight, that these people lived all around her, he would be a pretty poor doctor if he didn't consider it, so I could take his own analogy.

I don't want to be met with the contention when we argue this size matter that we had the opportunity to put in evidence as to the size in other industries and didn't do it and that is just exactly the contention, not that this counsel would make, but that his successors would make.

9419

The Examiner: I thank you gentlemen for the arguments that you have made and they will help me in deciding the matter.

I understand that counsel in an off the record discussion have agreed that this matter shall go over to next Tuesday at 10:00 o'clock, a.m. at which time I

—7,283—

will dispose of the matters that I have under consideration.

9420

(Whereupon, at 4:30 o'clock, the meeting was adjourned to reconvene on Tuesday, April 15, 1941.)

—7,284—

BEFORE THE

Securities and Exchange Commission

DOCKET NO. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.*

Hearing Room 622,
Securities and Exchange Commission Building,
18th & Pennsylvania Ave., N.W.,
Washington, D. C.,
Tuesday, April 15, 1941.

Met, pursuant to adjournment, at 10:00 o'clock a. m.

Before: WILLIAM W. SWIFT, *Trial Examiner*.

Appearances:

S. PEARCE BROWNING, JR., and
CHARLES S. HAMILTON, JR., of Sullivan & Cromwell, 48 Wall Street, New York, New York, appearing for the Respondents.

RALPH C. BINFORD, appearing for the Securities and Exchange Commission.

9424 *Colloquy*

PROCEEDINGS

The Examiner: The hearing will come to order.

Mr. Browning: I should like the record to show at this time, Mr. Examiner, that we are furnishing to the staff corrections from page 1032 to page 6218, inclusive, of the record. I believe that these corrections cover all the testimony up to the end of March, although I am not certain as to the exact day when
9425 they end.

In any case, we will expect to furnish the staff as promptly as possible with the corrections for the remaining portion of the record.

Meanwhile, it is our suggestion that the staff go over these corrections, with a view to advising us as to their approval or disapproval thereof or any additional corrections which the staff desires made, and we would then suggest that the corrections be made in the record.

Mr. Binford: That procedure is acceptable to us.

9426 The Examiner: All right, I think it is very desirable that these corrections be attended to.

I will wait until the Commission's staff check over this list, and perhaps there will be some additional corrections, at which time we will enter the corrections on the record as part of the record.

Mr. Browning: Off the record.

(Discussion off the record.)

—7,286—

Mr. Browning: Could we have it understood, Mr. Examiner, that even though the record is closed before

9427

the staff has had an opportunity to complete its work on the corrections or before we have had a chance to submit the final list, that the corrections can be supplied later and that the record will be reopened for that purpose?

Mr. Binford: That is perfectly agreeable, and we so stipulate.

The Examiner: All right.

Off the record.

9428

(Discussion off the record.)

Mr. Binford: Let the record show that counsel for the Commission are making no request that any further minutes of the two intercompany committees which have been mentioned in this proceeding are requested to be put in evidence, and counsel for the Commission is undertaking to return the series of minutes which were delivered to the staff for inspection.

Mr. Browning: Off the record.

9429

(Discussion off the record.)

The Examiner: With reference to the question of the admissibility of Sheets C, D, F and I, which form a part of Respondents' Exhibit 124, and the motion to strike which Commission's counsel has lodged against a small portion of the Witness Herbert C. Freeman's testimony (Transcript Pages 7,012 to

—7,287—

7,014), I have reached the conclusion that such evidence is relevant and that the objections are really

9430

directed to the weight thereof, rather than to its relevancy.

The motion to strike is denied, and Sheets C, D, F and I are now admitted in evidence, along with the other sheets contained in Respondents' Exhibit 124 which have heretofore been received.

Mr. Binford: I respectfully except to each of the rulings of the Examiner contained in the statement last made.

9431

Mr. Browning: Off the record.

(Discussion off the record.)

The Examiner: Now Mr. Binford, turning to the other matter which I have under advisement, have you considered further the contents of the exhibit which was marked for identification as Respondents' Exhibit 142, and have you anything further to say about it?

I recall in some of your remarks you indicated you might like to particularize your objections.

9432

Mr. Binford: In view of the nature of the argument, it is difficult to particularize my objection any further than I have.

The Examiner: All right.

Mr. Binford: I still urge the objection.

The Examiner: Were this a legal proceeding rather than an administrative proceeding, the article in question would be clearly inadmissible. Since this

is an administrative proceeding, where commonly established rules of evidence are relaxed, and since

Dr. Friday and the co-author of the article, Mr. Glendinning, are available for cross-examination by Commission's counsel, if cross-examination is desired, I have reached the conclusion that the article is relevant in some aspects at least, although it is in places somewhat argumentative.

The said article is admitted in evidence as Respondents' Exhibit 142, subject however to the right of cross-examination not only of Dr. Friday but of the co-author, Mr. Glendinning. 9434

Furthermore, if anything develops on such cross-examination of these witnesses as may be had, the counsel for the Commission may move to strike if he considers that the situation justifies such a move.

Mr. Binford: I respectfully except to the ruling of the Examiner in admitting the exhibit in evidence.

In view of the fact that this document has been admitted in evidence, there are a few questions which I would like to ask Dr. Friday, if he were recalled.

Counsel will remember that I stated that I did not know whether I would have cross-examination until 9435 the Trial Examiner ruled as to whether the document was admissible or not.

Mr. Browning: Off the record.

—7,289—

(Discussion off the record.)

Mr. Binford: Now as to Mr. Glendinning, possibly it will not be necessary to cross-examine him, but I would like to have him available for cross-

9436 examination, so that if the cross-examination of Dr. Friday indicates that some questions are advisable to Mr. Glendinning, he can be examined at that time.

Off the record.

(Discussion off the record.)

Mr. Browning: From time to time, Mr. Examiner, Commission's counsel has reserved the right to recall each witness produced by the Respondents and we
9437 have objected to such reservation and you have reserved the ruling.

I understand that those motions will be considered withdrawn when the record is closed?

Mr. Binford: That is correct.

The Examiner: All right.

Mr. Browning: Off the record.

(Discussion off the record.)

Mr. Binford: Mr. Examiner, it is now about eleven o'clock, and I should like to request a recess of about
9438 an hour before we proceed further with this hearing.

The Examiner: All right, we will recess until twelve o'clock.

(Whereupon, a recess was taken, as above.)

—7,290—

(After recess) (12:10 p. m.)

The Examiner: We will resume.

Whereupon, DAVID FRIDAY, (Resumed) a witness produced by the Respondents, having previously been sworn, resumed the stand and testified further as follows:

9439

Cross Examination by Mr. Binford:

Q. Dr. Friday, I believe you testified you and Mr. Glendinning are the author of this Exhibit 142, entitled "Area or Region", which was put in evidence? A. Yes, sir.

Q. Mr. Glendinning is a "fellow" did you say, of Princeton? A. He was graduate student there, and is a fellow for this coming year; graduate student in the Graduate School and also assistant to Professor Frank Graham there.

Q. You testified before the Committee on Interstate and 9440
Foreign Commerce of the House of Representatives in opposition to the Public Utility Holding Company Act of 1935, did you not? A. Yes, sir.

Q. And whom were you representing at that time? A. I was representing the Holding Company Executives. The

—7,291—

Association of Holding Company Executives, I believe, was the exact name.

Q. You were, of course, a compensated expert on their behalf? A. Yes, sir.

Q. That is true at the present time, is it? A. That is true 9441
at the present time.

Mr. Browning: Off the record.

(Discussion off the record.)

The Witness: My statement in the affirmative was only directed to the question as to whether I was being compensated now as an expert.

I did not imply that I was being compensated by the Holding Company Executives, or whether I was working for them. I am not either one of those things.

9442 *David Friday—By Respondents—Cross*

By Mr. Binford:

Q. That is, not by the same Association of Holding Company Executives, but rather by The North American Company? A. By The North American Company, yes sir.

Q. Were you ever regularly retained as an economic advisor, or in any other capacity other than you have already mentioned, by the Committee of Public Utility Executives? A. No, sir.

9443 Q. Have you been retained at any time as an economic advisor to any public utility holding companies, or in any

—7,292—

other capacity? A. By holding companies?

Q. Yes, public utility holding companies. A. I have been retained by some operating companies. I do not remember any——

Q. (Interposing) What were the operating companies? A. Well, I was retained by the Georgia Power Company, the rate case there; I was retained by the New Jersey Public Service Company, in a rate case that they had; I was retained
9444 by Louisville Gas & Electric in 1933, in a rate case; and I was retained during the last year, that is, in March of last year, by Puget Sound Power & Light, in a condemnation case, involving the determination of the value of some property in Whatcom county, Washington, which property was being condemned by the Public Utility District of that county.

Q. Did you take the position in your testimony, in part, in opposition to the bill which eventually became the Public

Utility Holding Company Act of 1935, that the operations of public utility companies within the meaning of that measure, as distinguished from those of railways, for example, were so essentially local in character as to make them amenable to sufficient state regulation as far as the public was concerned? A. I do not remember what position I took on that particular question, whether I took any. I would have to

—7,293—

read the brief again, the brief I filed with the committee, which you have. I do not remember that. 9446

Q. You also testified orally in addition to filing the brief? A. Yes, sir.

Q. You would not say that you did not take that position, would you? You just do not recall. A. No, I would not say that.

Q. You speak in the treatise which was introduced in evidence as Exhibit 142, of a science of regionalism. When did you say that science had been developed and recognized as such? A. Yes, sir.

Mr. Binford: Please read the question. 9447

(The pending question was read back by the reporter.)

The Witness: Well, I do not remember what I said. I did make a remark to the effect that for over 50 years it had been in the making, but not in the economic sense so much as it is now. It is particularly over the last 20 years, and certainly very intensively over the last decade, that this has had activity.

9448 *David Friday—By Respondents—Redirect*

I, myself, of course, was interested in it 20 years ago, when I was at the Michigan Agricultural College, as president.

By Mr. Binford:

Q. Your occupation at the present time is that of con-

—7,294—

sulting economist? A. That is correct.

9449 Q. Your clients are industrial companies, primarily—mostly? A. No, they are not.

Shall I tell you who they are?

Q. If you wish. A. I have been engaged over the last four or five years primarily for individuals and the United States Government in matters involving the valuation of properties, particularly the stocks, for purposes largely of gift taxes, administering the gift tax law and the State tax law, and that does not involve employment by corporations, industrial or otherwise. It is either by the Government or by the person or persons that are obligated for the tax.

9450 Q. Is this Exhibit 142 your first monograph on regionalism? A. That is my first formal monograph on regionalism, yes, sir.

Mr. Binford: I have no further questions.

Redirect Examination by Mr. Browning:

Q. You were asked whether you have been compensated for your work here or would be compensated, and you replied in the affirmative. Does the fact that you are compensated or

—7,295—

will be compensated affect the views which you have expressed? A. No, sir.

Mr. Browning: That is all.

Mr. Binford: No further questions.

(Witness excused.)

The Examiner: Off the record.

(Discussion off the record.)

9452

Mr. Binford: Mr. Examiner, I suggest at this point that we recess until two o'clock.

The Examiner: Very well, we will now recess until two o'clock.

(Whereupon, at 12.30 o'clock, p. m., the hearing was recessed to reconvene at 2:00 o'clock, p. m. of the same day.)

—7,296—

9453

9454

Colloquy

(2:00 p. m.)

AFTERNOON SESSION.

The Examiner: Let us proceed.

Mr. Binford: Mr. Examiner, as the Rules of Practice of the Commission do not provide for an Examiner's report in proceedings of this character, it would appear that the next step in this proceeding, after the closing of this hearing, will be the submission to the Commission of requested findings of fact by

9455

counsel for the Commission and by counsel for Respondents.

In order that counsel for Respondents may be fully apprised of the nature of the findings which will be requested by counsel for the Commission, I think that it is appropriate that I state at this time, without undue particularization and without argument, the ultimate facts which counsel for the Commission will contend have been established by the evidence adduced in this proceeding, and in accordance with which position our requested findings of fact will be

9456

framed.

We take the position that the evidence herein establishes the following facts:

The holding company system of The North American Company is not confined in its operations to those of a single integrated public utility system within the meaning of the Public Utility Holding Company Act of 1935, and to such other businesses as are reasonably incidental, or economically neces-

sary or appropriate to the operations of such integrated public utility system.

—7,297—

The electric utility system of Potomac Electric Power Company and Braddock Light & Power Company, Inc. together constitute a single integrated public utility system. Washington Railway and Electric Company, the registered holding company, which is the immediate parent of Potomac Electric Power Company and which controls Braddock Light & Power 9458
Company, Inc., controls no other utility properties within the meaning of the Act. It has not been shown that the businesses of Capital Transit Company and the latter's subsidiaries, nor of Great Falls Power Company, are reasonably incidental, or economically necessary or appropriate to the operations of the integrated public utility system represented by properties and operations of Potomac Electric Power Company and Braddock Light & Power Company, Inc.

Cleveland Electric Illuminating Company's properties and operations constitute those of a single in- 9459
tegrated public utility system. The businesses of The Power & Light Building Company and the Ceico Company, subsidiaries of Cleveland Electric Illuminating Company, are reasonably incidental, or economically necessary or appropriate to the operations of the integrated public utility system of Cleveland Electric Illuminating Company.

Likewise, the steam heating business carried on by Cleveland Electric Illuminating Company, is, to its present extent and at the present time, reasonably

—7,298—

incidental, or economically necessary or appropriate to the operations of the integrated public utility system of that company.

The electric utility operations of Wisconsin Electric Power Company, Wisconsin Gas & Electric Company and Wisconsin-Michigan Power Company constitute those of a single integrated public utility system in so far as such electric utility operations are concerned.

9461 The businesses of the two non-utility subsidiaries of Wisconsin Electric Power Company, namely, Wisconsin General Railway Company and Milwaukee Electric Railway & Transportation Company, and the subsidiary, Badger Auto Service Company, of the latter, have not been shown to be reasonably incidental or economically necessary or appropriate to the operations of the integrated electric public utility system of which Wisconsin Electric Power Company's operations constitute a part. The heating business done in connection with the operation of this system appears, 9462 to its present extent and at the present time, to be reasonably incidental, or economically necessary or appropriate to the operations of the system.

Union Electric Company of Missouri is a registered holding company as well as a public utility company. The electric utility operations of Union Electric Company of Missouri and of its electric utility subsidiaries, namely, Union Electric Company of Illinois, Mississippi River Power Company, Iowa

Union Electric Company, Cupples Station Light, Heat and Power Company and St. Charles Electric Light and Power Company constitute those of a single integrated public utility system within the meaning of the Act.

Union Electric Company of Missouri has three active subsidiaries which are not utility companies within the meaning of the Act. These companies are Union Electric Land and Development Company, St. Louis & Belleville Electric Railway Company and St. 9464
Louis & Alton Railroad Company. The business conducted by Union Electric Land and Development Company is presently reasonably incidental, or economically necessary or appropriate to the operations of the integrated electric public utility system of the Union Electric Company of Missouri group. The businesses of St. Louis & Belleville Electric Railway Company and St. Louis & Alton Railroad Company are not reasonably incidental, or economically necessary or appropriate to the operations of such system. The heating business conducted by Union Electric 9465
Company of Missouri appears to be reasonably incidental, or economically necessary or appropriate to the operations of the Union Electric Company of Missouri group electric utility system. Union Colliery Company is a direct subsidiary of Union Electric Company of Illinois. The business conducted by Union Colliery Company does not appear to be reasonably incidental, or economically necessary or appropriate to the operations of the system.

—7,300—

9466 *Colloquy*

Union Electric Company of Missouri, as a registered holding company, must be required to limit its operations in accordance with what has been said.

Within The North American System proper, that is excluding for the moment properties in the North American Light & Power Company system, the Washington Railway and Electric Company system, the Cleveland Electric Illuminating system, the Wisconsin-Michigan system or the Union Electric
9467 Company of Missouri system might be retained by The North American Company as its single integrated system, but if any one of these systems be so retained by The North American Company, the retention of none of the others would be permissible by The North American Company as an additional system under the provisions of Section 11(b) (1) of the Act, and this would be true not only because of paragraph B of that section but also because such retention would not meet the requirements of either paragraph A or paragraph C of the Section.

9468 The business conducted by the non-utility subsidiaries of The North American Company, namely 60 Broadway Building Corporation, North American Utilities Securities Corporation and West Kentucky Coal Company (the New Jersey corporation) and the latter's direct and indirect subsidiaries are not reasonably incidental, or economically necessary or appropriate to the operation of any single integrated system presently controlled by The North American Company and the retention thereof, consequently, is

not permissible under the Act, regardless of what system is retained by The North American Company as its "principal" single integrated system.

Now as to North American Light & Power Company:

North American Light & Power Company is a registered holding company. The holding company system of North American Light & Power Company is not confined in its operations to those of a single integrated public utility system within the meaning of 9470
the Act and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of any such single integrated public utility system.

The retention by The North American Company of its interest in North American Light & Power Company cannot be justified as the retention of a public utility system or systems additional to any single integrated public utility system which The North American Company might retain as its "principal" integrated public utility system, nor could that interest be 9471
retained as constituting one in a business reasonably incidental, or economically necessary or appropriate to the operations of any such "principal" system.

North American Light & Power Company must be required to take such steps as shall be necessary to limit its operations to those of a single integrated public utility system and to such interests in other businesses and to such other additional systems as

9472

Colloquy

may, respectively, be permitted under the terms of the Act.

North American Light & Power Company has four direct subsidiaries which are public utility companies within the meaning of the Act. These are The Kansas Power and Light Company, Missouri Power & Light Company, The Blue River Power Company and Nebraska Natural Gas Company. The physical properties of Nebraska Natural Gas Company have been sold, or
9473 at least such sale has been approved by this Commission and is in process of consummation, so that Nebraska Natural Gas Company will have ceased to be a public utility company within the meaning of the Act within the next few days, and it has been stated that the company will be thereupon dissolved, and therefore any consideration of that company's operations will be unnecessary.

The Electric utility system of The Kansas Power & Light Company together with the facilities and operations of The Blue River Power Company con-
9474 stitute a single integrated public utility system within the meaning of the Act.

The heating business of The Kansas Power & Light Company, to its present extent and at the present time, would appear to be susceptible of retention by The Kansas Power and Light Company as an interest in another business permissible under Section (11)(b)(1), but the transportation, water service and manufactured ice business engaged in by that company are not reasonably incidental, or economic-

ally necessary or appropriate to the operations of its utility systems.

The electric utility system of Missouri Power & Light Company, with the exception of its properties and operations in Henry county, Missouri, constitute an integrated public utility system within the meaning of the Act. The facilities in Henry county are not interconnected with those of the remainder of the system, nor are the operations in that locality otherwise susceptible of inclusion within the integrated electric 9476
public utility system of the company.

The heating business conducted by Missouri Power & Light Company, to its present extent and at the present time, appears to be retainable as a business reasonably incidental, or economically necessary or appropriate to the operations of the electric utility system of Missouri Power & Light Company. The water business and ice business conducted by the Company would appear to be not so retainable.

North American Light & Power Company has two direct subsidiaries which are holding companies with- 9477
in the meaning of the Act and are registered as such. These are Illinois Traction Company and Northern Natural Gas Company.

Illinois Traction Company has four direct, active subsidiaries; namely, Cahokia Manufacturers Gas Company, Kewanee Public Service Company, Western Illinois Ice Company and Illinois-Iowa Power Company.

9478 *Colloquy*

The electric utility operations of Illinois-Iowa Power Company, conducted by it directly, as distinguished from those carried on by its subsidiaries operating in Iowa, with certain exceptions, constitute those of a single integrated public utility system.

The electric utility operations of Kewanee Public Service Company can be regarded as a part of this single integrated public utility system, in so far as retention of control thereof by Illinois Traction Company is concerned.

9479

The electric facilities of Illinois-Iowa Power Company in and about Jacksonville, Enfield, El Dorado and Shawneetown, and Mound City and Cairo, are not interconnected with each other nor with any other portions of the Illinois-Iowa Power Company's electric utility system, nor have they been shown to be so susceptible of interconnection therewith as to render the consideration thereof as a part of the single integrated electric public utility system of Illinois-Iowa Power Company and Kewanee Public Service Company permissible under the Act.

9480

Moreover, it does not appear that the retention thereof as systems additional to the large single integrated electric public utility system of Illinois-Iowa Power Company and Kewanee Public Service Company can be justified under paragraphs A or C of Section 11(b)(1) of the Act.

Western Illinois Ice Company does no business of a character which would justify the retention thereof

—7,305—

by Illinois Traction Company.

Illinois-Iowa Power Company, in addition to being a public utility company, is a registered holding company. Therefore, it, also, must limit its operations in conformity with the provisions of Section 11(b)(1) of the Act.

In addition to the single integrated electric utility system heretofore delineated and to the other electric utility operations, Illinois-Iowa Power Company has a subsidiary which is both a public utility company and a registered holding company, ~~namely,~~ Des Moines 9482
Electric Light Company, the sole subsidiary public utility company of which is Iowa Power and Light Company.

The electric utility operations of these two companies constitute those of a single integrated public utility system. The gas utility operations of these two companies, likewise, constitute those of a single integrated gas utility system.

Neither the gas utility system of the Iowa companies nor the electric utility system of such companies could be retained, under the standards of para- 9483
graphs A and C of the Act, by a holding company retaining the Illinois electric or gas utility systems of the Illinois-Iowa group; nor can such Iowa operations and Illinois operations be regarded as together constituting those of a single integrated public utility

system.

Illinois Terminal Railroad Company and Central Terminal Company are non-utility subsidiaries of

9484 *Colloquy*

Illinois Iowa Power Company. The businesses of these companies are not reasonably incidental, or economically necessary or appropriate to the operations of any single integrated public utility system which might be retained by Illinois-Iowa Power Company.

Northern Natural Gas Company is a subsidiary of North American Light & Power Company and is a registered holding company, its subsidiaries being Peoples Natural Gas Company and Argus Natural
9485 Gas Company, Inc., each a gas utility company.

It is my understanding that an application has been filed on behalf of Northern Natural Gas Company for a reclassification of its stock and that a disposition thereof is expected to be made in the very near future.

Under these circumstances, it may be unnecessary to give further consideration to these companies at this time.

Power & Light Securities Company is not susceptible of retention by North American Light &
9486 Power Company in connection with any integrated public utility system.

North American Light & Power Company must limit its operations to one of the single integrated public utility systems presently controlled by it. Except as has been previously pointed out in this statement, no two or more of such integrated public utility sys-

tems can be retained by North American Light & Power Company under the provisions of paragraphs A, B and C of Section 11(b)(1) of the Act.

Similarly, and with the exceptions heretofore stated, Illinois Traction Company must limit its operations to those of a single integrated system, as must Illinois-Iowa Power Company and Northern Natural Gas Company.

In view of the relative unimportance of the gas utility operations by the companies of The North American Company system, it would not appear probable that any one of such systems would be retained as the principal integrated utility system of any of 9488
the several holding companies in the system.

Evidence has been adduced upon the part of the Respondents tending to show that these numerous gas utility systems might be retained under the standards of paragraphs A and C of the Act as systems additional to the electric utility systems in connection with which they are presently operated.

I am not prepared at this time to state to what extent this appears to have been proven. It may be that counsel for the Commission will merely request specific findings of fact in this respect, leaving the 9489
ultimate question for decision by the Commission without any requested findings in respect thereto.

The Commission will be asked to enter an order directing The North American Company, North American Light & Power Company and each of the other

registered holding companies within The North American system to take such steps as may be necessary to limit their respective holdings and operations in accordance with the findings so requested.

9490 *Colloquy*

The status of Pacific Gas and Electric Company and that of The Detroit Edison Company are presently being litigated. It is the claim, in each case, of The North American Company that these two companies are not subsidiaries of The North American Company.

If these companies are finally determined to be subsidiaries of The North American Company, whether or not each constitutes a single integrated utility system within the meaning of the Act, neither
9491 could be retained by The North American Company as a system additional to any other system presently admitted to be controlled by it, because of the requirements of paragraphs A, B and C of Section 11(b)(1).

Furthermore, if the interest of The North American Company in these two utility companies is regarded as an investment, it is an investment, in each case, which cannot be retained by The North American Company under the provisions of Section 11(b)(1) of the Act.

9492 Mr. Browning: Off the record.

(Discussion off the record.)

Mr. Binford: Mr. Examiner, if counsel for the Respondent will place in evidence the following:

—7,309—

1. Consolidating balance sheets covering the entire system, that is, the system of The North American Company and all subsidiary holding companies and operating companies therein for the past three calendar years, 1938, 1939 and 1940, together with

operating statements for the same period covering all companies, and surplus analyses for the same period in respect of the same companies, such financial information to be submitted in the same form as required for the so-called U-5S statements of the respective years covered;

2. For the calendar year 1940, the same information relative to compensation of officers, directors and employes, as required by the U-5S statement of the Commission in force at the present time; 9494

3. A copy of the charter and by-laws of The North American Company as amended to the present time;

4. Certain statistics on certain operating subsidiaries for the year 1940, in form to be agreed upon by counsel; and

5. Certain data heretofore agreed to be supplied by Witness Hight on the expenses of the Decatur general office; counsel for the Commission will then withdraw, if satisfactory to counsel for Respondents, the documentary evidence heretofore offered on the part 9495 of the Commission, in its entirety, with the exception of the exhibits relating to the matters of notice of hearing, designation of trial examiner, service of

—7,310—

process, and other procedural rather than substantive matter.

Mr. Browning: Could I restate our understanding, simply to be clear?

I would prefer that the record show that counsel's exhibits, with the exception of the last mentioned

9496

procedural exhibits, are withdrawn upon the understanding which we now confirm, that the Respondents' counsel will furnish the additional matter which is tabulated above.

In other words, I would like the record to be clear that the Commission's exhibits are withdrawn upon that understanding.

Mr. Binford: That is satisfactory to us, on the furnishing for the record of the information so suggested in my previous statement.

9497

The Commission's exhibits, with the exception mentioned, will be deemed to be automatically withdrawn from this case.

Mr. Browning: As to the time of furnishing the information requested, I should like to leave it that we will do our very best under the circumstances.

As we have pointed out, certain of the information may not be quite ready as yet. We will furnish the information as promptly as possible.

Mr. Binford: Well, of course, we expect them to

9498

be furnished in a reasonable length of time, at such time as can be referred to if necessary in any findings

and briefs that may be filed.

Mr. Browning: Off the record.

(Discussion off the record.)

The Examiner: When this data is supplied, it will be incorporated in this record by me, as soon as received, under appropriate exhibit numbers, starting

with the next number, which is Respondents' Exhibit 143.

Counsel, of course, will inform me when he has completed filing the data specified in the stipulation above agreed upon.

Mr. Browning: Off the record.)

(Discussion off the record.)

Mr. Binford: Mr. Examiner, may I state for the record that the exhibits excepted in my statement, 9500
that is, those that are to be retained in the record as exhibits of the Commission, are those numbered from 1 to 9, inclusive.

The others are those which are to be deemed to be withdrawn upon the furnishing of the several exhibits by counsel for the Respondents.

The Examiner: I think it is well to have that clearly in the record, Mr. Binford.

Mr. Browning: Could I state my understanding for the record, that it is not necessary to offer Respondents' answer in evidence, or any of the other 9501
pleadings?

—7,312—

The Examiner: Yes, I think that is in order.

Mr. Binford: And not only pleadings, but also orders.

Mr. Browning: Yes.

Mr. Binford: I agree.

Mr. Browning: Yes.

9502 *Colloquy*

Mr. Binford. Counsel for the Commission has nothing further to offer. We rest.

Mr. Browning: Counsel for the Respondents have nothing further to offer at this time, but we wish to have the time determined for the submission of findings of fact, or request for findings of fact.

The Examiner: Well, under the rules of practice, that is a matter for the Commission to pass upon, and I do not see any need for going into that here.

9503 Mr. Binford: Off the record.

(Discussion off the record.)

The Examiner: I want to inquire now of counsel for both sides if you are ready for this record to be formally closed?

Mr. Browning: Counsel for the Respondents are ready, subject to the various understandings into which we have entered, regarding corrections and furnishing these further exhibits, et cetera.

Mr. Binford: And counsel for the Commission are

9504 in accord with that respect.

—7,313—

The Examiner: Very well, subject to the matters which are mentioned in the stipulation to be supplied at a later date, the record in this matter is now closed.

(Whereupon, the record was closed, as above.)

—7,314—

Oral Argument 9505

BEFORE THE

Securities and Exchange Commission

WASHINGTON, D. C.

Docket No. 59-10

IN THE MATTER

of

THE NORTH AMERICAN COMPANY, *et al.*

9506

Hearing Room 1102,
Securities and Exchange Commission Building,
Washington, D. C.,
Monday, June 2, 1941.

The above matter came on for oral argument at 2:30 o'clock, p. m.

Before:

EDWARD C. EICHER, Chairman, 9507

ROBERT E. HEALY, Commissioner, and

SUMNER T. PIKE, Commissioner.

Appearances:

S. PEARCE BROWNING, JR., and CHARLES S. HAMILTON, JR., of Sullivan & Cromwell, 48 Wall Street, New York, New York, appearing for the Respondents.

RALPH C. BINFORD, appearing for the Securities and Exchange Commission.

9508 *Argument of Ralph C. Binford*

Chairman Eicher: Before beginning the argument, may it be stipulated by counsel for both sides that Commissioner Henderson, who cannot attend the oral argument this afternoon, may participate in the decision provided he reads the transcript of the argument?

Mr. Browning: Yes.

Mr. Binford: Yes.

Chairman Eicher: You may proceed, Mr. Binford.

9509

Argument of RALPH C. BINFORD, on behalf of the Securities and Exchange Commission.

Mr. Binford: As the Commission knows, this proceeding was initiated on March 8, 1940, for the purpose of determining what action The North American Company, a registered holding company, and its subsidiary registered holding companies and other subsidiaries, should take in order to limit their operations as required by Section 11(b)(1) of the Public Utility Holding Company Act.

9510 It was directed,—that is to say, the notice and order instituting the proceedings so stated,—not merely to restricting The North American Company in its operations, in accordance with Section 11(b)(1), but to the determination of what steps each sub-registered holding company within the system should take to limit the operations of such system in accordance with the provisions of the Act.

The North American Company filed an answer in which it tentatively took the position that it admittedly had sev-

eral systems within the meaning of "integrated utility systems" under Section 2(a)(29) of the Act, and that it would select what it contended to be such a system existing in and around St. Louis, as its principal system, and would seek to retain a system operated by Cleveland Electric Illuminating Company in Northern Ohio, as an additional system.

However, shortly after hearings began—in fact, almost as soon as they began—before the Trial Examiner, upon a question of evidence which was brought before this Commission, The North American Company was permitted to amend 9512
its answer so as to provide that it was not committed to the proposed course of action suggested in its answer, the assertion being made that that was based upon the theory that it would be allowed to proceed without the continuance of these proceedings.

Accordingly, no definite position has been taken by The North American Company nor by any of its subsidiary companies on this record up to May 23, when the requested findings of fact, and briefs in support thereof, were filed both by Commission counsel and by counsel for the respondents other than North American Light & Power Company and its sub- 9513
sidiaries, these latter having been permitted to retain additional counsel and having been granted additional time for filing of requested findings of fact and briefs in support thereof, in respect of the companies within that sub-holding

—3—

company system, including the top sub-holding company, North American Light & Power.

Now the staff requested, by its requested findings of fact and by the briefs filed therewith on May 23, that the Com-

9514 *Argument of Ralph C. Binford*

mission find, in brief, that The North American Company's system proper, that is to say, excluding North American Light & Power Company and its subsidiaries, consisted of several, or rather included several, integrated electric utility systems within the meaning of the Act; first, one operating under the sub-holding company, Washington Railway & Electric Company, and through the operating companies, Braddock Light & Power Company and Potomac Electric Power Company, in the City of Washington and in adjacent areas
9515 in Maryland and in Virginia, which we considered to constitute a single integrated system.

Secondly, the system of Cleveland Electric Illuminating Company, having its principal operations in the City of Cleveland, Ohio, but operating extensively throughout the Northern portion of that State.

Thirdly, the system operated by Wisconsin Electric Power Company, Wisconsin-Michigan Power Company, and Wisconsin Gas & Electric Company, in Wisconsin and in part of the Northern peninsula of Michigan.

Fourthly, the electric utility system operated by Union
9516 Electric Company of Missouri and the subsidiary electric

—4—

utility companies of that company.

A similar division of systems is apparently recognized by counsel for the respondent.

Now the controversy, therefore, centers down to the propositions of what interests in other businesses might be retained by The North American Company in connection with the retention of any one of these electric utility systems as a principal system; and, to the determination of what combination of systems is possible among these several

systems, under the Paragraphs (A), (B) and (C) standards of the Act; and to a third proposition, that is, as to what action must be taken by Washington Railway & Electric Company and by Union Electric Company of Missouri, which are both registered holding companies, to limit their sub-holding company systems in accordance with the Act by the elimination of businesses qualifying under the "reasonably incidental, or economically necessary or appropriate" clauses; or not qualifying as separate systems.

Two of these electric utility systems are operated to some 9518
degree in conjunction with gas businesses, gas utility businesses, within the meaning of the Act. The question of the retention of those by a holding company retaining the electric utility system is also presented by the argument and requested findings of respondent.

No statement is made in the findings, nor in the brief, as to what system The North American Company wishes to retain as a principal system.

—5—

Now it seems to us that the tests applied to "additional 9519
systems" necessarily presuppose a principal system to which such systems must be "additional", under which the tests given in the section upon which this proceeding is based may be applied.

We have been given no indication of the position of The North American Company in that respect, but the argument is made that Cleveland—by which I mean the electric utility system operating in that City and adjacent parts of Ohio; the system operating in Wisconsin and the Northern peninsula of Michigan; and the system of Union Electric Company of Missouri, may all be retained in combination. As to which

is to be considered the "principal" system, there is no statement, but the tests are applied as if that made no difference, or they are attempted to be applied.

It is also urged that each gas utility system presently operated in conjunction with the Wisconsin-Michigan system, and the Union Electric Company of Missouri system, may also be retained.

It is stated that The North American Company is proceeding to dispose of the Washington Railway & Electric
9521 Company, and therefore the question of the permissibility of retention there is not in issue.

It is further urged that some investments in excess of

—6—

$40,000,000 in Detroit Edison, which is a statutory subsidiary of North American, and an investment of $60,000,000-odd in Pacific Gas & Electric Company, may be retained as interests in businesses or as investments under the provisions of the Act.

Commissioner Healy: Now the Detroit Edison has been held to be a subsidiary——

9522 Mr. Binford: (Interposing) The action of this Commission in refusing to declare it to be otherwise has been, in effect, upheld by the Circuit Court of Appeals in dismissing the petition for review, but it is a subsidiary by virtue of the statute until declared to be otherwise.

Commissioner Healy: Is there any doubt about it being an operating utility company?

Mr. Binford: No, sir; by an order of this Commission and by consent of all counsel, the recent A-2 registration statement of the Detroit Edison Company was put in evi-

dence in this case, after the close of the taking of testimony before the Trial Examiner——

Commissioner Healy: (Interposing) But the status of the Pacific Gas & Electric is in a little more uncertain condition, I believe?

Mr. Binford: That is in actual litigation. As to the Detroit Edison Company, until an appeal is taken, I believe it can be considered as settled.

Now most of the contentions, I believe, have been—or

—7— 9524

some of the contentions at any rate, if not all—anticipated in the briefs filed in this case. I don't see that oral argument could add any great amount to them.

However, it is the position of the staff that no one of these great electric utility systems, controlled by The North American Company, can be held, in combination with any other, under the (A) and (C) standards of the Act, eliminating for the moment the problems incident to the several constructions heretofore urged upon this Commission in respect to paragraph (B) of Section 11.

9525

This holding company system is unlike some others that may have come before the Commission, in that it has specialized, it would seem, in the control of great metropolitan systems—Washington, Cleveland, the metropolitan area of St. Louis, the area of Milwaukee, and a large system extending out and based upon the Milwaukee operations.

Each of these systems, we submit,—and there are exhaustive discussions, of course, in the record, and figures given not only in the record but in the proposed findings of fact,—is a gigantic enterprise in and of itself.

9526 *Argument of Ralph C. Binford*

The combination of any two of them would certainly be such as to violate the provisions of both the (A) and (C) standards.

The North American Company put in evidence, over objection and subject to exception, a comparison of its size with the size of certain other industries. Those figures are possibly a little misleading, even if they had any relevance.

—8—

They could hardly have relevance, it seems to me, although
9527 I was overruled by the Trial Examiner, until it was shown that these businesses of similar size were not impeded, or were aided in the efficiency of their operations by their size.

However, based upon Exhibit 143, and testimony appearing in the record relative to the Pacific Gas & Electric Company at page 7040, I would like to call the attention of the Commission to the size of this aggregation of assets controlled by The North American Company at the present time, which, by their theory of this case, they do not intend substantially to reduce.

Now the companies consolidated on the basis of the
9528 method of consolidation used by the auditors of The North American Company, have assets of $957,064,000. By their method of consolidation they do not take into account the assets and plant and property of companies of which they do not have 50 per cent. or more of interest, regardless of the fact of control.

If we include Washington Railway & Electric Company and its subsidiary companies in that computation; Detroit Edison Company; and Pacific Gas & Electric Company, we have here a holding company which controls assets of a book

value of considerably over $2,000,000,000—in fact, of $2,239,956,000, by computations based upon Exhibits put in this record by respondent. This is an enormous company, such an enormous aggregation and concentration of economic power, the very thing which has the potentialities of evil

—9—

which this Act was designed to eliminate and cure.

All The North American Company here apparently proposes to do—and yet feels that it has complied with the Act—is to dispose of Washington Railway & Electric Company, 9530
and to dispose of its interest in North American Light & Power Company and the subsidiaries of that company.

We respectfully submit that this is wholly farcical and ridiculous as an interpretation of the Act.

Now as to retention of interests in additional businesses, there are one or two points which are brought up by the brief which I think were not anticipated in our brief, and which I might mention, but which are brought out in a memorandum for oral argument which I filed with the Commission this afternoon.

First, let me take up a special situation, slightly different 9531
in its legal problems involved from the others of the system.

Washington Railway & Electric Company is a holding company incorporated by special Act of the Congress of the United States, and that charter, which consists of the special Act, has been amended from time to time. By the so-called Unification Agreement of 1933, the transit systems here in Washington were brought together, and other changes were made in the existing public utility system—using "public utility" in the general sense here.

9532 *Argument of Ralph C. Binford*

Washington Railway & Electric Company was specifically

—10—

empowered to hold the stock of certain subsidiary companies. Among those was the Capital Transit Company, which operates the transportation facilities in the City of Washington.

It is now urged that the granting of this corporate power by special Act of Congress removes the question of the retention of these independent transportation properties by Washington Railway & Electric Company from the jurisdic-
9533 tion of this Commission under Section 11(b)(1), and the general statutory principle of construction is presented that a special Act or an Act relating expressly to a certain situation, governs over a general Act applying to the whole field, of which this particular case is a part.

Commissioner Healy: Do you think that is true when the general Act is passed several years after the special Act?

Mr. Binford: I not only think it is not true in that case, sir, but I think Acts of the regulatory type, such as the Public Utility Holding Company Act of 1935, are exceptions to the rule so expressed when the only conflict is with a charter
9534 purporting merely to grant corporate powers, which has been made in the form of a special Act.

I cite several cases in the memorandum on that subject, but one case in particular, although not a Federal case, I think brings out the point rather clearly.

The Citizens Bank & Trust Company, at Tampa, Florida, was incorporated by a special Act of the Legislature in 1895, and it was empowered to hold stock of other banks, expressly,

—11—

by special Act of the Legislature.

Later, in 1917, a general regulatory statute was passed, regulating the conduct of banks, and among other things it provided that banks shouldn't own stock of other companies or of other banks.

However, in apparent reliance upon this special charter provision, and the principle enunciated by counsel for respondent in this case, the Citizens Bank & Trust Company proceeded to——

Chairman Eicher: (Interposing) I am sorry to interrupt, Mr. Binford, but we will take a five-minute recess in order 9536
that Commissioner Healy may receive a phone call.

(Whereupon, a short recess was taken.)

Chairman Eicher: Proceed, Mr. Binford.

Mr. Binford: As I was saying, this Bank, incorporated by special Act of the Legislature, and by that Act empowered to hold stock of other banks, even after the passage of a later regulatory statute governing the whole field of bank operations in the State which prohibited one bank from acquiring the stock of another, proceeded, in apparent reliance upon the provisions of the earlier special Act, to acquire 9537
stock of another bank.

The legality of that acquisition came before the Supreme Court of that State, and the Court held that in the field of the exercise of regulation, a regulatory power of a police

power nature, a prior special charter did not exempt the institution to which it was granted from the provisions of the later regulatory statute, and therefore, in the cited case the acquisition or purported acquisition, in violation of a later general statute, even though apparently authorized

9538 *Argument of Ralph C. Binford*

by the special charter, was wholly void and illegal.

—13—

The Court said, in the second syllabus by the Court:

"No principle is better cited than that a special charter to any corporation to engage in a business of a public or quasi public nature can not be set up as exempting the institution from that regulation by the state in the exercise of its police power which the public necessity demands."

I submit that that is directly in point in respect of the
9539 argument here advanced that the special charter of Washington Railway & Electric Company, by Act of Congress, exempts it from the later regulatory statute embodied in section 11(b)(1) of the Public Utility Holding Company Act.

Upon the same Washington situation a further suggestion is made, apparently in the alternative, that if the first proposition isn't true, then, that we have a legislative determination by Congress that the retention of Capital Transit Company by the same holding company owning Potomac Electric Power Company and Braddock Light & Power Com-
9540 pany, which latter companies own the electric utility assets of the system, is the retention of a business "reasonably incidental, or economically necessary or appropriate" within the meaning of section 11(b)(1)——

Commissioner Healy: (Interposing) Who advances that proposal?

Mr. Binford: That is advanced as an alternative proposal by counsel for the respondent.

—14—

I find it difficult to follow, that an earlier charter grant, preceding a general regulatory statute, can be upheld as a

legislative finding of the existence of certain conditions prescribed by the later statute, when the policy of the later statute had not yet been formulated or put into the form of law. I don't think that argument is tenable, and I don't believe any logical analysis of it can make it appear to be tenable.

Commissioner Healy: When was the La Follette Act, which prohibited the control of local utility companies by holding companies, passed in Congress; do you know about that? 9542

Mr. Binford: Yes, that is to say in respect to ownership of 20 per cent. or more of the local utilities?

Commissioner Healy: Yes.

Mr. Binford: Well, I believe that the so-called enabling statute of 1933, that other statute being on the books at that time, did operate to permit the present setup to exist, but when the 1935 Act, our Public Utility Holding Company Act, came along, there was no exception of that kind made, and the District of Columbia was expressly designated as a "state" in the Public Utility Holding Company Act, and the utilities therein made subject to the same regulations as 9543 those situated in the "states" as popularly known.

Now it has already been pointed out that in our brief there is only one employee in common between this traction system and the local electric utility system. The two are

divorced in corporate form; there is some intermingling of equipment, but the operations of each are carried on by a different personnel, and they are of a different type.

Now there has been no showing that, for instance, the bonds of the system, guaranteed by Washington Railway &

Electric, of the transit system, have any particularly higher credit rating or are better than the bonds not so guaranteed. There is no showing, in other words, that any necessity requires the preservation of common ownership in these two companies, but that need not be taken up further, it seems to me, in view of the treatment of it in the briefs.

Now the argument on Paragraphs (A) and (C), relative to the retention of these several gigantic systems together, electric utility systems, is, I think, answered by looking at
9545 the maps of the systems in this case which are exhibits, the numerous maps, and the financial figures given with respect to each of them, their size and the extent of their operations is almost enough to raise doubt as to whether each in and of itself, if a definite line could be drawn somewhere, would not be so large and of such characteristics as to violate the (A) and (C) standards.

Now as to the retention of the interests of The North American Company in Pacific Gas & Electric Company, and in the Detroit Edison Company, what this Commission said in the case of United Gas Improvement Company, File No.
9546 59-6, Holding Company Act Release No. 2692, relative to

interests in other businesses, and particularly in statutory subsidiaries, and in utilities which are not statutory subsidiaries, seems to apply in the present case.

The only argument advanced apparently, so far, for the retention of these two investments, if they can be regarded as investments, and if were held not to be a subsidiary eventually by the highest court, is that they give diversi-

fication of income and of holdings to The North American Company security holders.

Now that is an argument, it seems to me, which was addressed at length to Congress in the enactment of the Public Utility Holding Company Act, and whatever advantages may lie in diversification were weighed at that time, and the evils potential to such a holding company system as the present one, whether they become active or are merely potential, as I have said, were evidently found by Congress to be greater than any advantages of great diversification, and were re- 9548
jected by the enactment of section 11(b)(1).

So that argument, it seems to me, has been settled already.

There is no other argument advanced as to why these interests in other businesses—if they could be considered as such, which we do not admit—are "reasonably incidental or economically necessary or appropriate".

Now the transportation properties in Wisconsin, part of

—17—

which are operated directly by the electric utility companies there; and one of which, the largest of which, is operated as a separate company, wholly owned however in respect 9549
of securities, by Wisconsin Electric Power Company—that transportation company was set up in 1938 to segregate the transportation properties.

It was a first step to the eventual divorcement of the transportation properties from the electric utility properties of that group of companies, operating the Wisconsin-Michigan system.

It is suggested for the first time in the brief filed in support of the requested findings of the respondent, that that

9550 *Argument of Ralph C. Binford*

may have been a recognition by this Commission, or a finding, that the retention of those fraction properties or transportation properties—they have become largely gasoline propelled rather than electrically propelled—constituted the retention of a "business reasonably incidental" and so on, that is to say, complying with the standards of section 11(b)(1).

A glance at the record in that case, however, and the published findings and opinion, will show that the principal thing there was not the acquisition of securities of the new
9551 company, the transportation company, which was formed, but the segregation, and it certainly can not be argued that insistence upon such segregation, and as a first step therein the acquisition of the securities of the new company by the former owners of the property, namely Wisconsin Electric

Power Company, constituted any definitive finding by this Commission that that condition could go on forever.

A thing may tend toward the development of an integrated electric utility system obviously, which doesn't accomplish it in the first instance, but merely is a step in that
9552 direction and to bring about a situation where the actual divorcement of those properties, which should be divorced, can be made; and I think that is the only way in which the opinion of this Commission could be construed in that case, if it has any bearing on this case at all.

Now as to the gas systems. This Commission has already heard argument and reargument on the question of whether or not a gas utility system and an electric utility system, can constitute a single integrated system in view of the two definitions given in the Act, and has held that they

can not do so, the cases on which are cited in the briefs filed herein.

As to the retention of one business with the other in the same locality, the tests of "additional systems" may be applied if a holding company seeks to retain both.

There is a great deal of evidence in this record, presumably introduced by the respondent, to show that substantial economies are effected both in the St. Louis area and in the Wisconsin-Michigan area, by the combination of the operations of the gas utility companies with the electric utility 9554
operations in the use of common personnel, common office

space, and a number of other physical respects.

However, this evidence is susceptible of other interpretations, it seems to me. It does not conclusively prove, nor substantially prove, that one business is not carrying the other. There is no detail of the basis of apportionment sufficient for this Commission to say that substantial economies are effected for the consumers or investors with respect to the gas businesses, or whether or not an extra burden is not being forced upon them, or vice versa, the latter being the 9555
more likely of the two situations.

The question of whether such retention is desirable from the public viewpoint, or whether it is detrimental to the public interest, is still open. Both companies are, by their nature, usually monopolies in a given area. It seems to me highly questionable, in the absence of unusual circumstances which might exist in a particular case, whether or not the two competing—that is to some degree competing—utilities should be held under common control and common ownership rather than be operated as distinct properties, each by

9556 *Argument of S. Pearce Browning, Jr. and Charles S. Hamilton, Jr.*

its energies and efficiencies of operation tending to stimulate the other to greater public service.

There is some evidence in this record tending to show that there is much greater activity, in promotion work presumably, in service by the gas utility people in the districts in which they do not also operate the electric utility businesses,

—20—

and even in the absence of evidence of much weight on that
9557 point, it seems to me that the Commission, in view of situations recognized in numerous reports of state public utility commissions, and well known, can see that there are certain inherent disadvantages in such joint ownership which may be detrimental to the public interest; and I submit that that proposition, known officially and judicially to this Commission, is not overcome by the particular circumstances of joint utilization, to some extent, of personnel and of equipment in the present case.

I think that is all I have at the moment, although I would like to say something in reply after respondent's counsel
9558 has spoken.

Chairman Eicher: Mr. Browning!

Argument of S. PEARCE BROWNING, JR., and CHAS S. HAMILTON, on behalf of the Respondent.

Mr. Browning: If the Commission please, at the outset I should like to clarify certain matters which may serve to simplify the argument.

In the first place, I should like to make it clear that we are not representing here today North American Light &

9559

Power Company or its subsidiaries. We are representing all of the other subsidiaries of The North American Company.

Commissioner Healy: Are you representing the interests of North American in North American Light & Power? You own 85 per cent. of the common stock of that company,

—21—

do you not?

Mr. Browning: Why, as far as we are concerned, Judge, North American Light & Power Company is going to be dissolved and its assets are going to be disposed of in liquidation. From a realistic standpoint, and looking forward, we think it is a waste of time to talk about the control of those companies. We haven't asked for any findings with regard to retention by North American of its interest in those companies.

9560

Commissioner Healy: Are the assets of The North American Light & Power going to be distributed in accordance with the provisions of this Act and the applicable decisions of the Supreme Court of the United States?

Mr. Browning: Judge, I am not particularly familiar with the proceedings except that I know that a meeting of the stockholders of North American Light & Power Company has been called to consider and act upon its dissolution.

9561

Commissioner Healy: Well, since The North American Company has such overwhelming voting control of North American Light & Power, and since the statute and the applicable decisions have laid down certain rules in respect to the distribution of assets, it may still be a very live topic in this case, in fact I am inclined to think it is.

—22—

9562 Maybe this isn't the appropriate time to discuss it, but for my part I should be very much loath to go along with the suggestion that the North American Light & Power problem goes out of this case completely merely because it is planned by The North American Company to dissolve North American Light & Power.

Now, North American not only owns 85 per cent., and therefore the voting control of North American Light &
9563 Power, but it also has a large debt claim and a large position in the preferred stock of North American Light & Power.

Then there is a large public interest in the preferred stock, and in a minority of the common stock.

I have been very much concerned, in my thinking about this matter, as to just where those debt claims and preferred stock claims might stand in liquidation as against the publicly held preferred and the publicly held common stock, in the light of the Supreme Court's decisions in the Deep Rock Case and the Consolidated Rock Case, and possibly some of the obiter in the Pepper versus Linton Case.

9564 As I have said before, this may not be the appropriate time to discuss those details, but since there is a proceeding here which involves the North American Light & Power Company and its subsidiaries, and the interests of The North American Company in North American Light & Power, I have some reservations of the propriety, and perhaps the legality, of going off into the State courts for a liquidation of North American Light & Power while there is a case

pending before this Commission under our statutory authorities, which hasn't been decided, which, according to you,

9565

ought not to be decided for some time; but the question in my mind is whether, pending that decision, a liquidation under a State statute is entirely an appropriate remedy. I don't see at all, at the moment at least, that the proposal of liquidation concludes the North American Light & Power Company and takes it out of this present proceeding, where North American Light & Power is a respondent.

Mr. Browning: Perhaps I can clarify that a bit.

I did not mean to say that you wouldn't have before you 9566
argument concerning North American Light & Power Company and its problems. I was trying to clarify this argument by saying that since, so far as North American was concerned, retention of its interest was no longer an issue, we saw no useful purpose to be served in discussing it, and I am not prepared to discuss the other questions which you mentioned.

Commissioner Healy: Well, of course, how North American Light & Power might be disposed of in the present proceeding in which it is a respondent, hasn't been decided, and
I am not entirely clear that the dissolution proceedings in 9567
the State court are an appropriate thing in this stage of the case. I just want to put that caveat in there so that our silence might not be taken as acquiescence.

Mr. Browning: In the next place, we filed with the Commission today a reply brief which brief also serves as a brief

—24—

on various legal questions involved.

In that brief we ask leave at various points to incorporate by reference the briefs of respondents' counsel in other

9568 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

11(b)(1) proceedings, the U.G.I., the Engineers Public Service, and the Commonwealth and Southern.

The point was that we wanted to have it understood that we were making the contentions, and at the same time we didn't want to burden the Commission with reading the same arguments, and I would like to ask the Commission if we were correct in assuming that we would have leave to incorporate those by refernce?

9569 Chairman Eicher: Does counsel for the Commission have any objection?

Mr. Binford: If that is done, I think, of course, in fairness, the briefs of counsel for the Commission in the same proceedings should also be open for consideration by the Commission.

Otherwise, we have no objection.

Mr. Browning: That is entirely satisfactory.

Chairman Eicher: That will be the understanding, then.

Mr. Browning: And by the same reasoning, I have no
9570 intention today of rearguing the various detailed questions of statutory construction which you have heard in those other proceedings.

We understand that the Commission refuses to consider the constitutionality of the statute, so that there is no purpose to be served in discussing constitutional issues. I would like to have that clear on the record also, if I may.

—25—

Commissioner Healy: Well, the Commission's decision, as I have understood it on that point, wasn't as much a matter of refusal, as a conclusion that we were not at liberty to

9571

do it. That is the conclusion of the Commission as I understand its decisions.

Mr. Browning: What I meant, Judge, was that you would feel that there was no useful purpose in my arguing the constitutionality of section 11(b)(1).

Commissioner Healy: I think that that is consistent with the position that the Commission has taken.

Mr. Browning: Now, that leaves for consideration only the issues of statutory construction, and it seems to us that those are principally two: (1) the tests for other businesses and (2) the application of the (A), (B) and (C) standards in the present case. 9572

We also want to discuss quite briefly the problem of electric and gas facilities, without repeating all of the arguments which you have heard before; and, finally, the point concerning the election of a principal system.

As a matter of presentation, we would prefer, if the Commission please, to take up first the tests for other businesses, and consider the other matters later; and if the Commission will so permit, I should like to have my associate, Mr. Hamilton, discuss this test of other businesses as present in this case. 9573

Chairman Eicher: That will be quite agreeable.

Mr. Hamilton: For the sake of convenience, I would like to take these up, if I may, first of all with a brief discussion

of what I understand your decision in the U.G.I. Case to mean as applied to "other business"; and secondly, specifically taking that test up with respect to businesses conducted

9574 directly by the four main groups in The North American System; and, finally, those owned or controlled directly by North American.

In referring to these groups I use the same terminology that has been used heretofore. The Washington group is the Washington Railway & Electric Company and its subsidiaries; the Cleveland group, the Cleveland Electric, and so on.

9575 Now, in the Commission's decision in the U.G.I. Case, Holding Company Act Release 2692, there are set up a number of clearly alternative tests which may be met in order to comply with the statutes on "incidental businesses".

The Commission in that case specifically said that the "Commission must permit the retention of other businesses, including investment interests in utilities not subsidiaries, which are found to be (one) reasonably incidental or (two) economically necessary or (three) appropriate to the operations of an integrated public utility system"——

9576 Commissioner Healy: (Interposing) What case was that?

Mr. Hamilton: The U.G.I. Case, Holding Company Act Release 2692.

The Commission went on to say that "as to both investments in non-utilities and interests in non-utilities sufficient to create the statutory parent-subsidiary relationship, these

standards may be met if the retention of the investments or other interests is found to be (one) necessary or (two) appropriate in the public interest or for the protection of

9577

investors or (and I am inserting words, interpolating for the protection of) consumers and (in each case) not detrimental to the proper functioning of such system or systems."

If you will notice, as to the second half of this statement by the Commission, there are set up here clearly six alternatives. It isn't necessary that five or all six be met, but that one out of the six be satisfied.

Now, what does the staff say on this point?

9578

Counsel for the Commission in his brief refers in passing to the entire sentence to which I have just referred, and then says that "reasonably incidental" carries with it the connotation of a functional relationship. Then he takes up "economically necessary or appropriate", and he says that these words appearing in close juxtaposition must be given their obvious meaning of functional relationship.

In other words, as he analyzes this test, there is only one test provided, and that is a test of "functional relationship", disregarding clearly the fact that there are three alternatives set up. He goes on to state or rather to cite a case, which is correct, to the effect that words used in a statute of Congress are to be given their known and ordinary signification.

9579

Now, what are the meanings of these words in their known and ordinary signification?

The word "incidental", as defined in the accepted dictionaries, means: casual, subordinate, occurring in connection with something else.

The word "appropriate", similarly is defined as meaning suitable, fit, or proper.

9580 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

These definitions, in common and ordinary use, considerably broaden the test beyond one merely of functional relationship. It may well be that functional relationship has some bearing, but certain there are other criteria which similarly have bearing.

For example, the question of a historical connection over a period of years on the question of whether a business is incidental; whether one might expect normally to find the
9581 particular type of business represented in a public utility enterprise.

I call the Commission's attention to a decision of the Circuit Court of Appeals in the Ninth District, 111 Fed. (2d) 1014, in which the Court was called upon to construe the phrase appearing in section 203(a) of the Federal Power Act, "consistent with the public interest".

The Circuit Court of Appeals for the Ninth Circuit said that "the language employed ought to be construed to mean no more than it says. It is enough if the applicants show that the proposed merger is compatible with the public in-
9582 terest." In other words, the Court is interpreting the phrase

"consistent with the public interest" to mean compatible with the public interest. The Court goes on to say:

"The Commission * * * may not impose a more burdensome requirement in the way of proof than that prescribed by law * * * suffice it to say that the statute does not require a showing that positive benefit to the public will result * * *"

I think that case should be borne in mind in any application of the term "appropriate in the public interest" appearing in this section.

 9583

Applying that case to the present instance, it is not necessary that there be shown from the record evidence to establish that positive public benefit will result by reason of the retention of the particular business in the enterprise. Rather, on the other hand, that the retention of the business in the enterprise shall merely be compatible or consistent with the public interest. —30—

Now turning to the specific incidental businesses which are represented in these four groups, we have, in the case of 9584
three groups, a steam heating business, which counsel concedes meets the statutory tests, and which therefore I shall not discuss.

Also, a land business in the case of the Union group, which, in addition, he concedes to meet the tests, and which, similarly, I shall not discuss.

Transportation businesses in certain of the groups, and electric railroad business in the Union group; a coal business in the Union group; and an electric furnace manufacturing company in the Wisconsin group.

Turning specifically to the transportation businesses— 9585
and here I don't propose to take up each one in detail—the facts with respect to the operations of each transportation business are set forth in the proposed findings and in our main brief.

But taking them up simply for the purposes of illustrating the point in the application of the statute—the Capital Transit here in the District has, for 48 years, directly or indirectly, been operated in conjunction with Washington Railway & Electric Company. Washington Railway was

organized in 1892, and at that time the railroad business predominated, and the electric business was more or less incidental.

That has been, I think, the history of a number of the present electric utilities in this country. Originally they

were transportation companies.

This business, as now constituted, is a revenue-producing
9587 investment for Washington Railway & Electric Company. The joint operation is indicated by the fact and to the extent that joint use of equipment is made, and also by the fact that Capital Transit is a very large purchaser of power from the Potomac Electric.

Now as to whether this business is incidental, the value of the investment as per the books of the Washington Railway & Electric Company is approximately 15 per cent. of the total consolidated assets, based on carrying value. The income from the investment is approximately 2 per cent. of the consolidated income. However, relating the carrying
9588 value of that investment to actual present market value, the investment is worth approximately, or represents approximately, 2 or 3 per cent. of Washington's consolidated assets.

Now as to whether or not the business is appropriate, it seems me that the Commission should clearly bear in mind the fact that there is no requirement, or should be no requirement, that an affirmative public benefit will be shown to ensue from retention of the ownership. Rather, as I have pointed out before, the question is: Is it merely compatible in the public interest that this business be retained?

Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.

9589

Now counsel has mentioned a point made in the brief as to the operation of the joint resolution, so-called, of 1933,

—32—

on the ownership by Washington Railway of its stock interest. Whatever the case under the Florida courts, the Supreme Court has clearly laid down the rule of statutory construction, that a later general statute which is not, on its face, irreconcilable with a prior specific statute, or is not on its face wholly inconsistent or incompatible with it, does not 9590
constitute a repealer of the prior statute; and I refer in that instance to certain cases in the Supreme Court, three in number which are cited in our main brief.

Without attempting to go into detail on his analysis of the case on which he appears to place the most reliance, because his brief has just been furnished to us—as ours to him—at the opening of this argument, as I understand his analysis, the Florida case merely holds that a later statute which specifically repeals a charter provision created by law previously is a proper exercise of the State's police power.

Now here the Public Utility Holding Company Act of 9591
1935 does not expressly repeal prior enactments. It is not, on its fact, wholly inconsistent with the prior statute of 1933 authorizing retention of the stock interest.

I ask the Commission to refer to those cases, and to read the Supreme Court's statement on statutory construction.

Turning now to another transportation business, the Milwaukee Electric Railway & Transport Company,—to which I shall refer, in shorthand expression, as the Transport Company—this business in Milwaukee has been conducted for

—33—

51 years, since 1890, either directly or indirectly in conjunction or control or with the electric utility operations.

Here again, originally the properties in Milwaukee, the utility properties, were street railway properties. Gradually, with the growth of the electric business, a shift in economic circumstances, the incidence of the importance of the operations has changed, and here again predominantly it is now an electric utility company, and the trans-
9593 port operations are relatively minor.

Now as to why the segregation occurred in 1938, the fact is that market-wise a public utility bond is a more saleable vehicle than a bond which is a lien on property both of the electric property and of transportation operations. That was the reason for the segregation in 1938, to permit and to facilitate a major refinancing which occurred at that time.

Now the record is replete with evidence showing the essentially joint nature of this operation, and here again I refer you to our findings and to our brief, which take
9594 these facts up in detail, and which establish, in my judgment beyond any question, that the business is not only incidental, by reason of the combined nature of the enterprise, but that it is also entirely appropriate because of manifest economies which result from the combined operations.

In addition, the transport company is the purchaser of

approximately 100,000,000 kilowatt hours a year, at a rather low rate of 7.8 mills.

Certainly it seems to me that retention of this interest is appropriate in the public interest, as it has been for 51

9595

years, and in the interest of investors and consumers. Certainly that property, if sold on the auction block today, is going to represent to Wisconsin Electric a very substantial loss, and therefore, in that respect, the interest of investors in Wisconsin Electric Power bonds, preferred stock and common stock, is involved.

Taking up again, for purposes of illustration, the business conducted by the Union Colliery Company, in conjunction with the St. Louis group, this business again has been 9596
part of the Union group since 1917. In other words, it has been a parallel operation for a period of 24 years, and I might say in passing that I note, in counsel's reply brief, that he indicates that neither in this case, Union Colliery, nor in the case of St. Louis & Belleville Electric Railway Company, have we made any contentions. I refer him specifically to pages 34 and 36 of our brief, where we most surely do make some contentions.

Commissioner Healy: May I interrupt just a moment on this Wisconsin street railway situation? Is that being operated at a profit or at a loss? 9597

Mr. Hamilton: The net income before bond interest in 1940 was approximately $630,000. That is after depreciation.

After bond interest of $400,000, the net income transferred to surplus would have been about $230,000.

I might say that that is, as you know—and I imagine this is generally true of other transportation operations—not a tremendously profitable enterprise. It is a case of working out, over a long period of years, an investment which, by force of economic circumstances, is not as attractive now as

it was back in 1910. That is peculiar, I think, to most of these transportation operations.

As to Union Colliery Company, this is a coal mining enterprise located some 85 miles from St. Louis, 80 per cent. of whose production is sold to the Union group for consumption in its steam generating plants. Almost the entire requirements of the Union group, of coal, are purchased from Union Colliery Company. It is important to Union for a

9599 number of reasons: One, the coal is entirely satisfactory for Union's steam generating facilities; two, Union, as you know, has a very substantial amount of hydro generation. That results in a circumstance where, at times during the year, due to high water or to the impoundage of water at the Osage Dam, it is possible to cut down on the steam generation. Therefore, an available source of coal from an affiliated company, where it is possible to get delivery when needed, is an important part of the Union enterprise. It contributes to the efficiency of the operation of the Union group.

9600 —36—

Now as to the size of the Union Colliery Company, on plant account and on revenues, it is approximately 1½ per cent. of the total in the Union Group.

Commissioner Healy: Does the Colliery Company sell coal to anybody else?

Mr. Hamilton: Yes, it sells 20 per cent. of its output, as of June 30, 1940, the 12 months' period, to outside sources.

Now I might point out in this connection that the Commission in 1937, at the same time that it approved the reorganization of the Union Company, the consolidation of the

9601

five East Side subsidiaries, specifically approved the transfer of this Colliery stock from Union of Missouri direct to Union of Illinois, and in that connection the Commission's findings and opinion stated:

"In the present case the Colliery is already owned within the system and its transfer from an intermediate holding company to the company which is to become the owner of the principal generating plants which it serves, will tend towards the economic and efficient development of an inte- 9602
grated public utility system".

I think the Commission has already passed on this phase of the case in 1937.

Commissioner Healy: Can you conceive of our making a finding under 10(c)(2) of that character where the real basis for saying it was to get the property into a position where it could be readily disposed of if it were found not

—37—

to be retainable under 11(b)(1)?

Mr. Hamilton: Judge, I don't want to push the point too much, because it may be embarrassing, but it seems to me 9603
that there were necessarily involved in a consideration of any transfer of ownership of securities within the system, or any acquisition of property, back in 1937 and 1938, necessarily in the Commission's mind there must have been a consideration of Section 11(b)(1). Now this is the language of your opinion.

Commissioner Healy: Well, of course, the various companies are in here many times with cases where we are asked to approve transfers under 10(c)(2), where it seems pretty plain that when this thing is all sugared off, some of these

9604 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

companies cannot be retained. But it quite often happens that it works in the direction of simplification, and also gets the property involved to a place where it can be more readily handled under 11(b)(1). I am not sure that if we make too strict an application of the 10(c)(2) standards, that we may not find ourselves where we cannot approve a good many transfers of that kind which have immediate benefits or immediate tendencies in the 11(b)(1) direction, but which
9605 in the long run can't be held under 11(b)(1).

Mr. Hamilton: I think you are quite right in that case, for other reasons, too. I think, on the merits, the business is entirely proper under the statutory tests, irrespective of

—38—

the language you may have used in your opinion.

Commissioner Healy: That may be so, but I just raised the question as to whether the language in the opinion necessarily concludes that point.

Chairman Eicher: That approval occurred in 1937?

Mr. Hamilton: Right.

9606

Chairman Eicher: That was prior to January 1, 1938, when, for the first time, the Commission took affirmative action looking towards the enforcement of Section 11?

Mr. Hamilton: That is true.

Now I have used these specific instances not for the purpose of exhausting the argument, but simply to point out the application of what seemed to me to be clear alternatives under this section of Section 11(b)(1), to specific incidental businesses in the system.

—39—

Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.

9607

Now as to the facts involving the other businesses, as to our contentions, I don't think it is necessary to repeat what is already in the main brief or the findings.

Now turning for the moment to the businesses controlled directly by North American, as distinguished from those which are controlled within the subsidiary groups, these investments and businesses are made up of an office building corporation in New York called Sixty Broadway Building Corporation; West Kentucky Coal Company, and its subsidiaries, a producer and distributor of coal in Kentucky; North American Utilities Securities, a relatively inactive, almost completely inactive I might say, investment company; and the stock interest in Detroit Edison and Pacific Gas & Electric.

9608

In order to meet to some extent these assertions of tremendous size with which counsel has characterized these investments, let me give you a few facts.

The investment in Detroit Edison is not $40,000,000, but actually $29,800,000, which is before deduction of the dividends recently declared, subject to your approval, payable on North American common stock.

9609

Now the Act itself specifically contemplates the existence of a holding company. Otherwise, the provisions relating to control of an integrated public utility system, or of other businesses, would have no effect. Detroit Edison and Pacific Gas & Electric we maintain represent investments.

—40—

I have in mind the decision of the Circuit Court of Appeals denying a petition for review of this Commission's order. However, there has been no final determination of

9610 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

that case, in the event an appeal is taken, and whether or not one is to be taken I do not know; and in addition to that fact, and as a further argument to support our contention that this is in fact an investment, I point again to the action of North American in declaring this dividend payable in Detroit Edison stock, which would have the effect of reducing North American's holdings from 19.21 per cent. of voting stock to 16.78 per cent.

9611 Now here again I don't want to exhaust your patience with a detailed statement of the facts, or an attempt to apply, in each case, the statute to the specific business or investment. I want to illustrate by taking one or two.

First, as applied to the Sixty Broadway Building Corporation—this company owns as its sole asset a 25-story office building in New York City, of which two floors, and part of three others, are devoted directly to North American's activities. The total assets of this enterprise are approximately 1 per cent. of North American's corporate assets.

The record shows, through testimony, that in the early
9612 30's and in the late 20's this investment was of extreme importance because at that time rents were high in the New York financial district. The return on the investment at that time was high, and the saving in terms of rents paid was substantial to North American.

Even in 1940 this investment produced income of 2½ per cent. on its carrying value to North American.

The testimony in the record shows clearly that this business can not be sold at this time, the office building, without recognizing a substantial loss.

 9613

If we assume, as I think we must, that continuation of a holding company is proper under the Act, and is clearly so from the language of the statute, certainly any holding company should be permitted office space for its operations.

Commissioner Healy: How much of the building does The North American Company itself occupy?

Mr. Hamilton: Two floors, and part of three others, out of a total of 25. You won't find many small buildings down there though, Judge. 9614

Commissioner Healy: I suspect not.

Mr. Hamilton: Now I think, just in passing, that the amount of this investment is, on its face, so small, and its purpose in providing office space essential, and that is its main purpose——

Commissioner Healy: (Interposing) What is the investment in the building?

Mr. Hamilton: The stock is carried at $350,000 on North American's books. There is an open account which, as I remember, is of the order of $1,600,000.

Commissioner Healy: Is that the cost of the investment to 9615

North American?

Mr. Hamilton: That is the cost to North American.

As to the Detroit Edison—and I pick this as an illustration of the two utility investments—as the Commission knows, this investment dates back in its origin to 1903. It represents today less than 10 per cent. of North American's corporate assets, and approximately 7½ per cent. of its corporate gross income.

9616

As pointed out in the brief, this investment, together with Pacific Gas, provides diversity and stability of income.

The record shows that in the five-year period 1936 to 1940, inclusive, the dividends from these two sources have more than covered North American debenture interest and preferred stock dividends in the three years, namely 1936 through 1938, and it covered 85 per cent. of the combined requirements, the amount of such requirements being larger

9617

by reason of the dissolution of North American Edison in 1938.

In addition, the records show that the Detroit Edison has been a valuable source of information in the inter-company committees, and that this information has been exchanged with other companies, Cleveland, Potomac, St. Louis and Wisconsin, for many years.

Now I would like to call your attention, in closing, to the Commission's decision in the American Water Works case in 1937, not as applied to the question of joint ownership of gas and electricity, however.

9618

—43—

In that case, which is Holding Company Act Release 949, the Commission expressly authorized the retention by American Water Works of subsidiaries conducting water businesses, constituting 30 per cent. of the total business of the holding company system, and in its opinion stressed the fact that these water businesses contributed a stable source of revenue to the holding company.

—44—

Also, in passing on a coal business and transportation businesses, the Commission stated, as to the coal business,

9619

that it would "seem to bear an intimate relation to the operations of the gas and electric utility companies"; and as to the electric railway, bus transportation and bridge businesses, the Commission stated that it "realizes that these are in the nature of an inheritance from an earlier age when electric transportation was of more importance than the business of electrical distribution. In view of the facts and of the minor importance of the applicant's interests in these businesses, relative to its other operations, and in consideration of the difficulty which the applicant would face in satisfactorily disposing of its interests in these transportation businesses, the Commission finds that their retention is necessary and appropriate in the public interest and is not presently detrimental to the proper functioning of the applicant's integrated public utility system."

9620

We submit that that decision was well reasoned, that it was realistic, that it took into the account the problems which face the holding company under the Act, and we submit that it should be followed in this case.

Mr. Browning: If the Commission please, we should like to turn now briefly to the question of whether gas and electric properties may, in combination, constitute a single integrated system.

9621

—45—

The only gas properties in the main group of North American subsidiaries are in St. Louis and Wisconsin, and in the aggregate they amount to about 4 per cent. of the three-system total.

Our fundamental contention, as to the rule, which is a sound proper rule, is that as a matter of law gas and electric

9622 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

facilities may constitute a single integrated system but that whether they do in fact should be resolved upon the facts, and that is the point that I want to make today.

I thought that the question was thoroughly argued in the U.G.I. Case, but my only trouble was that it was being argued in a vacuum of facts. We want you to look at the facts in the North American Case as a background for a reconsideration of that ruling.

9623 In that connection, we hope that you are going to read our briefs, because we are not trying to cover today all of the items covered in our briefs. They are not long, we tried to hold them so that you could read them.

Counsel in his oral argument implied that there was no evidence on substantial economies. There is not only evidence but it is highly specific. We gave figures on these economies and those figures have never been challenged. And there isn't a scintilla of evidence in the record against that testimony, and we ask again that the Commission consider the facts in this regard.

9624 Turning now to the (A), (B) and (C) standards of section 11(b)(1), we wish to discuss those as applied to the

St. Louis, Wisconsin and Cleveland groups, that is, whether, in combination, those groups meet the statutory standards.

Each one of the groups has been conceded to be a single integrated system in and of itself, as must have been the case.

Taking up the (A) standard, the test prescribed by the statute is that "each of such additional systems cannot be operated as an independent system without the loss of sub-

9625

stantial economies which can be secured by the retention of control by such holding company of such system".

Now the staff in its brief makes the contention that each of the three systems is large enough to stand on its own feet. In fact, that is the contention that the staff makes. That is not the statutory test. The statutory test is whether the substantial economies are derived by the subsidiaries. We discuss this matter in our reply brief, and particularly what seems to us to be the only question of construction involved, and 9626
that is the word "substantial".

As far as I know, this particular issue of statutory construction has not been previously argued before the Commission. We have cited to you various cases dealing with the meaning of the word "substantial", and I just want to quote one judicial interpretation:

"'Substantial' as an adjective means something worthwhile as distinguished from something without value, or merely nominal."

—47—

I would also like to refer to this Commission's own de- 9627
cision in the matter of Public Service Company of Oklahoma, where you were dealing with the correct interpretation of the word "material" under another section of the Act, and in which you said:

"We think that the standard * * * connotes income the loss of which would be something more than de minimis to the company concerned."

In other words, we submit that, broadly speaking, the term "substantial" means something worth having, as distinguished from something nominal or de minimis.

9628 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

Now, our evidence in this proceeding goes much further. We have offered evidence in this proceeding, having placed upon the stand the chief executive of each of the subsidiary companies, and that evidence is conclusive, that these subsidiaries do derive substantial benefits from their retention within the North American system.

Broadly speaking, these benefits may be divided into two classes: (1) the benefits which they derive directly from
9629 their contracts with The North American Company and (2) the benefits which they derive from their contracts with the sister operating companies.

Now, as to North American's direct benefits, as you know, the general theory of North American management for many years, since at least prior to 1920, has been a highly localized management, and that meant that North American's function was restricted to that of advice and consultation.

—48—

The testimony is unanimous that that advice and consultation has been of great value to the subsidiary companies.
9630 Advice and helpful advice on one important matter may be worth advice on a thousand minor points.

—49—

The advice is made valuable, and in fact the essential elements in it are: first, the background of knowledge of the holding company executives, of the particular operating subsidiary; secondly, the holding company executives' experience with a similar problem in other companies; and finally, and most vital of all, the factor of financial interest.

As Dr. McClellan remarked, when he was on the stand, he could get a lot of advice from anybody in the world on

9631

anything, but the advice that was worth having was the advice from somebody who had the same financial stake that he had.

Let me give an example of one important piece of advice. The Wisconsin executive testified that when Wisconsin was issuing bonds in 1930, Edwin Gruhl, who was then president of The North American Company, persuaded Wisconsin that they should issue more bonds than they then had in mind, should secure more money. That advice paid the Wisconsin hundreds of thousands of dollars, and permitted them to build the great Port Washington plant, because they could never have secured the funds in the depression.

9632

Commissioner Healy: Were they publicly held securities in those companies?

Mr. Browning: Yes, sir.

Commissioner Healy: Why didn't The North American Company make an equity contribution?

Mr. Browning: North American has made equity contributions totaling many millions of dollars.

—50—

9633

Commissioner Healy: What was the coupon on those bonds?

Mr. Hamilton: Five per cent.

Commissioner Healy: What was the rate of return being made on the investment and allowed by the Wisconsin Commission?

Mr. Hamilton: There was no dividend paid from 1932 until 1939, I believe it was, on the common stock of Wisconsin Electric Power Company, which was then Milwaukee Electric Railway & Light.

9634 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

Commissioner Healy: Did the common stock have earnings during that period?

Mr. Hamilton: My recollection is that it did for the entire period.

Mr. Browning: While that is being looked up may I proceed?

Another example which is in the evidence is that the Cleveland company's decision to follow the growth of the
9635 Cleveland radius, in other words to expand its operations beyond the then narrow corporate limits of the City of Cleveland, was a direct result of North American's encouragement. That expansion has brought benefits to the public which I don't know that we could estimate in figures. The testimony in this record shows that as the Cleveland Company expanded its operations, rates were cut overnight more than half for those consumers. They got service they never dreamed of before.

No single action that I could think of has meant more to

9636 the people of that area than that expansion of the Cleveland Company's service area. My recollection is that those rates dropped from as high as 15 cents a kilowatt hour to five cents; and 12-hour service became 24-hour service.

Now the particular field in which The North American has aided its subsidiaries, one field in which it has rendered great assistance, has been in financing.

In our briefs we have pointed out the essential difference between a utility business and other businesses, in its constant need for new money. The utility business is distinct in that regard, as you know. Not only do they need money

9637

constantly, but they need a great deal of it, and financing problems are extremely intricate.

The witnesses testified in detail as to this, and also that despite the importance of the problem, as a practical matter, an operating utility executive does not have time or the opportunity to be a financing expert, he can not be both. None of these North American subsidiaries have found it necessary to maintain a financing staff. Furthermore, their testimony shows that if they did, the staff would not have the practice—they can't.

9638

Take a company like Cleveland, a great company, Cleveland does not finance every year, but only every several years. If Cleveland had a financing staff, that staff wouldn't get the practice that the North American staff does.

—52—

The subsidiaries have not only saved the operating expenses to which they would have been subjected had they attempted to maintain a staff of anything like the same quality and caliber, but they have obtained much better results.

9639

In fact, witnesses attributed the unusual operating results of The North American subsidiaries to be in substantial part due to their freedom to devote their attention to operating problems, as distinct from financing problems.

Now let us turn to the sister company contacts. The testimony shows that beginning in 1921, under North American's sponsorship, there were set up these committees of engineers from the operating companies. There were two such committees, one dealing with all phases of power generation, and the other dealing with all phases of power trans-

9640 mission and distribution. Those committees have functioned over the years, they have been highly important, they have had remarkable results which have been reflected in the operations of the respective companies.

In effect, the result has been an engineering pool, giving each company the value of the consulting engineering services of the other companies.

You know, from your own general knowledge of the util-
9641 ity industry in this country, how important it would be for a company in a metropolitan center to have the detailed aid of engineers from other metropolitan centers. There is no such group anywhere else in this country as these North American committees.

—53—

We offered in evidence, as our Exhibits 131 and 132, specimen minutes of these committees. We brought down all the minutes over the years. They filled suitcases. And we just offered a specimen. Then we said to the staff, "If you don't think this is a fair specimen, you pick your speci-
9642 men" and we left the minutes with the staff. I gather that they thought we had picked a fair one, because they didn't offer any.

The minutes were too long to quote in the brief, so we only have a very short excerpt. I wish you would glance at those minutes. You will be impressed at the variety and importance of the topics considered. They show on their face the tremendous value of the work of these committees.

Now more recently, a similar accounting committee has been formed. As you know, accounting problems have been getting steadily more important, and this is also functioning

9643

now. The executives of the sister companies are also in contact. —54—

Then there is another element, intangible if you like, but nonetheless real, and that is the competitive rivalry between these companies. They exchange the most detailed cost statistics regularly, and by the "most detailed", I mean right down to the last cent on everything.

They not only do that, but the chemists of each company analyze the coal of each other company to be sure that they 9644
are getting a fair comparison. Adjustments are made to make comparisons fair. As you know, the great difficulty in comparative statistics is to get a base that everybody will accept and say is a fair comparison. Having gotten this fair basis, then these elaborate and detailed statistics are exchanged monthly between the operating companies and, as one witness testified, Mr. Crawford, the President of Cleveland, it was like the standings in the American Baseball League. When those sheets came in, they showed how Cleveland stood as contrasted with the other companies. And each of the presidents have testified to this remarkable rivalry 9645
which exists between these companies. That rivalry has absolutely no counterpart elsewhere. In no other utility companies do we know of such feeling toward a non-affiliated company. It is a family relationship that produces it.

Now the suggestion w s made during the course of the hearings that all of the system relationships might continue if you terminated the system. We think that that suggestion is absurd on its face. —55—

The testimony shows that this exists only within the system. I might further say that the testimony shows that

9646 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

one company which retired from the system committees retired when financial control passed.

So that if you break up this system, you are going to break up something very fine and very valuable, and something which has been beneficial to the public, to consumers and to investors.

Turning now to the (B) standard, we realize that this has been fully argued before the Commission, with all the
9647 legislative precedents and construction questions, and we have no desire to repeat those arguments. Our contention is that in any case the three systems here meet the (B) standard test, because they are in adjoining States.

Commissioner Healy: Adjoining what?

Mr. Browning: Adjoining each other, Judge.

If you take Union as your principal system, you have Union in Iowa, Missouri and Illinois, with Wisconsin adjoining, Michigan adjoining and Ohio adjoining. You have met the statutory test. If you take Cleveland as the principal system, you reach the same result.

9648 Commissioner Healy: What State does Ohio adjoin?

Mr. Browning: Michigan.

Chairman Eicher: On that theory, you could run a shoe-

string clear across the United States, couldn't you?

Mr. Browning: I don't think that you can construe this statute in a vacuum. If you will look at the Federal Power Commission maps of the utilities in this country, it is perfectly clear that that question doesn't arise. We meet the statutory test, we are in adjoining States.

9649

Turning to the (C) standard, the so-called size standard——

Commissioner Healy (Interposing): Just a minute, before you leave that.

Suppose you took Cleveland as your principal system. On what basis do you contend that Illinois adjoins the State of Ohio, or Missouri or Kansas?

Mr. Browning: Off the record.

(Off the record discussion.)

9650

Commissioner Healy: You own property in Kansas?

Mr. Browning: We are not arguing for retention of that as a matter of statutory construction.

Commissioner Healy: Let's take your Union property in Missouri.

Mr. Browning: Could I just clarify that for one minute? Our constitutional case stands with respect to all properties. On the other hand, in discussing these issues of statutory construction, we are only dealing with three systems, Cleveland, Union and Wisconsin.

9651

Commissioner Healy: All right. Now let's take Union.

—57—

How does the Union property in Missouri, how can it be said to be adjoining Ohio if Cleveland were selected as your principal system; how could you work that out?

Mr. Browning: Because there is nothing in the statute except the word "adjoining". Wisconsin adjoins Illinois—we have properties in Wisconsin; Michigan adjoins Wisconsin—we have properties in Michigan, in the northern peninsula there; and we have properties in Ohio which adjoin Michigan.

9652 Commissioner Healy: That is, you work out your connection between Cleveland and Missouri by saying that you have something in Michigan and Michigan adjoins Ohio?

Mr. Browning: Yes, sir.

Commissioner Healy: And you have something in Wisconsin, and Wisconsin adjoins Michigan?

Mr. Browning: Yes, sir.

Commissioner Healy: And you have something in Illi-
9653 nois, and Illinois adjoins Wisconsin; and you have something in Missouri, and Missouri adjoins Illinois—is that it?

Mr. Browning: Yes.

Turning to the (C) standard, the question is one of size, or how big is "too big"?

Now I find Commission's counsel's discussion of this no less than remarkable. It is a masterpiece of generality—so was his oral argument today.

In other words, he says, "This system is too big". That

—58—

is all. How do we know it is too big? What is the test?

9654 Commissioner Healy: Well, the burden is on you under (C) to show that each one of these additional integrated systems is not too big.

Mr. Browning: Yes, sir, and we have met that burden.

Now when I was at law school, one of the very noted law professors there used to talk about visceral logic. I don't think that we ought to go on that in this case; in other words, on a mere feeling.

—59—

I think we ought to apply these tests, and that is what we have done in our brief, we did apply the tests.

Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr. 9655

The Commission's staff makes no effort whatsoever, they never mention the three tests in (C). Their brief just says it is "too big".

Let's look at these tests right now.

The first is "not so large * * * as to impair the advantages of localized management"—and of course we are now talking about the combination. There is no question but that each of those groups has had localized management, for many years, long before this statute was ever passed, long before this 9656
Commission was ever established. That was the policy of North American as its own policy, and it followed it.

Those systems have had every advantage of localized management. They couldn't have had more. Obviously the combination has not injured the localized management.

Now, in that connection I want to mention one thing: Counsel in his brief made a slighting reference to the Union situation which developed sometime ago. I want to say on that, that while we are not trying the Union Case here, the trouble was certainly not lack of localized management. The trouble was the opposite, the management was too localized. 9657

Furthermore, while that situation was most regrettable, what organization do any of us know, public or private, which can point with pride to every act of all its employees and ex-employees? Even the finest groups—and we believe

The North American is a fine company with a fine record—have some troubles over a period of 50 years.

The important thing is that when those troubles arose, North American removed that management and put in a

9658 highly competent and new management which was a feat in itself.

Turning now to the test of efficient operation in standard (C), the evidence shows conclusively that not only are these three systems efficient, but they are outstanding leaders of their industry.

St. Louis is a remarkable combination of a hydro-electric and steam combination, and I hope you will read the figures.
9659 They have a remarkable record for operating expenses, low rates, and fine service.

As to Cleveland, you know, sitting on this Commission, that it is ranked as one of the finest electric utilities in the United States.

You know that in its 1940 financing, it received the lowest rate ever obtained by an American utility up to that time.

Then let's go to Wisconsin. Wisconsin is the only company ever to have won both Coffin awards for distinguished service in the electric and transportation fields. For any years it has had the most efficient power generation in the
9660 world, not only in the United States but in the world.

It was the original developer of powdered fuel, which has

saved untold millions of dollars for the utility industry of this country and for consumers. And I may say that its development of powdered fuel was a remarkable illustration of courage and vision, not only on its part but on the part of North American, because at the time it was developed all of the experts were saying that it couldn't be done, and they invested millions of dollars in that powdered fuel plant, when the experts said it couldn't be done.

Any person who knows the utility industry knows of Milwaukee's outstanding technical reputation.

Now, obviously, the combination has not injured efficient operation.

And let me show you how the combination helped. Take this powdered fuel, an outstanding, pioneering achievement in the utility industry, first developed in Malwaukee.

What happened next? The second plant in the country to have powdered fuel was at St. Louis, and there were further refinements and developments. The Wisconsin engineers were down there working to help them, and watching. In other words, the first invention was made, and then it developed within the system.

Then we come to effectiveness of regulation. Now each of these three systems is regulated in all phases of its business by the respective State commissions.

The testimony is conclusive that they have been effectively regulated, and among other matters that all affiliate

relations are regulated. We submit that it is impossible for the combination to injure the effectiveness of regulation, that it has not and cannot.

As to size generally, we have shown by the evidence, which is reviewed in our briefs that this North American three-system combination is smaller than various single systems in the United States, both private and Governmental, and smaller on all tests. We took them all, square miles, kilowatt hours generated, generating capacity, revenue, assets—what you will. Of course, on the square mile test alone, Commission counsel has conceded that the Kansas Power & Light

9664 Company is a single integrated system and its square mileage is greater than the three systems combined.

Now we also show that this three-system combination was smaller than other leading American businesses.

One characteristic of America is that we are big here. In South America they refer to us as "El colosal del Norte". That is our common name. We are big, everything is big in the United States. We don't have 50 telephones, we have
9665 1,000. We don't have one automobile for every ten persons, but one automobile for every other person.

The South Americans think that that is remarkable, that we should be so big. But we are used to being big.

—63—

Now this system combination is a big system, but it is not big in comparison with other leaders in American industry. The staff has stressed the distance from the New York office. I frankly can't see what that has to do with the case. Suppose we change the office to Chicago overnight. As you know, distance is shortening all the time. Think of the sit-
9666 uation now as contrasted with that 10 years ago. Think of the improvement in transportation and communication facilities. And we have seen nothing as yet, because those distances are going to shorten still.

I can reach anybody on the telephone in Cleveland in as short a time as I could reach somebody in the next block.

We have also offered in evidence the report of a distinguished economist, showing that the Middle West constitutes a widely acknowledge region. All economists acknowledge it as a region in itself. In other words, these three systems

9667

are all located in one economic region. We submit that that is a highly significant factor which this Commission should consider.

Now if I may, I should like to turn to the last issue of Construction, which is the election of the principal system, and counsel has mentioned the fact that neither in the findings nor the brief have we elected a principal system.

The only statutory mandate is that each holding company shall limit its operations to a single integrated system 9668
and to permissible other businesses in secondary systems. The Act does not require that the holding company designate

which of the systems shall be the principal system, and no such additional requirement can be added to the statute.

Now I am not fencing with words at this point, because the point is very material to North American.

Since the construction issues here concern three concededly integrated systems, and only three, St. Louis, Wisconsin and Cleveland, if the Commission should overrule our contention that all three may be retained, then North Amer- 9669
ican should have the right to dispose of its interests in any such groups as circumstances permit. That is a highly important right, because we wouldn't know in advance, any more than the Commission would, what the circumstances regarding sale would be. That right is of great value to North American, and we insist that it is not called upon to designate a principal system under the facts of this case.

Commissioner Healy: Does anybody have that right?

Mr. Browning: Yes, sir.

Commissioner Healy: Who?

9670 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

Mr. Browning: North American. We submit that it is clearly the company's right, if one must be designated.

Commissioner Healy: Why don't you exercise it?

Mr. Browning: We submit that we have the right to designate it, and that if you disagree with our argument, our primary argument—which is that we don't have to designate—and you hold against us, then we submit that we have

9671 the right to designate as soon as you call upon us.

Commissioner Healy: You are not ready to do it now?

Mr. Browning: At this moment, no. If the Commission tells me that we must, we will do it immediately.

Commissioner Healy: Well, my trouble, frankly, is that I get into difficulty with this word "additional". First the statute says that the holding company must reduce itself to the ownership of one integrated system. Then it says it can keep "additional" systems. That implies additional to something. What can it be additional to?

Mr. Browning: On the facts of this case we contend that

9672 each of the three clearly qualifies on the tests for secondary systems.

Commissioner Healy: Well, what are they additional to?

Mr. Browning: To the third, which is primary. You have here just three systems. We have shown that each of the systems meets the tests. Now then, since each of the systems meets the tests, there is no reason why either you or we have to face the problem of which is principal.

Commissioner Healy: Now you say they meet the tests?

Mr. Browning: Yes, sir.

Commissioner Healy: They meet the tests applicable to additional systems in your contention?

Mr. Browning: Yes, sir; they have been conceded to meet the primary tests.

—66—

Commissioner Healy: Additional to what?

Mr. Browning: Additional each to any one of the others, except that under the (B) standard, either Cleveland or Union is required to be the principal system. I think we can 9674
work it down to that.

But we submit that if you do reject our views, that North American alone has that right to designate, and we are ready to designate immediately.

Commissioner Healy: How immediately?

Mr. Browning: Pretty immediately, Judge.

Commissioner Healy: Not today at least, is that right?

Mr. Browning: I should prefer—if you insist, I will.

Commissioner Healy: I am not proposing that.

Mr. Browning: I am prepared to do so if the Commission requires it, but I submit that we are entitled to considera- 9675
tion of that argument, and in our brief——

Commissioner Healy: (Interposing) Suppose we don't put it in too formal terms. Would you be willing to guess as to which one of these systems, North American might designate as the principal single integrated system if we held against you on the question of statutory construction?

Mr. Browning: Do you want my guess, Judge?

Commissioner Healy: Yes.

Chairman Eicher: Educated guess.

—67—

9676 *Argument of S. Pearce Browning, Jr., and Charles S. Hamilton, Jr.*

Mr. Browning: If we are required to elect, we elect Union, but I submit that we are not required to elect, and that any order which is issued, if it overrules our contentions that we are entitled to maintain all the systems, should be in the alternative. This Commission, I may state, in its Commonwealth & Southern tentative order, has dealt with alternatives, and I thought very clearly.

Commissioner Healy: What do you think Union includes?

9677 Mr. Browning: It is conceded to be a single integrated system.

Commissioner Healy: Does it include the Illinois-Iowa Power Company?

Mr. Browning: Oh no, Judge. It is the Union Electric Company of Missouri and its subsidiaries.

Commissioner Healy: That includes the Mississippi River Power Company, for example?

Mr. Browning: That is right.

Commissioner Healy: And it includes the Union Electric Company of Illinois?

9678 —68—

Mr. Browning: That is right. And it is our position that it also includes St. Louis County Gas Company.

In conclusion, may we say that North American has had a long and honorable history. For over 50 years it has held a high place in the United States. It started with the beginning of the electrical business. It has developed these fine operating companies which have rendered outstanding service to the public, their consumers and investors.

We ask you to consider the achievements of the four operating groups. Does anyone think that it is an accident that

9679

each of our operating groups holds the position that it does in the utility industry? Is anyone as naive as to think that it is a coincidence that Washington, Cleveland, Milwaukee and St. Louis hold their outstanding positions? You read just this past week a statement by Secretary Ickes concerning a possible power shortage, and probable measures which would have to be taken. There is no power shortage in the North American subsidiaries. Nobody in those cities is going to have to cut down his consumption of current. There will 9680
be no shortage whatever. Why? Because those subsidiaries started two years ago to build facilities to meet this emergency. In other words, they looked ahead and they had long-range planning, and that is characteristic of North American's subsidiaries.

North American has a great achievement in that its

policies and aid have developed these subsidiaries. We are proud of them and of what North American has done.

Now on various occasions here, members of your very courteous staff have said to me, in substance, "Remember, 9681
we did not write this law, but we are here to enforce it, and it is our duty to enforce it; in other words, if North American is to be dismembered, it will not be the fault of the staff or of the Commission or of Congress, the law requires it."

Now in all frankness, that state of mind represents an unconscious effort to evade responsibility. Unfair and destructive as this statute is, its framers still left to this Commission sufficient room for it to preserve the fundamental structure of The North American Company through the combination of the three systems. The Commission needs

9682 not strain to reach the result. Even a fair construction of the Act permits it. It is only if the statute is distorted, rewritten by the legislative efforts of the staff itself, that North American will be dismembered.

So we submit to you that this case is now the very grave responsibility of this Commission. It is now your problem whether you will tear apart and dismember a great and distinguished company, destroying something fine and valuable;
9683 or whether, administering justice with economic statesmanship, you will apply this law so as to preserve The North American Company, permitting it to continue its distinguished contributions to this accomplished age.

—70—

Commissioner Healy: I presume as a lawyer you believe in the supremacy of law in the United States?

Mr. Browning: Yes, Judge, I do.

Commissioner Healy: Do you believe what the unanimous Supreme Court, speaking of the Federal Trade Commission—another independent commission—said, that such
9684 commissions had no right to have any policy except the policy of the law?

Mr. Browning: Yes, sir. My difficulty, Judge, in the construction of this statute, is that I think you have gone beyond that point.

Commissioner Healy: Well, of course, that is a question that will have to be settled by the courts ultimately, will it not?

Mr. Browning: You have concededly not followed its literal meaning.

Commissioner Healy: Who has conceded that?

9685

Mr. Browning: I mean that Standard (B) was rewritten, so far as I know, in the U.G.I. case.

Commissioner Healy: I don't think that that is so at all.

Mr. Browning: Well, perhaps it might be differently phrased.

Commissioner Healy: Of course, you could say that of any statute, or of a will, or a deed, or any legal document. Of course, we have to concede that the last word on the construction of a statute lies in the courts.

9686

—71—

Mr. Browning: Yes, sir.

Commissioner Healy: That is entirely proper, and that is consistent with the supremacy of law in the United States, and we construe these statutes as well as we can, as lawyers, You do the same thing, and so do the judges of the courts.

Under your statement of reducing these issues to three systems, why shouldn't this Commission forthwith issue an order requiring you to divest yourself of everything outside of the three systems?

9687

Mr. Browning: Our position on that is that first, while we know the Commission has already passed on the point in another proceeding, that such an order is not warranted by the statute; but over and above that, we cannot see what possible purpose it would serve here.

As you know, all steps are being taken which North American can take to dispose of these other interests. Of course, it is our fundamental position that you constitutionally cannot do it, so we cannot consent to any such order.

I can't see what possible practical good it would do.

9688 *Rebuttal Argument of Ralph C. Binford*

As you know, North American is pretty close to the mark on this Washington thing. We think it would hurt the situation and not help it.

Chairman Eicher: Mr. Binford, have you any reply?

Mr. Binford: Yes.

—72—

Rebuttal Argument of Ralph C. Binford:

Mr. Binford: I wish to state that my incorrect statement relative to the investment of North American Company in
9689 Detroit Edison was wholly inadvertent. I didn't intend it as an exaggeration for effect or otherwise.

In the requested findings of fact filed by counsel for the Commission, it is requested that the Commission find that as of December 31, 1940, the investment of The North American Company in the Detroit Edison Company amounted to $29,822,316, which is taken from the exhibit of the respondent in this case. My figure of $40,000,000 was inadvertently stated, it was not an attempt at exaggeration. As of the same date, the investment of The North American Company in Pacific Gas & Electric Company was carried upon the
9690 books of The North American Company at $63,765,419.

—73—

For the general purpose for which these figures were given, namely to show the enormous magnitude of this system, such a discrepancy in figures has no particular meaning.

Now, on the question of the meaning of the words and phrases, such other businesses as are "reasonably incidental or economically necessary or appropriate to the operations" of such integrated public utility system, counsel for respondents state that we have not been specific in our argument, and

that the word "incidental" has numerous meanings other than functionally related.

I concede that the word "incidental" does have other meanings. The dictionary gives a number, such as casual, or things occurring perchance. However, we submit, as used in this section, with reference to the powers which a holding company will be permitted to exercise, and the field of the exercise of those powers, our nearest analogy for the use of the word "incidental", particularly when the word is preceded by the adverb "reasonably", is that there is some functional attribute to be given to the word, and we proceeded upon that basis, and we think that the words used together, or in the manner in which the several phrases are used here "reasonably incidental, or economically necessary or appropriate", they take some degree of color from each other, and regard it as having meaning within a somewhat similar field. 9692

As to the specific properties involved here, the coal company, the transportation properties, the office building which

—74—

houses the Hanover Bank and The North American Company only—possibly I might in a different sense say—incidentally, and the North American Securities Corporation, it seems to us evident that there is no way in which it can be said with any degree of reason that the retention of this office building in the heart of the financial district of New York is "reasonably incidental or economically necessary or appropriate to the operations" of the electric utility system in Cleveland, Ohio, or to the one in Wisconsin and Michigan, or to the one in St. Louis; and if it is not "reasonably incidental" to the operations of any one of these three, it is not retainable under the terms of the Act. 9693

9694 *Rebuttal Argument of Ralph C. Binford*

The same thing is true as to the coal mining properties, which do not furnish coal to the utilities here in question, namely those of the West Kentucky Coal Company. It was suggested that when they were purchased some 30 years ago, it was thought that these coal properties might be used as a source of supply for the Union Electric of Missouri companies, but they never have been so used to any degree.

Counsel also, I believe, misunderstood my statement relative to the Florida Case, which I cited, which case, by the
9695 way, is not unusual under numerous authorities cited in it—and there was a key number given in the digest showing a long line of cases to the same effect. His understanding was that the later general law regulating banks, which was held

to govern over the provisions of a prior charter by special act of the legislature, expressly repealed that special act. That is not true in this case. I possibly did not make the statement clearly enough. But the general act in that case, just as in the present case, related to an industry or a field of business activity, as a whole, without specific reference to any
9696 special charter or other special laws theretofore enacted, and it was held that the general regulation prevailed over the apparent charter powers.

Getting to the question of the retention of these several systems by The North American Company, under the (A), (B) and (C) standards of section 11(b)(1), it is again argued by counsel for the respondent that our argument is too general. They speak of the benefits supposed to accrue by reason of advice from The North American Company; financial assistance from The North American Company, by way, however, apparently of advice rather than of contribu-

tions in the main; and thirdly, of the intercompany relationships through the several committees.

Now, I think there may be some benefits which are intangible, possibly, as counsel suggested.

The words of paragraph (A) are these:

"Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system."

—76— 9698

The only economies that I see in this argument that are relied upon are only called such by stretching the meaning of the word. They are the supposed benefits which have not been calculated in dollars and cents, or in actual degrees of efficiency, related to the so-called benefits, which these several companies receive by reason of their contacts with the personnel of The North American Company.

It isn't a dollars and cents proposition. It isn't like a case where you have several small companies in one State or an adjoining State, where there are economies in purchasing or economies that can be measured in any pecuniary 9699 or any other sense, other than emotionally.

Now, we don't know, as far as the record shows, whether the financing that a certain company of the North American system did at a certain time, was solely by reason of advice received from the several financial experts of The North American Company, and resulted in substantial savings, or whether they would not have done it anyhow, in the absence of such advice. —77—

The benefits supposed to accrue from the exchange of information through these so-called inter-company com-

mittees, which are three in number, the station operating advisory committee, composed of mechanical engineers; the electric committee, composed of electrical engineers; and the accounting committee, composed of accountants of the several companies—were not apparently fully realized until this present 11(b)(1) proceeding was begun, because up until that time only two of these committees existed. Then, after these proceedings were started, it was suddenly recognized that the idea of having the engineers meet four or five
9701 times a year in regular meeting, might be a good one to carry a little further, and have the accountants do likewise.

At the time mention was first made of the accounting committee in this proceeding, it only had had one meeting, and that was an organization meeting.

These other committees have functioned over a long period of years, and there probably is quite a little benefit to be obtained by the exchange of information. But we respectfully submit that these three things—first, general advice from the executives of the holding company to the operating companies; secondly, the intervention to the bene-
9702 fit or detriment (we don't know which) of the operating companies, of the holding company's financial man in the financing of the operating companies; and third, the sponsorship by the holding company of the exchange of technical in-

formation between the companies—falls far short of showing that each of such additional systems can not be operated as an independent system without "the loss of substantial economies".

Now as to localized management, under (C) there is quite a degree of localized management, except in financial mat-

ters, among these several North American companies, and I think there is quite a showing of efficient operation.

On the other hand, "the continued combination of such systems under the control of such holding company," has not been proven, and the burden of proof is upon the respondent, not to be "so larg , considering the state of the art and the area or region affected, as to impair the advantages of localized management" in another sense, which I will mention, or the effectiveness of regulation.

Counsel for the respondents accuses me of making a slurring reference to recent happenings in the Union Electric Company of Missouri system. The reference wasn't intended as a slur, but rather as an avoidance by merely referring to the matter, of detailed argument, to show that the existence of the situation which developed in Union Electric Company of Missouri, and with which this Commission is familiar, and which is shown in part in the record in this case, obviously indicates, if The North American Company officials were wholly ignorant and innocent of the matters that arose in that system, and if the state authorities were unable to 9704

detect the matter until the point of indictment had been reached, and the point of a lawsuit for the purpose of forfeiting the charter of the Union Electric Company of Missouri had been reached—that this system, as presently constituted is getting so large as to get out of hand of eight officers and 99 employees of The North American Company located in New York. In other words, the effectiveness of regulation isn't demonstrated by the incidents in connection with that Union Electric of Missouri situation.

Now on the question of size, it is suggested that we have conceded that the Kansas Power & Light Company, in so

far as its electric utility operations and properties are concerned—this company being a subsidiary of North American Light & Power Company—constitutes a single integrated system, while its geographic extent in square mile area is greater than that of the three systems presently sought to be retained by The North American Company.

We don't think that is inconsistent at all. In the Kansas situation we have an entirely different area or region. It is a rural area, with great distances between centers of popu-
9707 lation, and there are no large centers of population in the area.

Consequently, in a sparsely settled rural section such as that, a system, to be operated at maximum efficiency, may be larger in square mile area than one in a metropolitan district or area such as Cleveland, Washington or the St. Louis metropolitan area. —80—

The statute specifically enjoins the Commission to look to the particular area or region affected.

So we see no inconsistency in that position that any two of these systems, or the three put together, which lie within
9708 The North American Company system, proper, would be too big a combination to meet the several tests of (C).

Now as to (B), by the adoption of the briefs in these other proceedings, which has been done here at the request of counsel for the respondent, the necessity of arguing (B) and the proper interpretation thereof, appears to be made unnecessary except in this respect.

Counsel for the Commission do not, of course, accept the interpretation suggested by counsel for the respondent that the word "adjoining" is a transitory word that would cover a string of systems extending all the way around the United States and eventually over the United States, merely because

each additional system may have properties in a state adjoining the next additional system in the chain.

—81—

Now we insist that the word "adjoining" relates to the State in which the principal system is situated, of course.

I think the other points have been covered as fully as is practicable in a matter of this kind, in the briefs which have been filed.

Mr. Browning: Could I give Judge Healy the figures he asked for? 9710

Chairman Eicher: Yes.

Mr. Browning: Judge, you asked whether North American had invested any equity capital in the Wisconsin group.

Commissioner Healy: That wasn't my question, but it is all right to answer it as if I had asked it.

Mr. Browning: A rough check shows $24,400,000 for that group alone, and our findings give a figure of $104,000,000 for the four groups.

Commissioner Healy: Of course, when The North American Company advised the Wisconsin Company to finance a generating addition through the issuance of bonds, it may 9711 have been acting primarily in its own interest, for all I know; as the owner of the equity, The North American Company would have the benefit of the leverage of the money invested by way of bonds.

If you had a three or four or five per cent. coupon on the bonds, and the rate of return permitted by the State Commission at that time was 7 or 8 per cent., the common stock would have the benefit of the amount by which the rate of return exceeded the cost of that money invested to produce that return; isn't that true?

—82—

Mr. Browning: It certainly is true that the issuance of senior securities at a lower rate increases the rate of return.

Could I say on that, Judge, that we are proud of our financial record and we hope you are going to read the briefs in which we discuss it.

Commissioner Healy: Of course we will read the briefs.

Mr. Browning: We are proud of our capitalization, we are proud of our financing. One of the things we have pointed out is that there has never been a default on a security in
9713 these groups. You know what a remarkable record that is.

One other minor matter which Mr. Binford and I agreed might go into the record.

One of the companies in the Union group had been dissolved, and all of its assets sold or distributed, and Commission counsel was not aware of the fact because the dissolution took place after the record closed.

I have furnished him with an affidavit by Mr. Woodbridge, and I wonder if we couldn't have that stipulated in as part of the record, or perhaps as an additional exhibit, because then it gets rid of that company, and you don't have
9714 to consider it?

Chairman Eicher: Is there any objection, Mr. Binford?

Mr. Binford: No, that is satisfactory.

—83—

Commissioner Healy: What is the name of the company?

Mr. Browning: St. Louis & Alton Railway Company.

Commissioner Healy: Is it a wholly-owned subsidiary?

Mr. Browning: Yes, sir.

Chairman Eicher: The Commission will take the matter under advisement.

(Whereupon, at 5:30 o'clock p. m., the Commission took the above matter under advisement.) —84—

SECURITIES AND EXCHANGE COMMISSION

WASHINGTON

OFFICE OF THE SECRETARY

June 27, 1940.

S. Pearce Browning, Esq.,
c/o Sullivan & Cromwell,
48 Wall Street,
New York, New York.

Re: North American Company and its
Subsidiary Companies,
File No. 59-10.

Dear Mr. Browning:

By direction of the Commission, it is requested that you file with the Commission, in the above entitled proceeding, a statement in behalf of respondents upon the following matters:

1. To what extent do the respondents consider that the issues in the subject proceeding have been correctly stated by counsel for the Commission in the statement submitted for the record by him on June 21, 1940?

2. The retention of which properties as a supposedly integrated public utility system, and of what interests in other businesses supposedly reasonably incidental, economically necessary or appropriate to the operations of such integrated public utility system, do the respondents consider to be at issue?

3. The retention of what properties as an "additional" system or systems, do the respondents consider to be at issue?

4. In respect of the retention of such additional system or systems, what questions relative thereto under the (A), (B), (C) standards of Section 11(b)(1) of the Act are deemed by the respondents to be at issue?

It is requested that the Commission be furnished with this statement on or before July 5, 1940, to aid it in passing upon your application for a continuance.

Very truly yours,

FRANCIS P. BRASSOR
Francis P. Brassor,
Secretary.

NOTES:

(A) The earnings for years 1939 and 1940 are on the basis of the former basis of consolidation, including Washington Railway and Electric Company and Subsidiaries and excluding North American Light & Power Company and Subsidiaries.

(B) The percentage deviation from the ten year average shown in this column is computed without regard to sign, plus or minus.

(C) Includes the former Wisconsin Electric Power Company prior to October 1938 when it was merged into the present Wisconsin Electric Power Company (formerly The Milwaukee Electric Railway and Light Company).

(D) Holding and securities companies referred to are, Edison Securities Corporation, Western Power Corporation and North American Utilities Securities Corporation. The net income of these companies after deducting all expenses and charges, including minority interest, is included in the item for Holding Company Other Net Income, etc.

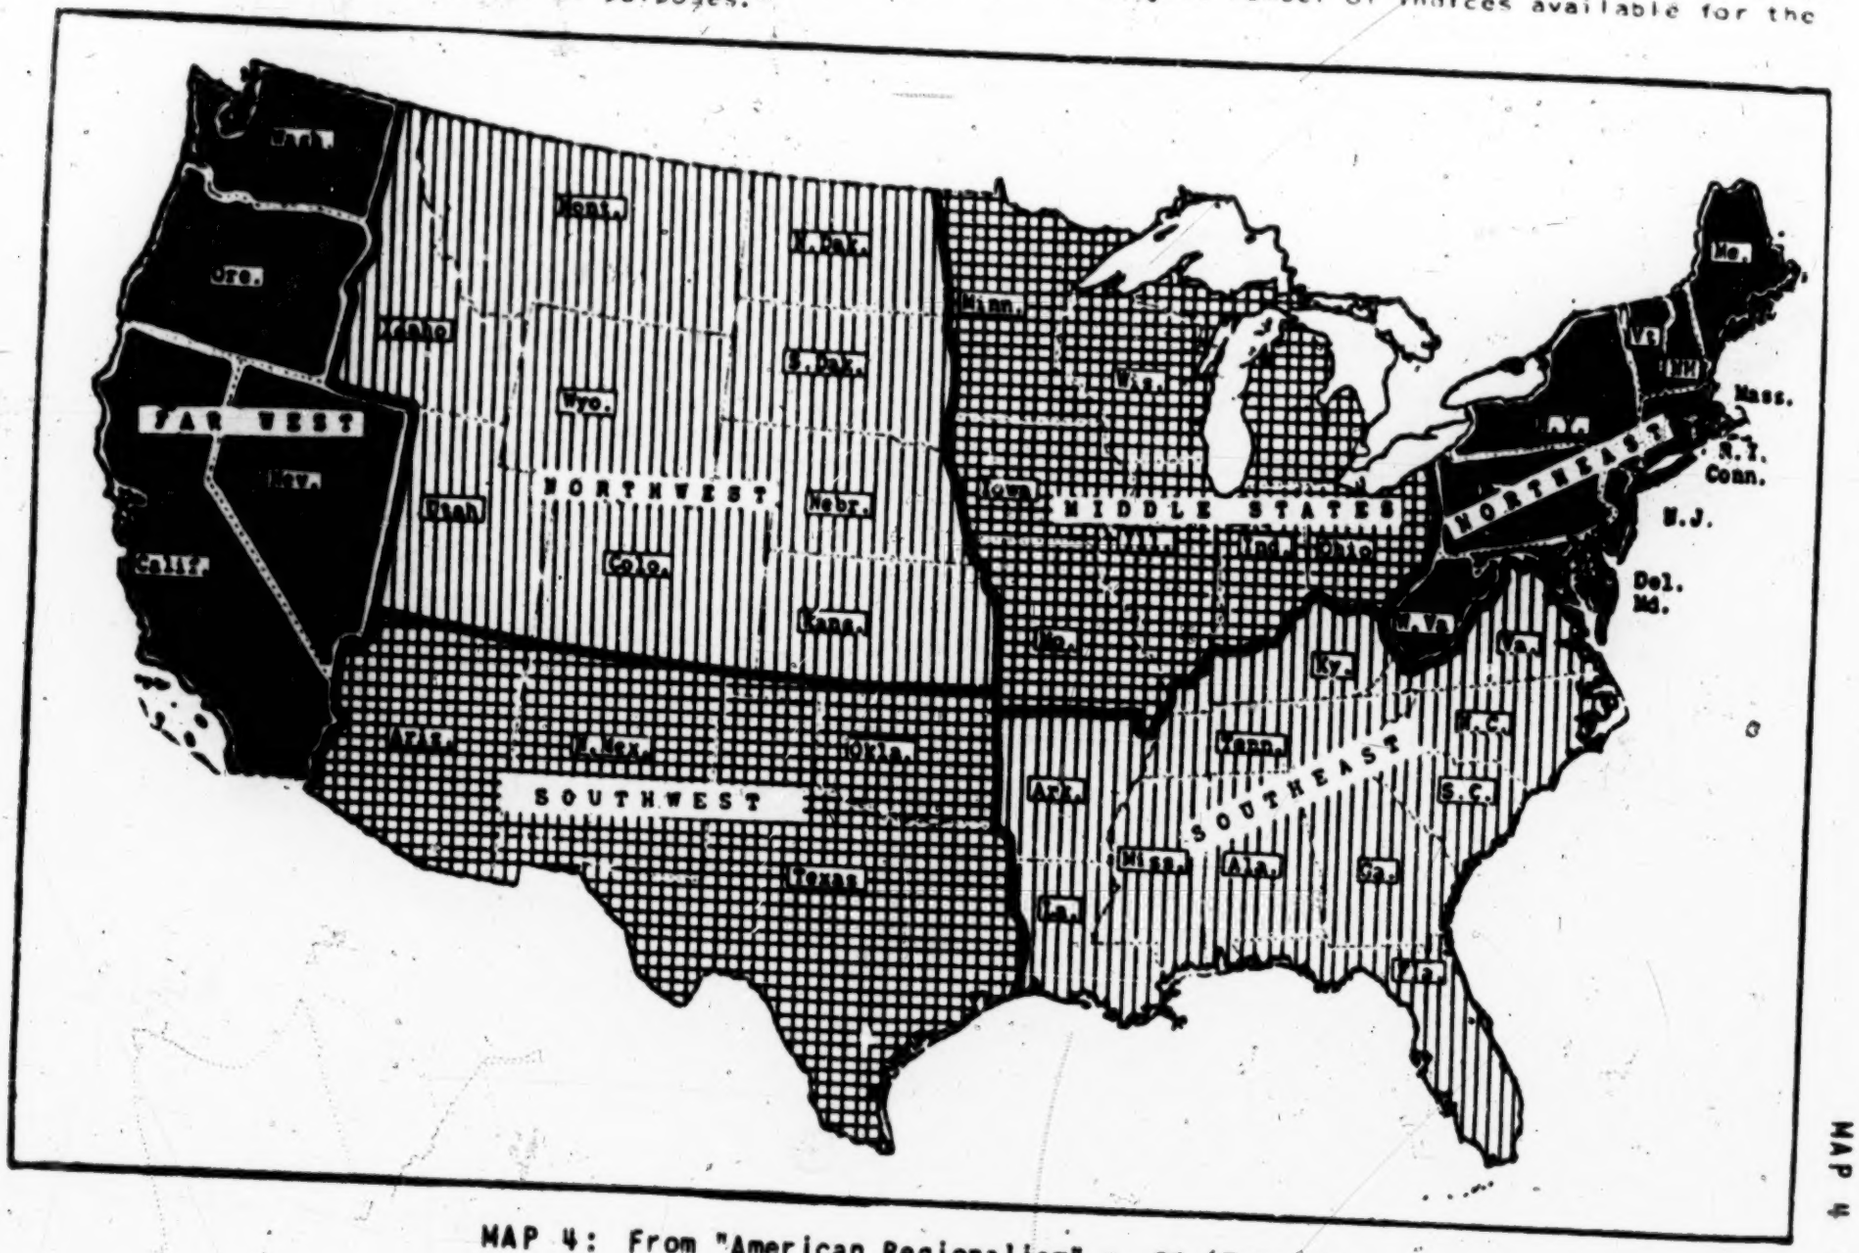
" The Six Major Societal Group-of-States Regions utilized in American Regionalism as approximating the largest available degree of homogeneity measured by the largest number of indices available for the largest possible number of purposes."



MAP 4

MAP 4: From "American Regionalism" p. 84 (Top).

" This map illustrates the no-man's land of border lines and states and indicates how the regions would be flexible and modified if it were not necessary to utilize state lines. The Southwest, for instance, would follow popular usage and include parts of Utah, Colorado, and Kansas, as would the Middle States extend over to the tree belt line of Nebraska and the Dakotas. West Virginia would classify in three regions. "

SERIAL PREFERRED STOCK

"(a) The Board of Directors is hereby empowered to cause the Serial Preferred Stock to be issued from time to time in one or more series as follows:

(1) As shares of Preferred Stock, 6% Series, which shall include the 606,678 shares of previously authorized and issued Six Per Cent. Cumulative Preferred Stock which have been changed into, and shall hereafter be designated as, Preferred Stock, 6% Series. The annual dividend rate for such series shall be 6% per annum; the date from which dividends on all shares of such series issued prior to the record date for the dividend payable on April 1, 1939, shall be cumulative shall be January 1, 1939; the redemption price for such series shall be $55 per share; and the amount per share payable to the holders thereof upon any liquidation, dissolution or winding up of the Company or upon any distribution of its capital shall be the par value thereof.

* * * * *

(d) Before any amount shall be paid to, or any assets distributed among, the holders of the Common Stock upon any liquidation, dissolution or winding up of the Company or upon any distribution of its capital, and after paying or providing for the payment of all creditors of the Company, the holders of the Serial Preferred Stock at the time outstanding shall be entitled to be paid in cash, in the case of Preferred Stock, 6% Series, the amount hereinbefore specified with respect thereto, and, in the case of Serial Preferred Stock of any other series, the amount for the particular series fixed therefor by the Board of Directors as hereinbefore provided, together with a sum in the case of each

such share of each series, computed at the annual dividend rate for the series of which the particular share is a part, from the date from which dividends on such share became cumulative to the date fixed for the payment of such distributive amount, less the aggregate of the dividends theretofore or on such date paid thereon; but no payments on account of such distributive amounts shall be made to the holders of the Serial Preferred Stock of any series unless there shall likewise be paid at the same time to the holders of the Serial Preferred Stock of each other series at the time outstanding like proportionate distributive amounts, ratably, in proportion to the full distributive amounts to which they are respectively entitled as herein provided.

COMMON STOCK

(e) Whenever the full dividends on the Serial Preferred Stock at the time outstanding for all past quarter-yearly dividend periods shall have been paid, and the full dividend thereon for the quarter-yearly dividend period then current shall have been paid or declared and a sum sufficient for the payment thereof set apart, then such dividends (payable in cash, stock or otherwise) as may be determined by the Board of Directors may be declared and paid on the Common Stock, but only out of surplus or net profits legally available for the payment of dividends, and the Serial Preferred Stock shall not be entitled to participate in any such dividends, whether payable in cash, stock or otherwise; provided, however, that so long as any of the Serial Preferred Stock shall remain outstanding, no dividend whatsoever, whether in cash, stock or otherwise, shall be paid or declared, nor shall any distribution be made on the Common Stock, nor shall any shares of the Common Stock be purchased, retired or other-

wise acquired by the Company, unless, after giving effect thereto, there shall remain a balance of earned surplus, net profits, and reserves created for losses resulting from the revaluation, sale or other disposition of any of the assets of the Company, which in the aggregate shall be at least equal to fifteen per cent. of the aggregate par value of all Serial Preferred Stock then outstanding."

* * * * *

Extract from Certificate of Designation of Preferred Stock, 5¾% Series, Part of Respondents' Exhibit No. 145

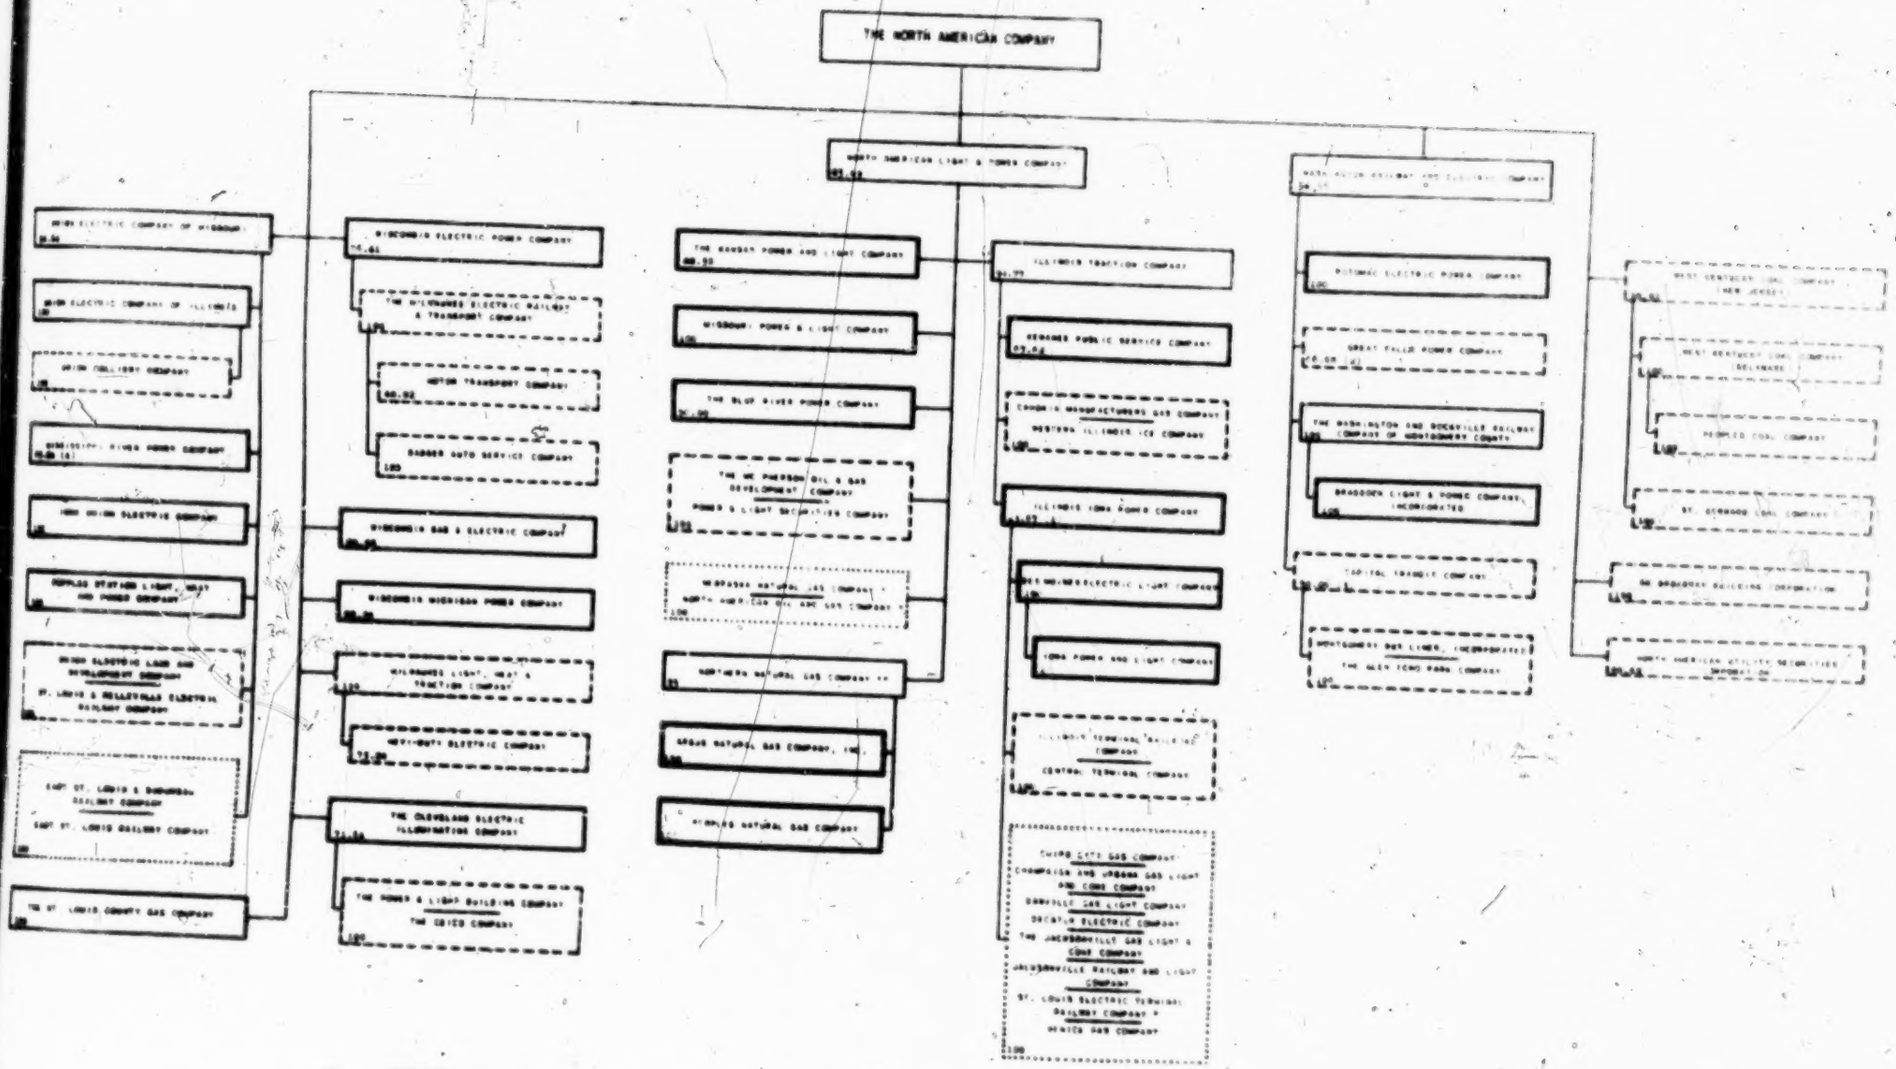
"RESOLVED, that Six hundred ninety-six thousand five hundred eighty (696,580) shares of the authorized but unissued shares of Serial Preferred Stock, of the par value of $50 per share, of the Company, be issued as shares of a series to be designated 'Preferred Stock, 5¾% Series', and that, pursuant to Article Fourth of the Certificate of Organization of the Company, as amended, the Board of Directors hereby fixes for such series:

(1) 5¾% of the par value of each share as the annual dividend rate, and February 1, 1939 as the date from which dividends on all shares of such series issued prior to the first dividend payment date therefor shall be cumulative;

(2) $55 per share as the redemption price;

(3) $52.50 per share as the amount payable to the holders thereof in case of voluntary dissolution or any voluntary distribution of assets, and $50 per share as the amount payable to the holders thereof in case of involuntary dissolution or any involuntary distribution of assets;"

Corporate Chart-May 1, 1941



Explanatory Notes

A light solid line connecting a company name indicates that the company is a holding company. A heavy solid line indicates a utility company. A broken line indicates a non-utility company, and a dotted line indicates an inactive company or a company in process of organization.

The figures shown above represent the percentage of total voting securities held by the immediate parent (excluding securities having voting rights because of default or arrears).

NOTES (1) to (9):

(1) In addition Power & Light Securities Company holds 1.91% of the voting stock. North American Light & Power Company holds 0.1% of the voting stock and the North American Company holds 0.74% of the voting stock.
(2) In addition The Appalachian and Nashville Railway Company of Montgomery County holds 33.33% of the common stock.
(3) In addition The North American Company holds 1.0% of the common stock.
(4) In addition The North American Company holds 0.05% of the voting stock.
* In process of dissolution.
** Sale pending.

Note: In addition to the foregoing, The North American Company owns directly 10.01% of the voting stock of The Detroit Edison Company and 17.10% of the voting stock of Pacific Gas and Electric Company. North American Utility Securities Corporation owns directly 0.01% and 0.10% of the voting stock of The Detroit Edison Company and Pacific Gas and Electric Company, respectively.

UNITED STATES OF AMERICA

BEFORE THE

SECURITIES AND EXCHANGE COMMISSION

IN THE MATTER

of

THE NORTH AMERICAN COMPANY

and its

SUBSIDIARY COMPANIES,

Respondents.

File No. 59-10

Public Utility Holding Company Act of 1935,
Section 11(b)(1)

FINDINGS OF FACT REQUESTED BY THE NORTH AMERICAN COMPANY AND OTHER WITHIN NAMED RESPONDENTS

The North American Company and all of its subsidiaries which are Respondents in this proceeding (other than North American Light & Power Company and its subsidiaries)*

*Such subsidiary Respondents on behalf of which these findings are requested are Washington Railway and Electric Company and its subsidiaries, Union Electric Company of Missouri and its subsidiaries, The St. Louis County Gas Company, Wisconsin Electric Power Company and its subsidiaries, Wisconsin Gas & Electric Company, Wisconsin Michigan Power Company, Milwaukee Light, Heat & Traction Company and its subsidiary, The Cleveland Electric Illuminating Company and its subsidiaries, West Kentucky Coal Company and its subsidiaries, 60 Broadway Building Corporation and North American Utility Securities Corporation.

hereby request the Securities and Exchange Commission to make the findings of fact hereinafter set forth. For the sake of convenience, such requested findings are grouped by the subject matter or groups of companies to which they relate. The North American Company is hereinafter called "North American".

1. North American And Its Holdings

1.1. North American is a registered public utility holding company which was incorporated under the laws of the State of New Jersey in 1890 and has since had continuous existence. (Tr. 6886)

1.2. North American's principal public utility holdings now consist of controlling interests in companies operating in and about Washington, D. C., Cleveland, Milwaukee and St. Louis. It also has substantial minority investments in The Detroit Edison Company and Pacific Gas & Electric Company. North American also controls three non-utility companies and North American Light & Power Company, an intermediate public utility holding company. (Resp. Exs. 125 and 147)

2. The Washington Group

2.1. Washington Railway and Electric Company (hereinafter called "Washington") is a registered holding company and has the subsidiaries hereinafter mentioned (all hereinafter collectively called the Washington Group"). Washington was incorporated under an Act of Congress in 1892. (Tr. 519)

Findings of Fact Requested by the North American Company and Other Within Named Respondents

2.2. North American holds 34.55% of the voting stock of Washington. (Resp. Ex. 147) Its holdings at December 31, 1940 represented a cost to North American of $12,835,341 and 44..39% of Washington's consolidated capital. (Resp. Exs. 125, 127 and 147)

2.3. The only public utility companies in the Washington Group are Potomac Electric Power Company (hereinafter called "Potomac"), incorporated under the District of Columbia Code in April, 1896, and Braddock Light & Power Company (hereinafter called "Braddock"), a Virginia corporation. (Tr. 118) Braddock owns only the small part of the distribution system located in Virginia, being a separate corporation to comply with Virginia law, and its property is in all respects an integral part of Potomac's system. (Tr. 132)

2.4. Potomac and Braddock furnish all electric utility service in a single compact and continuous service area, consisting of the District of Columbia and adjacent portions of Maryland and Virginia, a total of 630 square miles, with a population of 826,000. The operations of Potomac and Braddock are confined to a single area or region. (Resp. Ex. 3; Tr. 132, 137)

2.5. The electric utility system of Potomac and Braddock consists of two generating stations (additional power supply being obtained through an interconnection with Baltimore), together with transmission lines and distributing facilities. The utility assets of Potomac and Braddock are physically interconnected and are economically operated as a single in-

terconnected and coordinated system. (Resp. Ex. 3, 5; Tr. 179, 244, 246, 304)

2.6. The electric utility system of Potomac and Braddock is not so large as to impair the advantages of localized management.

2.7. The electric utility system of Potomac and Braddock is not so large as to impair its efficient operation.

2.8. The electric utility system of Potomac and Braddock is not so large as to impair the effectiveness of regulation.

2.9. The electric utility system of Potomac and Braddock constitutes a single integrated public utility system within the meaning of the Act.*

2.10. The Washington and Rockville Railway Company of Montgomery County is a non-operating company and its only activity is ownership of all of the stock of Braddock and part of the stock of Great Falls Power Company. (Tr. 129) The latter company's only activity is ownership of 1,050 acres of land on the Potomac River sixteen miles from Washington, originally acquired for hydroelectric development and now held for liquidation. (Tr. 517) The retention by Washington of its interest in the Washington and Rockville and Great Falls Companies was expressly authorized by Congress (47 Stat. 760; Tr. 519)

2.11. The Washington and Rockville and Great Falls companies do not conduct a business, and in any case reten-

*The Public Utility Holding Company Act of 1935 is herein referred to as the "Act".

tion of Washington's interest therein is necessary or appropriate in the public interest or for the protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility system of Potomac and Braddock, and the activities of such companies are reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

2.12. The only other business in the Washington Group is the transportation system of Capital Transit Company (hereinafter called "Capital Transit") and its two subsidiaries. Capital Transit and its subsidiary, Montgomery Bus Lines, Incorporated, do substantially all the transportation business in the District of Columbia and in two adjacent Maryland Counties. Glen Echo Park Company, the other subsidiary, operates an amusement park in connection with such transportation system and to increase traffic thereon. (Tr. 450, 476)

2.13. Capital Transit was incorporated in 1933, when it acquired all of the transportation property formerly owned by Washington and by the former Capital Traction Company pursuant to a transit unification plan approved by Congress. Such unification resulted in economies and better service and was highly beneficial to the public. (Tr. 455, 469-75). The retention by Washington of its interest in Capital Transit was expressly authorized by Congress. (Tr. 519; 47 Stat. 760)

2.14. The properties of Potomac and Capital Transit are interconnected at many points, with joint use of many

facilities, and Potomac operates various electrical equipment of Capital Transit. (Tr. 470-475) All electric energy used by Capital Transit is purchased by it from Potomac. (Tr. 475) The electric system of Potomac had its origin in transportation properties now owned by Capital Transit, and the two have been under common control for more than forty-eight years. (Tr. 457-9, 463-4)

2.15. The investment in Capital Transit represents less than 15½% of Washington's consolidated assets and 2.06% of its consolidated gross income. (Resp. Ex. 143d)

2.16. Capital Transit and its subsidiaries are fully regulated by the Public Utilities Commission of the District of Columbia and the Public Service Commission of Maryland. (Tr. 479)

2.17. Retention of Washington's interest in Capital Transit is necessary or appropriate in the public interest or for the protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility system of Potomac and Braddock; and the transportation business and related operations of Capital Transit and its subsidiaries are reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

2.18. The operations of the holding company system of Washington are limited to a single integrated public utility system and to such other businesses as are reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

Findings of Fact Requested by the North American Company and Other Within Named Respondents

3. The Cleveland Group

3.1. The Cleveland Electric Illuminating Company (hereinafter called "Cleveland") is an electric utility company and has the two subsidiaries hereinafter mentioned. Cleveland was incorporated under the laws of Ohio in 1892. (Tr. 1068)

3.2. North American holds 79.4% of the common stock of Cleveland, representing a cost to North American of $38,417,339, and 33.58% of Cleveland's capital. (Resp. Exs. 125 and 127)

3.3. Cleveland furnishes electric utility service in a single compact and continuous service area centering about the City of Cleveland, a total of 1,700 square miles, with a population of 1,400,600. The operations of Cleveland are confined to a single area or region and within the State of Ohio. (Tr. 596, 598, Resp. Ex. 21)

3.4. The electric utility system of Cleveland consists of three generating stations, together with transmission lines and distributing facilities. The utility assets of Cleveland are physically interconnected and are economically operated as a single interconnected and coordinated system. (Resp. Ex. 21; Tr. 647-649, 696-699, 823)

3.5. Cleveland has two subsidiaries, The Power & Light Building Company, which owns the system office building, and The Ceico Company, which holds a small amount of miscellaneous system real estate and renders meter service to certain system customers. The activities of such sub-

sidiaries constitute an integral part of Cleveland's electric utility system. (Tr. 939-945)

3.6. The electric utility system of Cleveland is not so large as to impair the advantages of localized management.

3.7. The electric utility system of Cleveland is not so large as to impair its efficient operation.

3.8. The electric utility system of Cleveland is not so large as to impair the effectiveness of regulation.

3.9. The electric utility system of Cleveland constitutes a single integrated public utility system within the meaning of the Act.

3.10. The only business of Cleveland other than electric service consists of furnishing steam to 600 customers in the City of Cleveland. Such steam business, which was commenced by Cleveland in 1906, benefits the electric system by rendering unnecessary independent steam plants which could also generate customers' electric requirements. The steam business represents about 5% of Cleveland's total operating revenues. (Tr. 951) The electric and steam services are conducted by the same organization and use much joint equipment, with resultant substantial economies. Conduct of the steam business by Cleveland benefits consumers and the community. Such steam business could not be sold without a substantial loss to Cleveland. (Tr. 951-967)

3.11. Retention by Cleveland of its steam business is necessary or appropriate in the public interest or for the

protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility system of Cleveland; and the steam business is reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

4. The Wisconsin Group

4.1. The Wisconsin Group consists of three public utility companies, Wisconsin Electric Power Company (hereinafter called "Wisconsin Electric"), Wisconsin Gas & Electric Company (hereinafter called "Wisconsin Gas") and Wisconsin Michigan Power Company (hereinafter called "Wisconsin Michigan"), and the five non-utility companies hereinafter mentioned. (Resp. Ex. 117) The three utility companies were all incorporated under the laws of Wisconsin, in 1896, 1866 and 1911, respectively. (Tr. 2131, 2171, 2191)

4.2. North American holds 76.41%, 89.98% and 88.24%, respectively, of the voting stock of Wisconsin Electric, Wisconsin Gas and Wisconsin Michigan. Its holdings at December 31, 1940 represented a cost to North American of $25,313,824, $6,000,000 and $6,774,615.46, respectively, and 25.06%, 32.45% and 29.04%, respectively, of the capital of such companies. (Resp. Exs. 125, 127)

4.3. The Wisconsin Group furnishes electric utility service in a territory of 12,318 square miles in Wisconsin, including Milwaukee and its suburbs, and in a portion of the northern peninsula of Michigan, with an aggregate population of 1,275,000. The electric operations of the Wisconsin

Group are confined to a single area or region. (Resp. Exs. 32, 142; Tr. 1219)

4.4. The electric utility system of the Wisconsin Group consists of 21 generating stations, together with transmission lines and distributing facilities. The utility assets of the Wisconsin Group are physically interconnected (except for a very minor area in Northern Michigan which is capable of physical interconnection) and under normal conditions may be economically operated as a single interconnected and coordinated system. (Resp. Ex. 32; Tr. 1469, 1509, 1528, 2226-8)

4.5. In addition to electric service, Wisconsin Gas furnishes gas service in a territory of 1,300 square miles adjacent to Milwaukee, of which all but 84 square miles lie within the electric service territory above referred to, with a population of 274,500. (Tr. 1311, 1313) Wisconsin Michigan furnishes gas service in a territory of 61 square miles in Wisconsin, wholly within its electric service territory, with a population of 53,200. (Tr. 1316) Such gas services are operated as a single coordinated system. Gas operations account for 5.2% of the total operating revenues and approximately 8.4% of property and plant of the three utility companies in the Wisconsin Group. (Resp. Ex. 143b; Tr. 1498, 1506)

4.6. The electric and gas operations of the Wisconsin Group are conducted jointly as a single coordinated system, utilizing joint management and personnel, and many joint facilities. Such joint operation results in substantial economies to the respective services and also in benefits and

convenience to consumers, all of which would cease if the electric and gas businesses were divorced. (Tr. 2101-2120, 2261-2)

4.7. Neither the electric nor the gas system of the Wisconsin Group could be operated independently of the other without the loss of substantial economies which can be secured by their retention under common control.

4.8. The electric and gas utility systems of the Wisconsin Group, singly and in combination, are not so large as to impair the advantages of localized management.

4.9. The electric and gas utility systems of the Wisconsin Group, singly and in combination, are not so large as to impair their efficient operation.

4.10. The electric and gas utility systems of the Wisconsin Group, singly and in combination, are not so large as to impair the effectiveness of regulation.

4.11. The electric utility properties of the Wisconsin Group constitute a single integrated public utility system within the meaning of the Act, the gas utility properties of such Group constitute a single integrated public utility system within the meaning of the Act, and in combination such systems constitute a single integrated public utility system within the meaning of the Act.

4.12. The only businesses conducted by the three utility companies in the Wisconsin Group, other than electric and gas service, are the heating businesses in Milwaukee and Waukesha, and the transportation operations in Kenosha and Appleton, which, individually and in the aggregate, ac-

count for a minor part of the Wisconsin Group's total assets and gross revenues. (Tr. 1320, 1321, 1509; Resp. Ex. 143b)

4.13. The heating businesses of the Wisconsin Group benefit the electric system by rendering unnecessary independent steam plants which could also generate customers' electric requirements. (Tr. 1979) The electric and heating businesses are conducted by the same organization and use many joint facilities, resulting in substantial economies. (Tr. 1980) The conduct of the heating businesses benefits consumers and the respective communities. (Tr. 1980) Such heating businesses could not be sold or be conducted by anyone other than the Wisconsin Group, and any forced divorcement thereof would result in the abandonment of such heating services, to the public detriment. (Tr. 1998).

4.14. The transportation businesses in Kenosha and Appleton had a common origin with the electric service and are conducted by the same organization and use many joint facilities, resulting in substantial economies. (Tr. 1994, 2001-2, 2102, 2105, 2109, 2113) Such transportation businesses could not be sold without loss. (Tr. 2001)

4.15. Retention by the Wisconsin Group of such heating and transportation businesses is necessary or appropriate in the public interest or for the protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility system of the Wisconsin Group; and each such business is reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

Findings of Fact Requested by the North American Company and Other Within Named Respondents

4.16. Wisconsin Electric owns all outstanding securities of The Milwaukee Electric Railway & Transport Company (hereinafter called the "Transport Company"), a Wisconsin corporation, which does the principal local transportation business in Milwaukee and also has interurban electric railway and motor bus services to certain nearby communities. (Tr. 1983) The electric business of Wisconsin Electric grew out of such transportation system and Wisconsin Electric conducted such transportation business directly until the segregation thereof in 1938, and directly or indirectly has conducted such transportation business in and about Milwaukee for fifty-one years. (Tr. 2131)

4.17. The operations of the Transport Company are joint with those of Wisconsin Electric in many respects, and each company utilizes personnel and facilities of the other, with resultant substantial economies. (Tr. 2024-2099) Wisconsin Electric sells to the Transport Company its entire electric requirements and devotes many facilities solely to the requirements of the Transport Company. (Tr. 1986)

4.18. The Transport Company is regulated by the Public Service Commission of Wisconsin, which supervises all contracts between affiliated companies in the Wisconsin Group. (Tr. 1714, 2210) There has always been joint regulation of the electric and transportation businesses in Milwaukee. (Tr. 1789-1791, 2407, 2410-2412)

4.19. Due to economic changes in recent years, the transportation business has become less profitable, and Wisconsin Electric is providing reserves against contingent loss on a

large portion of its investment in the Transport Company on a 10-year basis under the terms of a bank loan agreement. (Tr. 2418) The Transport Company's return is low in consequence of its low fares, which could not be continued if the intercompany relationship were terminated. (Tr. 2411, 2419) Any forced sale by Wisconsin Electric of such investment would be detrimental to the interests of its investors. (Tr. 2411-19)

4.20. Retention by Wisconsin Electric of its interest in the Transport Company is necessary or appropriate in the public interest or for the protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility system of the Wisconsin Group; and the transportation business of the Transport Company is reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

4.21. The Transport Company has a minority stock interest in Motor Transport Company, which renders a minor trucking service supplementary to the Transport Company's business, and owns Badger Auto Service Company, which conducts a minor parking lot and filling station business to utilize temporarily certain land owned by Wisconsin Electric and held either for future use or pending liquidation. (Tr. 1991-1992) Neither of such businesses is in any way detrimental to the utility services and retention of each results in substantial economies. (Tr. 2022)

4.22. The only other companies in the Wisconsin Group are Milwaukee Light, Heat & Trac on Company, and Hevi-

Duty Electric Company. The first of these is an inactive company and direct subsidiary of North American, owning 73.8% of the outstanding stock of Hevi-Duty Electric Company. (Resp. Ex. 147; Tr. 2003) Such latter company is a minor business which has been engaged for many years, in cooperation with Wisconsin Electric, in the development and manufacture of electric furnaces and other specialized appliances designed to increase the use of electricity. The operations of Hevi-Duty Electric Company have been benecial to the public and to the Wisconsin Group in the development of such appliances. (Tr. 2003, 2270)

4.23. Retention of the interests in Motor Transport Company, Badger Auto Service Company, Milwaukee Light, Heat & Traction Company and Hevi-Duty Electric Company is in each case necessary or appropriate in the public interest or for the protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility system of the Wisconsin Group; and each such business is reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

5. The St. Louis Group

5.1. The St. Louis Group consists of Union Electric Company of Missouri (hereinafter called "Union") and its subsidiaries hereinafter mentioned (all hereinafter collectively called the "Union Group") and also St. Louis County Gas Company (hereinafter called the "Gas Company"), a direct subsidiary of North American. Union, which is both a reg-

istered holding company and an electric utility company, and the Gas Company were incorporated under the laws of Missouri, in 1922 and 1904, respectively. (Tr. 3044, 3130)

5.2. North American holds all of the common stock of both Union and the Gas Company, representing a cost to North American of $51,840,781 and $4,100,000, respectively, and 33.37% and 81%, respectively, of the capital of such companies. (Resp. Ex. 125, 127, 147)

5.3. Union and its four utility subsidiaries, Union Electric Company of Illinois, Mississippi River Power Company, Iowa Union Electric Company and Cupples Station Light, Heat and Power Company, furnish electric utility service in a compact and continuous area in and around St. Louis, in Missouri and Illinois, and in small additional service areas around the Osage hydroelectric station in Central Missouri, and, in Iowa and Illinois, around the Keokuk hydroelectric station. The total service territory contains 3,100 square miles, with a population of 1,500,000. (Resp. Ex. 124; Tr. 2437) The electric operations of the Union Group are confined within a single area or region. (Resp. Ex. 142)

5.4. The electric utility system of the Union Group consists of six generating stations, together with transmission lines and distributing facilities. The utility assets of the Union Group are physically interconnected and are economically operated as a single interconnected and coordinated system. (Tr. 2535, 2738)

Findings of Fact Requested by the North American Company and Other Within Named Respondents

5.5. In addition to its electric business, Union Electric Company of Illinois operates a minor gas business in Alton, Illinois, and Iowa Union Electric Company operates a similar small gas business in Keokuk, Iowa. (Tr. 3119, 3123) In both cases, the gas service territory lies within the electric service territory. Such gas services account for only 0.57% of the total operating revenues of the Union Group. Such electric and gas operations of the Union Group are conducted jointly as a single coordinated system, utilizing joint management and personnel and many joint facilities. (Tr. 3121, 3127) Such joint operation results in substantial economies to both services and also in benefits and convenience to consumers, all of which would cease if the electric and gas businesses were divorced. (Tr. 3121, 3127)

5.6. The Gas Company furnishes gas service in a compact and continuous area of approximately 62 square miles in St. Louis County, Missouri, with a total population of 250,000, which territory lies within Union's electric service territory. (Tr. 3131)

5.7. The operations of the Union Group and the Gas Company are conducted under joint management and utilize many joint personnel and facilities. (Tr. 3152) Such joint operation results in substantial economies to the respective services and also in benefits and convenience to consumers, all of which would cease if the businesses were divorced. (Tr. 3153-3155)

5.8. Neither the electric nor the gas system of the St. Louis Group could be operated independently of the other

without the loss of substantial economies which can be secured by their retention under common control.

5.9. The electric and gas utility systems of the St. Louis Group, singly and in combination, are not so large as to impair the advantages of localized management.

5.10. The electric and gas utility systems of the St. Louis Group, singly and in combination, are not so large as to impair their efficient operation.

5.11. The electric and gas utility systems of the St. Louis Group, singly and in combination, are not so large as to impair the effectiveness of regulation.

5.12. The electric utility properties of the Union Group constitute a single integrated public utility system within the meaning of the Act, the gas utility properties of the Union Group and the Gas Company constitute a single integrated public utility system within the meaning of the Act, and in combination such systems constitute a single integrated public utility system within the meaning of the Act.

5.13. The only businesses of the Union Group other than the electric and gas operations above referred to consist of the heating business in the City of St. Louis, the coal business of Union Colliery Company, the small railroad operations of St. Louis & Belleville Electric Railway Company, and the land operations of Union Electric Land and Development Company. Such other businesses, individually and in the aggregate, account for only a minor part of the Union Group's total assets and gross revenues. (Tr. 2475, 3050, 3051; Resp. Ex. 143b) St. Louis & Alton Railway Company,

East St. Louis & Suburban Railway Company and East St. Louis Railway Company, the only other companies in the St. Louis Group, are either inactive or in process of liquidation. (Tr. 3051)

5.14. The Union Group supplies heating service in the business dictrict of St. Louis, which benefits the electric system by rendering unnecessary independent steam plants which could also generate customers' electric requirements. (Tr. 3095) The electric and heating businesses are conducted by the same organization and use much joint equipment, with resultant substantial economies. Conduct of the heating business by the Union Group benefits consumers and the community. (Tr. 3100-3104) Such heating business could not be sold without a substantial loss to the Union Group.

5.15. Union Colliery Company, a Missouri corporation, conducts a coal mining business eighty-five miles from St. Louis (Tr. 3107) Most of the coal so mined is sold to the Union Group and the Union Group buys most of its coal from or with the help of the Colliery Company. Coal is the most important commodity purchased by the Union Group. Ownership of the Colliery Company results in substantial economies to the Union Group in permitting more satisfactory coal arrangements than would be possible with outside interests. (Tr. 3115)

5.16. St. Louis & Belleville Electric Railway Company operates an electric freight line eleven miles long, terminating at East St. Louis, Illinois. Its principal business is hauling coal used by the Union Group. Ownership of the Railway Company has been beneficial to the utility services

and constitutes an insurance against coal shortages. (Tr. 3115-3117)

5.17. Union Electric Land and Development Company, a Missouri corporation, holds for liquidation excess land acquired as a result of development of the Osage hydro-electric station. Such land is being liquidated as rapidly as practicable, but will require substantial time for completion. (Tr. 3129)

5.18. Retention of the heating, coal, railway and land businesses above referred to is in each case necessary or appropriate in the public interest or for the protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility system of the Union Group, and each such business is reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

5.19. The operations of the holding company system of Union are limited to a single integrated public utility system and to such other businesses as are reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility system.

5.20. If it is found that the holding company system of Union or the St. Louis Group includes any public utility system additional to the electric utility system of the Union Group, such additional system or systems meet the standards of Clauses (A), (B) and (C) of Section 11(b)(1) of the Act, and may be retained under common control with such electric utility system.

Findings of Fact Requested by the North American Company and Other Within Named Respondents

6. The North American Company Holding Company System

6.1. North American has on many occasions financed its subsidiaries directly and has also rendered assistance to them by planning, negotiating and supervising their public financing operations. No subsidiary has any financing expert on its staff, nor could maintain such an expert, comparable to those on the North American staff.

6.2. While North American's policy has resulted in strong localized management for its subsidiaries, it has aided such localized management by constant advice and consultation on general operating questions and important specific problems, and has rendered assistance in accounting, secretarial and other phases of the business.

6.3. The assistance of North American has resulted in substantial economies to its subsidiaries and could only be secured from it since a common financial interest and background of knowledge of the particular property are both essential thereto.

6.4. The period of growth and development of the operating subsidiaries has not ended and they will continue in the future to receive substantial benefits and economies from North American's aid.

6.5. Under North American's sponsorship, representatives of its principal operating subsidiaries have been in constant contact through various intercompany committees since 1921 and through other contacts, as a result of which the operating companies have, in effect, pooled their engineering

resources. The operating subsidiaries in the North American system derive substantial benefits and economies from their intra-system activities and contacts. A healthy rivalry between companies has been stimulated and there has been a general broadening influence on the operating company personnel. A common financial bond is the essential element in all such relationships and such benefits would cease if the holding company control were discontinued.

6.6. None of the integrated public utility systems in the North American holding company system could be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by North American of such system.

6.7. The Middle States or Middle West, consisting of Kansas, Missouri, Iowa, Minnesota, Illinois, Wisconsin, Michigan, Indiana and Ohio, constitute a single economic region, and the operations of all public utility subsidiaries of the North American system, except those of the Washington Group, are confined to such region. (Resp. Ex. 142)

6.8. The combination of the Cleveland, Wisconsin and St. Louis Groups is smaller in many respects than many single utility systems. (Resp. Ex. 124)

6.9. The continued combination of the Cleveland Group, the Wisconsin Group and the St. Louis Group under the control of North American is not so large as to impair the advantages of localized management, efficient operation or the effectiveness of regulation, and North American's hold-

ing company system has secured the advantages of localized management, efficient operation and effective regulation for all such groups.

6.10. In addition to its major investments in the Washington, Cleveland, Wisconsin and St. Louis Groups, North American also has substantial minority interests in The Detroit Edison Company and Pacific Gas & Electric Company. (Resp. Ex. 147)

6.11. Detroit Edison is an electric utility operating in and about Detroit, Michigan. North American's investment, which began in 1903, consists of 19.21% of Detroit Edison's voting stock and represents a cost to North American of $29,822,316.04. Such investment represented in 1940 9.86% of North American's corporate assets and 7.49% of its gross corporate income. (Tr. 6917; Resp. Ex. 125, 143, 147)

6.12. Pacific Gas & Electric Company is a public utility operating in California. North American's investment, which began in 1925 with the acquisition of certain constituent properties, consists of 17.22% of Pacific Gas' voting stock and represents a cost to North American of $69,765,418.62. Such investment constituted in 1940 21.08% of North American's corporate assets and 20.44% of its gross corporate income. (Tr. 6917; Resp. Ex. 125, 143, 147)

6.13. Neither the investment in Detroit Edison nor in Pacific Gas has had any detrimental effect on the North American holding company system but, on the contrary, has contributed diversification and stability of earnings for North American. In the case of Detroit Edison, such in-

vestment is also valuable because it has facilitated exchange of information and contacts between Detroit Edison and North American's subsidiaries, with substantial benefits resulting therefrom. (Tr. 6937)

6.14. Retention by North American of its investments in Detroit Edison and Pacific Gas is, in each case, necessary or appropriate in the public interest or for the protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility systems of North American; and each such investment is reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility systems.

6.15. North American also controls three non-utility subsidiaries, North American Utility Securities Corporation (hereinafter called "NAUS"), 60 Broadway Building Corporation (hereinafter called "60 Broadway") and West Kentucky Coal Company (hereinafter called "West Kentucky"). (Resp. Ex. 147).

6.16. NAUS was organized under the laws of Maryland in 1924 and all of its preferred stock and 80.62% of its common stock are owned by North American. NAUS is an investment company with a portfolio having a total market value at December 31, 1940 of approximately $4,667,865, consisting of a diversified list of marketable securities. The operating expenses of NAUS are negligible; it contributes diversity to the North American system and in no way interferes with the operations of the utility subsidiaries of North American. (Tr. 6939-45)

Findings of Fact Requested by the North American Company and Other Within Named Respondents

6.17. 60 Broadway was incorporated under the laws of New York in 1924 and owns a 25-story office building in the New York financial district in which are located the North American executive offices which occupy two floors and part of three other floors. North American's investment was made in such enterprise as protection against rising rents for its own offices. The investment yields a small income and has in no way interfered with the operations of the utility subsidiaries. North American's total investment at cost, in all outstanding stock and in open account, is $2,009,023, representing less than 1% of its corporate assets, and could only be disposed of at this time at a substantial loss. (Tr. 6947)

6.18. West Kentucky was incorporated under the laws of New Jersey in 1905, at which time North American first acquired a stock interest therein. North American presently owns 98.91% of the voting stock. West Kentucky owns and operates coal mines in Western Kentucky producing approximately 1,500,000 tons annually. Such investment was originally made to develop coal sources for the St. Louis Group. Sales of coal have been made to North American utility subsidiaries and West Kentucky insures a system coal supply for the future. North American's investment, constituting but 2⅓% of its total corporate assets, could not be disposed of without loss. (Tr. 6949-53; Resp. Ex. 147) Such investment in no way interferes with the operations of the utility subsidiaries. (Tr. 6952)

6.19. Retention by North American of its interests in NAUS, 60 Broadway and West Kentucky is in each case

necessary or appropriate in the public interest or for the protection of investors or consumers, and not detrimental to the proper functioning of the integrated public utility systems of North American; and each such business is reasonably incidental or economically necessary or appropriate to the operations of such integrated public utility systems.

6.20. North American is not engaged in the business of sending or transporting, or causing to be sent or transported, goods, merchandise or services in commerce with foreign nations or among the several States, or any other kind of interstate commerce; and North American makes use of the mails or other instrumentalities of interstate commerce only incidentally to its business as a holding company, which consists of investment in and holding of securities. (Tr. 7028, 7029)

6.21. The combined operation of several businesses by a public utility subsidiary of North American does not create any regulatory problems which are not inherent in the regulation of a single utility service, nor does it in any way impair the effectiveness of State regulation.

6.22. Size does not necessarily impair any advantages of localized management, efficient operation or effectiveness of regulation; and the size of the North American holding company system, as now constituted, in no way impairs the advantages of localized management, efficient operation or effectiveness of regulation.

6.23. The securities of the operating utility companies in the Cleveland, Wisconsin and St. Louis Groups could

not be marketed to any substantial extent in the respective service areas of such utility companies or the States in which they respectively operate, and even as to the small part of such securities which might be marketed in such service area or State, the probability is that it would not continue to be held there.

6.24. North American has engaged since 1890 in the holding of securities for investment, and since 1895 has confined its investments primarily to the electric business. (Tr. 6889)

6.25. North American's policy throughout its history has been characterized by acquisition of securities for long-term investment and by additions thereto through acquiring and consolidating adjacent properties, through investment in additional securities of the same enterprises and through leaving large amounts of undistributed earnings in its subsidiaries. (Tr. 6916, 6918-6920)

6.26. North American's investment policy has also been characterized by investment in different localities to obtain stability through diversification. The diversity so obtained has been and is of substantial value to the security holders of North American. (Tr. 6917)

6.27. North American has pursued sound and conservative financial practices both as to itself and as to its subsidaries. North American's policy has been to carry its investments at cost or less on its books of account. (Tr. 6921) North American's securities enjoy a favorable investment rating and are widely distributed, with a large

percentage of small holders and including many fiduciaries and institutions. (Tr. 6956, 6967-8)

6.28. During its entire history, North American has never defaulted in the payment of principal or interest on any indebtedness, nor has it ever failed to pay any preferred stock dividend when due and, except in 1908, it has paid dividends continuously on its common stock since 1903. (Tr. 6901-2) No public utility subsidiary of North American has ever defaulted in the payment of principal or interest on any indebtedness issued by it while a subsidiary of North American. With a single exception from 1896 to 1900, no public utility subsidiarry of North American has ever defaulted in the payment of dividends on any preferred stock issued while that company was a subsidiary of North American. (Tr. 6897, 6898)

6.29. North American and its subsidiaries have long followed the policy of complete disclosure of all relevant information to their stockholders, both through regular reports and on special inquiry. (Tr. 6958-6962, 6991)

6.30. North American's policy has been to develop a few sound, well organized and efficiently operated public utility subsidiaries which would render efficient service at the lowest cost to the consumer, and to make each of such companies a part of its own community with the most localized management possible, with a sound financial structure and full cooperation with regulatory bodies; and thereby to achieve soundness and stability for the security holders of North American. (Tr. 7024, 7025)

6.31. Investors in securities of North American and its several subsidiaries have been able to obtain the information necessary to appraise the financial position or earning power of the issuers, and both North American and its subsidiaries utilize, and in most cases for many years have utilized, uniform standard accounts.

6.32. Securities of subsidiary public utility companies in the North American system have been issued only with the approval or consent of the States having jurisdiction of such companies, and such securities have not been issued upon the basis of fictitious or unsound asset values having no fair relation to the sums invested in or the earning capacity of the respective properties, or upon the basis of paper profits from intercompany transactions, or in anticipation of excessive revenues from subsidiary public utility companies, and securities have not been issued by any subsidiary public utility company under circumstances which subjected such company to the burden of supporting an over-capitalized structure or tended to prevent voluntary rate reductions.

6.33. Subsidiary public utility companies in the North American system have not been subjected to excessive charges for services, construction work, equipment and materials, nor have they entered into transactions in which evils resulted from an absence of armslength bargaining or from restraint of free and independent competition.

6.34. Service, management, construction and other contracts involving allocation of charges have not been made

by North American or within its holding company system with subsidiary public utility companies so as to present problems of regulation which could not be dealt with effectively by the States.

6.35. Control of subsidiary public utility companies by North American or within its holding company system has not affected the accounting practices and rate, dividend and other policies of such companies, so as to complicate or obstruct State regulation of such companies, nor has control of such companies been exerted through disproportionately small investment.

6.36. The growth and extension of North American and its system has borne a relation to economy of management and operation and the integration and coordination of related operating properties.

6.37. In the North American system, there has been no lack of economy of management and operation of public utility companies, or lack of efficiency and adequacy of service rendered by such companies, or lack of effective public regulation, or lack of economies in the raising of capital.

6.38. The total assets of North American and its subsidiaries consolidated (Washington and Illinois Iowa Power Company and their subsidiaries not being so consolidated, but being included as investments) represent only 5.4% of the entire electric industry in the United States and both the total of such North American assets and its proportion of industry assets are substantially less than those of lead-

ing corporations in the industrial and railroad fields in the United States. Similarly, in such matters as annual sales or revenues, number of employees and number of States in which operations are conducted, North American and its subsidiaries consolidated are substantially smaller than many other leading companies in American industry. (Resp. Ex. 124)

7. NORTH AMERICAN LIGHT & POWER COMPANY

7.1. North American Light & Power Company (hereinafter called "NAL") is an intermediate holding company organized under the laws of Delaware in 1924, which in 1926 succeeded a predecessor corporation organized in 1915. (Tr. 6001)

7.2. North American first acquired an interest in NAL in 1926 when it purchased 42½% of its voting stock. Such interest was originally intended as a minority investment, but increased to a controlling interest after 1932 when North American was forced by the defaults of others to increase its stock interest substantially. North American's present stock interest in NAL consists of 83.49% of its voting stock. (Tr. 6006; Resp. Ex. 125, 147)

7.3. NAL's principal investments consist of a controlling interest in utility companies operating in Kansas and Missouri and substantial minority interests in Northern Natural Gas Company and in utility companies operating in Illinois and Iowa.

Findings of Fact Requested by the North American Company and Other Within Named Respondents

7.4. Control of NAL by North American has been beneficial both to investors and consumers in the NAL system since the NAL subsidiaries greatly improved their financial position, as well as their rates and service, after North American acquired control of NAL. (Tr. 7226-27, 6133-48)

7.5. In view of the impending dissolution of NAL and the disposition of its assets in liquidation, no further findings with respect to that company or its subsidiaries are necessary so far as regards their relations with North American.

Respectfully submitted,

SULLIVAN & CROMWELL,
Attorneys for the above named Respondents,
48 Wall Street,
New York, N. Y.

S. PEARCE BROWNING, JR.
CHARLES S. HAMILTON, JR.
Of Counsel.

UNITED STATES OF AMERICA

BEFORE THE

SECURITIES AND EXCHANGE COMMISSION

IN THE MATTER

of

THE NORTH AMERICAN COMPANY

and its

SUBSIDIARY COMPANIES

Respondents.

File No. 59-10

Public Utility Holding Company Act of 1935,
Section 11(b)(1)

REPLY BRIEF ON BEHALF OF THE NORTH AMERICAN COMPANY AND OTHER WITHIN NAMED RESPONDENTS

This brief is filed on behalf of The North American Company (hereinafter called "North American") and all of its subsidiaries which are Respondents in this proceeding (other than North American Light & Power Company and its subsidiaries). There are considered herein not only certain legal issues but also various statements in the brief of counsel for the Commission.

Reply Brief on Behalf of the North American Company and Other Within Named Respondents

1. ELECTRIC AND GAS FACILITIES MAY IN COMBINATION CONSTITUTE A SINGLE INTEGRATED SYSTEM WITHIN THE MEANING OF THE ACT.

This issue has been discussed at length in the memorandum, dated March 6, 1941, of William Clarke Mason, Esq., in the U. G. I. proceeding under Section 11(b)(1). To avoid duplication, we ask leave of the Commission to incorporate herein by reference the contentions set forth in such memorandum filed by Mr. Mason.

In addition, we submit that the facts in the North American proceeding itself clearly show that the position of the Commission's staff on this question cannot be sustained; and we therefore strongly urge upon the Commission that it reconsider its tentative conclusions, not only as a matter of general statutory construction but also on the basis of the uncontroverted evidence in this proceeding.

The only gas properties involved in the North American proceeding are in the St. Louis and Wisconsin Groups. In two of the three instances in St. Louis, these very gas properties have previously been recognized by this Commission to constitute jointly with the same electric properties a single integrated system. *Matter of East St. Louis Light & Power Company,* 2 SEC 361 (1937); *Keokuk Electric Company,* 2 SEC 963 (1937). These two cases dealt with the merger and reorganization in which Union Electric Company of Illinois and Iowa Union Electric Company acquired, with the approval of this Commission, the very gas properties now under discussion. In each case, the Commission expressly found that the requirements of Section 10(c) had been sat-

isfied, which necessarily included the statutory condition that the acquisition tended toward "the economical and efficient development of an integrated public utility system". Accordingly, if the Commission now holds that these gas properties cannot constitute a single integrated system with the same electric properties as were involved in its former decisions, it is directly reversing such former decisions and thus violating the basic principles of *res adjudicata*. We submit that such result must be avoided in the interest of any consistent administration of the Act.

It is further clear upon the examination of the record here that all of the gas properties in question do *in fact* constitute a single system with the electric properties. From the executives of the respective systems down to the meter readers, repair men and clerks, the same organization, and to a large extent the same personnel, handles both electric and gas operations. A great deal of the same equipment is used for both operations and many of the general facilities, such as main offices, branch offices, garages, etc. are likewise used jointly. Thus, *in fact*, the two operations constitute one system, and certainly any reasonable construction of the Act would permit the recognition of realities.

We submit that the proper rule which the Commission should adopt is that, as a matter of law, electric and gas facilities may constitute a single integrated system, but that whether they do in any particular case will depend upon its own facts. This pragmatic test is obviously in accord with the legislative intent and permits the Commission to reach a sensible and practical result in each case dependent upon its own facts. If such interpretation be adopted, there can

be no question on the facts here that the electric and gas facilities do constitute a single integrated system both in the St. Louis Group and in the Wisconsin Group.

2. THE PROPER INTERPRETATION OF "REASONABLY INCIDENTAL OR ECONOMICALLY NECESSARY OR APPROPRIATE".

We recognize that the proper interpretation of this clause has already been argued at length before the Commission and particularly the contention (which the Commission has rejected) that neither the clause nor any other provision of Section 11(b)(1) imposes any restriction on minority utility investments, a question of importance in this case, because of North American's minority holdings in Detroit Edison* and Pacific Gas & Electric Company. Accordingly, we will not further argue this aspect of the minority utility investment question, except to reiterate the position that Section 11(b)(1) should not be deemed to restrict or to apply in any way to such holdings of North American. We ask leave in this connection to incorporate by reference the Respondents' Memorandum dated March 6, 1941, in the U.G.I. proceeding, which dealt with this matter.

In disposing of this question in the U.G.I. proceeding, the Commission stated:

---

*Note: While the Circuit Court of Appeals has affirmed the Commission's holding that Detroit Edison is a subsidiary of North American, the question of further appeal is still pending and, in any case, North American has started to reduce its interest therein. The dividend recently declared on North American's common stock, payable in capital stock of Detroit Edison, will reduce North American's holdings from 19.21% to approximately 16.78%, and four of such dividends would reduce the holding to less than 10%.

"We must conclude that the two clauses in Section 11(b)(1) which refer to the retention of other businesses, when taken together, mean that the Commission must permit the retention of other businesses, including investment interests in utilities not subsidiaries, which are found to be reasonably incidental or economically necessary or appropriate to the operations of an integrated public utility system retainable under the control of the holding company, and that as to both investments in non-utilities and interests in non-utilities sufficient to create the statutory parent-subsidiary relationship, these standards may be met if the retention of the investments or other interests is found to be necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems." (H. C. Act Release 2692)

Turning to the brief of Commission counsel in this proceeding, we find that even the Commission's interpretation is now not sufficiently restrictive for the staff. The proposition is now advanced that "incidental", as used in the Act, "conveys an impression of that which arises, or is done, as ancillary to or functionally related to a greater and principal undertaking" and that the expression "economically necessary or appropriate" should likewise be given "its obvious meaning of functional relationship", since it appears "in close conjunction with the expression 'reasonably incidental'." (Commission's brief, pages 29, 30) Counsel never attempts to apply the final sentence of Section 11(b)(1), and under his construction it is presumably to be ignored.

The obvious result of Commission counsel's proposed interpretation is to destroy the most important aspect of the

statutory tests, a series of separate alternatives. Indeed, the clearest conclusion gained from a study of the statute is that Congress intended to give wide latitude on other businesses and to that end gave a series of various alternative tests, any one of which would suffice. The Commission is now asked to violate the Congressional intent by holding that all of the alternatives have only one meaning, a narrow and vague rule of "functional relationship".

The interpretation suggested is particularly remarkable because Congress, having first established the test of "reasonably incidental, economically necessary or appropriate", later inserted the long additional sentence at the end of Section 11(b)(1). Had the earlier phrase meant only "bearing a functional relationship", why was the final sentence necessary? Thus, in effect, Commission counsel now asks the Commission to disregard eight lines of Section 11(b)(1). We submit that such a distortion of the statute cannot be permitted and that each of the alternatives must be given full weight.

The first alternatives offered are, of course, in the original phrase "reasonably incidental or economically necessary or appropriate". "Incidental" is defined by the Webster and Century dictionaries as "happening as a chance or undesigned feature of something else; casual; subordinate; occurring or liable to occur in connection with something else; happening in fortuitous or subordinate conjunction with something else". Based upon these definitions, obviously the relative size of the other business would be material, as would be some likelihood of occurrence. These tests would easily be satisfied by the other businesses in this proceeding

since they are of either minor importance or of long and normal historical connection, as, for example, the transportation operations.

In dealing with the word "incidental", Commission's counsel cites a series of cases relating to the construction of corporate charters. None of these cases is in point, since it is a well established principle that corporate powers are to be strictly construed. *Fertilizing Company* v. *Hyde Park*, 97 U. S. 659 (1878), *Fletcher, Cyclopedia Corporation* (1931), Vol. 7, Section 3646. On the contrary, the Act, which operates retroactively and in derogation of existing property rights, must be liberally construed.

"Economically necessary" would seem to speak for itself and would be a strict test. "Economically appropriate", on the other hand, obviously offers much latitude, since the word "appropriate" is defined in the Webster and Century dictionaries as "suitable, fit or proper". Thus, any other business, the conduct of which was suitable or proper in connection with the utility system would meet the test. Among examples to be found in the North American case, we may refer to the minority utility investments and to such other activities as the coal business of Union Colliery Company in the St. Louis Group, which furnishes most of that utility's principal raw material. Any of these offers an excellent example of "economically appropriate". History would likewise have some bearing here, as the fact that such investments have been held and activities conducted advantageously for many years is one of the best practical proofs that they are "economically appropriate".

Turning to Congress' own addition in the final sentence of Section 11(b)(1) and to the Commission's decision in the U.G.I. proceeding, we find a further series of alternatives. A business is reasonably incidental or economically necessary or appropriate if it is

Necessary *or* appropriate
- (i) in the public interest
- *or*
- (ii) for the protection of investors
- *or*
- (iii) for the protection of consumers

and

Not detrimental to the proper functioning of such system or systems

Taking up the last and essential condition first, it is completely disposed of in this case. There is not a scintilla of evidence that any of the other businesses, either in a subsidiary group or North American itself, is or ever has been to the slightest degree detrimental to the proper functioning of any of the utlity systems. On the contrary, the uncontradicted evidence shows clearly in every case that the other business has not been detrimental to the utility systems. The testimony in this regard is reviewed in our principal brief.

As to the three preceding alternatives, it is clear that Congress was establishing three entirely different tests, based upon the class of persons affected, the public generally, con-

sumers and investors, so that such tests should be separately applied.

As to the first phrase, "appropriate in the public interest", we should again note the accepted dictionary meaning for appropriate of "suitable, fit or proper". The fact that similar statutory phrases have been judicially construed should also be noted. Thus, in *Pacific Power & Light Company, et al.* v. *Federal Power Commission,* 111 F. 2d 1014 (1940), the Circuit Court of Appeals held:

> "The phrase 'consistent with the public interest' does not connote a public benefit to be derived or suggest the idea of a promotion of the public interest. The thought conveyed is merely one of compatibility. Congress resorted to this language rather than to the use of the stock term 'public convenience or necessity', or to such phrases as 'in furtherance of' or 'will promote the public interest' used in its interstate commerce legislation (later considered); and the language employed ought to be construed to mean no more than it says. It is enough if the applicants show that the proposed merger is compatible with the public interest. The Commission, as a condition of its approval, may not impose a more burdensome requirement in the way of proof than that prescribed by law. . . . Suffice it to say that the statute does not require a showing that positive benefit to the public will result . . ." (Pages 1016, 1017)

It suffices, therefore, in the case of any business to show that it is compatible with the public interest, with no burden of showing affirmative public benefit.

Applying this correct interpretation, it is clear that every incidental business in the subsidiary groups and of North

American itself meets the statutory test. There is no evidence whatever that the retention of any such interest in any of these businesses in any way is injurious to the public. On the contrary, and though not required as a matter of law, there is a great deal of evidence of affirmative public benefit, as shown in the discussion in our principal brief. Among other examples of this, reference can be made to the various transportation businesses and to the pioneer electric appliance development work of Hevi-Duty Electric Company in the Wisconsin Group.

"Appropriate for the protection of investors" obviously authorizes retention where a forced sale would injure investors in the particular company conducting or controlling the business. In most cases, as shown by the discussion in our principal brief, the evidence is conclusive that any forced divestment would injure investors in the particular company. As one example, the evidence clearly shows that forcing North American to sell its New York office building under existing real estate conditions would materially injure North American's investors. Other examples are the transportation businesses in Washington and Milwaukee. In this connection, it may be noted that only within the last week, the losses incident to forced liquidation received Congressional recognition, since one purpose of Senate Bill 1438, which expanded the authority of the Reconstruction Finance Corporation to make loans to foreign governments, was

> "to enable those countries whose defense is deemed vital to the United States to liquidate their American interests

. . . without sustaining the exorbitant losses customarily incident to a forced liquidation."

"Appropriate for the protection of consumers" looks to still another class. If the conduct of the other business results either in better service or reduced expenses, it is obviously to the interest of consumers, as well as investors. In no instance in this proceeding does any incidental business work to the detriment of consumers and, on the contrary, as the evidence affirmatively shows, most of the incidental businesses result in substantial economies. Among other examples here are the transportation and coal businesses.

The proper interpretation of this entire phase of the Act, as above urged, was adopted by the Commission in its decision in the *American Water Works* case (H. C. Release 949). In that decision the Commission expressly authorized the retention by the holding company of subsidiaries conducting water businesses which constituted 30% of the total business of the holding company system, stressing that they contributed "a stable source of revenue." Such reasoning directly applies in this case to North American's minority holdings in Detroit Edison and Pacific Gas & Electric Company which, as the evidence shows, contribute both diversity and stability of income to North American's security holders.

The Commission further found that a coal business "would seem to bear an intimate relation to the operations of the gas and electric utility companies" and, in authorizing the retention of electric railway, bus transportation and bridge businesses in the American system, the Commission stated that it

"realizes that these are in the nature of an inheritance from an earlier age when electric transportation was of more importance than the business of electrical distribution. . . . In view of these facts and of the minor importance of the applicant's interests in these businesses relative to its other operations, and in consideration of the difficulty which the applicant would face in satisfactorily disposing of its interests in these transportation businesses, the Commission finds that their retention is necessary and appropriate in the public interest, and is not presently detrimental to the proper functioning of the applicant's integrated public utility system. . . ."

Accordingly, it is submitted that both the proper interpretation of the act, and the application of the Commission's own decision in an earlier case, together with the uncontradicted evidence in this proceeding, require affirmative findings by the Commission that North American may retain its minority utility investments and all of the other businesses controlled within the holding company system.

3. THE PROPER CONSTRUCTION OF THE A, B AND C STANDARDS OF SECTION 11(b)(1).

The A Standard

The first of the three statutory tests for the retention of additional public utility systems under the proviso of Section 11(b)(1), is to show that each such additional system cannot be operated independently without the loss of "substantial economies", which can be secured by retention in the holding company system.

Counsel for the Commission has contended in his principal brief that no one of the four electric utility systems controlled by North American meets the requirements of the A Standard, basing his conclusion upon the reasoning that each is large enough to stand alone on its own feet. Obviously, this contention has nothing whatsoever to do with the statutory test. The sole issue presented is whether or not "substantial economies" will be lost by a separation from the North American system. We are not maintaining that the Cleveland, Wisconsin or St. Louis systems could not function if severed from the North American system. What we are maintaining, however, as being fully supported by the record, is that substantial economies will be lost if any one of these systems is separated from the North American system.

As to the proper meaning of the term "substantial", this has been frequently the subject of judicial construction. In *In re Krause's Estate,* 21 P. (2d) 268 (Sup. Ct. Wash. 1933), an important issue involved in a will contest was whether one of the parties had "substantially benefited" a portion of the real estate in question. As to the meaning of the term "substantial", the Court stated:

> " 'Substantial' as an adjective means something worth while as distinguished from something without value, or merely nominal. Webster's New International Dictionary. 3 Bouvier's Law Dictionary (3d Ed.). In its ordinary parlance 'substantially benefited' in a contract would mean some worth-while advantage, profit, or good." (Page 270)

See also *Miller* v. *Commissioner of Internal Revenue*, 81 F. (2d) 415 (C.C.A. 7th, 1936), (involving the construction of the phrase "substantial interest" in its commonly accepted legal sense); *Consolidated Edison Co. of New York* v. *National Labor Relations Board*, 305 U. S. 197, 229 (1938) and *National Labor Relations Board* v. *Union Pacific Stages*, 99 F. (2d) 153 (C.C.A. 9th, 1938) (both with respect to the meaning of "substantial evidence").

In *In the Matter of Public Service Company of Oklahoma* (H. C. Release 2277), this Commission was called upon to determine whether the holding company there involved received a "material part of its income" from a subsidiary, within the meaning of Section 3(a)(1) of the Act. In attempting to establish a meaning for the phrase "a material part of its income", the Commission stated:

> "We think that the standard . . . connotes income the loss of which would be something more than *de minimis* to the company concerned."

Thus, broadly speaking, the term "substantial", or the similar phrase "material", would seem to mean "something worth having", as distinguished from something purely nominal or *de minimis*.

It is submitted that the evidence already discussed in our principal brief establishes conclusively that economies of a substantial nature will be lost by each of the Cleveland, Wisconsin and St. Louis systems in the event of any forced separation from the North American system.

Reply Brief on Behalf of the North American Company and Other Within Named Respondents

The B Standard

The proper interpretation of the B Standard has been argued at such length before the Commission that we again seek to avoid duplication by adopting the arguments set forth in the Respondents' memorandum, dated March 25, 1941, in the Engineers Public Service Company proceeding and in the Respondents' brief of points and authorities, dated April 3, 1941, filed in the Commonwealth & Southern proceeding.

As set forth in such memorandum and brief, the staff's proposed interpretation of the B Standard violates the plain language of the statute, ignores the first fundamentals of statutory construction and is in square contradiction of the legislative intent. We submit that the words of the statute should be given their plain and unmistakable meaning.

Applying the proper interpretation of the B Standard to the North American case, it is clear that the retention of the St. Louis, Wisconsin and Cleveland Groups meets the statutory tests. All of the States involved (Missouri, Iowa, Illinois, Wisconsin, Michigan and Ohio) adjoin. If the St. Louis Group be deemed the principal system, with its properties in Missouri, Iowa and Illinois, then obviously Wisconsin, Michigan and Ohio are adjoining. This is likewise true if the Cleveland Group is the principal system. There can be no basis for any objection that each State does not adjoin each other State, because not only did Congress not impose such a requirement, but it would be entirely arbitrary and unreasonable to adopt such a construction. For example, in our own case, if the Wisconsin Group otherwise constitutes a proper system secondary to the St. Louis Group, why should the fact that the Wisconsin Group's properties

are in small part in Michigan prevent the otherwise reasonable result? The statutory phrase is "in adjoining States", and in the North American case the States are adjoining.

The C Standard

We again incorporate by reference here the above-mentioned Respondents' memorandum and brief in the Engineers Public Service Company and Commonwealth & Southern proceedings. As there shown, the C Standard is applicable only to the combination of secondary systems.

Assuming for the purposes of argument, however, that the C Standard does apply to the combination of the *principal and secondary* systems, we submit, for the reasons set forth in our principal brief, that the *combination* of the St. Louis, Wisconsin and Cleveland systems meets any statutory test under Clause C.

Commission counsel's discussion of the C Standard in its application to the facts of the present proceeding is a masterpiece of vagueness and generality:

> "Certainly, the Commission can take notice of the well-known fact that this system in respect to capitalization and assets is the second or third largest in the United States. If it is not so large as to be precluded by paragraph (C) from continuing in its present magnitude, then paragraph (C) would seem to have no meaning." (Commission's Brief, page 51)*

**Note*: This statement ignores the impending liquidation of North American Light & Power Company and North American's program for disposition of its interest in the Washington Group, which will greatly reduce North American's consolidated assets. As the Commission is also aware, North American has now commenced the reduction of its minority holdings in Detroit Edison by declaration of a dividend in stock of that company.

The brief then suggests that, while each of the single systems meets the size test, each "approaches the point" at which it might be too large, and concludes that:

> "Nevertheless, joint control of any two of these great systems would constitute the continuance of a combination so large as to be in patent conflict with paragraph (C) of Section 11(b)(1)." (Commission's Brief, page 52)

These are bare conclusions, unsupported by any reference to testimony or cases, or even by any argument. In other words, the size tests are applied in a complete vacuum, with neither supporting facts nor logic.

The basic position of these Respondents is that the size tests are so vague as to be meaningless and without basis in reason. The staff asserts that they are proper and constitutional tests. If so, there certainly should be some sensible rule or basis for their application, but the staff has apparently been unable to develop one. Indeed, the staff has made no attempt whatever to apply the tests, or even to discuss the evidence relative thereto.

In our brief on the proposed findings, as contrasted with the vague generalities of the staff's brief, we discussed in detail each of the three tests under Standard C, as applied to the three system combination, and showed that on a combination basis there are and would be all the advantages of localized management, efficient operation and the effectiveness of regulation. We further showed that, on both absolute and relative bases, North American's three system combination was smaller than other well recognized *single* utility systems, and far smaller than other leading corporations in American industry. We submit, therefore, that the

vague generalities of the staff must be rejected and that on any basis the C Standard is met by the three system combination.

4. THE ELECTION OF A PRINCIPAL SYSTEM.

Counsel for the Commission refers at several points in his brief to the fact that North American has not yet elected its principal system.

The only statutory mandate is that each registered holding company shall limit its operations to "a single integrated public utility system" and to the permissible other businesses and secondary systems, and any holding company which took the requisite action to this end would have complied with the provisions of Section 11(b)(1). The Act does not require, either expressly or by implication, that the holding company designate which of the systems shall be its principal system and no such additional requirement can be added to the statute.

The point is obviously material in the present case when the only issues concern three concededly integrated systems, the St. Louis, Wisconsin and Cleveland Groups. If, however, the Commission should overrule our contention that all three of such systems may be retained, then in any case North American should have the right to dispose of its interests in any of such Groups as circumstances permit, without being bound in advance to determine which system would be retained. Such right is obviously of value to North American because which of the systems would first be sold may well, and probably will, depend upon future market conditions which are beyond its control. Thus, any order in this proceeding should give to North American the option of

retaining any one of the three systems as a principal system, with the others as secondary systems. A precedent for such alternative type of order is found in the Commission's own procedure in the Engineer's Public Service and Commonwealth & Southern proceedings, where alternatives are dealt with.

Even if the Commission should reject our views expressed above, it is the further position of North American that, in any case, it alone would have the right to elect the principal system, and only within a reasonable time after it was expressly required to make such election.

5. UNCONSTITUTIONALITY OF SECTION 11(B)(1).

The Respondents, in their answers in this proceeding, have asserted the unconstitutionality of the provisions of Section 11(b)(1) of the Act and have requested various findings of fact bearing on that issue. Since we understand that the Commission has repeatedly refused to pass upon the constitutionality of the Act and refuses to do so in this case, we omit discussion of constitutional questions.

Respectfully submitted,

SULLIVAN & CROMWELL,
Attorneys for The North American Company and Other Within Named Respondents,

IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT

THE NORTH AMERICAN COMPANY, Petitioner,

v.

SECURITIES AND EXCHANGE COMMISSION, Respondent

Subject to the approval of the Court, it is hereby stipulated by and between the parties herein as follows:

1. The petition to review the order of the Securities and Exchange Commission, dated April 14, 1942, filed in this Court on June 12, 1942, and the petition to review the order of the Securities and Exchange Commission, dated June 25, 1942, filed in this Court on August 21, 1942, shall be consolidated and treated as one case, and shall be briefed together and argued together upon the record heretofore certified by the Securities and Exchange Commission. The schedule with respect to the filing of briefs, oral argument and all other matters shall be that provided by the rules of Court with respect to the petition filed on June 12, 1942, except as modified by stipulation between the parties.

2. The time within which the brief of the respondent shall be filed and served shall be extended to thirty days after the service upon the respondent of a copy of petitioner's brief.

3. Upon the service of respondent's brief upon petitioner, the case shall be set for argument by stipulation of the parties on the first available date to be indicated by the Clerk, provided that such date shall not be earlier than fifteen days

after service of respondent's brief. Petitioner may file and serve a reply brief at least one day before oral argument.

4. There may be omitted from the printed record the testimony relative to Washington Railway and Electric Company and its subsidiaries, to North American Light & Power Company and its subsidiaries, and pages 2155 to 2168, inclusive, of the typewritten transcript of testimony before the Securities and Exchange Commission; and there may also be omitted from the printed record the following documents (the document number in each case being that assigned in the record certified to this Court by the Commission):

Documents Nos. 2, 3, 5, 6, 8, to 13, inclusive, 14 (other than the answer of The North American Company), 15, 22 to 34, inclusive, 42, 48, 54, 60, 66, 126, 130 to 146, inclusive, 148, 149, 154, 155, 158, 159, 160, 162, 169 to 172, inclusive, 174 to 176, inclusive, 178 to 183, inclusive, 186, 188, 191, 193 to 254, inclusive, 256, 260, 262 to 271, inclusive, 273, 274, 275, 276 (except as to certain persons), 277, 278, 280 to 291, inclusive, 292, (other than proposed findings), 293 to 306, inclusive, 308 to 330, inclusive, and 333 to 336, inclusive.

5. If the pending motion by the Commission in the United States Court of Appeals for the District of Columbia to dismiss the petition for review filed in said Court by Washington Railway and Electric Company and The Washington and Rockville Railway Company of Montgomery County shall be granted, the petitioner shall print such additional portions of the record certified by the Commission with respect to said companies and their respective subsidiaries, as shall then be agreed upon by further stipulation.

6. If after the opening briefs of petitioner and respondent have been filed, it appears to either party that any part of the record material to the issues framed by the briefs has been omitted from the printed record, a supplemental

volume of record shall be printed by the petitioner.

Dated, New York, October 2, 1942.

Sullivan & Cromwell, Counsel for Petitioner. John F. Davis, Solicitor. Milton V. Freeman, Assistant Solicitor, Counsel for Respondent.

So Ordered. October 6th, 1942. Thomas W. Swan, C. J.

United States Circuit Court of Appeals for the Second Circuit. The North American Company, Petitioner, v. Securities and Exchange Commission, Respondent. Consent and Order. Sullivan & Cromwell, Attorneys for Petitioner, 48 Wall Street, New York, N. Y. United States Circuit Court of Appeals, Second Circuit. Filed Oct. 6, 1942. D. E. Roberts, Clerk.

UNITED STATES CIRCUIT COURT OF APPEALS

FOR THE SECOND CIRCUIT

No. 105—October Term, 1942.

(Argued November 10, 1942 Decided January 12, 1943.)

THE NORTH AMERICAN COMPANY,

Petitioner,

—*v.*—

SECURITIES AND EXCHANGE COMMISSION,

Respondent.

Petitions to review two orders of the Securities and Exchange Commission entered in a proceeding initiated by the Commission under section 11 (b) (1) of the Public Utility Holding Company Act of 1935. 15 U. S. C. A. §79k(b) (1). By order of this court, upon stipulation, the petitions were consolidated. Orders affirmed.

Before:

SWAN, AUGUSTUS N. HAND and CHASE,

Circuit Judges.

SULLIVAN & CROMWELL, Attorneys for petitioner, Charles E. Hughes, Jr., of counsel.

JOHN F. DAVIS, Solicitor, Milton V. Freeman, Ass't Solicitor, Roger S. Foster, Counsel, Public Utilities Division, David K. Kadane, Maurice C. Kaplan and Jerome S. Katzin, Attorneys, for the respondent.

SWAN, *Circuit Judge:*

This case is before us on petitions of The North American Company, filed pursuant to section 24(a) of the Public Utility Holding Company Act of 1935, 15 U. S. C. A. §79x(a), to review two orders made by the Securities and Exchange Commission in a proceeding initiated by it under section 11 (b) (1) of the Act, 15 U. S. C. A. §79k(b) (1). The orders were entered on April 14, 1942 and June 25, 1942, respectively. The opinions of the Commission in support of them will be reported in The North American Company, 11 S. E. C. —— and ——.[1] The April order directed North American to divest itself of all its securities, with minor exceptions, other than those of Union Electric Company of Missouri and its subsidiaries (hereafter referred to as the St. Louis system). The June order denied North American's motion for leave to present further argument that the Commission lacks power to designate the particular system to be retained as its "single integrated public-utility system." North American's petitions to this court raise questions as to the construction and application of section 11(b) (1) and challenge its constitutional validity.

The North American Company was organized in 1890 under the laws of New Jersey. Its principal office is in the City of New York, N. Y. Its business consists in acquiring and holding for investment stocks and other securities, principally in the electric utility field. It is the top holding company in a system containing 80 companies and operating in 17 states and the District of Columbia. At no time has it engaged in the business of managing the operations of its public utility operating subsidiaries, or selling them supplies, engineering services or the like. It has, however, furnished financial advice and assistance and sponsored the in-

[1] The opinions may be found in C. C. H. Fed. Securities Law Serv., '43, §75,271 and §75,297.

terchange of operating information among the subsidiaries. On February 25, 1937 North American registered under the Act [2] and thus became "a registered holding company" within the meaning of section 11 (b) (1). This section makes it the duty of the Commission, "as soon as practicable after January 1, 1938," to require each registered holding company to take such action as the Commission may find necessary to limit the operations of the holding company system to "a single integrated public-utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations" thereof. A proviso permits a registered holding company "to continue to control one or more additional integrated public-utility systems" if they satisfy the requirements of clauses (A) (B) and (C) of the section. The orders complained of limit North American's operations to the St. Louis system. Such other facts as are required to be stated will appear in the course of our discussion.

The first matter for consideration is the petitioner's contention that it was premature for the Commission to proceed with forced divestment under section 11 (b) (1) before it had made the studies and published its recommendations as required by section 30, 15 U. S. C. A. §79z-4. The issue was presented by a motion, denied by the Commission, to hold the proceeding in abeyance pending publication of such recommendations. It is argued that Congress expected many holding companies, if given time and guidance, voluntarily to rearrange their affairs; the operation of section 11 (b) (1) was postponed to give the time, and the Commission was instructed to supply the guidance by making public its recommendations of administrative standards in respect to the matters referred to in section 30; hence, the order of

---

[2] Registration did not waive its right to future challenge of the validity of section 11. See *Electric Bond & Share Co.* v. *S. E. C.*, 303 U. S. 419, 435.

April 1942 was premature as no such guidance had been supplied. Whatever may have been the expectation of Congress as to voluntary readjustments, we can find nothing in the statutory language justifying a holding that the recommendations which the Commission is directed to "make public from time to time," are a condition precedent to invoking the procedure of section 11 (b) (1) to compel integration. If completion of *ex parte* studies under section 30 were a prerequisite to action under section 11 (b), it should equally be so to action under section 11 (e) or under section 10 (e) (1), 15 U. S. C. A. § 79j (e) (1). Since such studies and recommendations are apparently to be made "from time to time" throughout the life of the Commission, to hold that enforcement of other provisions of the statute are dependent on completion of the studies would defer their enforcement indefinitely. We cannot impute such an intention to Congress. If it be argued that enforcement as to a particular holding company should be deferred until a study has been made and recommendations published as to it, a sufficient answer is that the company must be accorded a hearing before integration can be ordered. We are satisfied that section 30 should be construed merely as an administrative direction to the Commission, not as a condition precedent to conducting a proceeding under section 11 (b) (1). Compare *United States* v. *Morgan*, 222 U. S. 274. For a discussion of the specific point see *Commonwealth & Southern Corporation*, 11 S. E. C. ——.[3]

We now turn to the petitioner's contentions relating to the interpretation and application of section 11 (b) (1). The first is as to selection of a single integrated public utility system to be retained (which may conveniently be called the "principal" system). The selection of a principal system must naturally precede any final determination of what "other businesses" are "reasonably incidental or economi-

[3] C. C. H. Fed. Securities Law Serv., '43, § 75,285.

cally necessary or appropriate to the operations of such" principal system, as well as what "additional integrated public-utility systems" the holding company is to be permitted "to continue to control." Where, as in this case, there are found to be several integrated public utility systems,[4] any one of which might reasonably be chosen as the principal system, is the choice to be made by the holding company or by the Commission? We may assume, without so deciding, that the privilege of selecting its principal system should, during preliminary stages of the section 11 (b) (1) proceeding, be accorded the holding company. This was done and only after North American had refused to express a preference between the several integrated public utility systems, was the St. Louis system selected by the Commission as the principal system for retention. No contention is made that the Commission made an unreasonable selection or that the selection of a different system would be more beneficial to North American. Its argument is merely that it cannot now tell which two of the three sytsems (St. Louis, Cleveland and Wisconsin) will be most marketable; that section 11 (c) gives it at least one year for compliance with the divestment order; and therefore it may select its principal system at any time within the period allowed for compliance. We do not think the statute contemplates such deferment of selection. It would necessarily result in delays. The Commission's duty is to act under section 11 (b) "as soon as practicable," and due diligence in complying with the order is prescribed by section 11 (c). Nor do we see that deferment in selecting the principal system is necessary to ade-

---

[4] The Commission found that the electric operations in each of the areas centering at St. Louis, Washington, Cleveland, Detroit and Wisconsin, respectively, constitute a single integrated public utility system within the meaning of the Act. North American's contentions in the aspect now under discussion are confined to the St. Louis, Cleveland and Wisconsin systems.

quate protection of a holding company against circumstances which may arise during the period allowed for compliance with the order. If changes occur in "the conditions upon which the order was predicated," the Commission is authorized by subsection (b) to revoke or modify any order previously made thereunder. Under the circumstances disclosed by this record we see no error in the Commission's selection of the St. Louis system as the principal system for retention.

It is next contended that the Commission erred in limiting North American to the retention of a single integrated system; that under the (A) (B) (C) standards of section 11 (b) (1), properly interpreted and applied, it is entitled to retain as additional or secondary systems the groups of subsidiaries which constitute the Cleveland and the Wisconsin systems. The (A) standard requires a finding that the additional system cannot be operated independently "without the loss of substantial economies which can be secured by the retention of control" by the holding company. It has been the practice of North American to furnish financial advice and, on occasions, direct financial assistance to its subsidiaries, and to sponsor the interchange of statistics and operating information among them. Such practices, it is urged, have been of great value to the Cleveland and the Wisconsin systems and a discontinuance of their relations with North American will cause them the loss of "substantial economies." After considering these arguments and the evidence presented in their support, the Commission refused to find that the additional systems could not be operated independently without the loss of substantial economies. Whether economy is achieved by centralized control is always a doubtful question and one peculiarly fitted for decision by an administrative agency staffed by experts. On such an issue a court cannot review or reweigh the evidence. See *Morgan Stanley & Co.* v. *Securities Exchange Com'n*,

126 F. 2d 325 (C. C. A. 2); section 24(a) of the Act, 45 U. S. C. A. §79x(a). With the Commission's ruling that "substantial economies" means important economies and not merely something more than nominal, we are in accord.

The Commission also found that neither additional system met the (C) standard. But we need not consider the correctness of this ruling, nor the interpretation placed upon clause (B), because the failure to satisfy the requirements of clause (A) precludes retention of the additional systems, since all three clauses must be satisfied to secure the right to retain more than the primary system.

North American complains that divestment has been ordered of its investments in three non-utility companies and that this has resulted from an erroneous construction of the "other business" clauses of section 11 (b) (1). The section requires a registered holding company to limit its operations to a single integrated public utility system, "and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public utility system." Then follows the proviso dealing with additional integrated public utility systems, and next comes the following provision:

> "The Commission may permit as reasonably incidental, or economically necessary or appropriate to the operations of one or more integrated public-utility systems, the retention of an interest in any business (other than the business of a public-utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems."

The Commission interpreted these "other business" clauses to permit retention only when it affirmatively appears "that

the public interest will be furthered by retention of a non-utility interest by reason of its relation 'to economy of management and operation' of a public utility system or systems or 'the integration and coordination of related operating properties.' " This conclusion is consonant with the policy of the Act expressed in section 1 (b) (4), 15 U. S. C. A. §79a(b) (4) which declared that "the national public interest" is or may be adversely affected "when the growth and extension of holding companies bears no relation to economy of management and operation or the integration and coordination of related operating properties." We agree with the Commission's interpretation. It is apparently not disputed that the three other businesses are unrelated to the operations of the St. Louis system. Consequently no error appears in ordering their divestment.

There remains for consideration the petitioner's attack upon the constitutional validity of section 11 (b) (1). It is urged that under the commerce clause of the Constitution, Art. I, sec. 8, cl. 3, Congress does not possess the power it has sought to exercise by this section of requiring a registered holding company to divest itself of all securities other than those related to a single integrated public utility system. Many of North American's subsidiaries are engaged in interstate commerce, but the ownership of securities issued by them does not of itself constitute engaging in interstate commerce; the ownership of property is characteristically an intrastate matter. Such ownership can be asserted to be subject to congressional regulation under the commerce clause only on the ground that it so affects interstate commerce as to make regulation of it an appropriate means to the attainment of a legitimate end. See *United States* v. *Wrightwood Dairy Co.*, 315 U. S. 110, 119; *United States* v. *Darby*, 312 U. S. 100, 118. Counsel argues that section 11 (b) (1) does not make such effect the test of its application;

it assumes that the mere fact that a holding company has registered under section 5 [5] of the Act indicates a sufficient relationship to interstate commerce to support the asserted power, and it provides for divestment orders without any specific finding by the commission or by a court that the company is engaged in interstate commerce or that interstate commerce will be adversely affected by retention of the securities it owns. But we think the necessity for such specific finding is eliminated by the statutory scheme. Section 1 expounds the policy underlying the necessity for control of holding companies as defined in section 2(a)(7). It declares them to be affected with a national public interest because, among other things, "their practices in respect of and control over subsidiary companies often materially affect the interstate commerce in which those companies engage," [6] and the extension of their activities over many states makes difficult, if not impossible, effective state regulation of public utility companies.[7] It is further declared that the national public interest is or may be adversely affected when the growth and extension of holding companies bears no relation to economy of management and operation or the integration and coördination of related operating properties.[8] Section 3 provides administrative procedure by which a holding company can obtain exemption from any provision of the Act, if it and its subsidiaries are predominantly intrastate in character.[9] North American did not avail itself of this administrative remedy; nor does it now assert that it is entitled to exemption. On the contrary its activities and those of its subsidiaries clearly bring it within the class of holding companies which section 1 declares affect interstate

[9] Section 3(a)(1) and (2), 15 U. S. C. A. §79c(a)(1) and (2).

commerce and require regulation. Hence the essence of the petitioner's argument comes down to the contention that the retention of securities, which section 11(b) (1) assumes to regulate, is a purely intrastate matter and beyond congressional power.

That the power of Congress to regulate interstate commerce extends to regulation through legislative action of activities intrastate which have a substantial effect on the commerce cannot be, and is not, disputed. In *United States* v. *Darby*, 312 U. S. 100 at page 120, the court noted that in such legislation determination whether the intrastate activities have the prohibited effect on the interstate commerce, has sometimes been left to the courts, sometimes to an administrative tribunal, and "sometimes Congress itself has said that a particular activity affects the commerce * * *" The statute there under discussion, like the one now before us, belonged to the class last mentioned. In passing on the validity of that class of legislation the opinion states that "the only function of the courts is to determine whether the particular activity regulated or prohibited is within the reach of the federal power." To what extent that power can reach has been very recently demonstrated by *Wickard* v *Filburn*, 317 U. S. ——, decided November 9, 1942. There it was held that a small farmer's production of wheat for his own use could be regulated under the Agricultural Adjustment Act of 1938, as amended, because in the aggregate the consumption of home-grown wheat by many small farmers affects the price and market conditions of wheat transported between the states. If the commerce clause has a sweep so broad as that, we cannot say that Congress has exceeded its power in regulating the ownership of securities by a holding company whose subsidiaries are engaged in interstate commerce.

The final argument is that section 11 (b) (1) violates the Fifth Amendment. The guaranty of due process demands

only that the law shall not be "unreasonable, arbitrary, or capricious, and that the means selected shall have a real and substantial relation to the object sought to be attained." *Nebbia v. New York*, 291 U. S. 502, 525. The object sought by the statute under consideration is the elimination of abuses in the public utility holding company field. It is argued that the divestment of securities required by section 11 is not a reasonable means to that end because it will involve a destruction of values. We do not think the argument can prevail. Congress did not think it could accomplish its object solely by regulating future transactions, although many of the provisions of the Act apply only to them. To eliminate existing conditions which adversely affect the public interest Congress considered it necessary to enact section 11. The means selected are clearly adapted to the end in view. The wisdom of the legislation and the appropriateness of the remedy chosen is not the concern of the courts. See *Sunshine Anthracite Coal Co.* v. *Adkins*, 310 U. S. 381, 394. Compelling the holding company to dispose of its securities is not the same as condemning private property for public use without paying just compensation. Under section 11 (c) the petitioner is given a year within which to comply with the order and may on proper showing obtain an additional period not exceeding one year. If divestment can be effected by distribution in kind, there may be no loss in values. If, as petitioner contends, such distribution will be impossible and a liquidation by sale becomes necessary, the process may be painful to its common stockholders, but we cannot say that the remedy selected by Congress is so unreasonable, arbitrary or capricious as to constitute taking property without due process.

Orders affirmed.

IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT

THE NORTH AMERICAN COMPANY, Petitioner,

v.

SECURITIES AND EXCHANGE COMMISSION, Respondent

DECREE

This cause came on to be heard at this term and was argued by counsel, and the Court having considered the briefs of the parties and the arguments of counsel and being fully advised in the premises and having filed its opinion herein, it is

Ordered, Adjudged and Decreed that the orders of the Securities and Exchange Commission entered on April 14, 1942 and June 25, 1942 in the cause entitled "In the Matter of the North American Company and its Subsidiaries, File No. 59-10," be and they hereby are affirmed.

Learned Hand, Thomas W. Swan, Circuit Judges.

Dated: —— — ——.

Approved as to form. Sullivan & Cromwell, Attorneys for the Petitioner. John F. Davis, Solicitor; Milton V. Freeman, Asst. Solicitor, Attorneys for Respondent.

[Endorsed:] No. American Co. v. Sec. & Exch. Comm. Order. United States Circuit Court of Appeals, Second Circuit. Filed Jan. 28, 1943. D. E. Roberts, Clerk.

UNITED STATES OF AMERICA, SOUTHERN DISTRICT OF NEW YORK

I, D. E. Roberts, Clerk of the United States Circuit Court of Appeals for the Second Circuit, do hereby certify that the foregoing pages, numbered from I to XXIX and 1 to 4012, inclusive in 10 volumes, contain a true and complete transcript of the record and proceedings had in said Court, in the case of The North American Company, Petitioner, against Securities and Exchange Commission, Respondent, as the same remain of record and on file in my office.

In Testimony Whereof, I have caused the seal of the said Court to be hereunto affixed, at the City of New York, in the Southern District of New York, in the Second Circuit, this sixth day of February, in the year of our Lord one thousand nine hundred and forty-three, and of the Independence of the said United States the one hundred and sixty-seventh.

D. E. Roberts, Clerk. (Seal.)

SUPREME COURT OF THE UNITED STATES, OCTOBER TERM, 1942

No. 721

ORDER ALLOWING CERTIORARI—Filed March 1, 1943

The petition herein for a writ of certiorari to the United States Circuit Court of Appeals for the Second Circuit is granted.

And it is further ordered that the duly certified copy of the transcript of the proceedings below which accompanied the petition shall be treated as though filed in response to such writ.

The Chief Justice took no part in the consideration or decision of this application.

No.

THE NORTH AMERICAN COMPANY,
Petitioner,

against

SECURITIES AND EXCHANGE COMMISSION,
Respondent.

PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT

The North American Company prays that a writ of certiorari be issued to review the decree of the United States Circuit Court of Appeals for the Second Circuit entered in the above entitled cause on January 28, 1943.

OPINIONS BELOW

The opinion of the United States Circuit Court of Appeals for the Second Circuit (R. 4000) is unreported as yet. The Securities and Exchange Commission (hereinafter called the Commission) issued opinions and orders dated April 14, 1942

(R. 194) and June 25, 1942 (R. 214) as its Holding Company Act Releases Nos. 3405 and 3629, which are not yet officially reported.

STATUTE INVOLVED

The statute involved is Title I of the Public Utility Act of 1935 entitled "An Act to provide for control and regulation of public-utility holding companies, and for other purposes", 49 Stat. 803 (hereinafter called the Act). The orders of the Commission were entered under Section 11(b)(1) of the Act. A sufficient number of copies of the Act for the Court are filed with this petition.

JURISDICTION

The decree of the Circuit Court of Appeals for the Second Circuit sought to be reviewed was entered on January 28, 1943. The jurisdiction of this Court is invoked under Section 240(a) of the Judicial Code as amended by the Act of February 13, 1925, made applicable by Section 24(a) of the Act.

QUESTIONS PRESENTED

1. Is Section 11(b)(1) of the Act within the power of Congress, under Article I, section 8, clause 3 of the Constitution, to regulate commerce among the several States?

2. Does Section 11(b)(1) of the Act violate the due process clause of the Fifth Amendment?

STATEMENT

The decree of the Circuit Court of Appeals of which review is sought affirmed two orders of the Commission.

The order of April 14, 1942 directs the petitioner to divest itself of all its assets other than securities of Union Electric Company of Missouri, except that the Commission reserved jurisdiction hereafter to enter an order directing petitioner to divest itself of securities of St. Louis County Gas Company and of 60 Broadway Building Corporation. The assets of which petitioner is ordered to divest itself cost it approximately $190,000,000. The order of June 25, 1942 refused permission to the petitioner to choose for itself the integrated public utility system which it might retain.

The petitioner, a New Jersey corporation with its principal office in New York City, was organized in 1890 and has since continuously engaged in the business of acquiring and holding for investment stocks and other securities, principally in the electric utility field. It has no other business (R. 2084-5, 2807, 2925). It registered under the Act on February 25, 1937 (reserving its constitutional rights),* and is thus "a registered hold-

*See *Landis, et al.* v. *The North American Company*, 299 U. S. 248, 251-252 (1936); *Electric Bond & Share Co., et al.* v. *Securities and Exchange Commission, et al.*, 303 U. S. 419, 435 (1938).

ing company" within the meaning of Section 11(b)(1).

The investments of petitioner dealt with by the Commission's opinion, findings and order are set out in Appendix A hereto.

Petitioner's direct and indirect investments in *utilities engaged in interstate commerce* are:

Wisconsin Electric Power Company: An electric utility company which, with its subsidiaries, operates in and around Milwaukee and to the north, including an area in the upper peninsula of Michigan. Petitioner's investment, which consists of 94% of the common stock, commenced in 1890 (R. 838-9, 2832; SEC Holding Company Act Release 2950).

Union Electric Company of Missouri: An electric utility company which, with its subsidiaries, operates in and around St. Louis, Missouri, including adjacent Illinois territory. Petitioner's investment, which consists of all of the common stock, commenced in 1901 (R. 91, 92). Petitioner also directly owns all of the stock of The St. Louis County Gas Company, a relatively small company which furnishes gas service in St. Louis County, a suburban county in Missouri, which does not include the city of St. Louis (R. 1870).

Washington Railway and Electric Company: A holding company which holds all of the common stock of Potomac Electric Power Company, an electric utility company which serves the District

of Columbia and an adjoining area in Maryland, and of a minor company which serves a small adjacent area in Virginia, together with 50% of the capital stock of Capital Transit Company, which furnishes street car and bus service in the District of Columbia. Petitioner's investment, which consists of 80% of the common stock, commenced in 1924 (R. 132-4, 2826).

North American Light & Power Company: A holding company which holds stocks of electric utility companies and gas utility companies operating in Kansas, Missouri, Illinois and Iowa. This holding company is in process of dissolution; and petitioner will eventually receive such proceeds of liquidation as are applicable to its holdings of securities of various classes. This investment commenced in 1926 (R. 139, 2826).

Petitioner's investments in *utilities not engaged in interstate commerce* are:

The Cleveland Electric Illuminating Company: An electric utility company which serves Cleveland and the surrounding area. Its business is confined within Ohio. Petitioner's investment, which consists of 79% of the common stock, commenced in 1922 (R. 327, 646-50, 2826).

Pacific Gas and Electric Company: An electric utility company which, with its subsidiaries, operates in and around San Francisco and to the north. Its business is confined within California. Petitioner's ownership, which consists of 33% of the

common stock, represents an investment which started in 1925 (SEC Holding Company Act Release 2988).

The Detroit Edison Company: An electric utility company which serves Detroit and the surrounding area. Its business is confined within Michigan. Petitioner's investment, dating from 1903, which at the time of commencement of the proceedings consisted of 19.2% of the capital stock, now consists of approximately 2% of the capital stock (R. 93; SEC Holding Company Act Release 4056).

Petitioner's investment in *non-utilities engaged in interstate commerce* is:

West Kentucky Coal Company: A company which owns and operates coal mines in Kentucky and sells coal, partly through subsidiary selling companies, in several States. Very little of this company's coal has been sold to utility companies in which petitioner holds investments. Petitioner's investment, which consists of most of the preferred stock and 100% of the common stock, commenced in 1905 (R. 123, 2858).

Petitioner's investments in *non-utilities not engaged in interstate commerce* are:

North American Utility Securities Corporation: A relatively small investment company. Petitioner's interest, which consists of all of the preferred stock and 80% of the common stock, commenced in 1924 (R. 119, 120).

60 Broadway Building Corporation: A company whose only asset is the office building in New York where petitioner has its offices. Petitioner's investment, which consists of 100% of the capital stock, commenced in 1924 (R. 121, 122).

Miscellaneous investments covered by the order also include:

$120,000 of 5% Notes of Capital Transit Company.

4,700 shares of preferred stock of Illinois Iowa Power Company.

An investment of $400,000 in Milwaukee Light, Heat & Traction Company whose sole assets are real estate held for liquidation and stock of a small electric furnace enterprise (R. 1507-8).

It will be noted from the foregoing summary that petitioner's investments have been continuous and are of long standing. In making and retaining its investments in the Wisconsin, St. Louis, Cleveland, Washington, Detroit and California areas, petitioner has long followed a policy of diversification which has proved sound and of substantial value to its securityholders (R. 2831-2, 3013-4).

Petitioner has at no time engaged in the business of managing the operations of its public utility operating subsidiaries, or selling them supplies, engineering services or the like. Its relationship has, essentially, been that of a large investor seek-

ing to promote the sound development of his investment. Petitioner has consistently proclaimed and practiced the policy of local autonomy for each public utility operating company and has sought to use its voting power to assure good local management which has had the genuine responsibility of conducting operations. Petitioner has furnished financial advice and assistance and sponsored the interchange of valuable operating information among the subsidiaries (R. 100-1, 2903, 2922).

Petitioner has been conservatively financed and its financial practices have been sound. There has never been a default on any security issued by petitioner (R. 2815, 2869-70, 2892-3). Residential electric rates charged by petitioner's operating utility subsidiaries are far below the national average and among the lowest in the country (Petitioner's Exhibits 124, 141, R. 3284, 3310).

Petitioner itself has accepted the strictest and most comprehensive regulation by the Commission, while its utility subsidiaries have been completely regulated for many years by the respective State commissions.

SPECIFICATION OF ERRORS TO BE URGED

The Circuit Court of Appeals erred:

1. In holding that Section 11(b)(1) of the Act is within the power of Congress to regulate commerce among the several States.

2. In holding that Section 11(b)(1) of the Act is not violative of the Fifth Amendment to the Constitution.

REASONS FOR GRANTING THE WRIT

(1) This case presents Federal questions of great importance which have not been, but should be, settled by this Court.

The orders of the Commission and the decree of the Court below affirming those orders hold that the statute requires the divestment of the greater part of petitioner's assets. As thus interpreted and applied, the statute will require many public utility holding companies to divest themselves of assets, and will cause hardship to many stockholders.

The questions of the constitutionality of Section 11(b)(1) of the Act should, therefore, be reviewed by this Court. They present Federal questions of great public importance which should be and have not heretofore been passed upon by this Court. This Court has had before it on two prior occasions suits involving the constitutionality of the Act and has expressly reserved passing upon the constitutionality of Section 11(b)(1).

In *Landis, et al.* v. *The North American Company*, 299 U. S. 248 (1936), this Court had before it the action of the District Court for the

District of Columbia in staying the suit brought by petitioner to enjoin enforcement of the Act against it. There was not involved in that review the question of the constitutionality of Section 11(b)(1). However, this Court said (p. 256) that the questions arising in suits to resist enforcement of the Act were "of extraordinary public moment" which presented "grave issues" and "novel problems of far-reaching importance to the parties and the public".

In *Electric Bond & Share Company, et al.* v. *Securities and Exchange Commission, et al.*, 303 U. S. 419 (1938), the Commission sought to compel the petitioners there to register under the Act, and in a cross-bill the petitioners sought to enjoin enforcement of the Act against them. This Court, in requiring the petitioners to register, held that the registration sections of the Act were separable and expressly reserved questions concerning the constitutionality of the provisions of the Act other than the registration sections. This Court said:

> "It is evident that the provisions of §§ 4(a) and 5 are not so interwoven with the other provisions of the Act that there is any inherent or practical difficulty in the separation and independent enforcement of the former while reserving all questions as to the validity of the latter. * * * If this decree is affirmed, it will constitute a specific adjudication that registration will be without prej-

udice to future challenge of the validity of any provision of the Act, or requirement of the Commission, outside of §§ 4(a) and 5." (pp. 434-435)

(2) The decision of the Court below does not give proper effect to the applicable decisions of this Court defining the power of Congress under the Commerce Clause.

The assets of which petitioner is ordered to divest itself consist wholly of securities of other corporations. The ownership of securities does not of itself constitute engaging in interstate commerce.

An intrastate matter, such as the ownership of securities, is not within the reach of the Federal power unless it so affects matters which are interstate that its control is necessary to protect the latter. *United States* v. *Wrightwood Dairy Co.*, 315 U. S. 110 (1942). However, in such case there must be a specific finding that interstate commerce is affected. And this finding must be made by the Court, the Commission, or Congress. *United States* v. *Darby*, 312 U. S. 100 (1941).

In the case at bar, the Commission concededly made no finding that the ownershp of the securities of which it ordered the petitioner to divest itself, or the ownership of any of them affected interstate commerce. The Circuit Court made none. It affirmed the orders of the Commission on the

theory that Congress itself had made the necessary findings. However, the only general finding that Congress made* is that public utility holding companies are affected "with a national public interest". Such a finding is insufficient as a basis for Federal jurisdiction under the commerce power. True, Congress declared* that the activities of public utility holding companies "often" affected interstate commerce, but that is not tantamount to a general finding that interstate commerce is affected merely by holding company ownership of securities in other corporations. It is at best a contingent finding that certain unspecified activities of some holding companies affect interstate commerce. To bring the orders of the Commission within the reach of the Federal power, this Congressional finding would have to be supplemented by findings that the petitioner's ownership of securities in other corporations sufficiently affects interstate commerce. No such findings were made by the Commission or the Court below; and the Act contains no provision authorizing either the Commission or the Court to make any such findings.

The statute involved in *Wickard, et al.* v. *Filburn*, 317 U. S. (November 9, 1942), was of a wholly different character from the Act here in question. It was an amendment to the Agricul-

*Section 1 of the Act.

tural Adjustment Act of 1938, Title III of which declared a policy and provided machinery for the regulation of interstate and foreign commerce and the prevention of burdens thereon by comprehensive regulation of the supply of basic agricultural commodities, including wheat. (See declaration of policy introducing the entire Act in Section 2, and the provisions of Title III containing general definitions (Section 301(a)(3) and (4), the legislative findings as to wheat in Section 331 and the provisions of Sections 335-339 regarding marketing quotas.) The question before this Court was simply whether, in view of the use to which Filburn put his wheat, his surplus could be said to affect interstate commerce sufficiently to make the application of the statute to him constitutional. In that case there was also a stipulation of the economic facts on the basis of which this Court found that the raising of wheat, for Filburn's own consumption, affected the marketing of wheat in interstate commerce. In the case at bar no such facts appear in the record, and it is necessary, if the Act is to be held within reach of the Federal power, that the ownership of securities *as a matter of law* affects interstate commerce.

(3) The decision of the Court below does not give proper effect to the applicable decisions of this Court under the Fifth Amendment.

The object which Congress sought to attain through the Act was the elimination of the enu-

merated "abuses".* The means selected were: (i) the far-reaching regulatory provisions of the Act other than Section 11, and (ii) divestment under Section 11. The petitioner contends that substantially all abuses are eliminated through the far-reaching regulatory sections of the Act other than Section 11. In view of this, the contribution which enforcement of that section would make to the Congressional purpose of eliminating abuses in the public utility field would be slight. It follows, we submit, that Section 11(b)(1) bears no such reasonable and substantial relation to the object sought to be attained as to be justified under the rule of *Nebbia* v. *New York*, 291 U. S. 502 (1934), cited by the Court below.

On the other hand, enforcement of Section 11(b)(1) would deprive petitioner of large properties and important property rights and inevitably visit upon it and its stockholders an enormous destruction of values. In *Wickard, et al.* v. *Filburn, supra*, the grounds upon which this Court upheld the legislation there involved against attack under the Fifth Amendment were that its apparently retroactive features were not actually such because "the penalty was contingent upon an act which appellee committed not before but after the enactment of the statute", and that the

*These so-called "abuses" are enumerated in Section 1(b) of the Act.

statute, along with the detriments complained of, conferred large benefits upon the appellee. This Court concluded:

> "* * * That appellee is the worse off for the aggregate of this legislation does not appear; it only appears that if he could get all that the Government gives and do nothing that the Government asks, he would be better off than this law allows. To deny him this is not to deny him due process of law."

Neither of these grounds applies to Section 11(b)(1). Its operation is manifestly retroactive and neither that section nor the act as a whole confers upon petitioner any benefit to compensate for the deprivation of property which its enforcement would entail.

We submit that, in such a situation, the test of the *Nebbia* case is not satisfied and that the applicable authority is *Louisville Joint Stock Land Bank* v. *Radford*, 295 U. S. 555, 589, 601-602 (1935).

(4) The decision of the Court below is in conflict with a decision of the Circuit Court of Appeals for the Fourth Circuit.

Under the opinion of the Court below Section 11(b)(1) of the Act is applicable to all registered holding companies which have not obtained exemption pursuant to Section 3(a) of the Act.

In this respect the opinion below is in direct conflict with the opinion of the Circuit Court of Appeals for the Fourth Circuit in the case of *Burco, Inc.* v. *Whitworth, et al.*, 81 F. (2d) 721 (1936) cert. den. 297 U. S. 724 which holds that the Act is invalid in so far as it applies to companies which are not engaged in interstate commerce, even though such companies do not seek exemption. This inconsistency, between the two Circuit Courts of Appeals, is not resolved by the case of *Electric Bond & Share Co.* v. *Securities and Exchange Commission, et al.*, 303 U. S. 419 (1938) since only the registration sections (Sections 4 and 5) of the Act were involved in that case.

CONCLUSION

Because of the importance of the Federal questions presented and for the other reasons stated, this petition for a writ of certiorari should be granted.

Respectfully submitted,

CHARLES E. HUGHES, JR.,
Counsel for the Petitioner.

SULLIVAN & CROMWELL,
Attorneys for the Petitioner.

February, 1943.

OCTOBER TERM—1942

No. 721.

THE NORTH AMERICAN COMPANY,
Petitioner,

against

SECURITIES AND EXCHANGE COMMISSION,
Respondent.

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF OF PETITIONER

Writ of certiorari was granted by this Court to review the decree of the United States Circuit Court of Appeals for the Second Circuit entered in the above entitled cause on January 28, 1943.

That decree affirmed orders of the Securities and Exchange Commission (hereinafter called the "Commission") entered in a proceeding initiated by the Commission under Section 11(b)(1) of the Public Utility Holding Company Act of 1935, by notice of and order for hearing (R., Vol. I, 1-33) on March 8, 1940.

OPINIONS BELOW

The opinion of the United States Circuit Court of Appeals for the Second Circuit (R., Vol. X, 4000-4010) is unreported as yet.

The Commission's Findings and Opinion (R., Vol. I, 73-193), and Orders dated April 14, 1942 (R., Vol. I, 194-204) and June 25, 1942 (R., Vol. I, 214-217) are its Holding Company Act Releases Nos. 3405 and 3629, which are not yet officially reported.

STATUTE INVOLVED

The statute involved is Title I of the Public Utility Act of 1935 entitled "An Act to provide for control and regulation of public-utility holding companies, and for other purposes", 49 Stat. 803 (hereinafter called the "Act").

The provision thereof which is directly involved, and under which the orders of the Commission were entered, is Section 11(b)(1) which provides as follows:

> "(b) It shall be the duty of the Commission, as soon as practicable after January 1, 1938:
>
> (1) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such action as the Commission shall find necessary to limit the operations of the holding-company system of which such company is a part to a single integrated public-utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public-utility system: *Provided, however,* That the Commission shall permit a regis-

tered holding company to continue to control one or more additional integrated public-utility systems, if, after notice and opportunity for hearing, it finds that—

(A) Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system;

(B) All of such additional systems are located in one State, or in adjoining States, or in a contiguous foreign country; and

(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation.

The Commission may permit as reasonably incidental, or economically necessary or appropriate to the operations of one or more integrated public-utility systems the retention of an interest in any business (other than the business of a public-utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems."

A sufficient number of copies of the entire Act for the Court were filed with the petition for certiorari.

JURISDICTION

The decree of the Circuit Court of Appeals for the Second Circuit under review was entered on January 28,

1943. The jurisdiction of this Court is invoked under Section 240(a) of the Judicial Code as amended by the Act of February 13, 1925, made applicable by Section 24(a) of the Act.

The writ of certiorari was granted by this Court on March 1, 1943.

QUESTIONS PRESENTED

1. Is Section 11(b)(1) of the Act within the power of Congress, under Article I, section 8, clause 3 of the Constitution, to regulate commerce among the several States?

2. Does Section 11(b)(1) of the Act violate the due process clause of the Fifth Amendment?

STATEMENT

The decree of the Circuit Court of Appeals, here under review, affirmed two orders of the Commission.

The order of April 14, 1942 directs the petitioner to divest itself of all its assets other than securities of Union Electric Company of Missouri, except that the Commission reserved jurisdiction hereafter to enter an order directing petitioner to divest itself of securities of St. Louis County Gas Company and of 60 Broadway Building Corporation. The assets of which petitioner is ordered to divest itself cost it approximately $190,000,000. The order of June 25, 1942 refused permission to the petitioner to choose for itself the integrated public utility system which it might retain.

The petitioner, a New Jersey corporation with its business office in New York City, was organized in 1890 and has since continuously engaged in the business of acquiring

and holding for investment stocks and other securities, principally in the electric utility field. It has no other business. (R., Vol. VI, 2084-5; Vol. VII, 2807; Vol. VIII, 2925).

Petitioner registered under Section 5 of the Act on February 25, 1937 (reserving its constitutional rights),* and is thus a "registered holding company" within the meaning of Section 11(b)(1).

The investments of petitioner dealt with by the Commission's opinion, findings and order are set out in Appendix A hereto.

Petitioner's direct and indirect investments in *utilities engaged in interstate commerce* are:

Wisconsin Electric Power Company: An electric utility company which, with its subsidiaries, operates in and around Milwaukee and to the north, including an area in the upper peninsula of Michigan. Petitioner's investment, which consists of 94% of the common stock, commenced in 1890. (R., Vol. III, 838-9; Vol. VII, 2832; SEC Holding Company Act Release 2950).

Union Electric Company of Missouri: An electric utility company which, with its subsidiaries, operates in and around St. Louis, Missouri, including adjacent Illinois territory. Petitioner's investment, which consists of all of the common stock, commenced in 1901. (R., Vol. I, 91, 92). Petitioner also directly owns all of the stock of The St. Louis County Gas Company, a relatively small company

*See *Landis* v. *The North American Company*, 299 U. S. 248, 251-252; *Electric Bond & Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419, 435.

which furnishes gas service in St. Louis County, a suburban county in Missouri, which does not include the city of St. Louis (R., Vol. V, 1870).

Washington Railway and Electric Company: A holding company which holds all of the common stock of Potomac Electric Power Company, an electric utility company which serves the District of Columbia and an adjoining area in Maryland, and of a minor company which serves a small adjacent area in Virginia, together with 50% of the capital stock of Capital Transit Company, which furnishes street car and bus service in the District of Columbia. Petitioner's investment, which consists of 80% of the common stock, commenced in 1924 (R., Vol. I, 132-4; Vol. VII, 2826).

North American Light & Power Company: A holding company which holds stocks of electric utility companies and gas utility companies operating in Kansas, Missouri, Illinois and Iowa. This holding company is in process of dissolution; and petitioner will eventually receive such proceeds of liquidation as are applicable to its holdings of securities of various classes. This investment commenced in 1926. (R., Vol. I, 139; Vol. VII, 2826).

Petitioner's investments in *utilities not engaged in interstate commerce* are:

The Cleveland Electric Illuminating Company: An electric utility company which serves Cleveland and the surrounding area. Its business is confined within Ohio. Petitioner's investment, which consists of 79% of the common stock, commenced in 1922. (R., Vol. II, 327, 646-50; Vol. VII, 2826).

Pacific Gas and Electric Company: An electric utility company which, with its subsidiaries, operates in and around San Francisco and to the north. Its business is confined within California. Petitioner's ownership, which consists of 33% of the common stock, represents an investment which started in 1925. (SEC Holding Company Act Release 2988).

The Detroit Edison Company: An electric utility company which serves Detroit and the surrounding area. Its business is confined within Michigan. Petitioner's investment, dating from 1903, at the time of commencement of the proceedings consisted of 19.2% of the capital stock. (R., Vol. I, 93; SEC Holding Company Act Release 4056). By April 2, 1943, this holding will have been reduced to less than ⅛ of 1%.

Petitioner's investment in *non-utilities engaged in interstate commerce* is:

West Kentucky Coal Company: A company which owns and operates coal mines in Kentucky and sells coal, partly through subsidiary selling companies, in several states. Very little of this company's coal has been sold to utility companies in which petitioner holds investments. Petitioner's investment, which consists of most of the preferred stock and 100% of the common stock, commenced in 1905. (R., Vol. I, 123; Vol. VII, 2858).

Petitioner's investments in *non-utilities not engaged in interstate commerce* are:

North American Utility Securities Corporation: A relatively small investment company. Petitioner's interest, which consists of all of the preferred stock and 80% of the common stock, commenced in 1924. (R., Vol. I, 119, 120).

60 Broadway Corporation: A company whose only asset is the office building in New York where petitioner has its offices. Petitioner's investment, which consists of 100% of the capital stock, commenced in 1924. (R., Vol. I, 121, 122).

Miscellaneous investments covered by the order also include:

$120,000 of 5% Notes of Capital Transit Company;

4,700 shares of preferred stock of Illinois Iowa Power Company;

An investment of $400,000 in Milwaukee Light, Heat & Traction Company whose sole assets are real estate held for liquidation and stock of a small electric furnace enterprise. (R., Vol. IV, 1507-8).

It will be noted from the foregoing summary that petitioner's investments have been continuous and are of long standing. In making and retaining its investments in the Wisconsin, St. Louis, Cleveland, Washington, Detroit and California areas, petitioner has long followed a policy of diversification which has proved sound and of substantial value to its security holders. (R., Vol. VII, 2831-2; Vol. VIII, 3013-4).

Petitioner has at no time engaged in the business of managing the operations of its public utility operating subsidiaries, or selling them supplies, engineering services or the like. Its relationship has, essentially, been that of a large investor seeking to promote the sound development of his investment. Petitioner has consistently proclaimed and practiced the policy of local autonomy for each public utility operating company and has sought to use its voting power to assure good local management which has had the

genuine responsibility of conducting operations. Petitioner has furnished financial advice and assistance and sponsored the interchange of valuable operating information among the subsidiaries. (R., Vol. I, 100-1; Vol. VIII, 2903, 2922).

Petitioner has been conservatively financed and its financial practices have been sound. There has never been a default on any security issued by petitioner. (R., Vol. VII, 2815, 2869-70; Vol. VIII, 2892-3). Residential electric rates charged by petitioner's operating utility subsidiaries are far below the national average and among the lowest in the country. (Petitioner's Exhibits 124, 141, R., Vol. IX, 3284, 3310).

Petitioner itself has accepted the strictest and most comprehensive regulation by the Commission, while its utility subsidiaries have been completely regulated for many years by the respective State commissions.

SPECIFICATION OF ERRORS

The Circuit Court of Appeals erred:

1. In holding that Section 11(b)(1) of the Act is within the power of Congress to regulate commerce among the several States.

2. In holding that Section 11(b)(1) of the Act is not violative of the Fifth Amendment to the Constitution.

ARGUMENT

FIRST. SECTION 11(b)(1) OF THE ACT IS NOT WITHIN THE POWER OF CONGRESS TO REGULATE COMMERCE AMONG THE SEVERAL STATES. SINCE THE OWNERSHIP OF SECURITIES IS NOT COMMERCE, IT IS NOT SUBJECT TO THE COMMERCE POWER UNLESS BY REASON OF ITS EFFECT ON INTERSTATE COMMERCE, AND NO SUCH EFFECT HAS BEEN FOUND.

(a) Introduction and summary of argument.

In holding that Section 11(b)(1) is within the power of Congress under the commerce clause, the Circuit Court of Appeals has pressed the scope of that source of federal power far beyond anything yet decided by this Court and far beyond the limits clearly indicated by its decisions.

In contrast with all of the other enactments which this Court has upheld under the commerce clause, the statutory criteria governing the application of Section 11(b)(1) have nothing whatever to do with interstate commerce or effect thereon. That section requires divestment by a holding company (whether or not engaged in or having any relation to interstate commerce) of all securities owned by it in other corporations (whether or not those other corporations be engaged in or have any relation to interstate commerce), except the securities of corporations whose relations to the holding company meet certain statutory tests (which tests also have no relation to interstate commerce or effect thereon). It requires such divestment whether or not the prohibited ownership by holding companies of such securities has substantial, or any, effect on interstate commerce or tendency to obstruct the power of Congress over it.

Certainly the ownership by one corporation of securities in other corporations is not in itself commerce, interstate or intrastate. The right to own or retain the ownership of property is characteristically a matter governed by the laws of the several States, with which the federal government has no concern except as an incident to the due exercise of one of the granted powers.

It follows that an enactment proscribing such ownership may not be upheld as an exercise of the commerce power unless it falls within the rule of which the following extract from this Court's opinion in *United States* v. *Wrightwood Dairy Co.*, 315 U. S. 110, 119, is the most recent comprehensive formulation:

> "* * * The commerce power is not confined in its exercise to the regulation of commerce among the states. It extends to those activities intrastate which so affect interstate commerce, or the exertion of the power of Congress over it, as to make regulation of them appropriate means to the attainment of a legitimate end, the effective execution of the granted power to regulate interstate commerce. [Citing cases]. The power of Congress over interstate commerce is plenary and complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution. *Gibbons* v. *Ogden*, 9 Wheat. 1, 196. It follows that no form of state activity can constitutionally thwart the regulatory power granted by the commerce clause to Congress. Hence the reach of that power extends to those intrastate activities which in a substantial way interfere with or obstruct the exercise of the granted power."

In *Wickard* v. *Filburn*, 87 L. Ed. 57, this Court repeated (p. 64) the above quotation and added (p. 65):

> "* * * But even if appellant's activity be local and though it may not be regarded as commerce, it may still, whatever its nature, be reached by Congress if it exerts a substantial economic effect on interstate commerce and this irrespective of whether such effect is what might at some earlier time have been defined as 'direct' or 'indirect'."

But this rule does not come into play at all unless the prerequisite condition of substantial effect on interstate commerce, or on the power of Congress to regulate it, satisfactorily appears. Where, as here, the connection between the forbidden conduct and interstate commerce is not self-evident, there must be a finding of the required effect by either a court, an administrative agency or Congress itself.

In *United States* v. *Darby,* 312 U. S. 100, this Court (pp. 119-121) divided the instances of congressional regulation "of activities intrastate which have a substantial effect on the [interstate] commerce or the exercise of the Congressional power over it" into three categories, as follows:

> "In such legislation Congress has sometimes left it to the courts to determine whether the intrastate activities have the prohibited effect on the commerce, as in the Sherman Act. It has sometimes left it to an administrative board or agency to determine whether the activities sought to be regulated or prohibited have such effect, as in the case of the Interstate Commerce Act, and the National Labor Relations Act, or whether they come within the statutory definition of the prohibited Act, as in the Federal Trade Commission Act. And sometimes Congress itself has said that a particular activity affects the commerce, as it did in the present Act [the Fair Labor Standards Act of 1938], the Safety Appliance

> Act and the Railway Labor Act. In passing on the validity of legislation of the class last mentioned the only function of courts is to determine whether the particular activity regulated or prohibited is within the reach of the federal power. See *United States* v. *Ferger, supra; Virginian Ry. Co.* v. *Federation,* 300 U. S. 515, 553."

The Act here in question does not fall within either of the first two categories. It does not leave the required determination to the courts. The only hearing on the facts for which it provides is one before the Commission; and it neither requires nor contemplates that the Commission shall make findings on the question whether interstate commerce is affected. The obvious reason it does not is that the prohibitions of Section 11(b)(1) apply regardless of any such effect. Congress did not intend that the Commission should make, either as to North American specifically or as to holding companies generally, findings which would be irrelevant under the statute which it was administering. The Commission in fact made no findings on the subject of any effect on interstate commerce of the prohibited security holdings. In all the 105 pages of its Findings and Opinion (R., Vol. I, 73-178) no such effect is so much as mentioned, and the term "interstate commerce" is not once used. Such occasional references as there are to the business or operations of some of the corporations being in more than one state are descriptive only.

The sole remaining question, therefore, is whether Congress has itself made a finding that the "particular activity" in question,—here the ownership of securities of other corporations,—affects interstate commerce to the required degree. Such a finding would in any event not be con-

clusive on the courts. If it were, the "function of courts" in passing on legislation in the third category would have been described as being only to see whether Congress had in words so found, not as being to "determine" whether the subject of the prohibition "is within the reach of the federal power". But a congressional finding of the required effect is a *sine qua non*. The Circuit Court of Appeals thought the declarations in Section 1 of the Act sufficient for this purpose. We submit that they are not.

We submit that neither the decisions above referred to, nor the other decisions in which this Court has applied the same rule, support this legislation. They concerned enactments which established, and provided machinery to carry out, policies for the regulation of interstate commerce and the prevention of burdens thereon. The regulation of intrastate matters was incidental, and only such as was required to make the interstate-commerce policies effective. The application of those statutes was limited, either by their express terms or by their administration, to acts which were done in the course of interstate commerce or were satisfactorily found to have a substantial adverse effect thereon.

But in the case of the Act here in question the very policy which it establishes is not a policy for interstate commerce. It is a policy supposed to promote general public welfare, which Congress has sought to give an appearance of constitutional foundation by reference to the fact that some of those subject to it are engaged in interstate commerce, or in activities of a wholly unspecified character which affect interstate commerce.

We proceed now to develop more fully the several propositions which we have stated summarily above.

(b) Section 11(b)(1) applies regardless of any relation of the prohibited property ownerships to interstate commerce or of any effect thereon.

(1) *The statutory definitions of terms.*

The requirement by Section 11(b)(1) of limitation of the operations of the holding company system to "a single integrated public-utility system", with the qualifications hereafter noted, and to "such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public-utility system", applies to "each registered holding company and each subsidiary company thereof". Passing, for the moment, the alleged significance of the adjective "registered", the definitions of the above-quoted terms, in Section 2 of the Act, show clearly that the classification of those subject to the requirement of divestment does not purport to be based upon participation in or effect upon interstate commerce.

The term "holding company" is defined (Section 2(a)(7)) as including (A) "any company which directly or indirectly owns, controls or holds with power to vote 10 per centum or more of the outstanding voting securities of a public-utility company * * *"; and (B) "any person which the Commission determines * * * directly or indirectly to exercise * * * such a controlling influence over the management or policies of any public-utility or holding company as to make it necessary or appropriate in the public interest or for the protection of investors or consumers that such person be subject to the obligations, duties and liabilities imposed in this title upon holding companies".

Under Section 2(a)(5) a "public utility company" means either an "electric utility company" or a "gas utility

company" and the definition of those terms in Sections 2(a)(3) and 2(a)(4), respectively, import no test in any way related to interstate commerce. The definition of the term "subsidiary company" in Section 2(a)(8) is the counterpart of the definition of "holding company", above quoted, and is no more dependent upon engagement in or effect on interstate commerce.

Section 2(a)(7), (3), (4) and (8) contain provisions that the Commission, upon application, shall by order declare that a company is not a "holding company", "electric utility company", "gas utility company" or "subsidiary company", respectively, if certain specified conditions are met; but those conditions do not relate to engagement in or effect on interstate commerce. The only one which might give even a superficial appearance of attaching significance to such considerations is Clause (B) of Section 2(a)(3) which states as one of the requirements for such an order that "such company is one operating within a single State". But that is only one of several requirements, and a reading of the clause as a whole shows clearly that the fact that a company's operations are purely intrastate is not a sufficient ground for exclusion from the definition of "electric utility company".

Not only is the requirement of divestment unaffected by whether either the holding company or the corporations whose securities it holds do or do not bear any relation to interstate commerce, but the tests which guide the decision whether certain properties may or may not be retained thereunder are wholly unrelated to interstate-commerce factors.

Unless one or more of the qualifications of Section 11(b)(1) are satisfied, the holding company is to be limited

to a single "integrated public-utility system", a term that is defined in Section 2(a)(29) without any reference to interstate-commerce standards. By that provision "integrated public-utility system" means, as applied to "electric utility companies" (and the definition as applied to "gas utility companies" is so nearly the same as not to require separate quotation):

> "a system consisting of one or more units of generating plants and/or transmission lines and/or distributing facilities, whose utility assets, whether owned by one or more electric utility companies, are physically interconnected or capable of physical interconnection and which under normal conditions may be economically operated as a single interconnected and coordinated system confined in its operations to a single area or region, in one or more States, not so large as to impair (considering the state of the art and the area or region affected) the advantages of localized management, efficient operation, and the effectiveness of regulation;"

Under that definition several electric companies located in different states and physically interconnected, thus implying interstate commerce, would be retainable; whereas if they were not physically interconnected or capable of interconnection, they would not be retainable even if they were all located in a single state and no interstate commerce were involved.

The qualifications, above referred to, are expressed in Clauses (A), (B) and (C) which permit the continuance of control of one or more additional "integrated public-utility systems" if the Commission finds the facts required by all three. And those facts have no relation to interstate commerce or any effect thereon.

Clause (A) requires that such additional systems "cannot be operated * * * without the loss of substantial economies". As construed by the Commission and the court below (R., Vol. X, 4006) "substantial economies" means "important economies and not merely something more than nominal". Thus, even if retention of the additional system be more, rather than less, economical, it must still be disposed of if the economies are not "important". Clause (B) requires that "all such additional systems are located in one State, or in adjoining States, or in a contiguous foreign country". Under this test obviously the question whether the additional system may be retained or must be disposed of depends not at all on whether its operations are interstate or intrastate. Clause (C) requires that the continued combination of such systems is "not so large * * * as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation". Here again the test has nothing to do with interstate commerce. Several disconnected public utility systems all located and operating wholly within a single state such as, for example, New York, Pennsylvania or Texas might fail to meet this requirement, whereas another system located in and operating between the states of, say, Maine, New Hampshire and Vermont would completely satisfy it.

Again, Section 11(b)(1) permits the retention of such "other businesses" as are "reasonably incidental, or economically necessary or appropriate to the operations" of the integrated public utility system which is retained. This test equally has no relation to interstate-commerce factors, as is made even clearer by the amplification that this means "necessary or appropriate in the public interest or for the

protection of investors or consumers and not detrimental to the proper functioning of such system or systems".

On the face of Section 11(b)(1) itself every company in which a holding company owned securities might be operating wholly intrastate and in such a manner as would have no effect upon interstate commerce, and still it would be required to divest itself of all of them, except those representing a "single integrated public-utility system", provided it held as much as 10% of the voting stock of any company which was a utility company. In the case of the petitioner itself, the order of the Commission permits it to retain as its single integrated public utility system the interstate system of the Union Electric Company of Missouri, but requires it to divest itself of those of the intrastate and state-regulated utility enterprises of the Cleveland Electric Illuminating Company, Pacific Gas and Electric Company and the Detroit Edison Company. Similarly, it is required to divest itself of North American Utilities Corporation which is the vehicle through which some surplus funds have been invested in some miscellaneous market securities, and the operation and investments of which in no way impinge upon interstate commerce. The Commission has reserved decision and so asserts the power to compel divestment of the stock of 60 Broadway Building Corporation, the owner of a New York office building.

(2) *The alleged significance of "registration."*

The Commission contended below that the definitions above referred to are without significance because Section 11(b)(1) applies only to "registered" holding companies, and that no holding companies are required to register ex-

cept those which are "interstate in nature". We submit that this argument is demonstrably incorrect. The requirements for registration are set forth in Section 4 of the Act. Section 5 simply prescribes the mechanics of such registration.

Section 4(a) makes it unlawful for a holding company, directly or indirectly, to do any one of six described things unless it registers under Section 5. These things are enumerated in paragraph (1) to (6). Of these (1) and (5) deal with activities in interstate commerce. But (2), (3) and (4) do not and paragraph (6) forbids the holding company "to own, control, or hold with power to vote, any security of any subsidiary company thereof that does any of the acts enumerated in paragraphs (1) to (5) inclusive, * * *". Paragraphs (2), (3) and (4) respectively cover: (2) the entering into of any service, sales or construction contract; (3) making any public offering of any security of the holding company or any subsidiary or affiliate thereof; or (4) acquiring or negotiating for the acquisition of any security or utility assets of any subsidiary; if only these things are done "by use of the mails or any means or instrumentality of interstate commerce".

Bearing in mind the definition of "subsidiary company" in Section 2(a)(8), this means that a holding company was obliged to register if any single public utility company (though operating wholly intrastate) of which it owned as much as 10% of the voting stock, used the mails (even if for communication wholly within a single state where it was incorporated and did business) to make any service, sales or construction contract or to sell any security or acquire any utility asset; and this regardless of the character of the holding company's own operations or the character of any of the other corporations in which it held securities.

It is thus idle to contend that the obligation to register under Sections 4 and 5 has any tendency to show the necessary relation to interstate commerce. And this is made all the clearer by Section 4(b) which requires registration by "Every holding company which has outstanding any security any of which, by use of the mails or any means or instrumentality of interstate commerce, has been distributed or made the subject of a public offering subsequent to January 1, 1925, and any of which security is owned or held on October 1, 1935 * * * by persons not resident in the State in which such holding company is organized * * *".

Electric Bond & Share Company v. *Securities and Exchange Commission*, 303 U. S. 419, (which we discuss *infra* pp. 52-54) is a sufficient authority that the fact of registration is not enough to make the provisions of Section 11 constitutionally applicable. The defendants in that case were held to be obliged to register under Sections 4 and 5. But, as we point out hereafter, the opinion plainly implies that their right to contest the constitutionality of the other sections of the Act, and especially Section 11(b)(1), would not, because of that, be futile.

(3) *The "exemption" provisions of Section 3.*

The Circuit Court of Appeals relied on Section 3 as support for its conclusion that petitioner's activities and those of its subsidiaries brought it within the class of holding companies which might be subject to the commerce power. It said (R., Vol. X, 4008):

> "Section 3 provides administrative procedure by which a holding company can obtain exemption from any provision of the Act if it and its subsidiaries are predominantly intrastate in character."

and it pointed out that petitioner did not avail itself of this administrative remedy and does not assert that it is entitled to exemption.

We submit that the Circuit Court of Appeals was plainly in error in its reliance on Section 3.

That section in the part here material, provides:

> "SEC. 3. (a) The Commission, by rules and regulations upon its own motion, or by order upon application, shall exempt any holding company, and every subsidiary company thereof as such, from any provision or provisions of this title, **unless and except insofar as it finds the exemption detrimental to the public interest or the interest of investors or consumers,* if—
>
> (1) such holding company, and every subsidiary company thereof which is a public-utility company from which such holding company derives, directly or indirectly, any material part of its income, are predominantly intrastate in character *and* carry on their business substantially in a *single State in which such holding company and every such subsidiary company thereof are organized;*"

The remaining paragraphs of Section 3(a) are not here material. Paragraph (2) makes eligible for exemption a holding company which is "predominantly" a public utility company whose operations do not extend beyond the state in which it is organized *and* states contiguous thereto; paragraph (3) a company which is only "incidentally" a holding company and is principally engaged in other business, plus other requirements here of no importance; paragraph (4) a company which is only "temporarily" a hold-

---

*All italics in quotations in this brief are supplied unless otherwise noted.

ing company; and paragraph (5) one with only foreign public-utility subsidiaries.

Reverting to the material provisions of Section 3(a)(1), it is apparent that the test of exemption is not, as stated by the Circuit Court of Appeals, whether the holding company and its subsidiaries "are predominantly intrastate in character".

For a holding company even to qualify for consideration upon an application for exemption, not only must it and every one of its public utility subsidiaries be "predominantly intrastate in character", but also it and every such subsidiary must "carry on their business substantially in a single State in which such holding company and every such subsidiary company thereof are organized".

If petitioner, a New Jersey corporation, held nothing but a 10% voting stock interest in each of two public-utility companies, one located in Albany, New York, and one in Rochester, New York, each operating wholly intrastate, and having no effect on interstate commerce, it would not even be eligible to make application for exemption under Section 3(a)(1). Certainly the fact that petitioner was incorporated in New Jersey rather than New York would not make the system above supposed any the less "predominantly intrastate in character." North American's business office is in New York City. But suppose it were in Newark, New Jersey, instead. That would not make the system interstate in character. It may be that officials and employees would have to use interstate trains or interstate mails or telegraph or telephone lines to maintain contact with the operating subsidiaries. But so does any company whose main office, or any individual whose residence, is in another state from that in which some of its or his business operations are

conducted. No case has suggested that by so doing such a company, or such an individual, subjects all its or his activities to regulation, or its or his properties to divestment, at the hands of the federal government acting under the commerce power.

But suppose that, in the hypothetical case above described, the operating public utility subsidiaries all carried on their business and were incorporated in New Jersey, where petitioner also was organized. Petitioner would then be eligible to make an application for exemption under Section 3(a)(1). But the Commission would still be obliged to deny the exemption if it found that it would be "detrimental to the public interest or to the interest of investors or consumers", because that phrase qualifies the permitted exemption provided in all five of the paragraphs which follow. And this express test of whether the application for exemption should be granted or denied has nothing to do with participation by either the holding company or any of its subsidiaries in interstate commerce, or the presence or absence of any effect, substantial or otherwise, of any of the acts of any of them upon interstate commerce.

The Circuit Court of Appeals was therefore clearly in error in its view of the intendments of Section 3. As to the significance which the Court below attached to petitioner's failure to apply for exemption, it is enough to say that it was not eligible even to make such an application for the sufficient reason (which is not an interstate-commerce reason) that its subsidiaries were incorporated in states other than that in which it was organized (see Appendix A to Findings and Opinion of Commission, R., Vol. I, 179-183).

(c) The findings of the Commission show that its order is not grounded at all upon any relation of the prohibited property ownerships to interstate commerce, or upon any effect thereon.

We have hitherto pointed out that the Findings and Opinion of the Commission (R., Vol. I, 73-178) from beginning to end contain not a single reference to interstate commerce. But the light thrown by the Findings on the basis of the Commission's order of divestment goes beyond that fact. They show affirmatively that the considerations upon which that order was predicated have nothing whatever to do with interstate commerce or any effect upon it of petitioner's ownership of the securities of its subsidiaries, or, indeed, of anything done by petitioner or any of its subsidiaries.

The Findings and Opinion describe (R., Vol. I, 84-88) the system composed of petitioner and its subsidiaries, and the reasons (*id.* 88-93) for the Commission's choice of the system headed by Union Electric Company of Missouri as the "single integrated public-utility system" retainable by petitioner, none of which reasons relate to interstate commerce or any effect thereon. The Commission then discusses (*id.* pp. 93-110) whether, under the standards specified in Clauses (A), (B) and (C) of Section 11(b)(1), any of the other systems controlled by petitioner, which it found to be also "integrated public-utility systems", were retainable by petitioner as "additional" systems, and finds, for reasons germane to the requirements of those clauses but having nothing to do with interstate commerce, that none satisfied such requirements. It discusses (*id.* pp. 110-113) whether any of the gas systems may be retained

under the standards of Clauses (A) and (C) and concludes that it has not sufficient data to reach a decision on that subject. It discusses (*id.* pp. 113-131) whether any of the non-utility companies which were subsidiaries of petitioner, either directly or through the system of Union Electric Company of Missouri, may be retained under the "other businesses" proviso of Section 11(b)(1); and again the reasons which dictate permission or refusal of such retentions relate in no way to interstate commerce or any effect of such retention thereon.

The balance of the Findings and Opinion (*id.* pp. 131-170), up to the summary of conclusions and nature of the order (*id.* pp. 170-178), concern the application of the requirements of Section 11(b)(1) to petitioner's subsidiaries which are themselves registered holding companies, and are not here involved.

The Findings and Opinion simply find such facts and state such conclusions as were required, in the Commission's judgment, to apply the criteria of Section 11(b)(1) to petitioner and its subsidiary companies. Since the terms of that section did not make any relation on their part to interstate commerce a relevant factor, the Commission referred to no such consideration in carrying out those terms.

(d) The declarations by Congress in Section 1 of the Act do not constitute a legislative finding that petitioner's ownership of the securities of which the order requires divestment has any effect upon interstate commerce.

The Circuit Court of Appeals thought (R., Vol. X, 4008) that the necessity for findings by the Commission that petitioner's ownership of the securities, divestment of which is required by its Order, affected interstate commerce was

obviated by Section 1, which it said "expounds the policy underlying the necessity for control of holding companies as defined in Section 2(a)(7)",—in other words, that the Act was a valid exercise of power of the third category stated in the *Darby* case (*supra*, pp. 12-13).

We submit that this conclusion was erroneous. The full text of Section 1, which is headed "Necessity for Control of Holding Companies", is as follows:

> "SECTION 1. (a) Public-utility holding companies and their subsidiary companies are affected with a *national public interest* in that, among other things, (1) their securities are widely marketed and distributed by means of the mails and instrumentalities of interstate commerce and are sold to a large number of investors in different States; (2) their service, sales, construction, and other contracts and arrangements are *often* made and performed by means of the mails and instrumentalities of interstate commerce; (3) their subsidiary public-utility companies *often* sell and transport gas and electric energy by the use of means and instrumentalities of interstate commerce; (4) their practices in respect of and control over subsidiary companies *often materially affect the interstate commerce in which those companies engage;* (5) their activities extending over many States are not susceptible of effective control by any State and make difficult, if not impossible, effective State regulation of public-utility companies.
>
> "(b) Upon the basis of facts disclosed by the reports of the Federal Trade Commission made pursuant to S. Res. 83 (Seventieth Congress, first session), the reports of the Committee on Interstate and Foreign Commerce, House of Representatives, made pursuant to H. Res. 59 (Seventy-

second Congress, first session) and H. J. Res. 572 (Seventy-second Congress, second session) and otherwise disclosed and ascertained, it is hereby declared that the *national public interest*, the *interest of investors* in the securities of holding companies and their subsidiary companies and affiliates, and the *interest of consumers* of electric energy and natural and manufactured gas, are *or may be* adversely affected—

(1) *when* such investors cannot obtain the information necessary to appraise the financial position or earning power of the issuers, because of the absence of uniform standard accounts; *when* such securities are issued without the approval or consent of the States having jurisdiction over subsidiary public-utility companies; *when* such securities are issued upon the basis of fictitious or unsound asset values having no fair relation to the sums invested in or the earning capacity of the properties and upon the basis of paper profits from intercompany transactions, or in anticipation of excessive revenues from subsidiary public-utility companies; *when* such securities are issued by a subsidiary public-utility company under circumstances which subject such company to the burden of supporting an overcapitalized structure and tend to prevent voluntary rate reductions;

(2) *when* subsidiary public-utility companies are subjected to excessive charges for services, construction work, equipment, and materials, or enter into transactions in which evils result from an absence of arm's-length bargaining or from restraint of free and independent competition; *when* service, management, construction, and other contracts involve the allocation of charges among subsidiary public-utility companies in

different States so as to present problems of regulation which cannot be dealt with effectively by the States;

(3) *when* control of subsidiary public-utility companies affects the accounting practices and rate, dividend, and other policies of such companies so as to complicate and obstruct State regulation of such companies, or *when* control of such companies is exerted through disproportionately small investment;

(4) *when* the growth and extension of holding companies bears no relation to economy of management and operation or the integration and coordination of related operating properties; or

(5) *when* in any other respect there is lack of economy of management and operation of public-utility companies or lack of efficiency and adequacy of service rendered by such companies, or lack of effective public regulation, or lack of economies in the raising of capital.

"(c) *When* abuses of the character above enumerated *become* persistent and wide-spread the holding company *becomes* an agency which, *unless regulated*, is injurious *to investors, consumers, and the general public*; and it is hereby declared to be the policy of this title, in accordance with which policy all the provisions of this title shall be interpreted, to *meet the problems and eliminate the evils as enumerated in this section, connected with public-utility holding companies which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce;* and for the purpose of effectuating such policy to compel the simplification of public-utility holding-company systems and the elimination therefrom of properties detrimental to

> the proper functioning of such systems, and to provide as soon as practicable for the elimination of public-utility holding companies except as otherwise expressly provided in this title."

Interstate commerce is referred to only in subdivisions (a) and (c) and none of the references therein are anything like a finding or declaration of policy adequate to support the provisions of Section 11(b)(1).

Subdivision (a) says that public utility holding companies and their subsidiaries are affected with a "national public interest" for five reasons correspondingly numbered.

Reasons Nos. (1) and (2) have no materiality. Corporations do not become subject to regulation by Congress in all their activities and interests just because they market securities or make or perform contracts by means of the mails or instrumentalities of interstate commerce. That fact may perhaps make them subject to regulation with respect to security transactions, as Sections 6 and 7 of the present Act do, or make them subject to regulation with respect to their contracts so made or performed, as is provided in Section 13 of the present Act with respect to service, sales and construction contracts. But that has nothing to do with prohibition of their continued holding of securities or other property validly acquired under state law.

Reasons (3) and (5) may similarly be disregarded. The fact that (3) operating public utility companies "often" sell and transport gas and electric energy by use of means and instrumentalities of interstate commerce is irrelevant, because Section 11(b)(1) by its terms applies equally to holding companies none of whose subsidiaries do so. And as to reason (5), Section 11(b)(1) requires the divestment of securities, even though the activities of the holding com-

pany and its subsidiaries do not extend over many states and are entirely susceptible to effective state regulation.

The only reason, therefore, which has any semblance of relevance is (4) which states that the "practices" of holding companies in respect of and control over subsidiary companies "often" materially affect the interstate commerce in which those companies engage. Passing the consideration already adverted to that Section 11(b)(1) applies even though neither the holding company nor any subsidiary is engaged in interstate commerce, this declaration is, for several reasons, wholly insufficient as a finding to support an order under Section 11(b)(1).

Under the *Darby* case (*supra*, pp. 12-13) the function of the court is to determine whether "the particular activity" prohibited is within the reach of the federal power. The particular question here is of the power of Congress to prohibit petitioner's ownership of properties. The word "practices" is scarcely an apt way to describe such a condition. Section 1 purports to state the necessity of all the ensuing operative provisions of the Act. By far the major part thereof relate to regulation of future conduct. Security transactions are respectively regulated by Sections 6 and 7; acquisitions of interest in electric and gas utility companies by Section 8; acquisitions of securities and utility assets and other interests by Section 9; inter-company loans, dividends, security transactions, sale of utility assets, proxies and other transactions by Section 12; and service, sales and construction contracts by Section 13. The word "practices" in Section 1(a)(4) relates far more naturally to the matters corrected by the prospective regulatory provisions than it does to the status of property ownership.

Another fatal defect in this fourth reason, as support for the sweeping proscriptions of Section 11(b)(1), lies in the word "often". Its necessary implication is that the material effect on interstate commerce stated to result even from the "practices" does not exist in all, or even the generality of, cases. That would seem to require that some provision be made for a finding, either by a court in analogy to the Sherman Act or by an administrative agency, whether that reason applies to the particular holding company against which a divestment order is contemplated. But, as we have already pointed out, the Act makes no such provision.

This defect is accentuated by the single reference to interstate commerce in subdivision (c). It is there declared to be the policy of the Act to meet the problems and eliminate the evils connected with "public utility holding companies which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce". That amounts to saying that it is not the policy of the Act to meet the problems and eliminate the evils connected with holding companies which are not engaged in interstate commerce or in activities which directly affect or burden interstate commerce. The "which" in subdivision (c) corresponds to the "often" in subdivision (a). It does not support the concluding clause of (c) stating a policy to compel the simplification of public utility holding systems generally, the elimination therefrom of properties detrimental to the proper functioning thereof and "to provide as soon as practicable for the elimination of public-utility holding companies except as otherwise expressly provided in this title". Still less does it support the terms of Section 11(b)(1), requiring indiscriminately

the divestment of properties by a public utility holding company whether or not "engaged in interstate commerce or in activities which directly affect or burden interstate commerce".

There is no justification for attempting to enlarge by construction the limited scope of the legislative finding in Section 1. That the phraseology above quoted was not inadvertent clearly appears from the legislative history. The legislation was initiated by substantially identical bills simultaneously introduced in the Senate by Senator Wheeler (S. 1725, 74th Congress, First Session) and in the House by Congressman Rayburn (H.R. 5423, 74th Congress, First Session) on February 6, 1935. Section 1(a)(4) of H.R. 5423 made an unqualified finding as follows (with which Section 2(a)(4) of S. 1725 is substantially identical):

> "Section 1. (a). Public utility holding companies and their subsidiary companies are affected with a national public interest in that, among other things,* * *
>
> 4. Their practices and control over subsidiary companies materially affect the interstate commerce in which those companies engage".

Thereafter these bills were referred to committees and after several months of hearings and investigations the Senate passed a bill (S. 2796, 74th Congress, First Session) on June 11, 1935 which, with amendments, was passed by the House on July 2, 1935. This bill then went to conference and was enacted on August 22, 1935 in the form reported by the Conference Committee.

Section 1(a)(4) in S. 2796 as passed by the Senate and the House on June 11 and July 2, 1935 respectively

was in the same form as it now appears in the bill as enacted. The introduction of the word "often" therefore followed the months of consideration by Congress in which the facts relating to the industry were given prolonged consideration. It is manifest that Congress changed the unqualified language of the bills as introduced to the present wording deliberately because it found that the latter was the strongest statement that would square with the facts.

A legislative finding that an effect on interstate commerce sufficient to justify prohibitory legislation exists in some cases cannot support a legislative prohibition which applies in all cases. True, subdivision (b) enumerates in five paragraphs certain classes of conditions, which are referred to in (c) as "abuses" or "evils", but the word "when", with which these paragraphs are introduced, clearly implies that such conditions are not general. And, more importantly, there is no statement therein that interstate commerce is affected by these conditions even "when" they occur; rather the statement is that the interest of "investors" and "consumers" are "or may be" adversely affected. As well might Congress say that because corporations generally, or individuals, "often" engage in interstate commerce or in unspecified activities which directly affect or burden interstate commerce, and that some of them have been guilty of abuses in certain described phases of their operations, all corporations and individuals may be prohibited from owning property of certain kinds or in certain locations, without any finding that by such ownership interstate commerce is affected substantially or at all.

(e) The decisions of this Court upholding regulation of conduct which was not commerce or was in intrastate commerce themselves show the absence of foundation for the legislation embodied in Section 11(b)(1).

The power conferred on Congress by Article I, section 8, clause 3 of the Constitution is to regulate "commerce", meaning "traffic" or "intercourse", among the several states; and "regulate" means "to prescribe the rule by which commerce is to be governed". *Gibbons* v. *Ogden*, 9 Wheat. 1, 189, 196. Where Congress prescribes such a rule for interstate commerce, it has plenary incidental power to make that rule effective by regulating or prohibiting things which would otherwise substantially interfere with its operation. But it is still interstate commerce which is the subject of the permitted regulation.

It follows that the necessary foundations for control by Congress of conduct which is not commerce or is intrastate commerce are (1) the prescribing of a rule for interstate commerce, and (2) a finding that the conduct sought to be reached has such an effect on interstate commerce that without its control the rule would be ineffective. It is not enough to support laws of this class that the person whose non-interstate-commerce conduct is sought to be reached is in other matters engaged in interstate commerce.

> "* * * It is the effect upon the interstate commerce or its regulation, regardless of the particular form which the competition may take, which is the test of federal power." *United States* v. *Wrightwood Dairy Co.*, 315 U. S. 110, 120.

See also *National Labor Relations Board* v. *Jones & Laughlin Steel Corp.*, 301 U. S. 1, 32, 38; *United States* v. *Darby*, 312 U. S. 100, 121.

The enactments of this class which this Court has upheld have recognized the necessity for the two foundations which we have above stated, and the decisions of this Court upholding them clearly indicate that in their absence power under the commerce clause does not exist. We have already shown the absence of such foundations for Section 11(b)(1).

Our discussion of the cases may conveniently commence with *United States* v. *Darby, supra.* That case involved the provisions of the Fair Labor Standards Act of 1938 (52 Stat. 1060) prohibiting the shipment in interstate commerce of commodities manufactured by employees whose wages were less than the prescribed minimum or whose weekly hours of labor were greater than the prescribed maximum; and prohibiting the employment of workmen in the production of goods "for interstate commerce" at other than prescribed wages and hours. The latter provision was sustained as a regulation of intrastate activities which had a substantial effect upon interstate commerce itself. The unqualified congressional finding in that statute is in marked contrast to the vague and equivocal declaration in the Act here in question. Section 2(a) of the Fair Labor Standards Act declared:

> "The Congress hereby finds that the existence, in industries engaged in commerce [defined in Section 3(b) to cover interstate and foreign commerce] or in the production of goods for commerce, of labor conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers (1) causes commerce and the channels and instrumentalities of commerce to be used to spread and perpetuate such labor conditions among the workers

> of the several States; (2) burdens commerce and the free flow of goods in commerce; (3) constitutes an unfair method of competition in commerce; (4) leads to labor disputes burdening and obstructing commerce and the free flow of goods in commerce; and (5) interferes with the orderly and fair marketing of goods in commerce."

To support its conclusion that the evil inherent in substandard labor conditions "so burdens" and "obstructs" interstate commerce as to be within the reach of federal power, this Court relied particularly (312 U. S., p. 119) upon its prior decisions upholding the National Labor Relations Act of 1935 (49 Stat. 449). *National Labor Relations Board* v. *Jones & Laughlin Steel Corp.*, 301 U. S. 1, 38, 40; *Santa Cruz Fruit Packing Co.* v. *National Labor Relations Board*, 303 U. S. 453, 466; *National Labor Relations Board* v. *Fainblatt*, 306 U. S. 601, 604.

In the *Jones & Laughlin* case, this Court (301 U. S., p. 29) took note of the argument of the respondent that the National Labor Relations Act involved "an attempt to regulate all industry", that the references in the statute to interstate and foreign commerce were colorable at best, and that the statute was not "a true regulation of such commerce or of matters which directly affect it but on the contrary has the fundamental object of placing under the compulsory supervision of the federal government all industrial labor relations within the nation". This Court, after saying (pp. 29-30) that if this conception of terms, intent and consequent inseparability were sound the Act would necessarily fall, continued (p. 30):

> "But we are not at liberty to deny effect to specific provisions, which Congress has constitu-

> tional power to enact, by superimposing upon them inferences from general legislative declarations of an ambiguous character, even if found in the same statute. The cardinal principle of statutory construction is to save and not to destroy. We have repeatedly held that as between two possible interpretations of a statute, by one of which it would be unconstitutional and by the other valid, our plain duty is to adopt that which will save the act. Even to avoid a serious doubt the rule is the same. [Citing cases.]
>
> "We think it clear that the National Labor Relations Act may be construed so as to operate within the sphere of constitutional authority."

The Court then referred (pp. 30-31) to the jurisdiction of the Board, as conferred by Section 10(a), to prevent any person from engaging in any unfair labor practice "affecting commerce"; to the statutory definition of "commerce" as meaning interstate and foreign commerce; and to the following statutory definition of the term "affecting commerce":

> " 'The term "affecting commerce" means in commerce, or burdening or obstructing commerce or the free flow of commerce, or having led or tending to lead to a labor dispute burdening or obstructing commerce or the free flow of commerce.' "

The Court then said:

> "This definition is one of exclusion as well as inclusion. The grant of authority to the Board does not purport to extend to the relationship between all industrial employees and employers. Its terms do not impose collective bargaining upon all industry regardless of effects upon interstate or foreign com-

> merce. It purports to reach only what may be deemed to burden or obstruct that commerce and, thus qualified, it must be construed as contemplating the exercise of control within constitutional bounds." (p. 31)
>
> * * *
>
> "* * * Whether or not particular action does affect commerce in such a close and intimate fashion as to be subject to federal control, and hence to lie within the authority conferred upon the Board, is left by the statute to be determined as individual cases arise." (p. 32)

There was in that case an exceedingly comprehensive and unequivocal legislative finding of substantial effect on interstate commerce and declaration of policy to prevent it contained in Section 1, quoted in a footnote to the Court's opinion (301 U. S., p. 23). Nonetheless, this Court, in the sentence immediately following the last-quoted passage, said:

> "We are thus to inquire whether in the instant case the constitutional boundary has been passed."

After an exposition of the fundamental principles underlying the constitutional question, this Court went on (pp. 41-43) to find for itself that the effect upon interstate commerce of the "industrial strife" which the statute was aimed to prevent was by no means "indirect or remote" but would be "immediate" and might be "catastrophic".

In *Santa Cruz Fruit Packing Co.* v. *National Labor Relations Board*, 303 U. S. 453, at page 466 (the page particularly referred to in this Court's citation of the case in *United States* v. *Darby*), this Court said:

> "*Third.* It is also clear that where federal control is sought to be exercised over activities which separately considered are intrastate, it must appear that there is a close and substantial relation to interstate commerce in order to justify the federal intervention for its protection. However difficult in application, this principle is essential to the maintenance of our constitutional system. The subject of federal power is still 'commerce,' and not all commerce but commerce with foreign nations and among the several States. The expansion of enterprise has vastly increased the interests of interstate commerce but the constitutional differentiation still obtains."

For the proposition stated in the last sentence of the quotation from *United States* v. *Darby*, (*supra*, pp. 12-13) this Court cited two cases: *United States* v. *Ferger*, 250 U. S. 199, and *Virginian Ry. Co.* v. *Federation*, 300 U. S. 515, 553. The *Ferger* case involved a statute making criminal the uttering of spurious bills of lading purporting to be used in interstate commerce. This Court resorted (p. 204) to common knowledge, of which it might take judicial notice, that bills of lading for the movement of interstate commerce are instrumentalities of that commerce. The *Virginian Railway* case involved the constitutionality of the Railway Labor Act, requiring a carrier to "treat with" those certified by the Mediation Board as representatives of a craft or class, as applied to certain "back shop" employees who, it was asserted, were solely in intrastate commerce. But this Court (p. 556) referred to the findings of the courts below that "interruption by strikes of the back shop employees, if more than temporary, would seriously cripple petitioner's interstate transportation". On the question of constitutionality

it said (p. 553, the page particularly referred to in this Court's opinion in the *Darby* case) that the judgment of Congress "supported as it is by *our* long experience with industrial disputes, and the history of railroad labor relations, to which we have referred, is not open to review here". Beginning at the bottom of that page is a long footnote summarizing the history of railway labor relations, to which the Court referred.

This Court's opinion in the *Virginian Railway* case also points to another distinction which is significant in the instant case. Referring to the *Employers' Liability Cases*, 207 U. S. 463, the Court said (p. 557):

> "* * * Whatever else may be said of that pronouncement, it is obvious that the commerce power is as much dependent upon the *type of regulation* as its subject matter. It is enough for present purposes that experience has shown that the failure to settle, by peaceful means, the grievances of railroad employees with respect to rates of pay, rules or working conditions, is far more likely to hinder interstate commerce than the failure to compensate workers who have suffered injury in the course of their employment."

In all of these cases there was clear factual basis for the view that regulation of the "particular" intrastate matter involved was necessary to make effective a rule established by Congress for interstate transactions.

The same was true with respect to the Agricultural Marketing Act of 1937 (50 Stat. 246) the enforcement of which was upheld in different aspects by this Court in *United States* v. *Rock Royal Co-Operative Inc.*, 307 U. S. 533 and *United States* v. *Wrightwood Dairy Co.*, 315 U. S. 110 (*supra*). That statute provided that

the Secretary of Agriculture should regulate agricultural commodities or products

> "in the current of interstate or foreign commerce, or which directly burdens, obstructs or affects" that commerce.

We have already shown that the provisions of Section 11(b)(1) of the Act here in question are not susceptible of a construction which would so limit them. In the *Rock Royal Co-Operative* case this Court said as to the question of local milk (307 U. S. p. 569):

> "Where local and foreign milk alike are drawn into a general plan for protecting the interstate commerce in the commodity from the interferences, burdens and obstructions, arising from excessive surplus and the social and sanitary evils of low values, the power of Congress extends also to the local sales."

In the *Wrightwood Dairy Company* case, *supra*, the local milk of the respondent was sold in Illinois in competition with the interstate milk, and it was found that 60% of the milk sold in the marketing area was produced in Illinois and 40% in neighboring states. The factual basis for the regulation with respect to intrastate milk was that "by reason of its competition with the handling of the interstate milk" it "so affects that commerce as substantially to interfere with its regulation by Congress (315 U. S. pp. 125-126).

This Court's most recent decision on the subject (*Wickard v. Filburn*, 87 L. Ed. 57), upon which the Circuit Court of Appeals particularly relied (R., Vol. X, 4009), is simply another application of the same doctrine. The Agri-

cultural Adjustment Act of 1938 (52 Stat. 31), and the amendment thereof of May 26, 1941 (55 Stat. 203) there involved, was of a wholly different character from the Public Utility Holding Company Act here in question. Its purpose, as declared in its title, was to provide for the conservation of national soil resources "and to provide an adequate and balanced flow of agricultural commodities in interstate and foreign commerce". The policy which it declared and the provisions enacted to carry it out were directly concerned with the fostering of interstate commerce in vital agricultural commodities. In the language of the declaration of policy to the entire Act (Section 2, 52 Stat. p. 31) it was

> "to regulate interstate and foreign commerce in cotton, wheat, corn, tobacco, and rice to the extent necessary to provide an orderly, adequate, and balanced flow of such commodities in interstate and foreign commerce through storage of reserve supplies, loans, marketing quotas, assisting farmers to obtain, insofar as practicable, parity prices for such commodities and parity of income, and assisting consumers to obtain an adequate and steady supply of such commodities at fair prices."

Title III of the Act dealt particularly with the means above enumerated, particularly marketing quotas, with respect to several enumerated commodities. The legislative findings regarding wheat appear in Section 331, which reads as follows (52 Stat. pp. 52-53):

> "Sec. 331. Wheat is a basic source of food for the Nation, is produced throughout the United States by more than a million farmers, is sold on the country-wide market and, as wheat or flour, flows almost

entirely through instrumentalities of interstate and foreign commerce from producers to consumers.

Abnormally excessive and abnormally deficient supplies of wheat on the country-wide market acutely and directly affect, burden, and obstruct interstate and foreign commerce. Abnormally excessive supplies overtax the facilities of interstate and foreign transportation, congest terminal markets and milling centers in the flow of wheat from producers to consumers, depress the price of wheat in interstate and foreign commerce, and otherwise disrupt the orderly marketing of such commodity in such commerce. Abnormally deficient supplies result in an inadequate flow of wheat and its products in interstate and foreign commerce with consequent injurious effects to the instrumentalities of such commerce and with excessive increases in the prices of wheat and its products in interstate and foreign commerce.

It is in the interest of the general welfare that interstate and foreign commerce in wheat and its products be protected from such burdensome surpluses and distressing shortages, and that a supply of wheat be maintained which is adequate to meet domestic consumption and export requirements in years of drought, flood, and other adverse conditions as well as in years of plenty, and that the soil resources of the Nation be not wasted in the production of such burdensome surpluses. Such surpluses result in disastrously low prices of wheat and other grains to wheat producers, destroy the purchasing power of grain producers for industrial products, and reduce the value of the agricultural assets supporting the national credit structure. Such shortages of wheat result in unreasonably high prices of flour and bread to consumers and loss of market outlets by wheat producers.

> The conditions affecting the production and marketing of wheat are such that, without Federal assistance, farmers, individually or in cooperation, cannot effectively prevent the recurrence of such surpluses and shortages and the burdens on interstate and foreign commerce resulting therefrom, maintain normal supplies of wheat, or provide for the orderly marketing thereof in interstate and foreign commerce.
>
> The provisions of this Part affording a cooperative plan to wheat producers are necessary in order to minimize recurring surpluses and shortages of wheat in interstate and foreign commerce, to provide for the maintenance of adequate reserve supplies thereof, and to provide for an adequate flow of wheat and its products in interstate and foreign commerce. The provisions hereof for regulation of marketings by producers of wheat whenever an abnormally excessive supply of such commodity exists are necessary in order to maintain an orderly flow of wheat in interstate and foreign commerce under such conditions."

The operative provisions regarding marketing quotas are in Sections 335 to 339 (52 Stat. 54-55).

This Court thus had solid foundation for stating (87 L. Ed. p. 59):

> "The general scheme of the Agricultural Adjustment Act of 1938 as related to wheat is to control the volume moving in interstate and foreign commerce in order to avoid surpluses and shortages and the consequent abnormally low or high wheat prices and obstructions to commerce."

The amendment of May 26, 1941 increased the penalty for the farm marketing excess and subjected the entire crop to a lien for the payment thereof.

The question before this Court therefore was simply whether, in view of the use to which Filburn put his wheat, his surplus could be said to affect interstate commerce and the declared policy of Congress with respect to it sufficiently to make the application of the statute to him constitutional. As to that this Court said (87 L. Ed. p. 66):

> "The effect of consumption of homegrown wheat on interstate commerce is due to the fact that it constitutes the most variable factor in the disappearance of the wheat crop."

There was in the record a stipulation of the economic facts on the basis of which this Court itself found that the raising of wheat for Filburn's own consumption did affect the marketing of wheat in interstate commerce. It said (p. 67):

> "This record leaves us in no doubt that Congress may properly have considered that wheat consumed on the farm where grown if wholly outside the scheme of regulation would have a substantial effect in defeating and obstructing its purpose to stimulate trade therein at increased prices."

In contrast, Section 11(b)(1) of the Public Utility Holding Company Act of 1935 does not purport to be a regulation of interstate commerce; there is no congressional declaration that its provisions were necessary to carry out any policy with respect to interstate commerce; the impact of that section has nothing to do with interstate commerce or any effect thereon; there is no finding, judicial, administrative, or legislative, that the ownership by petitioner of the securities of which the orders here under review require divestment affected interstate commerce substantially or at all; and there is nothing in this record, by stipulation or otherwise, upon which this Court can make such a finding.

The differences between the Act here under review and the recent enactments which this Court has upheld under the commerce power are further illustrated by the case of *Sunshine Anthracite Coal Co.* v. *Adkins,* 310 U. S. 381, holding the Bituminous Coal Act of 1937 (50 Stat. 72) constitutional. This was entitled "An Act to regulate interstate commerce in bituminous coal, and for other purposes". Its opening language was a congressional declaration

> "That regulation of the sale and distribution in interstate commerce of bituminous coal is imperative for the protection of such commerce; that there exist practices and methods of distribution and marketing of such coal that waste the coal resources of the Nation and disorganize, burden, and obstruct interstate commerce in bituminous coal, with the result that regulation of the prices thereof and of unfair methods of competition therein is necessary to promote interstate commerce in bituminous coal and to remove burdens and obstructions therefrom."

Section 4 sets forth the Bituminous Coal Code and the third paragraph of that section, which introduces the detailed provisions regarding the code, declares as follows:

> "For the purpose of carrying out the declared policy of this Act, the code shall contain the following conditions and provisions, which are intended to regulate interstate commerce in bituminous coal *and which shall be applicable only to matters and transactions in or directly affecting interstate commerce* in bituminous coal:"

This Court, in upholding the regulatory provisions of the statute, said (p. 393):

> "These provisions are applicable only to sales or transactions in, or directly or intimately affecting, interstate commerce."

In the court below the Commission attempted to analogize the provisions of Section 11(b)(1) requiring divestment of properties with the Sherman Act, the Clayton Act and the commodities clause of the Hepburn Act. The analogy wholly fails. Those statutes prescribe rules for the conduct of interstate commerce. No divestment of property is provided for. When it occurs it is as incident to the enforcement of the rule, and because of a judicial finding that the policy of Congress with respect to interstate commerce requires it. The decisions under those acts make clear that divestment of properties cannot be justified under the commerce clause simply because the corporate owners thereof are engaged in interstate commerce.

That was made plain in the Sherman Act case most strongly relied on by the Commission below, *Northern Securities Company* v. *United States*, 193 U. S. 197. There it was held that the acquisition by the Northern Securities Company, after the passage of the Sherman Act, of the capital stocks of two competing interstate carriers, Great Northern and Northern Pacific, was in violation of that Act, and the Northern Securities Company was ordered to divest itself thereof. The basis for the decision was that the acquisition of these stocks by the holding company violated the rule embodied in the Sherman Act that competition in interstate commerce could not be restrained by any device whatever. If the Northern Pacific and Great Northern had not been in competition, the ownership of their stocks by the Securities Company would have

offended no rule for interstate commerce and a requirement of divestment would have been without constitutional foundation. The opinions of the majority and the minority in that case bring this out clearly.

The minority view was that the Sherman Act, if construed so as to prevent the Northern Securities Company from acquiring the stocks of competing railroads, was a regulation by Congress of ownership, and that Congress did not have this power under the Constitution. The majority view was that Congress had not undertaken to regulate ownership, but had laid down a rule for the conduct of interstate commerce, and that acquisition of securities in conflict with that rule could be, and was, made illegal.

Mr. Justice White, writing for the dissenting Justices, said (p. 369):

> "Does the delegation of authority to Congress to regulate commerce among the States embrace the power to regulate the ownership of stock in state corporations, because such corporations may be in part engaged in interstate commerce? Certainly not, if such question is to be governed by the definition of commerce just quoted from *Gibbons* v. *Ogden*. Let me analyze the definition. 'Commerce undoubtedly is traffic, but it is something more, it is intercourse;' that is, traffic between the States and intercourse between the States. I think the ownership of stock in a state corporation cannot be said to be in any sense traffic between the States or intercourse between them."

Mr. Justice Harlan, for the majority, said (p. 334):

> "* * * It [the Government] does not contend that Congress may control the mere acquisition or the mere ownership of stock in a state corporation

engaged in interstate commerce. Nor does it contend that Congress can control the organization of state corporations authorized by their charters to engage in interstate and international commerce. But it does contend that Congress may protect the freedom of interstate commerce by any means that are appropriate and that are lawful and not prohibited by the Constitution.

(p. 337) "The means employed in respect of the combinations forbidden by the Anti-Trust Act, and which Congress deemed germane to the end to be accomplished, was to prescribe as a *rule* for *interstate and international* commerce, (not for domestic commerce,) that it should not be vexed by combinations, conspiracies or monopolies which restrain commerce by destroying or restricting competition." (Italics in original.)

The case lays down no rule that Congress may compel divestment of the ownership of stock, even in the case of corporations engaged in interstate commerce, whenever it deems such ownership to be against the general welfare. It lays down only the principle that where a corporation purchases stock with the purpose and effect of restraining competition in interstate commerce, the Court can compel the divestment of the stock in order to eliminate the restraint on interstate commerce. The *reductio ad absurdum* of the view that Congress can regulate anything which might affect commerce in any degree was given by Mr. Justice Holmes (p. 402):

"* * * Commerce depends upon population, but Congress could not, on that ground, undertake to regulate marriage and divorce."

The cases that have arisen under Section 7 of the Clayton Act, prohibiting restraints on competition in interstate

commerce by the acquisition of stock of competing companies, add nothing. Moreover, Section 7 is not retroactive, but expressly provides:

> "Nothing contained in this section shall be held to affect or impair any right heretofore legally acquired."

The cases under the commodities clause of the Hepburn Act show clearly that the regulation was of interstate commerce. It concerned only coal transported in interstate commerce, and the purpose of Congress was to prevent railroads from occupying the dual position of carrier and shipper as to coal transported in interstate commerce. In the first case that arose under that Act (*United States* v. *Delaware & Hudson Company*, 213 U. S. 366) the Government contended that Congress had the power to prohibit an interstate railroad from engaging in the business of mining coal. Because of the grave constitutional questions which the Court held were presented by that contention (see pp. 406-408), this Court construed the Act as merely preventing the carrier from transporting coal which it owned when transported. The Court further held that the Act did not prevent a railroad corporation from owning the stock of the mining company (p. 413). In *United States* v. *Lehigh Valley R. Co.*, 220 U. S. 257, it was held that the right of a carrier to own such stock did not apply where the carrier controlled the mining company to such an extent as to destroy its separate entity. In *United States* v. *Delaware, L. & W. R. R. Co.*, 238 U. S. 516, where the Court held the mining company to be the mere agent of the carrier, it reaffirmed its decision that ownership of stock therein was not in itself enough to make the transportation illegal.

There is nothing in the case of *Electric Boud & Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419 (the only decision of this Court in which the constitutionality of any provision of the Public Utility Holding Company Act has been considered), which in any way affects these conclusions. It decided nothing except that the defendants in that case could constitutionally be required to register under Sections 4 and 5 of the Act; and the implications from that decision, so far from aiding the contentions of the Commission here, are opposed to them. The question of the validity of any provision of the Act except Sections 4 and 5 was expressly excluded. The chief issue arose on defendants' contention that those sections were merely auxiliary to the "control" provisions (Sections 6-13) and so interwoven with them that they could not properly be treated as a separate enactment, to be enforced regardless of the constitutionality of the rest of the Act (pp. 433-435, 437). This Court would not have had to decide that difficult question of construction if it had entertained any idea that the relation of the defendants' activities to interstate commerce were enough as to make the control provisions constitutional as against them anyhow. To the contrary, the Court emphasized again and again the reservation of the defendants' constitutional and legal rights as to all the other sections of the Act, and it said (p. 435) that this reservation was not "illusory". It quoted with express approval (p. 436) the statement of the District Court that

> "* * * § 1 (c) in its entirety negatives any conclusion that the simplification and elimination of holding companies 'is the sole policy or the whole end and object of the Act, which, as stated, is "to

> meet the problems and eliminate the evils, as enumerated in this section, connected with public utility holding companies,"' and thus 'simplification and elimination' are but a means and not 'the exclusive means' deemed to be essential for the purpose of effectuating such policy in whole *or insofar as may be constitutionally possible.'"

This was particularly true of Section 11. The Court (p. 436) thus described the Government's contention:

> "* * *'If, for example,' argues the Government, 'section 11 dealing with corporate reorganizations were adjudged invalid, there is no inherent reason why the other regulatory provisions could not be enforced as the Congress provided.'"

The Court's conclusion was (p. 441) that "Without attempting to state the limits of permissible regulation in the execution of" the declared policy of Congress with respect to public utility holding companies, it had no reason to doubt "that from these defendants, with their highly important relation to interstate commerce and the national economy, Congress was entitled to demand the fullest information as to organization, financial structure and all the activities which could have any bearing upon the exercise of congressional authority". It is manifest from the opinion that, when the Supreme Court said that the defendants in that case* were "engaged in activities within the reach of Con-

---

*It should be noted that the activities of the defendants in the *Electric Bond & Share* case, which this Court emphasizes as related to interstate commerce, are not parallelled in the case of North American. Thus the Court (303 U. S., pp. 431-440) referred to "an elaborate stipulation" in the record and to the "findings of fact" of the trial court on that subject. But in the

gressional power" (303 U. S., p. 433), it meant that they were subject to the exercise of that power which was embodied in Sections 4 and 5.

Congress can, of course, require the *furnishing of information* from one whose activities only remotely touch upon interstate commerce. Indeed, it can require *information* to be furnished for the purpose of determining its jurisdiction. See, *e.g., Newport Shipbuilding & Dry Dock Co.* v. *Schauffler,* 303 U. S. 54, 58.

If the vague, general and equivocal references to interstate commerce in Section 1 of the Public Utility Holding Company Act were held sufficient to justify the sweeping requirements for compulsory divestiture of property which are contained in Section 11(b)(1) as a proper exercise of the commerce power, it is impossible to fix limits to its scope. Congress would equally be authorized to fix the number of factories that an industrial concern might be permitted to have, or the number of branch stores that a mercantile establishment might maintain, the locations thereof, the per-

---

instant case there are no such stipulation and no such findings by any court or by the Commission. For example, the defendants in the *Electric Bond & Share* case were performing, either directly or through a wholly-controlled subsidiary, several contracts for the rendering of continuous expert specialized and technical service, advice and assistance to the subsidiary companies upon every phase of the utility enterprise (303 U. S., pp. 432-433). But North American, in its entire history, has never had a service company providing management, construction or other services for compensation (R., Vol. VIII, 2903) and the Commission found (R., Vol. I, 100-101) that "as nearly as can be determined from the record in this case, North American leaves operations and operational policy to the managements of its subsidiaries."

mitted number, character and residence of their personnel, etc. A conception of federal power as including control of the ownership of property to promote the general welfare, and regardless of the existence or absence of an effect on interstate commerce, would read out of the Constitution the limitation that congressional action under Article I, section 8, clause 3 must be in regulation of interstate commerce.

SECOND: SECTION 11(b)(1) OF THE ACT VIOLATES THE DUE PROCESS CLAUSE OF THE FIFTH AMENDMENT.

The Circuit Court of Appeals (R., Vol. X, 4009-4010) held that "the guaranty of due process demands only that the law shall not be 'unreasonable, arbitrary, or capricious and that the means selected shall have a real and substantial relation to the object sought to be attained' ", citing *Nebbia* v. *New York*, 291 U. S. 502, 525.

"Whatever terminology is used, the criterion is necessarily one of degree" since "mathematical or rigid formulas * * * are not provided by the great concepts of the Constitution such as 'interstate commerce', 'due process', and 'equal protection' ", *Santa Cruz Fruit Packing Co.* v. *National Labor Relations Board*, 303 U. S. 453, 467. There is no doubt of the general rule that the Fifth Amendment limits congressional action in connection with the commerce power. *Monongahela Navigation Company* v. *United States*, 148 U. S. 312, 324-325, 336. The only question is as to what kinds of interference with property rights may be sustained as consistent with its terms.

It is certainly not enough that the means selected by Congress has a real and substantial relation to the object

sought to be attained. That might be a sufficient answer to an attack under the Fifth Amendment of the regulatory provisions of the Act where any injuries to property rights might be deemed merely consequential. But it is not in itself an answer to an enactment like Section 11(b)(1) which operates retroactively to cause actual deprivations without provision for compensation of property rights lawfully acquired and held. For example, acquisition of a desirable site for a post office would certainly be an appropriate means of carrying out the power of Congress "To establish Post Offices and post Roads", and the acquisition of a right-of-way for an interstate railroad or power transmission line would equally be an appropriate exercise of the commerce power. But no one would contend that either could be done without compensating the owner of the property thus acquired. The Circuit Court of Appeals said (R., Vol. X, 4010) that "Compelling the holding company to dispose of its securities is not the same as condemning private property for public use without paying just compensation". But the injunction of the Fifth Amendment against deprivations of property without due process of law is by no means confined to condemnations.

In *Louisville Joint Stock Land Bank* v. *Radford*, 295 U. S. 555, this Court held the first Frazier-Lemke Act unconstitutional as against a mortgagee suing to foreclose a farm mortgage made some ten years before the passage of the Act. The Court found (p. 594) that the Act had taken from the mortgagee definite property rights, which were recognized by the law of Kentucky. To the argument that the Act was an appropriate exercise of the bankruptcy power, the Court replied that exercise of that

sort was barred by the Fifth Amendment. Mr. Justice Brandeis, writing for a unanimous Court, said:

> "Because the Act is retroactive in terms and as here applied purports to take away rights of the mortgagee in specific property, another provision of the Constitution is controlling.
>
> "*Fourth.* The bankruptcy power, *like the other great substantive powers of Congress,* is subject to the Fifth Amendment." (p. 589).

Both the purpose and effect of the Frazier-Lemke Act there involved had considerable similarity to those of Section 11(b)(1) of the Act here in question. They are thus summarized in the following passage in this Court's opinion (pp. 598-599):

> "*Seventh.* Radford contends further that the changes in the mortgagee's rights in the property, even if substantial, are not arbitrary and unreasonable, because they were made for a permissible public purpose. That claim appears to rest primarily upon the following propositions: (1) The welfare of the Nation demands that our farms be individually owned by those who operate them. (2) To permit widespread foreclosure of farm mortgages would result in transferring ownership, in large measure, to great corporations; would transform farmer-owners into tenants or farm laborers; and would tend to create a peasant class. (3) There was grave danger at the time of the passage of the Act, that foreclosure of farms would become widespread. The persistent decline in the prices of agricultural products, as compared with the prices of

articles which farmers are obliged to purchase, had been accentuated by the long continued depression and had made it impossible for farmers to pay the charges accruing under existing mortgages. (4) Thus had arisen an emergency requiring congressional action. To avert the threatened calamity *the Act presented an appropriate remedy.* Extensive economic data, of which in large part we may take judicial notice, were submitted in support of these propositions."

This Court answered that argument as follows (pp. 601-602):

"We have no occasion to consider either the causes or the extent of farm tenancy; or whether its progressive increase would be arrested by the provisions of the Act. Nor need we consider the occupations of the beneficiaries of the legislation. These are matters for the consideration of Congress; and the extensive provision for the refinancing of farm mortgages which Congress has already made, *shows that the gravity of the situation has been appreciated.* The province of the Court is limited to deciding whether the Frazier-Lemke Act as applied has taken from the Bank without compensation, and given to Radford, rights in specific property which are of substantial value [citing cases]. As we conclude that the Act as applied has done so, we must hold it void. *For the Fifth Amendment commands that, however great the Nation's need, private property shall not be thus taken even for a wholly public use without just compensation.* If the public interest requires, and permits, the taking of property of individual mortgagees in order to relieve the necessities of individual mortgagors, resort must be had to proceedings by eminent domain; so that,

through taxation, the burden of the relief afforded in the public interest may be borne by the public".

In the same vein are the expressions of this Court, by Mr. Justice Holmes, in *Pennsylvania Coal Co. v. Mahon,* 260 U. S. 393, which reversed under the Fourteenth Amendment a state decision upholding as "a legitimate exercise of the police power", a statute forbidding the mining of anthracite coal in such a way as to cause the subsidence of, among other things, any structure used as a human habitation, with certain exceptions:

> "Government hardly could go on if to some extent values incident to property could not be diminished without paying for every such change in the general law. As long recognized, some values are enjoyed under an implied limitation and must yield to the police power. But obviously the implied limitation must have its limits, or the contract and due process clauses are gone. * * * [p. 413].
>
> "* * * What makes the right to mine coal valuable is that it can be exercised with profit. To make it commercially impracticable to mine certain coal has very nearly the same effect for constitutional purposes as appropriating or destroying it. * * * [p. 414].
>
> "* * * We are in danger of forgetting that a strong public desire to improve the public condition is not enough to warrant achieving the desire by a shorter cut than the constitutional way of paying for the change. As we already have said, this is a question of degree—and therefore cannot be disposed of by general propositions." [p. 416].

In *Block* v. *Hirsh,* 256 U. S. 135 this Court upheld, against attack under the Fifth Amendment, an emergency rent law for the District of Columbia protecting from evic-

tion tenants whose leases expired while the Act was in force so long as they paid reasonable rent, but solely on the ground of its being a temporary measure necessitated by emergency conditions growing out of the War. Mr. Justice Holmes, writing for the majority of this Court, recognized that "regulations of the present sort pressed to a certain height might amount to a taking without due process of law" (p. 156), and concluded: "A limit in time, to tide over a passing trouble, well may justify a law that could not be upheld as a permanent change".

In *Wickard* v. *Filburn*, 87 L. Ed. 57, (*supra*) the grounds upon which this Court upheld the legislation there involved against attack under the Fifth Amendment were that its apparently retroactive features were not actually such because "the penalty was contingent upon an act which appellee committed not before but after the enactment of the statute", and that the statute, along with the detriments complained of, conferred large benefits upon the appellee. This Court concluded (p. 69):

> "* * * That appellee is the worse off for the aggregate of this legislation does not appear; it only appears that if he could get all that the Government gives and do nothing that the Government asks, he would be better off than this law allows. To deny him this is not to deny him due process of law."

Neither of these grounds applies to Section 11(b)(1). Its operation is manifestly retroactive and neither that section nor the Act as a whole confers upon petitioner any benefit to compensate for the deprivation of property which its enforcement would entail.

That deprivation of property is no mere technical one, but will inevitably involve a vast destruction of values.

First and paramount is the destruction of the right of the shareholders to pool their investments and thereby obtain for them the benefit of efficient, common management of diversified interests. That right is one conferred by the State of New Jersey which has authorized persons to form corporations in order to acquire and hold stocks of other companies. The North American Company represents one of the early exercises of that right. It was organized in 1890 and its 53 years of history shows how valuable that right has been. The North American Company has steadily grown and prospered and it has done so through being a prudent and wise investor. The record of this case is replete with evidence showing the beneficent influence of The North American Company management upon the properties in which it has largely invested. That management has promoted efficient local managements. It has provided them with the financial resources for sound development and has promoted operating efficiency through encouraging the operating companies to exchange the benefits of their experience.

This is a case where the whole is greater than the sum of the separate parts. Two values are inherent in the whole which are destroyed when it is broken up into its separate parts—the value of further assurance of competent operating management and of sound financing of properties, and the value of diversity of investment, the existence of which is dependent on the continuance of the holding company in relationship to the operating utility companies.

The functions of the holding company, in the case of North American, are to provide a diversity of investment in sound, metropolitan operating utilities located in different parts of the country, where local economic and business

conditions affecting earning power from year to year vary and where local rainfall conditions affecting the production of hydro-electric power vary; and to provide a supervisory investor management responsible to the stockholders for seeing that competent operating managements are maintained in charge of the operations of the utility properties, and that the subsidiary companies and local properties are soundly financed and have available the necessary capital and the best of technical facilities in order to meet the growing needs for electric power of the communities which they serve.

To break up The North American Company by requiring it to divest itself of all its assets except one property is to destroy very real and important elements of value, regardless of whether the break-up can be effected by distribution of assets, as against enforced liquidation of assets.

It is true that large investors can obtain diversity of location of the utility properties in which they invest by buying a number of parcels of independent operating utility stocks instead of one parcel of holding company stock. However, the small investor has no such choice, as a practical matter, and must give up this factor of diversity if his holding company is eliminated or restricted to ownership of one property. The overwhelming majority of petitioner's common stockholders hold 100 shares or less. On the other hand, large investors, as well as small investors, cannot obtain the benefits of the supervisory investor management which are real and important factors of value in the stock which they have bought and paid for unless there be the continuance of the holding company.

This deprivation of property is not avoided by talking about "abuses" or "evils". Moreover, in the case of The

North American Company citation of no such abuses or evils is to be found in the reports of the Federal Trade Commission or of the Committee on Interstate and Foreign Commerce (House of Representatives) referred to in Section 1(b) of the Act as disclosing facts on the basis of which the recitation of "abuses" and "evils" in Section 1(b) is predicated. Neither is finding of such abuses or evils in the case of The North American Company to be found in the Findings and Opinion of the Commission (R., Vol. I, 73-178). The Act makes no provision for such findings. We submit that, if compulsory divestment of property is to be regarded as a means of eliminating "abuses", due process demands that the statute which compels this should equally provide for a fair hearing on the question of whether the person affected has in fact been guilty of the abuses sought to be remedied.

Nor is this deprivation of property avoided by referring to the extension of time, "plan of reorganization" and receivership provisions of Section 11 (c), (d) and (e) of the Act, because extensions of time of voluntary compliance for an additional year, plans of reorganization, whether voluntary or involuntary, and whether or not adjudged fair and equitable, and receiverships and trusteeships, all lead eventually and inevitably to one goal—the break-up of the holding company and the divestment of all its assets except one property. That break-up, that divestment, of itself constitutes a very real destruction of values and deprivation of property, regardless of the technical steps and methods employed in carrying it out.

In addition to this right of which the Commission's order would deprive the stockholders of the Company, the

order involves a further destruction of values in its requirement that the petitioner divest itself of investments having an approximate cost to it of $190,000,000. (See Appendix A).

There are only two methods by which the divestment order may be carried out. One is by a distribution of assets in kind; the other by a liquidation of such assets.

A distribution in kind would be impossible unless the presently outstanding debentures and preferred stock of petitioner are first paid off at their liquidation or redemption prices, aggregating over $100,000,000. This prior right of the holders of debentures and preferred stock is, contractually, a right to dollars and petitioner is amply solvent. Thus, cash must be realized in that amount, or underlying stocks must be exchanged for petitioner's debentures and preferred stocks on a basis which satisfies their holders that they are getting, on the basis of market values, the equivalent of cash. Only after that can there be any distribution of assets in kind to petitioner's common stockholders. The only practicable method, therefore, of complying with the divestment order is by a very large liquidation of securities. This is, of course, exactly the method of divestment which will produce the most disastrous consequences.

Any enforced, large-scale liquidation at any time means substantial sacrifice. As this Court said in *Harriman* v. *Northern Securities Co.*, 197 U. S. 244, 299, "the forced sale of several hundred millions of stock would have manifestly involved disastrous results." If the enforced liquidation were effected on a high market there would still be large losses in relation to what would have been realized out of transactions between free sellers and willing buyers.

The liquidation is at valuations fixed by buyers who know that the sellers are under compulsion to sell; it is not at valuations arrived at between free sellers and willing buyers. The point is not whether at the moment the stock market is "high" or "low", but it is that Section 11(b)(1) creates a situation where there must be liquidation under circumstances which inherently prevent a realization of fair values of the underlying assets, even after the loss on break-up of the holding company is accepted. No extensions of time or waiting for a favorable turn in the cycle of markets, no substitution of statutory receivers or trustees for the lawfully constituted management of the Company, elected by the stockholders, no plan of reorganization, however clever and intricate, can avoid these losses to stockholders attendant on enforced liquidation which are inherent in the application of Section 11(b)(1) to a thoroughly solvent holding company with senior securities outstanding in excess of $100,000,000.

A fortiori, an enforced, large-scale liquidation in the course of the present total war, with its consequent depressed market conditions and the disappearance of security purchasing demands and power, means the maximum in sacrifice. When the British owners of Viscose Company were, in 1941, forced to sell their stock in the American market to produce dollar exchange as a war requirement of their government, the British government recognized that the liquidation involved, in effect, a confiscation of 50% of the real value and it indemnified the owners to that extent (*N. Y. Times*, July 23, 1942).

Inevitably, the risks and the losses of forced liquidations must be borne by petitioner's common stockholders. There

are about 58,000 holders of petitioner's common stock of whom 85% hold 100 shares or less. They reside in every state of the United States, and include insurance companies, trustees, guardians, executors, and educational and religious institutions. More than 460,000 shares of common stock are held by banking institutions as trustees for about 1,300 trust accounts. (R., Vol. VIII, 2873-5). It is these people who will ultimately feel the consequences of the Commission's order. The Commission's order will result in a true and real deprivation of property lawfully acquired and held for many years.

The Circuit Court of Appeals said (R., Vol. X, 4010):

> "If, as petitioner contends, such distribution will be impossible and a liquidation by sale becomes necessary, *the process may be painful to its common stockholders*, but we cannot say that the *remedy selected* by Congress is so unreasonable, arbitrary or capricious as to constitute taking property without due process."

In fact, Congress selected two separate procedures: (1) the far-reaching regulatory provisions of the Act other than Section 11(b)(1); and (2) divestment of existing property holdings under that section.

The "policy" of the Act, as stated in subdivision (c) of Section 1 (quoted *supra*, pp. 27-30) was "to meet the problems and eliminate the evils as enumerated in this section, connected with public utility holding companies which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce; * * *". These "evils", or "abuses" as they are called elsewhere in subdivision (c), are those enumerated in the five numbered paragraphs of subdivision (b) of Section 1. We here summarize

below in the left-hand column the "evils" or "abuses" so found by Congress and in the right-hand column the elimination thereof through the regulatory provisions of the Act other than Section 11(b)(1). The constitutionality of these truly regulatory provisions is not here in issue, and as a practical matter regulation thereunder has now for nearly six years been accepted by petitioner and all other important public utility holding companies in the United States.

Abuses Enumerated in Section 1 of the Act:	*Regulation:*
1. Inadequate information for investors (Section 1(b)(1))	Section 5 of the Act provides that upon registration a holding company must file complete information about itself and all of its subsidiaries. Section 7 prohibits a holding company or a subsidiary from issuing securities unless detailed information is filed with the Commission. Section 10 prohibits the acquisition of securities, utility assets or other interest without Commission approval and the filing of detailed information. Section 14 requires a holding company to file annual, quarterly "and other periodic and special reports" ordered by the Commission by rule or regulation. Under Section 22 the information so filed shall be made available to the public unless the Commission otherwise directs. Section 15 provides that registered holding companies and subsidiaries shall maintain accounts and records as prescribed by the Commission.

Abuses Enumerated in Section 1 of the Act:	*Regulation:*
2. Unregulated issue of securities (Section 1(b)(1))	Sections 6 and 7 of the Act prohibit the sale of securities unless approved by the Commission.
3. Security issues on capitalization of fictitious values (Section 1(b)(1))	Section 7(d) provides that the Commission shall not permit the sale of securities unless it finds that the security is reasonably adapted to the earning power of the issuing company and that the financing is necessary or appropriate to the economical and efficient operation of its business.
4. Security issues on overcapitalization to prevent voluntary rate reduction (Section 1(b)(1))	In addition to Section 7 which prohibits holding companies and subsidiary companies from issuing securities without Commission approval, Section 204, of Part 2 of Title II of the Act prohibits the issue of a security by public utility companies without prior approval of the Federal Power Commission, except when the Company is both organized and operating in a state which regulates security issues.
5. Excessive charges to subsidiary by holding company (Section 1(b)(2))	Section 13 provides that such charges are either prohibited or brought under the regulation of the Commission.
6. Service charges not susceptible of state regulation (Section 1(b)(2))	

Abuses Enumerated in Section 1 of the Act:	*Regulation:*
7. Abuse of control over accounts, rates and dividends of operating companies (Section 1(b)(3))	Accounts of holding companies and subsidiaries are controlled by Section 15. Dividend policies are controlled by Section 12(c). Rates of operating companies are fixed by State Commissions or by the Federal Power Commission under the Federal Power Act.
8. Control of operating companies through disproportionately small investment (Section 1(b)(3))	Apart from Section 11(b)(2) much is being done by the Commission under such sections as 7, 10, 12 and 13 to rectify this type of situation.
9. Growth unrelated to the integration and coordination of related operating properties (Section 1(b)(4))	Further growth is wholly subject to Commission control under Sections 9 and 10. Existing lack of integration and coordination of related operating properties is subject to the power of the Federal Power Commission under Section 202(b) of the Federal Power Act to compel the physical connection of transmission facilities.
10. Lack of economy of managements, etc. (Sections 1(b)(4) and (5))	The Commission asserts broad power to insure economy of management under various sections, notably Section 13, of which (e) gives the Commission jurisdiction over the "costs" of services rendered by an "affiliate", which term (Section 2(a)(11)) includes any officer or director or any other person that the Commission determines has a

Abuses Enumerated in Section 1 of the Act: *Regulation:*

relation to a company such that there is liable to be an absence of "arm's length bargaining."

It is in the light of this background that the means embodied in Section 11(b)(1) is to be appraised. On the decisions of this Court above cited we submit that, in view of the deprivation of property rights and the destruction of values that it inevitably entails, it would not in any case be a legitimate means of carrying out the purpose of the Act. But, even if that contention be not accepted, we submit that, considering the extent to which the congressional purpose has been attained by the regulatory provisions of the Act, and considering the vast destruction of values which would attend the compulsory divestment provided in Section 11(b)(1), the terms of that section are so unreasonable, arbitrary and capricious as to constitute the taking of property without due process of law.

CONCLUSION

The combination of the propositions for which the Commission contends in this case,—(1) that the required relation between the object of the legislation and interstate commerce can be found on considerations as tenuous as those here presented; and (2) that deprivation of property by virtue of a statute so grounded is mere consequential damage infringing no right under the Fifth Amendment,—amounts in substance to denial of any constitutional safe-

guard against arbitrary congressional confiscation of property.

The Order of the Circuit Court of Appeals should be reversed and the Orders of the Commission here under review should be set aside.

Respectfully submitted,

CHARLES E. HUGHES, JR.,

OCTOBER TERM—1942

THE NORTH AMERICAN COMPANY,
Petitioner,

against

SECURITIES AND EXCHANGE COMMISSION,
Respondent.

No. 721

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT

REPLY BRIEF OF PETITIONER

I. THE COMMERCE POWER.

Two principal theses pervade the argument in the Commission's brief based on the commerce power. The first is that petitioner's relationship to the enterprises in which it holds securities is not that "of a large investor seeking to promote the sound development of his investment" but that it "has control over" these enterprises (Brief, pp. 12-13, 27). The second is that petitioner in its communications and contacts with the corporations in which it owns securities, and otherwise, uses facilities of interstate commerce, such as interstate trains and telegraph and telephone lines, and the mails (Br. pp. 27-28).

These two theses are the Commission's sole answer to petitioner's contention that its ownership of the securities of which it has been ordered to divest itself is not commerce, interstate or intrastate, and accordingly is not within the reach of congressional power unless such ownership has been found to have a substantial effect on interstate commerce or a tendency to obstruct the power of Congress over it, and that this Court has before it no finding of such effect or tendency by the Commission, by any court or by Congress itself.

The Commission concedes (Br. p. 29) that the Act contains no provision for a finding by the Commission or by a court that the particular company subjected to an order under Section 11(b)(1) shall itself be engaged in interstate commerce or "that the situations corrected by the order shall in the particular case have an effect on interstate commerce". It makes only a half-hearted argument that Congress has made any express finding to that effect. Its chief contention on that head is that the very enactment of Section 11(b)(1) itself must be taken as a finding, even in the absence of any express declaration, that all registered holding companies so affect interstate commerce as to be properly subject to its terms (Br. pp. 29, 30).

The Commission also makes an argument, the exact bearing of which on our contentions is not wholly clear, that the Act, and Section 11(b) in particular, are "in the conservative tradition of federalism", because they do not undertake to cover the whole field but leave certain regulatory functions to the several states in which the operating utility companies are organized and do business.

We shall discuss these contentions of the Commission in the order in which we have stated them.

a. The Commission's argument based on alleged "control" by petitioner of the corporations whose securities it owns.

The Commission's position apparently is that, even though Section 11(b)(1) of the Act may not be constitutional as applied to all registered holding companies, it is constitutional as applied to petitioner, because petitioner must be considered to be of "interstate character" by reason of its "control" of its subsidiaries (Br. pp. 24, 29).

What the Commission means by "control" is made clear by its statement (Br. p. 27) that petitioner "controls its subsidiaries and that *their acts are its acts*".* It has to adopt that meaning of "control" to make its point. The kind of "control" which is involved in the mere ownership of a large enough proportion of the voting stock of a company to influence the selection of a competent management would not suffice. That is simply a normal incident of ownership of stock for investment, which could not be considered to be commerce.

The Commission (Br. p. 7) quotes the President's message to Congress transmitting the report of the National Power Policy Committee, as follows:

> "We do not seek to prevent the legitimate diversification of investment in operating utility companies by legitimate investment companies. But the holding company in the past has confused the function of control *and management* with that of investment and in consequence has more frequently than not failed in both functions. * * * But an investment company ceases to be an investment company when

*All italics in quotations in this brief are supplied unless otherwise noted.

> it embarks into business *and management. Investment* judgment requires the judicial appraisal of *other people's* management."

The Commission makes the surprising statement (Br. p. 27) that its assertion that petitioner controls its subsidiaries in the sense that "their acts are its acts" is "not explicitly contested". But it is of no consequence that denial was not made *in haec verba* of an assertion that had not been made. Certainly our statement (Main Brief p. 8) that "petitioner has at no time engaged in the business of managing the operations of its public utility operating subsidiaries, or selling them supplies, engineering service or the like" and that "its relation has, essentially, been that of a large investor seeking to promote the sound development of his investment" should be deemed sufficient to take issue.

The Commission's reiterated assertion of "control" by petitioner, obviously intended to be understood in the sense stated at page 27, is made without support of any finding, by the Commission or anyone else, and even without citation of any part of the record believed to sustain it. It is contrary to the only finding on the subject which the Commission made (R., Vol. I, 100-101) that

> "As nearly as can be determined from the record in this case, North American leaves operations and operational policy to the management of its subsidiaries".

and to the evidence that petitioner, in its entire history, has never had a service company providing management, construction or other services for compensation (R., Vol. VIII, p. 2903). The Commission's present brief (p. 90), says that "North American's contribution to the management

of its underlying subsidiaries is largely limited to financial matters".

In the case of *Electric Bond & Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419, frequently relied on by the Commission in its brief, there was (pp. 431-440) "an elaborate stipulation" and "findings of fact" by the trial court of activities on the part of the defendants in that case which are not at all paralleled in this one. The Commission says (Br. p. 27) that "North American has, either directly *or through its subsidiaries* engaged in all the types of activities mentioned in the *Bond and Share* case as a basis for federal regulation". That statement is made without any supporting reference. To the extent that it creates the inference that petitioner had servicing subsidiaries, it is incorrect. Moreover, the qualifying phrase "either directly or through its subsidiaries" robs the statement of any significance, because if petitioner's subsidiaries are not its mere instrumentalities so that "their acts are its acts", the operations of the subsidiaries do not determine petitioner's character.

Certainly, we submit, before this Court can uphold the Commission's contention that Section 11 (b)(1), even if not constitutional as to all holding companies, is constitutional as applied to this petitioner, there must be findings of the degree of control asserted as the basis for that contention. There are none.

In the absence of such findings the Commission resorts to reference to other sections of the Act which it asserts have the effect of not requiring any company to comply with Section 11 (b)(1) unless it is interstate in character or "controls" subsidiaries which are so. These are the registration requirements in Section 4, the exemption pro-

visions of Section 3 and the definitions of "holding company" and "subsidiary company" in Sections 2 (a)(7) and 2 (a)(8).

The Commission's argument on Section 4 and Section 3 (Br. pp. 21-24, 33-36) is very slight. With respect to the registration provisions (Section 4) we have nothing to add to the argument in our main brief (pp. 19-21), and with respect to the exemption provisions of Section 3 there is very little that was not anticipated in it (pp. 21-24).

As to Section 3, the Commission attempts an argument (Br., p. 24) based on the declaration set forth in Section 1(c), that the policy of the Act is to meet the problems and eliminate the evils "connected with public-utility-holding companies which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce". We have already commented upon this phrase in our discussion of Section 1 (Main Brief, p. 32). It might be germane if the operative provisions of Section 11 (b)(1), even taken in relation to Sections 3 and 4, were susceptible of a construction which would limit their application to public utility holding companies "which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce". But such a construction is impossible, and none of the argumentation in the Commission's brief supports it.

The Commission's argument based on Sections 2 (a)(7) and 2 (a)(8), defining "holding company" and "subsidiary company", respectively, is that the essential test which they prescribe of the holding company-subsidiary relationship is the "test of control", from which it deduces that no company need comply with Section 11 if it is merely an investor in other companies "and does not control such other companies". For the purpose of that argument, however,

the Commission must use the word "control" in a sense quite different from the meaning which is attached to that term in the other portions of its brief to which we have above referred.

Under Section 2 (a)(7) the term "holding company" (and the definition of "subsidiary company" in Section 2(a)(8) is the exact counterpart) includes any company which owns 10 per centum or more of the outstanding voting securities of a public utility company, unless the Commission by order declares such company not to be a holding company. The Commission may not make such a declaratory order unless all three of the following conditions are established by the applicant:

> "* * * that the applicant (i) does not, either alone or pursuant to an arrangement or understanding with one or more other persons, directly or indirectly control a public-utility or holding company either through one or more intermediary persons or by any means or device whatsoever, (ii) is not an intermediary company through which such control is exercised, and (iii) does not, directly or indirectly, exercise (either alone or pursuant to an arrangement or understanding with one or more other persons) *such a controlling influence* over the management or policies of any public-utility or holding company *as to make it necessary or appropriate in the public interest or* for the protection of investors or consumers that the applicant be subject to the obligations, duties, and liabilities imposed in this title upon holding companies."

This is quite a different thing from merely creating a rebuttable presumption, as the Commission argues (Br. p. 20), that a holding of ten percent of voting securities

constitutes control. The construction of the third requirement relating to "controlling influence" by the Commission, which construction has been upheld by the courts, shows how far it is from "control" in the sense of management so that the subsidiary's acts may properly be deemed to be the acts of the holding company.

In *Detroit Edison Co.* v. *Securities & Exchange Commission,* 119 F. (2d) 730 (C. C. A. 6), cert. den. 314 U. S. 618, the Court found (p. 738):

> "There is no evidence in the record that petitioner [Detroit Edison Company] is controlled, directly or indirectly, by the North American Company, either through one or more intermediary persons or by any means or device whatsoever, and likewise there is no evidence in the record that petitioner is an intermediary company through which such control of another company is exercised."

In spite of this finding, the Court held Detroit Edison to be a subsidiary of North American, because the "latent power" of the latter as a stockholder constituted "controlling influence".

In *Pacific Gas and Electric Co.* v. *Securities & Exchange Commission,* 127 F. (2d) 378 (C. C. A. 9) the Court held (p. 384) that:

> "* * * In view of what we regard as the proper construction of the words in the statute, 'subject to a controlling influence', a finding for the company is not compelled by the fact that North American had not dominated the company in the past."

The Court concluded that the correct construction of the statute was that, even if none of the conditions specified

under Clauses (i), (ii), and (iii) were present, "it could still deny the application on the ground that there was a necessity or appropriateness that the act be held to be applicable to the applicant under the necessity clause" (p. 385). Thus it in effect held that the phrase "so as to make it necessary or appropriate in the public interest or for the protection of investors or consumers that the applicant be subject to the obligations, duties and liabilities imposed in this title upon subsidiary companies of holding companies" constituted a fourth criterion which must be negatived in addition to the preceding three. And that fourth criterion need have no relation to "control".

In *Hartford Gas Co.* v. *Securities and Exchange Commission*, 129 F. (2d) 794 (C. C. A. 2) the Court, while not in words going to the length to which the Circuit Court of Appeals for the 9th Circuit went in its construction of the "necessary or appropriate" clause, in effect reached about the same result. It said (p. 796):

> "* * * Subdivision iii calls for a showing of *extreme negation*. Its requirement is no less than that of *preponderating proof* that 'the management or policies of the applicant are not subject to a controlling influence, directly or indirectly, by such holding company * * * so as to make it necessary or appropriate in the public interest or for the protection of investors or consumers that the applicant be subject to the obligations, duties, and liabilities imposed in this title [chapter] upon subsidiary companies of holding companies * * *' Decision by the Commission involved both the weighing of the evidence to establish the actual facts *and* the weighing of the facts against the background of what is '*necessary or appropriate in the public interest or* for the protection of investors or consumers'."

In *Public Service Corporation of New Jersey* v. *Securities and Exchange Commission*, 129 F. (2d) 899 (C. C. A. 3) cert. den., 87 L. Ed. 223, the Court reiterated the doctrine of unexercised power as follows (p. 903):

> "* * * A 'controlling influence' may exist, although in latent form. Detroit Edison Co. v. Securities & Exchange Commission, supra. Even though, after 1938, UGI and United did not utilize their voting strength to elect directors, pass resolutions or veto corporate changes the latent power to do so was a present power to exert a 'controlling influence' upon Public Service at any time."

The above principle was again applied in *American Gas and Electric Company* v. *Securities and Exchange Commission* (Circuit Court of Appeals for the District of Columbia, Feb. 1, 1943, C.C.H., ¶ 90,196), in spite of the fact that the Electric Bond & Share Company, the holding company there involved, had relinquished most of the features which the Court had relied upon as indicia of control in the past.

Considering the strictness with which the doctrine of administrative finality has been applied in these cases, coupled with the interpretation of Section 2(a)(8) which they have approved, it is apparent that the fact (adverted to in the Commission's brief, p. 13) that in the first two cases above cited the Detroit Edison Company and the Pacific Gas and Electric Company, respectively, were denied orders declaring that they were not subsidiaries of this petitioner is utterly without significance on the issue whether petitioner controlled them in the sense that their acts were its acts, which is the only sense material to the question here involved.

The rules determining whether a company is in "control" of another in the latter sense have been many times enunciated by this Court and are quite different. In *Pullman's Palace Car Co.* v. *Missouri Pacific Ry. Co.*, 115 U. S. 587, 597, this Court said:

> "* * * The Missouri Pacific Company owns enough of the stock of the St. Louis, Iron Mountain and Southern to control the election of directors, and this it has done. The directors now control the road through their own agents and executive officers, and these agents and officers are in no way under the direction of the Missouri Pacific Company. If they or the directors act contrary to the wishes of the Missouri Pacific Company, that company has no power to prevent it, except by the election, at the proper time and in the proper way, of other directors, or by some judicial proceeding for the protection of its interests as a stockholder. Its rights and its powers are those of a stockholder only. It is not the corporation, in the sense of that term as applied to the management of the corporate business or the control of the corporate property."

And in *United States* v. *Reading Co.*, 253 U. S. 26, 62-63, this Court thus stated the rule as applied to the commodities clause of the Hepburn Act:

> "* * * This rule was repeated and applied in *United States* v. *Delaware, Lackawanna & Western R.R. Co.*, 238 U. S. 516, 529. It results that it may confidently be stated that the law upon this subject now is, that while the ownership by a railroad company of shares of the capital stock of a mining company does not necessarily create an identity of corporate interest between the two such as to render it unlawful under the commodities clause for the railroad

> company to transport in interstate commerce the products of such mining company, yet where such ownership of stock is resorted to, *not for the purpose of participating in the affairs of the corporation in which it is held in a manner normal and usual with stockholders,* but for the purpose of making it a mere agent, or instrumentality or department of another company, the courts will look through the forms to the realities of the relation between the companies as if the corporate agency did not exist and will deal with them as the justice of the case may require."

See also *Porter* v. *Pittsburgh Bessemer Steel Co.*, 120 U. S. 649, 670; *United States* v. *Lehigh Valley R. R. Co.*, 220 U. S. 257, 274.

In this case it does not appear that petitioner has exercised "control" even to the extent regarded in the above-cited cases as normal to the stockholder relation. The Commission expressly found that petitioner "leaves operations and operational policy to the management of its subsidiaries" (R. Vol. I, 100-101). What does appear is that, in the practice of its policy of local autonomy for its public-utility operating subsidiaries, it has sought to use its voting power to assure good local management which has had the genuine responsibility of conducting operations; that it has furnished financial advice and assistance; and has sponsored the interchange of valuable operating information among the subsidiaries.

These are the things which owners of property, be they corporations or individuals, ordinarily do to promote the sound development of their investments. They are the normal incidents of ownership of securities. If the Commission's contentions here were accepted, every individual

owning substantial security interests in corporations engaged in interstate commerce would himself be deemed on that account to be so engaged, and all his property interests of whatever nature would be held at the sufferance of Congress. He could be required by Congress to divest himself of all his properties except one, including his own home, as petitioner here has been held liable to divestment of its office building, not because his ownership thereof had any effect on interstate commerce but because, among his property interests, he owned ten percent of the voting stock of some company that was engaged in interstate commerce, and was not able to satisfy the Commission that he did not have a "latent power", albeit wholly unexercised, to influence the management by advice or that there was not some other unspecified reason why it was "necessary or appropriate in the public interest" that he should not own so much property.

b. The Commission's argument based on use of instrumentalities of interstate commerce.

If the exercise by an owner of corporate securities of the rights normally incident to ownership of such investments (such as influencing the choice of competent management for the corporation, assisting it in securing adequate financing, and the like) is not commerce, it does not become so because he uses interstate trains or interstate telephone and telegraph lines or the mails to maintain contact with his property interests.

The act of communicating may be subject to appropriate regulation by Congress. But it by no means follows, and it is not the law, that the ownership of the property is sub-

ject to the control of Congress just because that ownership is facilitated by such communication. *Federal Baseball Club of Baltimore, Inc.* v. *National League of Professional Baseball Clubs, et al.*, 259 U. S. 200 was a treble damage suit under the anti-trust laws against the National League and the American League for conspiring to monopolize the baseball business and in the course thereof destroying the Federal League. Mr. Justice Holmes, writing for a unanimous Court, said (pp. 208-209):

> "The business is giving exhibitions of base ball, which are purely state affairs. It is true that, in order to attain for these exhibitions the great popularity that they have achieved, competitions must be arranged between clubs from different cities and States. But the fact that in order to give the exhibitions the Leagues must induce free persons to cross state lines and must arrange and pay for their doing so is not enough to change the character of the business. According to the distinction insisted upon in *Hooper* v. *California,* 155 U. S. 648, 655, the transport is a mere incident, not the essential thing. That to which it is incident, the exhibition, although made for money would not be called trade or commerce in the commonly accepted use of those words. As it is put by the defendants, personal effort, not related to production, is not a subject of commerce. That which in its consummation is not commerce does not become commerce among the States because the transportation that we have mentioned takes place."

Nor is petitioner's ownership of the securities of other corporations brought under the control of Congress because of the fact that relations between it and its own out-of-

state security holders, such as transmittal of interest, dividends, proxies, notices of meetings, etc., are accomplished by the use of interstate mails or facilities of interstate commerce, as the Commission appears to argue in footnote 12 at pages 20-21 of its brief.* Apparently the Commission, in this passage, is contending that a corporation may constitutionally be subjected to the requirements of Section 11 (b)(1) for no other reason than that it was required to register under Section 4 (b) because it had distributed securities by means of an interstate public offering at some time since January 1, 1925, and some of such securities are owned by persons not resident in the same state in which the holding company is organized. (See also the argument at Brief, p. 28.) This is an extreme application of the unsound thesis that because a corporation uses interstate facilities of communication for any purpose it is subject to the control of Congress for all purposes.

---

*In this footnote (Br. p. 20) there is a blind reference to the postal power of Congress. The Commission says that it does not understand that we question its conclusion that, "if the relation of holding companies to interstate commerce will sustain the validity of requiring registration under the commerce clause, a similar relation to the use of the mails will sustain similar regulation under the postal power". The reference is blind because the footnote is to a discussion of the application of Section 11 through the requirement of registration under Section 4 (a). If all the Commission means is that use of the mails will sustain appropriate regulation of such use, we have no quarrel with the statement. But if the Commission has vaguely in mind some such *non sequitur* as that, since (i) if a holding company uses the mails for certain purposes Section 4(a) compels it to register, and since (ii) if it registers it is subject to Section 11 (b)(1), therefore (iii), the postal power supports Section 11 (b)(1), we emphatically dissent. "* * * Congress may not exercise its control over the mails to enforce a requirement which lies outside its constitutional province, * * *" (*Electric Bond & Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419, 442).

If the relationship of the holding company to the subsidiaries does not constitute commerce by reason of permissible identification of their activities with it, it does not come under the control of Congress for purposes of compulsory divestment of its ownership of securities because of its use of interstate mails, telephones or telegraphs in the maintenance of whatever relationship it has.

The Commission argues (Br. p. 83) that the abuses and and opportunities for abuse which Congress found to be inherent in the utilities holding company system depend upon the employment of interstate commerce; and that in these circumstances Congress was at liberty to exercise its power under the commerce clause in an effort to eliminate or ameliorate those abuses. But no question is here involved regarding the legitimacy of so regulating the use of the channels of interstate commerce that such use will not further such abuses. That has been done through provisions of the Act other than Section 11 (b) (1). Sections 6 and 7 deal with security transactions, Section 8 with acquisitions of interests in electric and gas utility companies, Section 9(a)(1) with acquisitions of securities and utility assets and other interests, Section 12 with intercompany loans, dividends, security transactions, sale of utility assets, proxies and other transactions, and Section 13 with service, sales and construction contracts. These sections forbid, either unqualifiedly or unless permitted by the Commission, the effectuation of the various transactions specified therein by use of the mails or any means or instrumentality of interstate commerce.

What the Commission seems to be really arguing on this head, and what it must argue to support Section 11 (b) (1), is that Congress is entitled under the commerce power

to require the disintegration of all existing property ownerships, whether or not they themselves affect interstate commerce, for the reason that their accumulation has been accomplished, or at least facilitated, by use of the mails and the instrumentalities of interstate commerce. No such theory has ever been upheld, and we know of no other act of Congress which has even been based upon an assertion of such a power. The consequences of recognition of any such theory would be without limit. There are few instances in which substantial aggregations of property interests can be built up, either by corporations or by individuals, without the use of the mails or instrumentalities of interstate commerce. It has never been supposed that that fact gives Congress the power to require their owners to dispose of them because it believes that the general welfare would be promoted thereby.

The attempted analogy to the anti-trust laws and the commodities clause of the Hepburn Act (Br. pp. 84-85) wholly fails for the reasons shown in our main brief (pp. 48-51). Where divestment of properties is required by a decree under the former act, or becomes necessary under the latter act if a carrier desires to continue to carry coal, it is solely because a court has found that the continued ownership itself affects interstate commerce to the required degree. Neither act says anything about divestment of properties. Both prescribe rules "by which commerce is to be governed", (*Gibbons* v. *Ogden*, 9 Wheat. 1, 196) and any interference with property rights is merely an incident to the enforcement of those rules. Section 11 (b) (1) provides no rule for interstate commerce. It applies whether or not the forbidden ownerships have any effect on interstate commerce, as we show at length in the discussion in

our main brief, to which the Commission makes no very serious answer; the rule which it prescribes is one, not by which commerce is to be governed, but by which property ownership is to be governed. It is impossible to bring such a rule within the commerce power on the ground that those who are to be subjected to it either use or have used instrumentalities of interstate commerce.

A statute prescribing the conditions upon which property may be owned can be upheld under the commerce clause only if the very status of ownership is found to have such an effect upon interstate commerce as to bring it within reach of the power of Congress.

c. The Commission's argument on the alleged declaration by Congress.

On this branch of the case, the Commission significantly minimizes the supposed congressional declaration in Section 1 of the Act. Major emphasis is placed upon its argument (Br. p. 29) that the mere enactment of Section 11(b)(1) requiring compliance by all registered holding companies was itself a finding that all of them so affect interstate commerce that it is proper to apply its provisions to them. It says (Br. p. 30) "That determination is inherent in the enactment of the statute itself".

In attempted support of this proposition, the Commission (Br. p. 31) refers to *United States* v. *Ferger*, 250 U. S. 199, and *Virginian Railway Co.* v. *Federation*, 300 U. S. 515, which were cited by this Court in *United States* v. *Darby*, 312 U. S. 100, 121, following its statement of the third category of legislation therein enumerated (our Main Brief, pp. 12-13), and also to *Colorado*

v. *United States*, 271 U. S. 153. It says that the statutes sustained by those cases contain no statement by Congress that the activity regulated was related to interstate commerce, so that the finding must have been implied from their mere enactment and "from the character of the regulation applied". The quoted qualification shows the inappositeness of the reference as support for the proposition advanced by the Commission as applied to Section 11(b)(1).

The statute upheld in *United States* v. *Ferger, supra*, was "An Act relating to bills of lading in interstate commerce", and purported to protect "the vast volume of interstate commerce operating and moving in reliance upon genuine bills of lading" (p. 205) by the suppression of spurious ones. It required no declaration that the suppression of spurious bills of lading was a protection to the conduct of interstate commerce under genuine bills.

The Railway Labor Act upheld in *Virginian Railway Co.* v. *Federation, supra*, is far from being an instance where Congress left its determination that interstate commerce was affected wholly to such implication as might be derived from the mere enactment of the operative provisions. As this Court pointed out (300 U. S., p. 553):

> "* * * The Railway Labor Act, §2, declares that its purposes, among others, are 'To avoid any interruption to commerce or to the operation of any carrier engaged therein,' and 'to provide for the prompt and orderly settlement of all disputes concerning rates of pay, rules or working conditions.' The provisions of the Act and its history, to which reference has been made, establish that such are its purposes, and that the latter is in aid of the former."

(See our discussion in this case, Main Brief, pp. 40-41.)

Colorado v. *United States, supra,* is not properly cited as belonging to the category of legislation where the only finding of effect upon interstate commerce is that made by Congress itself. That case involved an attack upon the validity of a certificate issued by the Interstate Commerce Commission under the Interstate Commerce Act, as amended by the Transportation Act, that present and future public convenience and necessity permitted the abandonment of an intrastate branch line. The grounds on which the Interstate Commerce Commission granted the certificate permitting abandonment included that for years operation of the branch had resulted in large deficits, that future operation would likewise result in large deficits, that these deficits would have to be made up by the railroad, and that "thus continued operation would constitute an undue burden upon interstate commerce" (271 U. S. p. 160, and discussion of such reasons, p. 163). The Court said (p. 167):

> "* * * As every projected abandonment of any part of a railroad engaged in both interstate and intrastate commerce may conceivably involve a conflict between state and national interests, the consent of the Commission must be obtained by the railroad in every case."

The case was therefore one in the second category enumerated in the *Darby* case where Congress leaves it to an administrative agency to determine the effect of a particular activity upon interstate commerce.

The statutes to which this Court referred in the *Darby* case as falling within the third category clearly showed their

interstate-commerce purpose. The unequivocal congressional declaration in the Fair Labor Standards Act of 1938 is quoted in our main brief (pp. 36-37). The declaration of purpose in the Railway Labor Act has already been quoted in our discussion (*supra*) of the *Virginian Railway* case. The third act referred to, the Safety Appliance Act, originally applied only to common carriers engaged in interstate commerce by railroad (27 Stat. 531). It was amended (32 Stat. 943) to "apply to all trains, locomotives, tenders, cars and similar vehicles used *on any railroad engaged* in interstate commerce". This amendment was upheld in *Southern Ry. Co.* v. *United States,* 222 U. S. 20, the court saying (p. 27):

> "Speaking only of railroads which are highways of both interstate and intrastate commerce, *these things are of common knowledge*: Both classes of traffic are at times carried in the same car and when this is not the case the cars in which they are carried are frequently commingled in the same train and in the switching and other movements at terminals. Cars are seldom set apart for exclusive use in moving either class of traffic, but generally are used interchangeably in moving both; and the situation is much the same with trainmen, switchmen and like employes, for they usually, if not necessarily, have to do with both classes of traffic. Besides, the several trains on the same railroad are not independent in point of movement and safety, but are interdependent, for whatever brings delay or disaster to one, or results in disabling one of its operatives, is calculated to impede the progress and imperil the safety of other trains. And so the absence of appropriate safety appliances from any part of any train is a menace not only to that train but to others."

When the relation of an enactment to interstate commerce is self-evident, as in the legislation upheld in the *Ferger* case, or can be readily discerned from facts of common knowledge, as in the case of the Safety Appliance Act, no finding by anyone, court, administrative agency or Congress, is necessary to support its validity. But the mere enactment of a statute asserting Federal power to divest ownership of stocks cannot conceivably fall within such a rule. Ownership is something the incidents of which may or may not affect interstate commerce. It would, therefore, be contrary to the facts to attempt to assimilate this Act to the acts upon which respondent relies, namely, acts where the Congress might legitimately regard the effect on interstate commerce as so obvious that it could be taken for granted.

Moreover, this is not a case where Congress simply passed a statute and left the grounds of its enactment to presumption. It is a matter of common knowledge that Congress entertained grave doubt as to the constitutionality of Section 11 (b), and the elaborate recitals in Section 1 constitute a studied effort to make findings which would, so far as possible, support constitutionality.

The Commission's argument based on the declarations contained in Section 1 is unimpressive. It emphasizes the declaration that when the "abuses" referred to in Section 1(b) "become persistent and widespread the holding company becomes an agency which, *unless regulated,* is injurious to investors, consumers and the general public". But the Act does provide, in sections other than 11(b)(1), for such regulation, and the natural interpretation of the quoted phrase is that it explains the purpose of those regulatory provisions.

The final declaration of intention "to compel the simplification of public-utility holding-company systems and the elimination therefrom of properties detrimental to the proper functioning of such systems, and to provide as soon as practicable for the elimination of public-utility holding companies except as otherwise expressly provided in this title" seems to be based upon the supposition, the fallacy of which we have discussed in the preceding subdivision, that, even in the absence of an interstate-commerce policy, any company which uses the mails or instrumentalities of interstate commerce may be controlled by Congress not only with respect to such use but in any other way that Congress sees fit. Indications of this theory appear in the reasons given in Section 1(a) why holding companies and their subsidiaries are affected with a national public interest. The first three rely on the use of the mails and instrumentalities of interstate commerce. The fourth is that "their practices in respect to and control over subsidiary companies often materially affect the interstate commerce *in which those companies engage.*" But this again refers to "practices" rather than the ownership of the securities itself. And it does not explain the provisions of Section 11(b)(1) which require the divestment of securities in subsidiaries which are not engaged in interstate commerce. Neither does the fifth, relating to the ineffectiveness of control by any state, explain the necessity for the divestment of securities of companies with respect to which there is no such difficulty.

In fact, reliance upon the use of the mails and facilities of interstate commerce is the only common denominator upon which the requirements of Section 11 (b) (1) can rest. Take the systems of the Cleveland Electric Illuminat-

ing Company, the Pacific Gas and Electric Company and the Detroit Edison Company, of all of which petitioner is directed to divest itself. No "practice" of petitioner in respect of them, and no "control" over them, assuming that any such control exists (see Commission's brief, pp. 31-32, footnote 18), can affect any interstate commerce "in which those companies engage" because they engage in none. And they are susceptible of effective control by the states of Ohio, California and Michigan in which their businesses respectively are wholly confined. It is true that to communicate and maintain contact with them petitioner must use interstate mails, trains and telephone and telegraph lines. But that is the only connection with interstate commerce that Section 1 discloses. Take the North American Utility Securities Corporation, a small investment company, or the 60 Broadway Corporation in which petitioner has its offices. On what possible interpretation of Section 1 can it be said to be a declaration by Congress that the prohibition of ownership of the securities of such corporations is for interstate-commerce reasons?

The arresting distinction between Section 11 (b)(1) and any other statute the validity of which under the commerce power has been upheld by this Court is that it does not purport to prescribe a "rule by which commerce is to be governed" (*Gibbons* v. *Ogden, supra*). And, read as a whole, there is nothing in Section 1 which declares the intention of Congress to enact Section 11 (b) (1) as such a rule. The rule which is enacted is one to prescribe the conditions upon which certain types of property may be owned. Not only is Section 11 (b) (1) part of an Act which this Court has expressly held to be separable (*Electric Bond & Share Co.* v. *Securities and Exchange*

Commission, 303 U. S. 419), but it is an enactment which is distinct in purpose and effect from the other sections of the Act.

The structure of the Act as a whole is quite different from that of the other statutes in connection with which this Court has applied the rule that the commerce power extends to those activities intrastate which so affect interstate commerce, or the exercise of the power of Congress over it, as to make regulation of them an appropriate means for the regulation of interstate commerce. Such statutes have usually prohibited or regulated certain transactions in interstate commerce, and included or added a concomitant regulation or prohibition of similar transactions which are not in interstate commerce but are deemed to have a sufficient effect thereon as to require this. The interstate and intrastate transactions affected being of the same general character, are usually so inter-related that it is impossible to control the former without controlling the latter. Such was the case, for example, with respect to statutes providing for regulation of agricultural commodities or products "in the current of interstate or foreign commerce or which directly burden, obstruct or affect that commerce", considered in *United States v. Rock Royal Cooperative, Inc.*, 307 U. S. 533, and *United States* v. *Wrightwood Dairy Co.*, 315 U. S. 110, or "to provide an adequate and balanced flow of agricultural commodities in interstate and foreign commerce", like the act upheld in *Wickard* v. *Filburn*, 87 L. Ed. 57, or regulating sales on the exchange of the Chicago Board of Trade which occasioned the Grain Futures Act, upheld in *Chicago Board of Trade* v. *Olsen*, 262, U. S. 1 (Commission's Brief, p. 33). In such cases it is enough that the intrastate condition regulated "from

time to times does, directly burden and obstruct commerce between the States in grain, and that it recurs and is a constantly possible danger" (262 U. S., p. 40).

But these principles do not apply when a prohibition of intrastate matters or matters which are not commerce at all is not ancillary to a regulation of interstate commerce. No presumption can be indulged, that such an act is necessary to protect interstate commerce. Here the congressional finding of the required effect upon interstate commerce must relate clearly and unequivocally to the particular subject of property ownership. There is no such finding. It would not be sufficient for a statute like this to find, even if there were such a finding, that some such ownerships "often" have such effect. But the declarations in Section 1 do not even find that, for they speak only of "practices" of a wholly undefined nature, and "control" without specification of what is meant by that term, and do not declare that such "practices" and "control" even "often" materially affect interstate commerce except where the companies whose stocks are owned are engaged in interstate commerce.

The very fact that the conception of "interstate commerce" is one of degree (*Santa Cruz Fruit Packing Co.* v. *National Labor Relations Board,* 303 U. S. 453, 467) emphasizes that the more drastic and pervasive is the attempted prohibition, the more imperative it is that the necessity for it,—for the protection of interstate commerce and not merely for the general welfare,—clearly appear. There must be some point at which the commerce power of Congress stops. There would be none if declarations such as those in Section 1 here relied on were held conclusive. For, considering the complexities of social and economic relations in this country, it would be difficult to conceive of any condi-

tion which could not be said "often" to have some effect outside of the state in which it obtains. Since, if a particular subject matter be held to be within the commerce power, the control of Congress over it is plenary, and exclusive if it desires to make it so, few things would remain within the control of the states if Congress chose to preempt the field.

d. The Commission's argument based on "the conservative tradition of federalism".

The Commission's argument here (Br., pp. 75 *et seq.*) apparently is that Congress did not by this Act preempt the field as completely as it might constitutionally have done under the commerce power. But, whatever the purpose, the argument that "the Act, and Section 11 (b) in particular, are in the conservative tradition of federalism" cannot be accepted.

The specifications of the Commission's contention are contained in footnote 42 (Br., pp. 75-76). They may tend to support the observation so far as some of the regulatory provisions of the Act are concerned, but they utterly fail to support it with respect to "Section 11 (b) in particular".

The only thing that the Commission can find to say about Section 11 (b) (1) is that one of the standards, (C), which govern the permissibility of retention of additional public utility systems requires that such additional systems shall not be so large as to impair, among other things, "the effectiveness of regulation". But that is only one of three standards, all of which must be met to qualify for retention an additional integrated system; the other two have no relation to state regulation. And even as to (C) its

terms, like the other provisions of Section 11 (b)(1), may, as was the case in this very proceeding, permit the retention of an interstate system where all of the difficulties of centering control of its utility operations in a single state obtain, while denying permission to retain several utilities, each a completely local utility and doing business in a single state which, of course, has complete power of regulation.

A far more important violation of "the conservative tradition of federalism", however, lies in the unquestionable fact that Section 11 (b)(1) effectively denies to the states any power to prescribe the rules governing who shall be permitted to own the securities of corporations subject to their laws. There was with respect to this subject no "no man's land" which required congressional intervention. Any state, in the absence of federal legislation, has the right to legislate that voting stock of corporations of its creation shall not be owned by foreign corporations., *Mannington* v. *Hocking Valley Ry. Co.*, 183 Fed. 133, 156, 157 (C. C. S. D. Ohio) and decisions of this Court cited therein. Different states may feel differently on this subject and due regard for the federal system would leave each state to make its own choice. Many a state may well feel that the influence of holding companies in voting the stock held by them in utility operating companies in favor of well-qualified directors, and assistance in financing and technical advice, is beneficent and on the whole promotes the successful operation of the utilities with corresponding benefit to the citizens of the state. Section 11 (b)(1) makes it impossible for them to adopt and follow that policy.

It may be an appropriate exercise of the federal principle for Congress to supplement state laws by prohibiting the use

of facilities of interstate commerce in such manner as to occasion abuses, as Congress has done in certain sections of this Act other than Section 11 (b)(1). But it is not "in the conservative tradition of federalism" to preempt control of ownership itself, which has been traditionally considered a matter for determination by the states.

II. THE FIFTH AMENDMENT.

The only parts of the Commission's argument under the due process clause of the Fifth Amendment which require reply are: (1) its attempt to distinguish the case of *Louisville Joint Stock Land Bank* v. *Radford*, 295 U. S. 555 and (2) its attempt to show that enforcement of the order will not in fact visit loss upon petitioner and its stockholders.

The attempt to distinguish the *Radford* case is upon the grounds (Br. p. 88) that the order in question does not take property from any person and give it to another, and that petitioner's security holders who now own interests in petitioner's subsidiaries indirectly through investment in petitioner will, on compliance with the order, hold those same investments in a different form or they will receive cash in full compensation for those investments.

As to the first ground, it was held that the Frazier-Lemke Act, which was an exercise of the bankruptcy power of the United States, could not deprive a mortgagee of rights which he had under state law; that "If the public

interest requires and permits the taking of property of individual mortgagees to relieve the necessities of individual mortgagors, resort must be had to proceedings by eminent domain." (p. 602) So here, if the "national public interest" demands that part of the property of North American be taken from it and transferred to debenture-holders and preferred stockholders when they have no present right to be paid off, the loss sustained by North American and its common stockholders must be compensated for in proceedings in eminent domain, just as in the *Radford* case the loss sustained by the mortgagee through the deprivation of his rights was required to be compensated for.*

As to the second asserted ground of distinction above stated, it is not correct to say that petitioner's stockholders will after enforcement of the order hold the same investments in a different form or will receive cash in full compensation for those investments. Entirely apart from the necessity of paying off over $100,000,000 of senior securities, either in cash or in securities in kind at present valuations comparable to the amounts of cash to which they would become entitled on maturity, the common stockholders cannot receive the same investment in any form because the cardinal element of the investment, the benefit of common management of diversified investments, is destroyed. (See our Main Brief, pp. 60-62). If, as the Commission argues (Br. p. 90), Congress concluded that the economic

*There is nothing in the later case of *Wright* v. *Vinton Branch*, 300 U. S. 440, upholding the second Frazier-Lemke Act which in the slightest degree impairs the authority of the *Radford* case. The opinion in the later case was written by the same justice and its ground was that the full substance of the property rights of which the first Act had deprived the mortgagee were preserved to him in the second Act.

advantages from the continuance of holding company ownership of securities of operating utility companies were not commensurate with the economic, social and political disadvantages, its constitutional course under the doctrine of the *Radford* case was to resort to condemnation so that, through taxation, the burden of such promotion of the public interest might be borne by the public.

Petitioner's common stockholders cannot receive full compensation for their investments because, among other things, of the enormous destruction of values which will inevitably attend forced dispositions of underlying securities to satisfy the legal claims of holders of petitioner's debentures and preferred stocks (our Main Brief pp. 64-65). Nothing in the Commission's brief presents any satisfactory explanation of how the claims of holders of something over $100,000,000 of these senior securities may be discharged without such sacrifices.

The Commission refers (Br., p. 91) to the reorganization machinery provided in Sections 11 (d) and 11 (e). But for any plan under those sections to be approved it must be found "fair and equitable". With respect to footnote 48 (Br., p. 92), since petitioner is amply solvent by every test, no plan which required debenture holders and preferred stockholders to take less than the dollars to which they are entitled, or securities of a value less than the face amount of their claims, would, we assume, be found "fair and equitable". Even in bankruptcy, if petitioner were insolvent, a plan which provided for less than full payment to them before anything went to common stockholders, in the absence of contribution in money or in money's worth on the latter's part, would be unfair under the rule of priorities enunciated in *Case* v. *Los Angeles Lumber Products Co., Ltd.*, 308 U. S. 106. The debenture holders

and preferred stockholders will not *voluntarily* take securities in place of dollars unless at values at which the securities can, in their opinion, be liquidated in sufficient volume to produce the dollars to which they are entitled. To require them to take less, in the interests of preserving more value for the common stockholders, would merely shift the deprivation of property without due process, which enforcement of Section 11 (b)(1) accomplishes, from the common stockholders to the debenture holders and preferred stockholders.

If the divestment is effected by a plan of reorganization which calls for exchanging underlying stocks for petitioner's debentures and preferred stocks, those underlying stocks must be valued for the purpose on a basis which will be tantamount to a forced liquidation at the expense of the common stockholders (see our Main Brief pp. 64-65). To point out that this basis of liquidation is "fair and equitable" as between the senior security holders on the one hand, and the common stockholders on the other hand, is to beg the question. The Commission and the courts may competently determine the relative fairness of the distribution involved in the plan as between the two groups of security holders, but they are powerless to preserve for the common stockholders the real and important factors of value in their stock which are destroyed by the break-up of the holding company (see our Main Brief pp. 61-63) and to prevent the further loss to the common stockholders which would follow from the forced liquidation, regardless of whether the senior security holders are paid off in cash or by distribution of underlying assets in kind (see our Main Brief pp. 64-65).

The point is not, as the Commission seems to suppose (Br. p. 95), whether the present market is probably lower or higher than it will be in future. The point is that the effect of Sections 11 (b), (d) and (e) is to force petitioner into a "reorganization", which is not a continuation of the enterprise, but is a break-up of the solvent going enterprise, with the inevitable losses to the common stockholders attendant upon that break-up.

The point is also not, as the Commission seems to suppose (footnote 45, Br. pp. 88-89), whether the estimated liquidating value of the common stock of petitioner on a certain date, as computed by a statistician, was greater or less than the market price of the common stock of petitioner on that date. Such computations involve so many variables and perforce involve so much guess work, that they are not relied upon even by speculators, as proved by the fact that the actual purchases and sales on the market, cited by the Commission, are at prices which bear no realistic relation to the computations. Many of petitioner's underlying assets are closely held and have no quoted market value. The market time lag between the date of such computations and the prospective date of realization, the uncertainties involved in the market reaction to the forced release of very large blocks of stocks and the uncertainties involved in the settlement of large unliquidated claims at once destroy the specious certainty of the figures cited by the Commission. Such computations are designed to appeal to speculators and do not in any way disprove the very real destruction of values and consequent losses which must be borne by petitioner's common stockholders as *investors* in a going enterprise lawfully established fifty-three years ago and lawfully conducted since then.

Finally must be considered the argument of the Commission (Br. pp. 95-96) that, although since 1935 peti-

tioner has been on notice that it must limit its operations in accordance with Section 11, it has not chosen to avail itself of the provisions of Section 11 (e), but has waited until ordered to comply with Section 11 (b)(1). The argument apparently is that petitioner has only itself to blame for any "market loss" resulting from not picking the highest market which occurred after 1935 and not selling or distributing its assets on that market. Petitioner has already shown that a conception of loss to the common stockholders, based merely on market conditions at the time of divestment, is inadequate and fallacious.

But, apart from that, certainly petitioner's management cannot fairly be criticised for not voluntarily incurring the destruction of values which compliance at any time would have entailed (see our Main Brief, pp. 64-65). As this Court, by Mr. Justice Cardozo, said in *Landis et al.* v. *The North American Company*, 299 U. S. 248, 256:

> "* * * In these Holding Company Act cases great issues are involved, great in their complexity, great in their significance. On the facts there will be need for the minute investigation of intercorporate relations, linked in a web of baffling intricacy. On the law there will be novel problems of far-reaching importance to the parties and the public."

A board of directors and a management which permitted the visitation upon stockholders of the losses which would be entailed by voluntary compliance with an act of such doubtful validity, without first appealing to the courts, might well be chargeable with default in their fiduciary obligations. *Pollock* v. *Farmers' Loan & Trust Co.*, 157 U. S. 429; *Hill* v. *Wallace*, 259 U. S. 44; *Ashwander* v. *Tennessee Valley Authority*, 297 U. S. 288, 319.

III. CONCLUSION.

The Commission's brief narrates many interstate activities which are imputed to petitioner, mostly without reference to the Record, and which are imputed to other holding companies. Many of these are of a kind that would be engaged in by any large investor.

It may be conceded, for present purposes, that many such activities may be subject to federal regulation. Indeed, as we have shown in our main brief (pp. 67-70) they have, so far as utility holding companies are concerned, been very completely subjected to federal regulation. This is accomplished by sections of the Act other than Section 11(b)(1). The heart of Section 11(b)(1) is not regulation of any interstate activity, but is divestment of ownership. It is *ownership per se* that is struck at as something that is subject to be ordered about, and shifted hither and thither, at the bidding of an agency of the federal government.

Congress made no finding that utility holding company ownership *per se* affects interstate commerce. There was a constitutional necessity of limiting the scope of Section 11(b)(1) to situations and activities such as have in fact a material effect on interstate commerce. This constitutional requirement is, we have seen, not met by limiting Section 11(b)(1) to "registered" holding companies—for holding companies were required to register if, for example, they had outstanding any security which, by use of the mails, had been distributed ten years before the enactment of the Act. Nor, as we have seen in our main brief (pp. 21-24), is such constitutional requirement met by the exemption possibility provided by Section 3(a).

In fact the Congress, although making clear that utility company ownership did not necessarily involve any material effect on interstate commerce, failed to reflect that fact by either limiting the scope of Section 11(b)(1) or limiting the applicability of Section 11(b)(1) to cases where such a finding would be made.

The Commission has accordingly made no finding that the different ownerships of which the petitioner is required to be divested each and all affect interstate commerce, nor could it possibly have made any such finding as regards them all. The court below was not requested to make any such finding. Indeed, no such finding could be made except upon facts so tenuous that, if they were held legally adequate, there would be demolished completely all effective demarcation between federal and state authority.

Our argument is not a technical one. Our complaint is that we are denied the opportunity to make that showing to which due process would entitle us. If Congress had required as a precedent to Section 11(b)(1) action a finding that the ownerships dealt with adversely affected interstate commerce, then there would have been the opportunity, which so far has been denied to petitioner, to show that its ownership of various securities and its practices in relation thereto have been such as not so to affect interstate commerce as to permit destruction of the enterprise through resort to the commerce clause, and indeed that its policies as owner have not been of the character that the Commission's brief insinuates with reference to the petitioner and charges with respect to other utility holding companies which may have adopted policies quite different from those of The North American Company.

None of these questions were at issue in the proceedings before the Commission herein, nor was the Commission willing to make them the subject of findings, this not being contemplated by the Act. This substantive defect is fatal from the standpoint of constitutionality, both under the interstate commerce clause and under the due process clause.

Respectfully submitted,

CHARLES E. HUGHES, JR.,
Counsel for Petitioner.

No. 1

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT

SUPPLEMENTAL BRIEF OF PETITIONER

Respondent herein, in its brief in the *Engineers Public Service Company* cases (Nos. 2 and 3, October Term, 1945) refers to recent decisions, and makes additional argument, which it deems pertinent to the issue under the Commerce Clause, in view of the fact that the briefs herein were filed two and one-half years ago (Resp. Br. in Nos. 2 and 3, pp. 5, 33-42).

The purpose of this supplemental brief is similarly to bring up to date the brief and reply brief of petitioners herein.

Discussion of the Commerce Clause cases decided by this Court since the briefs herein were written may start with the insurance cases, *United States* v. *Southeastern*

Underwriters Association, 322 U. S. 533, and *Polish National Alliance* v. *National Labor Relations Board*, 322 U. S. 643, decided the same day, one under the Sherman Anti-Trust Law and the other under the National Labor Relations Act.

The *Southeastern Underwriters* case was an appeal from a dismissal of an indictment which charged restraint of interstate trade and commerce by the fixing and maintaining of arbitrary and non-competitive premium rates on certain lines of insurance and monopolizing trade and commerce in such insurance. The indictment charged, among other things, that by continuing agreement and concert of action the conspirators not only fixed premiums, but employed boycotts and other types of coercion and intimidation to force non-member insurance companies to join the conspiracy, and to compel persons who needed insurance to buy only from members of the Association on terms fixed by the Association; persons who purchased insurance from non-members were threatened with boycotts and withdrawal of patronage. Non-members were cut off from opportunity to reinsure their risks, and agents who represented non-members were denied the right to represent member insurance companies. The conspiracies were effectively policed by local inspection and rating bureaus and by local boards of insurance agents. This "kind of interference with the free play of competitive forces" was, as the majority opinion said (322 U. S. p. 536), "exactly the type of conduct which the Sherman Act has outlawed for American 'trade or commerce' among the states". The demurrer was on the ground that because "the business of fire insurance is not commerce" appellees were not required to conform to the Sherman Act (*ibid.*).

The essential basis of this Court's decision was its interpretation of the decision of the District Court. The majority opinion carefully differentiates between the activities alleged in the indictment and the insurance contracts as such. It said (322 U. S. p. 536-537) that the District Court's opinion contained not the slightest intimation that the indictment was held defective "on a theory that it charged the appellees with restraining and monopolizing nothing but the making of local contracts"; that there was not even a demurrer on that ground. It pointed out (*id.* p. 548) that "for Constitutional purposes, certain activities of a business may be intrastate and therefore subject to state control, while other activities of the same business may be interstate and therefore subject to federal regulation". And the conclusion of the part of the opinion dealing with the constitutional question was as follows (*id.* p. 553):

> "No commercial enterprise of any kind which conducts its activities across state lines has been held to be *wholly** beyond the regulatory power of Congress under the Commerce Clause. We cannot make an exception of the business of insurance."

The Sherman Act falls within the first category of instances of Congressional regulation enumerated in *United States* v. *Darby*, 312 U. S. 100, 120-121 (quoted in our Main Brief pp. 12-13), where the Congress has left it to the courts to determine whether the activities sought to be regulated or proscribed affect interstate commerce. In the *Southeastern Underwriters* case, the court had before it activities which presumptively would have such effect, un-

*All italics in quotations in this brief are supplied unless otherwise noted.

less it were prepared to hold that *no* part of the activities of insurance companies, as distinguished from the mere writing of insurance contracts, could ever under any circumstances restrain interstate commerce. This Court was unwilling to establish a rule which would foreclose inquiry by the courts on that subject. But the case is far from holding that all aspects of the insurance business are "in commerce" or even "affect" commerce.

The distinction between what is "in" and what merely "affects" commerce is sharply brought out by this Court's decision in the other insurance case, *Polish National Alliance* v. *National Labor Relations Board*, *supra*, where regulation of labor practices of an insurance company was upheld under the National Labor Relations Act. That Act, this Court said, exerted the full constitutional power of Congress, and hence the judicial inquiry was whether constitutional limits had been exceeded (322 U. S., pp. 648, 650). The Labor Board had made two findings, one that the company was "engaged *in commerce* within the meaning of the Act", and the other that its practices "have a close, intimate, and substantial relation to trade, traffic and commerce among the several states and tend to lead to labor disputes burdening and obstructing commerce" (*id.* pp. 651, 646). The majority opinion in this Court grounded its decision that the regulation was valid solely on the latter finding. Its conclusion (*id.*, p. 648) was "that the Board was not unjustified in finding that the unfair labor practices found by it would *affect* commerce". The concurring opinion of a minority of the Court insisted that the regulation of petitioner's labor practices should not be placed upon the ground "that petitioner's insurance activities merely *affected* commerce in types of interstate business other than its own" (*id.*, p. 651). But it is obvious from the limited ground

upon which the majority rested its decision that it was unwilling to accept that view.

The recent insurance cases therefore tend strongly to confirm the premise of the argument in our main brief and reply brief that, contrary to respondent's contention, a public utility holding company's ownership of stocks, which is all that Section 11(b)(1) deals with, is not of itself commerce; and that an enactment proscribing such ownership of property may not be upheld as an exercise of the commerce power unless it falls within the rule that even things that are local, or not commerce, may still be reached by Congress if they so affect interstate commerce, or the exertion of the power of Congress over it, "as to make regulation of them *appropriate means* to the attaining of a *legitimate end*, the *effective execution of the granted power* to regulate interstate commerce" (*United States v. Wrightwood Dairy Co.*, 315 U. S. 110, 119).

The only argument, having even superficial appearance of foundation, upon which respondent based its contention that the ownership of public utility stocks by holding companies generally, and North American specifically, is itself commerce, is attempted identification of the holding company with the activities of such of its subsidiaries as are engaged in interstate commerce, in the case of North American about one-half thereof. Respondent grounds that contention on the theory that a holding company, and North American specifically, "controls its subsidiaries and that their acts are its acts" (Resp. Br. in this case, p. 27). We answered that contention in our reply brief, pp. 3-13, and particularly the argument that Sections 2(a)(7) and 2(a)(8), defining "holding company" and "subsidiary company" respectively, prescribe the "test of control". We showed that the test applied by those sections was not that of "control",

in the sense used by respondent, but included criteria, such for example as "controlling influence", which can be and has been found on facts which gave no indication that the acts of the subsidiary could legitimately be deemed those of the holding company. Among the cases discussed in that connection (*id.*, pp. 8-10)* was one, *Pacific Gas & Electric Co.* v. *Securities and Exchange Commission*, 127 F. (2d) 378 (C. C. A. 9), involving a company in the North American system, in which further judicial proceedings have been had since the briefs herein were written.

The petition which was denied in 127 F. (2d) 378 was one by the Pacific Gas & Electric Company to review an order of the Securities and Exchange Commission which denied the company's application for a declaration that it was not a subsidiary of North American. There was thereafter a rehearing by the Circuit Court of Appeals *en banc* (139 F. (2d) 298). The result was an affirmance of the order by an equally divided court. A writ of certiorari was granted by this Court, which affirmed, also by an equally divided court (323 U. S. 826). The only opinion in these subsequent proceedings is the dissenting opinion in the Circuit Court of Appeals. We call attention to it for its elaborate and valuable recital of the facts, as to which there was no dispute. Those facts clearly demonstrated absence of "control", in spite of which the company was held to be under a "controlling influence" of North American within the meaning of the Act, and hence a subsidiary. (See particularly 139 F. (2d) pp. 302-303, 306-307).

*The case of *American Gas & Electric Company* v. *Securities and Exchange Commission*, cited at p. 10 of the reply brief, has since been officially reported, the citation being 134 F. (2d) 633 (C. C. A., D. C.).

In the instant case the Circuit Court of Appeals found (R., Vol. X, 4001) that the business of North American "consists in acquiring and holding for investment stocks and other securities, principally in the electric utility field" and that "at no time has it engaged in the business of managing the operations of its public utility operating subsidiaries". That was consistent with the Commission's finding (R., Vol. I, 100-101, referred to in our Reply Br., p. 4) that "as nearly as can be determined from the record in this case, North American leaves operations and operational policy to the management of its subsidiaries".

In the *Polish National Alliance* case, *supra*, the minority concurring opinion itself recognizes (322 U. S. p. 652) that, in applying the doctrine permitting regulation of activities "not themselves interstate commerce, but merely 'affecting' such commerce" this Court "properly has been cautious, and has required *clear findings* before subjecting local business to paramount Federal regulation".

Under the Sherman Act the finding is made by the Court itself. Under the National Labor Relations Act the finding is made by the administrative agency, subject to review by the Court. Concededly Section 11(b)(1) of the Public Utility Holding Company Act falls within neither of these categories, because there is no provision for a finding by court or administrative body of any effect on interstate commerce resulting from the holding companies' stock ownerships. The only contention possible to support the validity of Section 11(b)(1) is that it falls within the third category of the *Darby* case where "Congress itself has said that a particular activity affects the commerce". We shall not repeat the argument against the soundness of that contention which we advance in our Main Brief, pp. 26-35, and our reply Brief, pp. 18-27. Even the most hopeful

reading of Section 1 of the Act will not disclose any finding —much less a "clear finding"—that ownership by holding companies of the securities of operating companies affects interstate commerce adversely or at all.

It was peculiarly necessary for the validity of legislation of this sort, which did not itself even purport to establish a "rule by which *commerce* is to be governed," that provision be made for a finding by some body, judicial or administrative, that such stock ownership on the part of the company sought to be subjected to the requirements of Section 11(b)(1) had the necessary effect upon interstate commerce. The figures presented by respondent itself (its brief in this case, p. 5) are that only 19.8% of the electric power production for December, 1941, was in interstate movement. Granted that the operations of an intrastate utility company may affect interstate commerce, as for example if it supplies current to interstate carriers, the existence of that fact would have to be found. And facts in addition to that would also have to be found before a conclusion could be justified that the ownership by a holding company of 10% of the stock of an operating company, whether intrastate or interstate, so affected interstate commerce.

In this general connection a new argument is advanced by respondent in its brief in the *Engineers Public Service Company* cases (Nos. 2 and 3), p. 36, based on the separability provision in Section 32 of the Act that

> "If any provision of this title or the application of such provision to any person or circumstances shall be held invalid, the remainder of the title and the application of such provision to persons or circum-

stances other than those as to which it is held invalid shall not be affected thereby."

The argument is (*id.* p. 35) that, even if it be assumed that under some circumstances some company might be subjected to Section 11 whose connection with interstate commerce was too remote to support constitutional power, the only result would be to render the Act invalid as applied to that particular company.

The argument is unsound. A statute which strikes indiscriminately at those who are beyond as well as those who are within the reach of federal power is invalid on its face. It is not permissible to construe it as if the Congress had inserted limiting words that actually are not there. (*United States* v. *Reese*, 92 U. S. 214, 221). The fact that the statute contains a separability clause in the exact language of Section 32 here in question does not change the rule. (*Hill* v. *Wallace*, 259 U. S. 44, 70; *Retirement Board* v. *Alton Railroad Company*, 295 U. S. 330, 362).

While the respondent did not in its brief in this case make a contention corresponding to that which it now advances in Nos. 2 and 3 under the separability provision of Section 32, it did make (p. 24) a related contention which it may seek in oral argument to correlate with Section 32. In connection with the effect of the exemption clause of Section 3(a), it relies on a "policy set forth in Section 1(c) of the Act" which it says is "the policy which the Commission is required to apply in considering exceptions to Section 3(a) exemptions".* The clause cited is:

> "* * * It is hereby declared to be the policy of this title, *in accordance with which policy all the provi-*

*For our argument on Section 3(a), see our main brief, pp. 21-24.

> *sions of this title shall be interpreted*, to meet the problems and eliminate the evils as enumerated in this section connected with public utility holding companies which are *engaged in interstate commerce or in activities which directly affect or burden interstate commerce;* * * *".
> (Italics the respondent's)

We pointed out in our reply brief (p. 6) that this general declaration in Section 1(c) did not limit the application of Section 11(b)(1) to only those public utility holding companies which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce. The provisions of Section 11(b)(1) are so explicit that, even if the above-quoted clause of the declaration stood alone, it could have no effect in limiting them.

We now add that the above-quoted clause, on which respondent relies, does not stand alone. Respondent omits to quote the final clause of Section 1(c) which immediately follows it and which reads:

> "and for the purpose of effectuating such policy to compel the simplification of public-utility holding-company systems and the elimination therefrom of properties detrimental to the proper functioning of such systems, and to provide as soon as practical for the elimination of public-utility holding companies except as otherwise expressly provided in this title."

That contains no qualification based on the relation of the holding companies to interstate commerce, and, since it immediately follows a clause which does the omission is clearly intentional. Its declared purpose to eliminate from holding company systems properties deemed detrimental,

whether or not for reasons related to their effect on interstate commerce, and the elimination of holding companies themselves "except as otherwise expressly provided in this *title*", is consistent with the terms of Section 11(b)(1). Obviously the preceding clause, on which respondent relies, relating to the elimination, not of public utility holding companies *per se*, but of "the evils" connected with those "which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce", refers to the regulatory provisions of the Act.

The recent authority chiefly relied on by respondent is *Borden Co.* v. *Borella*, No. 688, October Term, 1944, 89 L. Ed. 1240, a case under the Fair Labor Standards Act, in which porters, elevator operators and night watchmen in a building owned and operated by the Borden Company, which was admittedly engaged in interstate commerce, were held to be within the minimum wage and overtime provisions of that Act as "employees engaged in commerce or in the production of goods for commerce" within the statutory definition. But on the same day this Court in *10 East 40th Street Building, Inc.*, v. *Callus*, No. 820, 89 L. Ed. 1244, held the other way where the building in question was not owned and operated as the headquarters of an interstate-commerce business and predominantly occupied for its offices, but had a miscellaneous assortment of tenants, some engaged and some not engaged in interstate commerce; the fact that nearly half of both the rentable and rented area was occupied by manufacturing and other concerns engaged in the production of goods for interstate commerce was not deemed sufficient to bring the maintenance employees therein within the purview of the Fair Labor Standards Act.

It seems to us that, as between these decisions under the Fair Labor Standards Act, it is the *10 East 40th Street Building* case rather than the *Borden Company* case which is apposite to this one. We are here considering the validity of an attempt to bring petitioner within the reach of the commerce power solely because of its ownership of the stocks of other corporations and the incidental interstate communications which are normal to investors. The businesses of the corporations in the North American system were as miscellaneous, both with respect to their inherent character and their relation to interstate commerce, as were those of the tenants of 10 East 40th Street. They comprised electric utility companies, some interstate and some intrastate, gas utility companies, some interstate and some intrastate, and in addition companies engaged in steam and hot water heating, water supply, railroad, urban and interurban transportation, terminal warehousing, real estate, coal mining, ice manufacturing and distribution, trucking, parking lot and filling station operation, motor servicing, heavy appliance design and manufacture, amusement park operation, investment company, oil drilling and gasoline extracting (Resp. Br. in this case p. 13, citing R., Vol. I, 84). This Court said in the *10 East 40th Street Building* case (p. 1247) that

> "Renting office space in a building exclusively set aside for an unrestricted variety of office work spontaneously satisfies the common understanding of what is local business * * *".

So, we submit, the mere ownership of stocks in such a miscellany of enterprises (which may be, and often is, duplicated in the case of individuals of large and diverse interests) occasions an identical spontaneous reaction.

In our view, decisions under the Fair Labor Standards Act are helpful analogies on the constitutional question. It is true that the test under that Act is not in all respects co-extensive with the constitutional test. But both involve the difficult problem of drawing lines where there are no fixed points. *See Kirschbaum* v. *Wailing*, 316 U. S. 517, 523. And in both, the precise place at which the line should be drawn cannot be determined solely by logical deductions but must pay due regard to necessary accommodation between state and national authority. This Court said in the *10 East 40th Street Building* case (89 L. ed. p. 1248) that on all border-line factual situations involved under the Fair Labor Standards Act an argument can be made on either side and that the correct solution is "a question of degree". Almost the identical phrase was used by this Court with respect to the "great concepts of the Constitution such as 'interstate commerce'"; that, since "mathematical or rigid formulas" are not therein provided, "the criterion is necessarily one of degree" (*Santa Cruz Fruit Packing Co.* v. *National Labor Relations Board*, 303 U. S. 453, 467); and that "however difficult in application" differentiation "is essential to the maintenance of our constitutional system" (*id.* p. 466).

The complexity of modern economic enterprise is such that, if the distinction between local and interstate business were made to rest solely on logical pursuit of causative effects, there would be few activities which could not be drawn within the ambit of the statutory test or the constitutional test. But neither the statutory nor the constitutional concept is so applied by this Court. Realization that our government is not a unitary but a federal one infuses all of its opinions in commerce cases whether they relate to

statutory or constitutional interpretation. On the statutory question, see *McLeod* v. *Threlkeld*, 319 U. S. 491, holding that a cook employed to prepare and serve meals to maintenance-of-way employees of an interstate railroad, in pursuance of a contract between his employer and the railroad company, is not "engaged in commerce" within the meaning of the Fair Labor Standards Act, although recognizing (pp. 493-494) that the quoted phrase "covered every employee in the 'channels of interstate commerce', *Walling* v. *Jacksonville Paper Co.*, 317 U. S. 564 * * *". On the constitutional question, see the following passage of this Court's opinion in *Polish National Alliance* v. *National Labor Relations Board* (322 U. S. p. 650):

> "The interpenetrations of modern society have not wiped out state lines. It is not for us to make inroads upon our federal system either by indifference to its maintenance or excessive regard for the unifying forces of modern technology. Scholastic reasoning may prove that no activity is isolated within the boundaries of a single State, but that cannot justify absorption of legislative power by the United States over every activity. * * *"

No. 721

THE NORTH AMERICAN COMPANY

v.

SECURITIES AND EXCHANGE COMMISSION

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT

MEMORANDUM FOR THE SECURITIES AND EXCHANGE COMMISSION

The Solicitor General, on behalf of the Securities and Exchange Commission, joins in the petition of The North American Company that a writ of certiorari be issued to review the judgment of the United States Circuit Court of Appeals for the Second Circuit entered January 28, 1943.

1. The suit involves the constitutionality of Section 11 (b) (1) of the Public Utility Holding Company Act of 1935 (49 Stat. 803, herein referred to as the Act) as applied by the Commission to The North American Company in orders

dated April 14 and June 25, 1942. On petitions for review under Section 24 (a) of the Act, the Commission's orders were unanimously affirmed by the Circuit Court of Appeals for the Second Circuit.

As is indicated in Section 1 (c) of the Act, the integration (Section 11 (b) (1)) and corporate simplification (Section 11 (b) (2)) portions of the Act were considered by Congress as the most important provisions of the Act. The two clauses of Section 11 (b) are closely related and involve similar constitutional questions. There is thus a substantial public interest in an early determination of the constitutionality of a crucial provision of an Act designed to integrate and simplify a $15,000,000,000 industry.

There are presently pending in the Circuit Courts of Appeals two cases involving the constitutionality of Section 11 (b) (1) as well as certain questions of construction of that section which arose in the instant case; these cases are *Engineers Public Service Company* v. *S. E. C.*, in the Court of Appeals for the District of Columbia, No. 8394; and *United Gas Improvement Company* v. *S. E. C.*, in the Circuit Court of Appeals for the Third Circuit, Nos. 7888 and 8046. In addition, the following pending cases involve the constitutionality of the related Section 11 (b) (2): *Central and Southwest Utilities Company* v. *S. E. C.*, in the Court of Appeals for the Dis-

trict of Columbia, No. 8333; *American Power and Light Company* v. *S. E. C.* and *Electric Power and Light Company* v. *S. E. C.*, in the Circuit Courts of Appeals for the First Circuit, Nos. 3823 and 3824, respectively; *Commonwealth and Southern Corporation* v. *S. E. C.*, in the Circuit Court of Appeals for the Third Circuit, No. 8052, and *Todd* v. *S. E. C.*, in the Circuit Court of Appeals for the Sixth Circuit, No. 9348.

The Commission has pending before it more than twenty proceedings involving the application of Section 11 (b) (1) of the Act, and more than forty proceedings involving Section 11 (b) (2).

Because of this multiplicity of suits in the Circuit Courts of Appeals, the great number of Section 11 (b) proceedings pending before the Commission, and the public importance of the question, it is desirable that a writ of certiorari be granted in the instant case, and that the case be submitted for decision at this Term.

2. In order to clarify the problems raised by the petition, we believe it advisable to explain at this time the structure of the statute and the scope of the order involved in this case.

The Public Utility Holding Company Act of 1935 provides for the registration of interstate gas and electric utility holding companies. Registration is required of companies which directly (§§ 4 (a) (1)–4 (a) (5)) or through subsidiaries (§ 4 (a) (6)) engage in interstate activity. In-

trastate holding companies may apply for exemption (§§ 3 (a) (1) and (2)). Once a holding company is registered (and not exempted), the Act provides for the regulation of issuance of securities and various other transactions by the holding company and its subsidiaries. Section 11 provides machinery for the limitation of each system to a single geographically integrated system and for the simplification of any unduly complex structure.

The North American Company is one of the largest holding companies subject to this statute. North American controls companies whose assets are carried on their books at more than $2,300,000,000 (R. 85).[1] The system consists of eighty companies, operating chiefly electric and gas utility properties in seventeen states and the District of Columbia (R. 84). Properties of the system are scattered from Washington, D. C., to California, and from northern Michigan to southern Kansas and Missouri (Maps, R. 90, 91). North American is a New Jersey corporation with its principal place of business in New York City (R. 86). North American's interest in its subsidiaries is not merely that of an investor owning securities, as it states. North American controls

[1] However, not all of these companies are included in the consolidated balance sheet of North American and its subsidiaries, which shows assets of approximately $957,000,000 (R. 85).

its subsidiaries.[2] Indeed, control is the essence of the parent-subsidiary relationship under the statute (Sec. 2 (a) (7) and Sec. 2 (a) (8)). And it is clear that, at least with respect to its admitted subsidiaries, the control is actually exercised by North American. Further, in the light of the geographical location of the subsidiaries, the control from the principal office is exercised by means of the instrumentalities of interstate commerce.

The subsidiaries render electric service to more than 3,000,000 customers spread over an area of some 165,000 square miles with a population in excess of 12,000,000 (R. 85). The principal territories served are St. Louis, the District of Columbia, Milwaukee, Cleveland, Detroit, and extensive portions of Illinois, Iowa, Kansas, Missouri, and California. In addition, the North American system includes numerous gas properties and nonutilities including such varied businesses as railroads, coal mines, ice manufacturing, amusement park operation, oil drilling and gasoline extraction (R. 84).

The order of the Commission appealed from (R. 194) required The North American Company to sever its relationship with a number of companies by disposing of its ownership, control, and

[2] The term "control" is used broadly to include controlling influence of the kind mentioned in Sections 2 (a) (7) and 2 (a) (8) of the Act.

holdings of securities issued and properties owned, controlled, or operated by these companies. In substance, the order requires The North American Company to confine itself to the control of a single integrated public-utility electric system in the area of St. Louis and of certain related incidental businesses. It is this order which is contended to be beyond the power of Congress under the commerce clause and in violation of the due process clause. The court below was right, we believe, in rejecting these contentions.

A. Commerce clause

The decision of this Court in *Electric Bond and Share Company* v. *S. E. C.*, 303 U. S. 419, although confined to the provisions of Sections 4 (a) and 5 of the Act, established two propositions relevant to this case: (1) that a corporation is brought within the reach of Congress under the commerce clause when it engages in the transmission of electric energy or gas across state lines, or in rendering to subsidiaries through the use or instrumentality of interstate commerce expert and financial service, or in the sale of securities in interstate commerce; and (2) that whether such activities are carried out by a holding company directly or whether they are carried out by subsidiary companies controlled by the holding company, a holding company is still within the reach of Congress under the commerce clause, for "the constitutional authority confided to Con-

gress could not be maintained if it were deemed to depend upon the mere modal arrangements of those seeking to escape its exercise" (p. 440). North American, as its petition admits, has directly and through its subsidiaries engaged in the type of activities mentioned in the *Bond and Share* case. Since, as has been stated, control over utility subsidiaries is the essential characteristic of a holding company, under the *Bond and Share* decision the activities of the holding company and its subsidiaries are to be regarded for constitutional purposes as what in fact they are—the activities of a single enterprise.

The relation of Section 11 to interstate commerce is direct. Section 11 (b) (1) ordering the limitation of holding company systems to a single system applies only to registered holding companies. As shown above, only holding companies engaged in interstate commerce are required to be registered. Furthermore, Sections 3 (a) (1) and 3 (a) (2) of the Act provide a means by which companies predominantly intrastate in character may obtain exemption from the Act. North American has not sought to obtain such an exemption and, of course, could not. Having registered and not having sought exemption from any provision of the Act, the Commission was entitled to assume, without express findings, that North American was a holding company interstate in nature and engaged in interstate commerce. Congress was entitled to make a similar assumption

as to all holding companies which register and cannot obtain any exemption from registration. It could, therefore, properly apply Section 11 to North American as a "registered holding company" confident that registration was evidence of the interstate character of the company.

North American argues, however, that the particular type of regulation adopted by Section 11 (b) (1) is not reasonably related to the Congressional power over interstate commerce. The answer lies in the determination whether the continued control by a holding company over subsidiary corporations operating in distant areas so affects interstate commerce that Congress may order such control to be terminated or limited in scope. The Commission, of course, made no such finding. Such a finding was unnecessary and would have been improper since Congress itself had made its own findings.

The constitutionality of dispensing with administrative or judicial findings in specific cases where Congress has found that the activities regulated have a direct effect on interstate commerce is well established. *United States* v. *Darby*, 312 U. S. 100, 120–121. The enactment of Section 11 (b) (1) is itself a finding of Congress that the activity regulated affects interstate commerce and that the remedy proposed is one deemed by Congress appropriate to cure the evils which affect interstate commerce. No more specific finding by Congress was necessary. *Wickard* v. *Filburn*, No.

59, this Term, decided November 9, 1942. Nevertheless, Congress spelled out its findings concerning public utility holding companies at some length.

The Congressional findings are set forth in Section 1 of the Act. The Congress found that it was necessary to control public utility holding companies because it found that such companies and their subsidiary companies were affected with a national public interest since, among other things, "their practices in respect of and control over subsidiary companies often materially affect the interstate commerce in which those companies engage" and the extension of "their activities" over "many States * * * make[s] difficult, if not impossible, effective State regulation of public-utility companies." Section 1 further declares that the national public interest is, or may be, adversely affected "when the growth and extension of holding companies bears no relation to economy of management and operation or the integration and coordination of related operating properties."

The Congressional findings expressly incorporate by reference the facts found in a comprehensive 9-year study of the industry set forth in the ninety-odd volumes of the reports of the Federal Trade Commission and in the six-volume Splawn Report of the Committee on Interstate and Foreign Commerce of the House of Representatives.

512247 42 - 2

The evils set forth in the reports before Congress included inflationary write-ups on the books of operating companies complicating the regulation of rates; acquisitions of properties at grossly inflated prices; financing expansion by issuing excessive amounts of senior securities and insufficient common stock capital, resulting in the abuses of excessive leverage and inequitable distribution of voting power; unduly favorable treatment, in the sale of such securities, to investment bankers, frequently affiliated; preoccupation of management with financial maneuvering rather than efficient production and distribution of gas and electricity and the meeting of local needs; extraction of excessive dividends to maintain top-heavy structures of holding companies, often leading to improper accounting practices, and coupled with exorbitant "service charges"; and, finally, concentration of economic power too large for local regulation and presenting dangers of monopolistic control. In Section 1 (c) of the Act Congress declared it "to be the policy of this title, * * * to meet the problems and eliminate the evils as enumerated in this section, connected with public utility holding companies which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce; and for the purpose of effectuating such policy to compel the simplification of public-utility holding company systems and the elimination therefrom of properties detrimental to the proper functioning of

such systems, and to provide as soon as practicable for the elimination of public-utility holding companies except as otherwise expressly provided in this title."

The elimination of public utility holding companies, except within defined limits, was thus found by Congress to be the appropriate means of striking at these evils. Section 11 (b) (1) insofar as it requires divorcement of holding company control over more than a single integrated public utility system (with exceptions not here pertinent) was one means of dealing with the evils of the holding company-operating company relationship; Section 11 (b) (2), requiring the elimination of holding companies insofar as they constitute unnecessary complexities in the holding company systems, is another means to the same end.

The Congress found that control over subsidiaries by the holding company was exercised by means of interstate commerce and that the evils resulting were initiated and perpetuated by means of instrumentalities of interstate commerce. It further found that these evils affected the nature and volume of the interstate commerce in which the subsidiaries engaged. The studies before it convinced Congress that control by the holding company over its subsidiaries was the root of the evil and it therefore declared that the means to remedy the evil was the limitation of the permissible scope of the holding company device.

Section 11 (b) (1), ordering divestment of properties unrelated to a single integrated public utility system, is not only reasonably related to the desired end, but is, in fact, essential to its accomplishment. The divestment of scattered and unrelated properties will achieve the desired objective of concentrating the attention of management on the efficient operation of "related operating properties" in a single area or region unhampered by absentee control and by problems unrelated to its proper functions. It seems clear from these findings that the particular activity regulated—control through the instrumentality of interstate commerce of a nation-wide holding company system—is within the reach of the federal power and that the type of regulation selected is reasonably designed to cope with the evils arising from the regulated activity.[3]

B. Due process

It is argued that enforcement of the Commission's order would deprive petitioner of important property rights. Although there is no basis for this assumption, nevertheless it has no

[3] There is talk of "destruction of values." It is important to note, however, that compliance with such orders is normally made by reorganization plans of the type which were before this Court in *S. E. C. v. Chenery Corp.*, No. 254, this Term, decided February 1, 1943. All such reorganizations must be made in accordance with a plan which is required to be "fair and equitable" and to be passed upon in this respect by the Commission, and normally by federal District and Circuit Courts of Appeals.

relevance to the question involved, which is whether the statute and order are unreasonable, arbitrary, and capricious. It seems clear that the statute is not subject to attack on this ground. When Congress found that substantial evils affecting interstate commerce resulted from control over far-flung empires by public utility holding companies (Section 1 of the Act), it was not powerless to adopt an appropriate remedy even though the alteration of "vested" property rights might be required. *Continental Ins. Co.* v. *U. S.*, 259 U. S. 156. The remedy of ordering divestment is in fact a familiar one under the Clayton Act, *F. T. C.* v. *Western Meat Co.*, 272 U. S. 554; under the Commodities Clause of the Hepburn Act, *U. S.* v. *Lehigh Valley R. Co.*, 220 U. S. 257; *U. S.* v. *Delaware L. & W. R. Co.*, 238 U. S. 516; and under the Packers and Stockyards Act, *Stafford* v. *Wallace*, 258 U. S. 495.

CONCLUSION

For the foregoing reasons, we believe that the decision below is right, but that the importance of the case makes early review by this Court desirable in the public interest.

Respectfully submitted,

CHARLES FAHY,
Solicitor General.

JOHN F. DAVIS,
Solicitor,
Securities and Exchange Commission.

FEBRUARY 1943.

APPENDIX

The Public Utility Act of 1935, 49 Stat. 803, 15 U. S. C., sec. 79 *et seq.*, provides in pertinent part as follows:

TITLE I—CONTROL OF PUBLIC-UTILITY HOLDING COMPANIES

NECESSITY FOR CONTROL OF HOLDING COMPANIES

SECTION 1. (a) Public-utility holding companies and their subsidiary companies are affected with a national public interest in that, among other things, (1) their securities are widely marketed and distributed by means of the mails and instrumentalities of interstate commerce and are sold to a large number of investors in different States; (2) their service, sales, construction, and other contracts and arrangements are often made and performed by means of the mails and instrumentalities of interstate commerce; (3) their subsidiary public-utility companies often sell and transport gas and electric energy by the use of means and instrumentalities of interstate commerce; (4) their practices in respect of and control over subsidiary companies often materially affect the interstate commerce in which those companies engage; (5) their activities extending over many States are not susceptible of effective control by any State and make difficult, if not impossible, effective State regulation of public-utility companies.

(b) Upon the basis of facts disclosed by the reports of the Federal Trade Commis-

sion made pursuant to S. Res. 83 (Seventieth Congress, first session), the reports of the Committee on Interstate and Foreign Commerce, House of Representatives, made pursuant to H. Res. 59 (Seventy-second Congress, first session) and H. J. Res. 572 (Seventy-second Congress, second session) and otherwise disclosed and ascertained, it is hereby declared that the national public interest, the interest of investors in the securities of holding companies and their subsidiary companies and affiliates, and the interest of consumers of electric energy and natural and manufactured gas, are or may be adversely affected—

(1) when such investors cannot obtain the information necessary to appraise the financial position or earning power of the issuers, because of the absence of uniform standard accounts; when such securities are issued without the approval or consent of the States having jurisdiction over subsidiary public-utility companies; when such securities are issued upon the basis of fictitious or unsound asset values having no fair relation to the sums invested in or the earning capacity of the properties and upon the basis of paper profits from intercompany transactions, or in anticipation of excessive revenues from subsidiary public-utility companies; when such securities are issued by a subsidiary public-utility company under circumstances which subject such company to the burden of supporting an overcapitalized structure and tend to prevent voluntary rate reductions;

(2) when subsidiary public-utility companies are subjected to excessive charges for services, construction work, equipment, and materials, or enter into transactions in

which evils result from an absence of arm's-length bargaining or from restraint of free and independent competition; when service, management, construction, and other contracts involve the allocation of charges among subsidiary public-utility companies in different States so as to present problems of regulation which cannot be dealt with effectively by the States;

(3) when control of subsidiary public-utility companies affects the accounting practices and rate, dividend, and other policies of such companies so as to complicate and obstruct State regulation of such companies, or when control of such companies is exerted through disproportionately small investment;

(4) when the growth and extension of holding companies bears no relation to economy of management and operation or the integration and coordination of related operating properties; or

(5) when in any other respect there is lack of economy of management and operation of public-utility companies or lack of efficiency and adequacy of service rendered by such companies, or lack of effective public regulation, or lack of economies in the raising of capital.

(c) When abuses of the character above enumerated become persistent and widespread the holding company becomes an agency which, unless regulated, is injurious to investors, consumers, and the general public; and it is hereby declared to be the policy of this title, in accordance with which policy all the provisions of this title shall be interpreted, to meet the problems and eliminate the evils as enumerated in this section, connected with public-utility holding companies which are engaged in

interstate commerce or in activities which directly affect or burden interstate commerce; and for the purpose of effectuating such policy to compel the simplification of public-utility holding-company systems and the elimination therefrom of properties detrimental to the proper functioning of such systems, and to provide as soon as practicable for the elimination of public-utility holding companies except as otherwise expressly provided in this title.

DEFINITIONS

SEC. 2. (a) When used in this title, unless the context otherwise requires—

* * * * *

(7) "Holding company" means—

(A) any company which directly or indirectly owns, controls, or holds with power to vote, 10 per centum or more of the outstanding voting securities of a public-utility company or of a company which is a holding company by virtue of this clause or clause (B), unless the Commission, as hereinafter provided, by order declares such company not to be a holding company; and

(B) any person which the Commission determines, after notice and opportunity for hearing, directly or indirectly to exercise (either alone or pursuant to an arrangement or understanding with one or more other persons) such a controlling influence over the management or policies of any public-utility or holding company as to make it necessary or appropriate in the public interest or for the protection of investors or consumers that such person be subject to the obligations, duties, and liabilities imposed in this title upon holding companies.

The Commission, upon application, shall by order declare that a company is not a holding company under clause (A) if the Commission finds that the applicant (i) does not, either alone or pursuant to an arrangement or understanding with one or more other persons, directly or indirectly control a public-utility or holding company either through one or more intermediary persons or by any means or device whatsoever, (ii) is not an intermediary company through which such control is exercised, and (iii) does not, directly or indirectly, exercise (either alone or pursuant to an arrangement or understanding with one or more other persons) such a controlling influence over the management or policies of any public-utility or holding company as to make it necessary or appropriate in the public interest or for the protection of investors or consumers that the applicant be subject to the obligations, duties, and liabilities imposed in this title upon holding companies. The filing of an application hereunder in good faith by a company other than a registered holding company shall exempt the applicant from any obligation, duty, or liability imposed in this title upon the applicant as a holding company, until the Commission has acted upon such application. Within a reasonable time after the receipt of any application hereunder, the Commission shall enter an order granting, or, after notice and opportunity for hearing, denying or otherwise disposing of, such application. As a condition to the entry of any order granting such application and as a part of any such order, the Commission may require the applicant to apply periodically for a renewal of such order

and to do or refrain from doing such acts or things, in respect of exercise of voting rights, control over proxies, designation of officers and directors, existence of interlocking officers, directors and other relationships, and submission of periodic or special reports regarding affiliations or intercorporate relationships of the applicant, as the Commission may find necessary or appropriate to ensure that in the case of the applicant the conditions specified in clauses (i), (ii), and (iii) are satisfied during the period for which such order is effective. The Commission, upon its own motion or upon application of the company affected, shall revoke the order declaring such company not to be a holding company whenever in its judgment any condition specified in clause (i), (ii), or (iii) is not satisfied in the case of such company, or modify the terms of such order whenever in its judgment such modification is necessary to ensure that in the case of such company the conditions specified in clauses (i), (ii), and (iii) are satisfied during the period for which such order is effective. Any action of the Commission under the preceding sentence shall be by order.

* * * * *

SEC. 11.

* * * * *

(b) It shall be the duty of the Commission, as soon as practicable after January 1, 1938:

(1) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such action as the Commission shall find necessary to limit

the operations of the holding-company system of which such company is a part to a single integrated public-utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public-utility system: *Provided, however,* That the Commission shall permit a registered holding company to continue to control one or more additional integrated public-utility systems, if, after notice and opportunity for hearing, it finds that—

(A) Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system;

(B) All of such additional systems are located in one State, or in adjoining States, or in a contiguous foreign country; and

(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation.

The Commission may permit as reasonably incidental, or economically necessary or appropriate to the operations of one or more integrated public-utility systems the retention of an interest in any business (other than the business of a public-utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems.

(2) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such steps as the Commission shall find necessary to ensure that the corporate structure or continued existence of any company in the holding-company system does not unduly or unnecessarily complicate the structure, or unfairly or inequitably distribute voting power among security holders, of such holding-company system. In carrying out the provisions of this paragraph the Commission shall require each registered holding company (and any company in the same holding-company system with such holding company) to take such action as the Commission shall find necessary in order that such holding company shall cease to be a holding company with respect to each of its subsidiary companies which itself has a subsidiary company which is a holding company. Except for the purpose of fairly and equitably distributing voting power among the security holders of such company, nothing in this paragraph shall authorize the Commission to require any change in the corporate structure or existence of any company which is not a holding company, or of any company whose principal business is that of a public-utility company.

The Commission may by order revoke or modify any order previously made under this subsection, if, after notice and opportunity for hearing, it finds that the conditions upon which the order was predicated do not exist. Any order made under this subsection shall be subject to judicial review as provided in section 24.

5. Impairment of state regula[illegible]	63

Argument—Continued.
I Section 11 (b)—Continued. Page
C. Congress has power under the commerce clause to regulate registered holding companies, by elimination or appropriate limitation as provided in Section 11 (b) 74
II. Section 11 (b) (1) does not violate the Fifth Amendment 86
A. Section 11 (b) (1) does not violate due process because of its effect on values 87
B. 11 (b) (1) is an appropriate remedy for the evils existing in public utility holding companies despite the application of other remedies for some of the same evils 96
C. The procedure provided in Section 11 does not violate due process 99

In the Supreme Court of the United States

OCTOBER TERM, 1942

No. 721

THE NORTH AMERICAN COMPANY, PETITIONER

v.

SECURITIES AND EXCHANGE COMMISSION

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT

BRIEF FOR THE SECURITIES AND EXCHANGE COMMISSION

OPINIONS BELOW

The opinion of the Circuit Court of Appeals for the Second Circuit is reported in 133 F. (2d) 148. The Findings and Opinions of the Commission (1 R. 73–192) are published in Holding Company Act Release Nos. 3405 and 3629 but are not yet officially reported.

JURISDICTION

The decree of the Circuit Court of Appeals for the Second Circuit was entered on January 28, 1943. The petition for a writ of certiorari was granted March 1, 1943. The jurisdiction of this

Court is invoked under Section 240 (a) of the Judicial Code as amended by the Act of February 13, 1925, made applicable by Section 24 (a) of the Public Utility Holding Company Act of 1935.

QUESTIONS PRESENTED

1. Is Section 11 (b) of the Public Utility Holding Company Act within the power of Congress to regulate commerce among the several states?

2. Does Section 11 (b) of the Act as applied by the Commission to the petitioner violate the due process clause of the Fifth Amendment?

STATUTE INVOLVED

The statute involved is the Public Utility Holding Company Act of 1935 (Act of August 26, 1935, c. 687, 49 Stat. 803). The relevant provisions of Sections 1, 2, 3, 4, and 11 of the statute are set forth in Appendix A, *infra,* pp. 103–115.

Broadly speaking, the Act provides for the regulation of electric and gas utility holding company systems. Its major provisions are of three types:

1. A requirement of registration of public utility holding companies which are engaged in interstate commerce or use the mails;

2. Substantive regulations of registered holding companies with respect to such matters as the issuance of securities, the sale and acquisition of assets, the payment of dividends, etc.; and

3. Corporate simplification and integration provisions as contained in Section 11 of the Act.

It is the latter provisions which are before the Court in the present case.

STATEMENT

A. BACKGROUND OF THE STATUTE

Control of the electric and gas utility industry as it affects our national economy has been the subject of Congressional concern for many years.

In December, 1924, there was introduced in the United States Senate (68th Congress) Senate Resolution 286 charging General Electric Company with exercising undue control over the electric power industry, and shortly thereafter the Senate adopted Senate Resolution 329 (68th Congress, 2d Session) directing the Federal Trade Commission to investigate to what extent and by what means the General Electric Company or its security holders "* * * monopolize or control the production, generation or transmission of electric energy or power."[1]

In 1928 the Senate directed the Federal Trade Commission to conduct an investigation of electric and gas utility and holding companies (S. Res. 83, 70th Cong., 1st sess.). The resulting periodic reports made to the Senate by the Federal Trade

[1] Shortly thereafter General Electric distributed to its stockholders its interest in securities of the Electric Bond and Share Company, the utility holding company which was before this Court in *Electric Bond & Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419.

Commission cover 101 volumes representing an exhaustive investigation of the utility industry.[2]

The House of Representatives also conducted an investigation in this field. Pursuant to H. Res. 59, 72d Cong., 1st sess., and H. J. Res. 572, 72d Cong., 2d sess., a report on the Relation of Holding Companies to Operating Companies in Power and Gas Affecting Control (popularly known as the Splawn Report) was made by the House Committee on Interstate and Foreign Commerce. This report consists of six parts, reported during the years 1933 to 1935.

In order to coordinate national policy on utility problems, the President of the United States in 1934 appointed the National Power Policy Committee, with membership consisting of representatives of governmental departments concerned with power problems. The report of this committee on Public Utility Holding Companies was submitted by the President to Congress on March 12, 1935 (House Document No. 137, 74th Cong., 1st sess.).

The reports of the Federal Trade Commission, the Splawn Report, and the Report of the National Power Policy Committee all concluded that the utility holding company was a highly deleteri-

[2] This has been called "the most thoroughgoing investigation of an American industry that has ever appeared." Barnes, *The Economics of Public Utility Regulation* (1942), p. 71. The reports, to which frequent references will be made, are cited "*Utility Corporations*, Part—."

ous device, peculiarly susceptible of abuses, and having a harmful effect on the economy of the nation.[3] They traced the development of the holding company from its beginnings, when Electric Bond and Share Company and United Gas Improvement Company were organized by manufacturers of utility equipment to find a market for their product,[4] to 1935, by which time holding companies had grown into enormous, often multi-billion dollar enterprises, 15 of them controlling the generation of 80% of the electricity generated by private utility companies in the United States.[5] Similarly, in the gas utility industry, by 1932, 11 holding company systems controlled 80% of the total mileage of natural gas pipelines upon which the gas fields are almost completely dependent for the marketing of their product.[6]

The figures of the Federal Power Commission show that 19.8% of the electric power production for December 1941, or 3 billion kilowatt-hours, was in interstate movement. Federal Power Commission, "Production and Utilization of Electric Energy in the United States," January 23, 1942. The Federal Trade Commission found that

[6] Report of National Power Policy Committee to the President, *supra*, n. 3.

holding companies controlled 98.5% of the electric energy transmitted in interstate commerce. *Utility Corporations*, Part 72–A, p. 43, Table 13. In the interstate movement of natural gas the holding companies are also dominant. In 1930 the Federal Trade Commission found that holding companies were responsible for 79.5% of the interstate flow. *Id.* at p. 50, Table 16.

A dominant characteristic of holding companies was found to be the concentration of management of the nation's utilities in a few financial centers. We are attaching as Exhibit B to this brief a chart showing the approximate dollar amount of consolidated assets of the 20 largest holding company systems, the location of their general headquarters, the number of utility subsidiaries of each, the number of states where those subsidiaries operate, and both the maximum and the average distance of the system headquarters to the subsidiaries. These 20 largest systems have combined assets of approximately $15,300,000,000 out of a total of some $16,000,000,000 of assets in the 53 holding company systems registered with the Commission under the Act.[7] In the light of information of this nature, the reports pointed out that the typical holding company system was a huge interstate enterprise

[7] "Registered Public Utility Holding Companies, August 15, 1942," Report of Public Utilities Division, Securities and Exchange Commission.

generally controlled from financial centers remote from the utility properties.

These were the systems which the Federal Trade Commission, the Splawn Report, and the National Power Policy Committee all agreed must no longer be permitted to dominate a large segment of our national economy, to the detriment of a nationwide group of investors and both industrial and residential consumers.

The President's message to the Congress, transmitting the report of the National Power Policy Committee, said:

> We do not seek to prevent the legitimate diversification of investment in operating utility companies by legitimate investment companies. But the holding company in the past has confused the function of control and management with that of investment and in consequence has more frequently than not failed in both functions. Possibly some holding companies may be able to divest themselves of the control of their present subsidiaries and become investment trusts. But an investment company ceases to be an investment company when it embarks into business and management. Investment judgment requires the judicial appraisal of other people's management.
>
> * * * * *
>
> But where the utility holding company does not perform a demonstrably useful and necessary function in the operating

industry and is used simply as a means of financial control, it is idle to talk of the continuation of holding companies on the assumption that regulation can protect the public against them. Regulation has small chance of ultimate success against the kind of concentrated wealth and economic power which holding companies have shown the ability to acquire in the utility field. No Government effort can be expected to carry out effective, continuous, and intricate regulation of the kind of private empires within the Nation which the holding-company device has proved capable of creating.

Except where it is absolutely necessary to the continued functioning of a geographically integrated operating utility system, the utility holding company with its present powers must go. If we could remake our financial history in the light of experience, certainly we would have none of this holding-company business. It is a device which does not belong to our American traditions of law and business. It is only a comparatively late innovation. It dates definitely from the same unfortunate period which marked the beginnings of a host of other laxities in our corporate law which have brought us to our present disgraceful condition of competitive charter-mongering between our States. And it offers too well-demonstrated temptation to and facility for abuse to be tolerated as a recognized business institution. That temptation and that

facility, are inherent in its very nature. It is a corporate invention which can give a few corporate insiders unwarranted and intolerable powers over other people's money. In its destruction of local control and its substitution of absentee management, it has built up in the public-utility field what has justly been called a system of private socialism which is inimical to the welfare of a free people.

Most of us agree that we should take the control and the benefits of the essentially local operating utility industry out of a few financial centers and give back that control and those benefits to the localities which produce the business and create the wealth. We can properly favor economically independent business, which stands on its own feet and diffuses power and responsibility among the many, and frowns upon those holding companies which, through interlocking directorates and other devices, have given tyrannical power and exclusive opportunity to a favored few. It is time to make an effort to reverse that process of the concentration of power which has made most American citizens, once traditionally independent owners of their own businesses, helplessly dependent for their daily bread upon the favor of a very few, who, by devices such as holding companies, have taken for themselves unwarranted economic power. I am against private socialism of concentrated private power as thoroughly as I am against governmental socialism.

> The one is equally as dangerous as the other; and destruction of private socialism is utterly essential to avoid governmental socialism. (S. Rep. 621, 74th Cong., 1st sess., pp. 2 and 3.)

Upon receipt of this message, bills to carry out its recommendations were introduced in both the House and Senate. These bills provided for the elimination of holding companies in five years if they could not demonstrate their usefulness to the operating companies. After extensive hearings in both the House and Senate divergent bills were reported out. The Senate bill required complete elimination of holding companies except in situations where the Federal Power Commission should issue a certificate finding that the continuance of a holding company was necessary (S. 2796, 74th Cong., June 13, 1935); while the House bill directed the Securities and Exchange Commission to limit each holding company system to a single integrated public utility system "except that if the Commission finds that it is not necessary in the public interest to so limit the operations of such holding company system, the order of the Commission shall require such company to take only such action * * * as the Commission finds necessary to limit such operations to such number of integrated public utility systems as it finds may be included in such holding company system consistently with the public interest." (S. 2796; House

Rep. No. 1318, 74th Cong., 1st sess., June 24, 1935.)

The bills were passed in each house in approximately the forms in which they were introduced. Conferees of the House and Senate worked out a compromise bill which was enacted as the Public Utility Holding Company Act of 1935, which in Section 11 (b) (1) limits each holding company to a single integrated system, related other businesses, and additional systems in certain narrow circumstances; and in Section 11 (b) (2) requires the simplication of such systems.

B. THE PRESENT PROCEEDINGS

The proceedings before the Commission were instituted by a Notice of and Order for Hearing under Section 11 (b) (1) of the Act, dated March 8, 1940 (R. 1). Hearings were commenced on June 21, 1940, before an examiner appointed by the Commission and were closed on April 15, 1941. On April 14, 1942, the Commission issued its Findings and Opinion (1 R. 73–192) and its Order (1 R. 194–204).

1. THE NORTH AMERICAN SYSTEM

North American controls companies whose assets are carried on their books at more than $2,300,000,000 (1 R. 84–86). Briefly, the North American system consists of eighty companies, operating chiefly electric and gas utility properties in seventeen states and the District of Columbia,

from Washington, D. C., to California, and from northern Michigan to southern Kansas and Missouri. Electric service alone is rendered to more than 3,000,000 customers spread over an area of some 165,000 square miles with a population in excess of 12,000,000. The principal territories served are St. Louis, the District of Columbia, Milwaukee, Cleveland, Detroit,[8] and extensive portions of Illinois, Iowa, Kansas, Missouri, and California. (*Ibid.*) A map showing the location of the electric service territories of the system is attached to this brief as Appendix C, *infra*; p. 118.

Gas Service is rendered by North American system companies in the states of Iowa, Missouri, Nebraska, Minnesota, Illinois, Kansas, Wisconsin, Michigan, and California. Appendix D, *infra* p. 119, is a map showing the location of gas operations of the system.

Appendix E, *infra* p. 120, is a map showing the air-line distances of various focal points in the territories served from the central offices of North American in New York City.

North American's relationship to these vast enterprises has not been solely that "of a large investor seeking to promote the sound development of his investment" (Pet. Br. 8). North

[8] Petitioner, since the institution of these proceedings, disposed of substantially its entire holdings of Detroit Edison by declaring common stock dividends payable in such stock, cash income being used to retire a portion of petitioner's indebtedness. *North American Company*, Holding Company Act Release No. 4056 (1943).

American has *control* over these scattered enterprises. As to only two of its subsidiaries, the Detroit Edison Company and Pacific Gas & Electric Company, was a claim raised that they were not controlled by or subject to a controlling influence of petitioner. After hearings in exemption proceedings the Commission rejected both claims and on appeal its determinations were sustained.[9]

The system companies are also engaged in the following businesses, in some cases a company being engaged in more than one business: holding company, natural gas production, natural gas transmission, steam and hot water heating, water supply, railroad, urban and interurban transportation, terminal and warehousing, real estate, coal mining, ice manufacturing and distribution, trucking, parking lot and filling station operation, meter servicing, heavy appliance design and manufacture, amusement park operation, investment company, oil drilling and gasoline extracting (1 R. 84).

The offices of North American are located at 60 Broadway, New York City. It has more than 58,000 common stockholders residing in every state of the Union (Pet. Br. p. 66). Of its board of directors of 12 persons nine are officers of North

[9] See *Detroit Edison Co.* v. *Securities & Exchange Commission*, 119 F. (2d) 730 (C. C. A. 6), certiorari denied, 314 U. S. 618; *Pacific Gas & Electric Company* v. *Securities & Exchange Commission*, 127 F. (2d) 378 (C. C. A. 9), petition for rehearing granted June 6, 1942.

American or of one or more of its subsidiaries (9 R. 3314–3323).

2. THE COMMISSION'S ORDER

In the administrative proceedings petitioner urged that it should be permitted to retain its holdings in and around St. Louis, Cleveland, and Milwaukee (each of which the Commission found to be an integrated system, the first and third being interstate systems). In the face of repeated refusals by petitioner to select a "single" system, the Commission designated the St. Louis properties as such and found that the Cleveland and Milwaukee properties did not meet the standards in the proviso to Section 11 (b) (1) for retention with the St. Louis properties as "additional" systems.[10]

---

[10] Petitioner states (Pet. Br. 4) that "the order of June 25, 1942, refused permission to the petitioner to choose for itself the integrated public utility system which it might retain." The Act places the responsibility for the limitation of holding company systems solely in the Commission, but the Commisison sought the benefit of petitioner's judgment in that regard. The fact is that petitioner was given repeated opportunities to indicate a choice as to its retainable integrated system, but it persistently refused to do so, taking the position that the Commission could not and it would not so select. Even the principal order here under review, dated April 14, 1942, provided "that notwithstanding the provisions of * * * the Commission's Rules of Practice, The North American Company * * * may, within 15 days of the date hereof, petition for leave to present further argument and proffer additional evidence as follows: (1) The North American Company may petition for opportunity to present

In regard to certain non-utility businesses of petitioner such as its interests in a coal mine, an investment company and a holding company owning real estate and stock in a heavy equipment manufacturing company, the Commission held that the properties were not retainable by petitioner. The basis of this finding was the Commission's interpretation of the provisions in the Act relating to the retention of "other businesses." The Commission construed those clauses to permit retention only when it appears "that the public interest will be furthered by retention of a non-utility interest by reason of its relation 'to economy of management and operation' of a public utility system or systems or 'the integration and coordination of related operating properties'" (1 R. 117). Since the properties in question were not

---

further argument or additional evidence on the question whether any single integrated public utility system, other than the integrated electric utility system of the Union group as described in our Findings and Opinion herein this day issued, shall serve as its principal system * * *" (1 R. 201). Petitioner did not avail itself of this opportunity, but again challenged the Commission's right to select a system. The Commission's Order of June 25, 1942, rejected this challenge (R. Vol. I, p. 214). At no point did petitioner claim that the Union system was not an appropriate selection on the merits; on the contrary, there were numerous indications that if petitioner had to make a choice the Union system would be elected and the Commission relied, in part, on those indications in making its decision to restrict petitioner to Union (1 R. 90-91).

related to the operations of the integrated Union Electric system, the Commission ordered their divestment.

The Commission further rejected petitioner's argument that orders might not be entered under Section 11 (b) (1) until the Commission had completed general industry-wide studies under Section 30 of the Act.

Thus the Commission ordered a limitation of the operations of petitioner's system to its integrated interstate public utility system in and around St. Louis, Missouri. Jurisdiction was retained to consider whether a gas system in the suburbs of St. Louis and petitioner's office building in New York City might be retained, but petitioner was ordered to "sever its relationship" with all of its other properties "by disposing or causing the disposition, in any appropriate manner not in contravention of the applicable provisions of the said Act or the Rules and Regulations promulgated thereunder, of its direct and indirect ownership, control and holding of securities issued and properties owned, controlled or operated" by the subsidiary companies involved (1 R. 195).

3. THE OPINION BELOW

On petition for review filed in the United States Circuit Court of Appeals for the Second Circuit, the Commission's order was sustained in every particular; the court further rejected petitioner's arguments, which it brings to this

Court, that Section 11 (b) (1) of the Act is beyond the power of Congress to regulate commerce among the several states, and violates the Fifth Amendment.

SUMMARY OF ARGUMENT

Section 11 (b) applies only to companies within the scope of the commerce power. Registered holding companies are those which use the channels of interstate commerce in their business; and predominantly intrastate companies within the effective control of a single state are not required to comply with the provisions of the Act.

The North American system is clearly an interstate enterprise. Petitioner controls some 80 companies, including ten direct subsidiaries, operating chiefly electric and gas utility properties in seventeen states and the District of Columbia, from the Atlantic to the Pacific seaboards, and from Michigan to Kansas and Missouri. Petitioner concedes that some of its important subsidiaries are engaged in interstate transmission of energy. Moreover, extensive sales of securities of companies in the system by public offerings in interstate commerce have taken place; in addition, North American exercises its control over subsidiaries through the instrumentalities of interstate commerce. These activities are the essence of the business of the system.

Congress has found in Section 1 (a) of the Act that the activities of registered holding companies affect interstate commerce, and in Section

1 (b) has detailed persistent and widespread abuses characteristic of utility holding companies. These abuses relate to security issues; to dealings not at arm's length; to control of operating companies through disproportionately small investment; to lack of integration and coordination of operating properties and lack of economies; and to impairment of state regulation. The findings of Congress are amply supported by the official reports of investigating bodies to which the Act refers. These abuses are spread and perpetuated by the business activities of utility holding companies carried on in interstate commerce, to the detriment of consumers and investors. The volume of interstate transmission, the dependence of interstate commerce on electricity and gas, the interstate marketing of securities and performance of financial and other services, all warrant Congressional action to eliminate or ameliorate the abuses of which utility holding companies are peculiarly susceptible.

The Act is in the conservative tradition of federalism. It preserves state regulation of local utility operations, and Section 11 (b) in particular was designed to restore and strengthen the power of the states to deal effectively with local operating utilities. Congress might have exercised its power by prohibiting the use of the channels of interstate commerce for the spread of harm caused by characteristic holding company practices. But Congress was not limited to that sanc-

tion. It was at liberty to reach the evil at its source, as it has done in other statutes, notably the antitrust laws. Divestment and dissolution are familiar remedies in this field.

The Act does not violate the Fifth Amendment. There is no taking of property. There is no inviolable right in investors to retain holding company securities rather than securities in the underlying companies. Moreover, any claim of loss is speculative, and responsible sources estimate an increase in market value of investors' interests through corporate simplification and integration. The Act may be applied to corporate structures antedating the statute, as the antitrust cases show.

ARGUMENT

I. SECTION 11 (b) OF THE ACT IS WITHIN THE COMMERCE POWER

A. REGISTERED HOLDING COMPANY SYSTEMS SUCH AS PETITIONER ARE INTERSTATE ENTERPRISES WHOSE SIGNIFICANT ACTIVITIES ARE CARRIED ON IN INTERSTATE COMMERCE AND SUBSTANTIALLY AFFECT SUCH COMMERCE

1. *The statutory scheme*

The provisions of the Act are so designed that Section 11 (b) will be applied only to companies properly within the scope of Congressional power under the commerce clause. Section 11 (b) applies its integration and simplification provisions only to "registered" holding companies. By definition (Sec. 2 (a) (7) of the Act), a holding company is a company which controls an electric or

gas utility company. The definition creates a presumption that a holding of 10% of voting securities constitutes control, but this presumption may be rebutted by showing lack of control or controlling influence. The essential test under the Act of the holding-company-subsidiary relationship is the test of control.[11] Consequently, no company need comply with Section 11 of the Act if it is merely an investor in other companies and does not control such other companies. The Act requires (Section 4 (a)) registration of any utility holding company which uses the instrumentalities of interstate commerce directly or through its subsidiaries in the operation of its business.[12]

---

[11] Petitioner frequently appears to argue that under the Act such ten percent ownership is conclusive of a holding company-subsidiary company relationship, so that that relationship involves merely the ownership of securities, but the provisions of Sections 2 (a) (7) and 2 (a) (8) clearly show the inaccuracy of petitioners' approach. And see p. 13, n. 9, *supra*.

[12] The Act also requires registration of holding companies which use the mails in the operation of their businesses. However, we are confining this discussion to interstate commerce since we believe that if the relation of holding companies to interstate commerce will sustain the validity of requiring registration under the commerce clause, a similar relation to the use of the mails will sustain similar regulation under the postal power. We do not understand that petitioner questions this conclusion, and in any event discussion of the postal power would be academic, in view of petitioner's obligation to register because of its interstate activities.

Registration of a utility holding company is also required under Section 4 (b) if it has distributed any of its securities

But not all companies which are involved in interstate activities are required to comply with the provisions of Section 11 (b), the integration and corporate simplification section of the Act. Holding companies, even though they use the instrumentalities of interstate commerce in the operation of their business, may obtain exemption from the provisions of the Act if predominantly intrastate in their operations and within the effective control of a single state. Section 3 (a) (1) and (2) of the Act provides as follows:

> Sec. 3. (a) The Commission, by rules and regulations upon its own motion, or by order upon application, shall exempt any holding company, and every subsidiary company thereof as such, from any provision or provisions of this title, unless and except insofar as it finds the exemption detrimental to the public interest or the interest of investors or consumers, if—
>
> (1) such holding company, and every subsidiary company thereof which is a

---

by means of an interstate public offering since January 1, 1925, provided any such securities are owned by persons not resident in the same state as the holding company at the time of the enactment of the statute. Relations between the holding company and its out-of-state security holders, such as transmittal of interest, dividends, proxies, notices of meetings, etc., are continuing relationships which of necessity are maintained by the use of the mails and facilities of interstate commerce; but in any event the petitioner was required to register because of the requirements of Section 4 (a) of the Act, and it thus appears that the requirement of Section 4 (b) is not here involved.

public-utility company from which such holding company derives, directly or indirectly, any material part of its income, are predominantly intrastate in character and carry on their business substantially in a single State in which such holding company and every such subsidiary company thereof are organized;

(2) such holding company is predominantly a public-utility company whose operations as such do not extend beyond the State in which it is organized and States contiguous thereto;

Thus, in spite of petitioner's argument that Section 4 may cause the registration of holding companies whose engagement in commerce is only sporadic or incidental, it is clear that the Act contains ample safeguard that local holding companies will not be regulated.

Petitioner disputes this argument because of the requirement for exemption in Section 3 (a) (1) that the holding company and all of its important utility subsidiaries be incorporated in the state where those utilities operate. Petitioner contends that this requirement is unrelated to interstate commerce. We think it is clear that the state of incorporation bears an important relation to the effectiveness of state regulation of utilities[13] sell-

[13] It has long been recognized as a peculiarly appropriate field for governmental regulation, to determine the conditions under which a number of individuals may combine their resources and activities through incorporation. Par-

ing electricity and gas in interstate commerce and to consumers engaged in such commerce, and that hence the exemption is appropriately qualified; but in any event, that is not this case, for, as petitioner admits, it would not have a Section 3 exemption available to it under any circumstances, its utility operations being scattered in seventeen states and the District of Columbia.

Petitioner also complains that exemptions under Section 3 (a) (1) need not always be granted to those eligible to apply for them since the Act extends such exemption "unless and except insofar as it [the Commission] finds the exemption detrimental to the public interest or the interest of investors or consumers." Petitioner argues that this qualification, similar to that of the domiciliary requirement discussed above, is unrelated to interstate commerce and that therefore Section 3 (a) does not provide for exemption for predominantly intrastate holding companies. We repeat that in no event could petitioner be eligible for a Section 3 (a) (1) exemption, because of the thoroughly interstate character of its system and operations, and consequently its argument based on the "unless and except" clause is an attempt to argue exemption cases which may never

---

ticularly is this so where the business is one affected with a public interest. This local control is circumvented where it is the holding company, incorporated in another state, which is the significant corporate entity through which the controlling group of investors pool their interests.

arise. In fact, however, the policy which the Commission is required to apply in considering exceptions to Section 3 (a) exemptions is the policy set forth in Section 1 (c) of the Act, as follows:

> * * * it is hereby declared to be the policy of this title, *in accordance with which policy all the provisions of this title shall be interpreted,* to meet the problems and eliminate the evils as enumerated in this section, connected with public-utility holding companies which are *engaged in interstate commerce or in activities which directly affect or burden interstate commerce;* * * * [Italics supplied.]

The Commission has never yet had occasion to deny exemption under the "unless and except" clause of Section 3 (a) to a holding company found to be "predominantly intrastate" in character within clause (1). It should be noted that Section 3 (a) refers to exemption from any provision or provisions of the Act. It is conceivable that a holding company system while predominantly intrastate in character nevertheless is engaged in activities which burden or affect interstate commerce, and this may be found to warrant denial of exemption from some, if not all, of the provisions of the Act.

2. *The application of the statute to the North American system*

The interstate character of petitioner is clear from an examination of its operations.

Petitioner is incorporated in New Jersey. There is a total of some 80 companies in its system. It has 10 direct subsidiaries, of which 3 are registered holding companies: Union Electric Company of Missouri operating in and around St. Louis, Missouri, and with subsidiaries operating in Illinois and Iowa as well; Washington Railway and Electric Company whose subsidiaries operate in the District of Columbia and adjacent territory in Virginia and Maryland; and North American Light & Power Company which operates extensive systems in Kansas, Missouri, Illinois and Iowa. Some of the subsidiaries of North American Light & Power Company are also registered holding companies (1 R. 84–86).

Four of the direct subsidiaries of North American are operating companies: Cleveland Electric Illuminating Company; Pacific Gas & Electric Company; The Detroit Edison Company; and Wisconsin Electric Power Company (a holding company which with its subsidiaries operates an integrated system in Wisconsin and Michigan, known as Wisconsin-Michigan; this Company has on file with the Commission an application for exemption under Section 3 (a) (2) of the Act as predominantly an operating rather than a holding company).

The remaining three direct subsidiaries of North American are North American Utility Securities Corporation, an investment trust; West Kentucky Coal Company which owns and operates

a coal mine in Kentucky and sells the coal in several states; and 60 Broadway Building Corporation which owns the office building in New York City where Petitioner has its offices.

North American controls all of these companies from its central offices in New York. The operations of petitioner's system are conducted in 17 states and the District of Columbia (1 R. 84–86). It is important to note that none of the utility operations of the North American system—by far the preponderant business of the system—is conducted either in New Jersey where petitioner is incorporated or in New York where is located its principal place of business, and only two of the non-utility businesses of petitioner are conducted in New York: the office building and North American's investment trust.

Petitioner has conceded that Wisconsin Electric Power Company, Union Electric Company of Missouri, Washington Railway and Electric Company, and North American Light & Power Company are engaged in interstate commerce.[14]

---

[14] Union Electric Company of Illinois, for example, in the year 1940, sold 1,200,000,000 kilowatt-hours of electric energy to its parent, Union Electric Company of Missouri, all of which crossed the Illinois-Missouri border. (*Ibid.* R. North American Exhibit No. 146.) While not strictly comparable because of the difference in period, the magnitude of this figure is indicated by the fact that in 1939 the total output of the entire Union Electric system was 2,468,000 kilowatt-hours (9 R. 3268). Other interstate transmission of electricity in substantial amounts takes place in the North American system between the District of Columbia and

It claims that Cleveland, Pacific Gas and Detroit Edison are not engaged in interstate commerce. It argues that since a particular subsidiary may not be engaged in interstate commerce and North American's relation with it is merely that of a holder of securities, asserted to be a purely intrastate activity, Congress has no power to require divestment.

This argument overlooks a vital characteristic of the relationship between petitioner and its subsidiaries. Petitioner not only holds more than 10 percent of the voting securities of its subsidiaries but also controls them. Petitioner's reiteration of its contention that it is a mere "investor" in its various utility enterprises must be contrasted with the plain fact—not explicitly contested—that it controls its subsidiaries and that their acts are its acts. *Electric Bond & Share Co.* v. *Securities and Exchange Commission,* 303 U. S. 419, 440.

North American has, either directly or through its subsidiaries engaged in all the types of activities mentioned in the *Bond & Share* case as a basis for federal regulation.[14a] Here is presented the situation of a New Jersey corporation with its principal place of business in New York controlling utility

---

both Maryland and Virginia, between Iowa and Missouri, and between Wisconsin and Michigan.

[14a] It is true that petitioner does not have a service company which renders and charges for services to its subsidiaries. However, services including financial advice are rendered by North American itself without charge (1 R. 101). The difference is one of degree, not kind.

companies incorporated and doing business in a great many states. Furthermore, the control is effectuated by use of the mails and facilities of interstate commerce, as when proxies are sent, e. g., from New York to Ohio, instructions or "advice" given, reports received, and the like. This relationship is obviously an interstate relationship. For example, the system sold almost half a billion dollars in securities in the three years between registration and September 1940 (9 R. 3308, 3309), and it will not be disputed, as the registration records of the Commission show, that these were largely interstate flotations.[15] The transactions involve the essence of petitioner's business and are commercial transactions which constitute commerce within the meaning of the commerce clause,[16] and since these transactions in commerce are carried out and performed by the use of the facilities of interstate commerce and "concern more states than one" they constitute interstate commerce within the meaning of the commerce clause.[17] See *The Minnesota Rate*

---

[15] The North American Company itself has securities holders in every state of the Union (Pet. Br. 66) and has its debentures and preferred and common stocks listed on the New York Stock Exchange where they are actively traded. Most of the securities issued by the various companies in the North American system and not owned by system companies are similarly traded on national securities exchanges.

[16] *Associated Press* v. *National Labor Relations Board*, 301 U. S. 103, 128, and cases cited.

[17] The fact that many of these instances of communication and transportation do not occur between a vendor and vendee

Cases, 230 U. S. 352, 398; *Second Employers' Liability Cases,* 223 U. S. 1, 46; *Gibbons* v. *Ogden,* 9 Wheat. 1, 194, 195; *International Textbook Co.* v. *Pigg,* 217 U. S. 91, 107.

Plainly Congress was not acting outside its proper sphere when it dealt with the North American Company. And the North American Company is "typical" of the holding companies subject to Section 11 (b). See Brief, *Amici Curiae,* p. 6.

3. *Congress has determined that the activities of registered holding companies affect interstate commerce*

It is true, as petitioners state, that the Act contains no provision for specific finding by the Commission or by a court that the particular company subjected to an order under Section 11 (b) shall itself be engaged in interstate commerce or that the situations corrected by the order shall in the particular case have an effect on interstate commerce. But such a provision was unnecessary since Congress itself has required compliance by all properly registered holding companies and in so doing it evidenced its conclusion that they so affect interstate commerce that it is proper to apply the provisions of Section 1 (b) to them. In *United States* v. *Darby,* 312 U. S. 100, 120–121, this Court stated:

---

is not material for purposes of Congressional power under the commerce clause. *The Pipe Line Cases,* 234 U. S. 548, 560; *United States* v. *Hill,* 248 U. S. 420, 423, 424.

> In such legislation Congress has sometimes left it to the courts to determine whether the intrastate activities have the prohibited effect on the commerce, as in the Sherman Act. It has sometimes left it to an administrative board or agency to determine whether the activities sought to be regulated or prohibited have such effect, as in the case of the Interstate Commerce Act, and the National Labor Relations Act, or whether they come within the statutory definition of the prohibited Act, as in the Federal Trade Commission Act. And sometimes Congress itself has said that a particular activity affects the commerce, as it did in the present Act [the Fair Labor Standards Act of 1938], the Safety Appliance Act and the Railway Labor Act. In passing on the validity of legislation of the class last mentioned the only function of courts is to determine whether the particular activity regulated or prohibited is within the reach of the federal power. See *United States* v. *Ferger, supra; Virginian Ry. Co.* v. *Federation,* 300 U. S. 515, 553.

The statute before the Court here clearly comes within the third category, in which the determination of the relation to interstate commerce is made by the Congress itself. That determination is inherent in the enactment of the statute itself. By adopting sections 2, 3, 4, and 11 of the Act Congress was asserting and declaring that the actions required of companies properly subject

to Section 11 under this statutory scheme were so related to the exercise of the commerce power as to require no additional finding by the Court or the Congress. This Court cited *United States* v. *Ferger*, 250 U. S. 199, and *Virginian Railway Co.* v. *Federation*, 300 U. S. 515, in the *Darby* case, *supra*, as cases of determination by the Congress which obviated the necessity of findings by an administrative agency or a court. See also *Colorado* v. *United States*, 271 U. S. 153. The statutes sustained by these cases contain no statement by Congress that the activity regulated was related to interstate commerce. The finding must therefore have been implied from the mere enactment of the statute and from the character of the regulation applied. Disregarding Section 1, the same is true here.

But in any event Congress in the present Act did provide an extensive explanation of its determination, in the declarations of policy contained in Section 1 of the Act. Congress in this declaration finds a widespread and frequent involvement of the activities of public utility holding companies in interstate transactions and from this draws the conclusion that such companies are "affected with a national public interest."[18]

---

[18] Petitioner ignores those declarations in Section 1 (a) which refer to activities of subsidiary companies and practices of holding companies in respect thereof, on the ground that ownership of securities is not a practice in respect of subsidiary companies. But section 1 (a) (4) speaks explicitly of "control over subsidiary companies," and it is precisely such control which makes North American a hold-

Congress finds that when the abuses detailed in Section 1 "become persistent and widespread the holding company becomes an agency which, unless regulated, is injurious to investors, consumers, and the general public" (Section 1 (c)). It then declares (Section 1 (c)) that it is the policy of the Act, "in accordance with which policy all the provisions of this title shall be interpreted, to meet the problems and eliminate the evils as enumerated in this section, connected with public-utility holding companies which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce." Having declared this policy Congress adopted, among others, Section 11 as well as the other regulatory provisions of the Act.[19] It would seem difficult to find a clearer statement that Congress regarded public utility holding companies as so much involved in interstate commerce and a source of so frequent abuses that the provisions of Section 11 were an appropriate exercise of the commerce power.

Petitioner, however, brings a highly technical approach to these declarations of legislative

---

ing company and which will be eliminated by the disposition of the ownership of the securities now held by North American and ordered divested by the Commission.

[19] Petitioner and *Amici curiae* point out that they are challenging only Section 11, and not the other regulatory provisions. Yet their argument as to lack of findings would strike at every provision of the Act, including the registration provisions upheld in the *Electric Bond & Share* case.

policy. It is pointed out that Congress stated in Section 1 (a) of the Act five reasons why public utility holding companies are affected with a national public interest and are matters of concern under the commerce clause, and that with regard to three of those reasons Congress stated that the effects on interstate commerce occur "often". The declaration of affectation with a national public interest, and the cataloging of reasons, some of which occur universally (Secs. 1 (a) (1) and 1 (a) (5)), and some of which occur frequently (Sec. 1 (a) (2), (3) and (4)), is not only careful draftsmanship but is clearly a sufficient basis for Congressional power. The effect of abuses on interstate commerce need not be invariable; it is enough that the effect "from time to time does" occur and that the abuse is likely to recur as a "constantly possible danger." *Chicago Board of Trade* v. *Olsen,* 262 U. S. 1, 40.

Petitioner states that the declaration concerning the abuses and evils in Section 1 (b) "clearly implies that such conditions are not general." This statement is in direct contradiction both to the Congressional declaration that when such abuses become "persistent and widespread" regulation is necessary and the actual adoption of regulations by the Congress. The use of the word "when" as a means of stating a factual premise is at least as old as the Declaration of Independence.

4. Registered holding company systems are characteristically engaged in interstate activities.

There is no better summary of the ways in which holding companies affect interstate commerce than the statement in Section 1 (a) of the Act:[20]

> (a) Public-utility holding companies and their subsidiary companies are affected with a national public interest in that,

---

[20] The legislative materials amply support the Congressional findings. See, e. g., as to the five findings in Section 1 (a):

(1) *Utility Corporations*, Part 72–A, pp. 346–348, 536–542. As to petitioner, the Federal Trade Commission found:

"One of the functions of The North American Co. was the negotiation for issues of senior securities of its subsidiaries. In the record a tabulation of such securities for the period 1920 to 1930 indicates that The North American Co. negotiated for the sale of over $300,000,000 principal amount thereof.

* * * * *

"*Securities issued through bankers, investment houses, and syndicates.*—The growing practice of issuing securities through holding companies which have acted for their subsidiaries has been indicated. Many issues have accordingly been actually disposed of to the general public by bankers, investment houses, or syndicates either at the instance of the issuing companies themselves or the holding companies. Indeed, it has become almost the general practice to thus sell obligations, and of the $300,000,000 of subsidiary securities sold by The North American Co., just referred to (most of which were bonds), all were sold through syndicates, principally headed by Dillon, Read & Co. * * * (*Id.* p. 347).

(2) *Id.* pp. 665, 844, 874.

(3) *Id.* pp. 39–44.

(4) Report of National Power Policy Committee, *supra*, note 3, pp. 5–7.

(5) *Utility Corporations*, Part 72–A, p. 874.

among other things, (1) their securities are widely marketed and distributed by means of the mails and instrumentalities of interstate commerce and are sold to a large number of investors in different States; (2) their service, sales, construction, and other contracts and arrangements are often made and performed by means of the mails and instrumentalities of interstate commerce; (3) their subsidiary public-utility companies often sell and transport gas and electric energy by the use of means and instrumentalities of interstate commerce; (4) their practices in respect of and control over subsidiary companies often materially affect the interstate commerce in which those companies engage; (5) their activities extending over many States are not susceptible of effective control by any State and make difficult, if not impossible, effective State regulation of public-utility companies.

We have shown that the mechanics of the Act impose its requirements on interstate holding companies, while leaving unregulated those holding companies which, even though they use the facilities of interstate commerce, are predominantly intrastate in character and within effective state control. We have shown that petitioner, a typical holding company required to register under the Act, is essentially an interstate enterprise, controlling scattered utilities by use of the facilities of interstate commerce, raising capital

in interstate commerce, and through its subsidiaries transporting power in interstate commerce. Finally, we have shown that Congress, with ample support in the materials before it, found that utility holding companies affect interstate commerce in their significant activities.

We turn now to a consideration of the ways in which holding companies have abused interstate commerce, how they have adversely affected and do adversely affect interstate commerce.

B. THE SIGNIFICANT ACTIVITIES OF REGISTERED HOLDING COMPANY SYSTEMS, CARRIED ON IN OR AFFECTING INTERSTATE COMMERCE, ADVERSELY AFFECT THAT COMMERCE TO THE DETRIMENT OF INVESTORS AND CONSUMERS.

Section 1 (b) of the Act recites the definite holding company abuses which the Congress found to be spread and perpetuated by use of the channels of interstate commerce and which experience had demonstrated could not effectively be corrected by state legislation.

The Congressional findings were based on the studies of the Federal Trade Commission and on the Splawn Report, both specifically referred to in Section 1 (b) of the Act; we state below the findings of Congress as to the abuses and make brief reference to the facts found by these studies and by disinterested students of the utility holding company industry.[21]

---

[21] It is not possible within the confines of a brief to recite in any detail the evidence disclosed by the Federal Trade Commission study nor can we exhaust the huge catalog of

1. *Abuses with respect to security issues—Section 1 (b) (1)*

Congress found in Section 1 (b) (1) that holding company securities are usually issued and sold without the consent or approval of the states having jurisdiction over the subsidiary public utility companies. At the same time, the characteristics and amounts of holding company securities have a considerable effect on local regulation of operating utilities since they impel the operating companies which are under local regulation to pay maximum dividends and to engage in accounting and financial maneuvers [22] in order to maintain

abuses of holding companies there revealed. *Utility Corporations*, Part 72–A, contains a summary of many of those abuses.

[22] These financial and accounting maneuvers, coupled with the absence of adequate reports and uniform accounts, frequently conceal the unsubstantial foundation of holding company securities and make it impossible for investors in the several states to secure the information necessary for an adequate appraisal of the financial position of the companies. "* * * deceptions arise from an effort to continuously show earnings for dividend purposes and for use in published statements to influence the investing public.

"It has been found that it is quite a common practice among holding companies to overstate earnings and surplus by recording unrealized earnings. The usual ways of doing this are through counting as income intercompany profits, undistributed earnings of subsidiaries, and the erroneous recording of stock dividends, stock rights, etc., received. The creation of surplus by the inflation or write-up of assets has been very general.

"With respect to operating companies, the usual methods of overstating surplus are through inadequate provisions for depreciation, revaluations of fixed assets, and the improper capitalization of expenses." *Utility Corporations*, Part 72–A, pp. 514–515. See also pp. 528–533, 868–870.

dividends to the holding company. In addition, an inordinate resistance to otherwise proper rate reductions is created where operating companies have to support overcapitalized structures of holding companies.[23]

"Holding company securities are often issued upon the basis of fictitious asset values and in anticipation of excess revenues and paper profits" (Sec. 11 (b) (1)) at the expense of the underlying operating companies. The most familiar of these devices was the "write-up," wherein the assets of both operating companies and holding companies were arbitrarily written up in value and watered securities issued against them. The Federal Trade Commission reported, in regard to the limited number of companies studied, that—

> The ledger values of the capital assets of all the companies examined, including both holding and operating companies, contained very large amounts of write-ups. It was found that the combined amount by which the capital assets of all the companies examined were written up in value over cost exceeded 1.4 billion dollars. (*Utility Corporations*, Part 72–A, p. 845).

It is further found that the capital assets of operating companies in holding company systems were written up by 22.1%, of subholding companies by 6.5%, and of holding companies by 9.6%. In

---

[23] Bonbright and Means, *The Holding Company* (1st ed. 1932), 166–170.

many cases if the write-ups in operating companies were deducted, little or no equity remained for the common stock; yet it was on the foundation of this common stock that the holding company structure was based and its securities sold to the public.[24]

The effects of write-ups are felt by both investors and consumers, as the Federal Trade Commission stated in its report to Congress:

> The effect of all this issuance of securities against written-up properties may be viewed from two angles, namely, that of the rate payer and that of the investing public. As far as the latter is concerned, it is obvious that the securities owned are not supported by values of properties which appear in the balance sheet of the company issuing such securities. In case of liquidation, it is questionable in many cases whether there could be realized sufficient cash from the sale of the assets of the company to liquidate the securities at their book values. A further effect on the investor is the fact that a failure to earn on excessive security issues and consequently to pay interest or dividends on securities issued (especially in case of heavily written-up properties) has undoubtedly been a principal cause of receiverships and other financial difficulties through which many utility systems are now passing. Practices of this sort have constituted one of the gravest

[24] *Utility Corporations*, Part 72–A, pp. 298–304.

dangers developed during the course of the entire investigation.

As to the rate-paying public, this matter is discussed at some length elsewhere (see ch. V). Suffice it to say here that while in States having utility regulation the usual theory of rate-making presupposes a return based on the actual values of properties, it is unquestionably a fact that the book values have considerable effect on the regulating authorities or complainants in rate cases. This was recognized in a recent decision of the Public Service Commission of the State of New York, in which the following statement was made: "Overcapitalization was not only undesirable from the viewpoint of the security holder, but was most detrimental to the public, for it concealed the true profits and made it appear that rates were reasonable. Such concealment was one of the reasons, if not the principal one in many instances, why companies were overcapitalized." (*Utility Corporations*, Part 72–A, p. 327.)

Most of the write-ups found in the holding and operating companies examined were reflected in security issues and were initiated by the holding-company management. The holding-company management has been generally under strong pressure to operate the controlled companies in such a manner as to earn a profitable return on the security issues, including those issued against the write-ups. This process therefore af-

> fects both the consuming and investing public. * * * (*Id.* at 845.)
>
> * * * In most instances these write-ups were injected by the controlling interests and were often based apparently on the amount of bonds and preferred stocks they thought could be marketed. * * *
>
> * * * * *
>
> For the most part, all of the various forms of write-ups referred to above were capitalized through security issues, of which those not required for control purposes were sold to the investing public, insofar as possible, thus enabling those initiating such transactions to recover in cash, or in securities of the issuing companies, a substantial portion, or all, of their investment, and in a few instances even more. This had the effect of passing on to the public most of the actual investment in the assets of the operating companies whose properties had been written up in value, or of the subholding companies whose securities had been written up. * * * (*Id.* at 846, 847.)

In short, the presence of holding companies with their typically complex structures and substantial amounts of senior securities has operated to the detriment not only of widely scattered investors but also of consumers of the utility products of the underlying operating companies.

With the erection of holding-company systems on such bases it is not surprising that investors have been seriously harmed. The twin devices

of pyramiding and stock watering worked well as long as rate-making agencies were nonexistent or quiescent and earnings continued to rise; but upon the pricking of the bubble, the leverage worked in reverse [25] and many investors

[25] "Another effect is greatly to multiply the rate of return that the stockholders of the top company can obtain upon their investment in the stock through which they exercise this control, provided that the operating companies are prosperous enough to earn 8 percent [in the hypothetical case there discussed] on the total investment in their businesses. It also has the result of greatly magnifying the adverse effect upon the income accruing to the holder of the top company's securities of a small diminution in the total net income of the operating companies that constitute the bottom layer. A relatively small decline in the total gross income of the operating companies, such as is very likely to happen in an industrial depression and which did happen in the present industrial depression, may wipe out a large part of the income accruing to the first layer of subholding companies and enable them to pay the contractual rates of income on only their senior securities, leaving nothing for the common-stock equities of subholding companies in the next higher layer. Such an event is likely, in an extreme case, to result in bankruptcy of the holding companies that are higher up in the pyramid.

"* * * The common stock of the top holding company of many public-utility pyramids is extremely speculative on account of the extreme 'leverage' exercised on the earnings of the top holding company by comparatively small changes in the earnings of the underlying operating companies. It becomes a favorite stock for speculators and stimulates stock gambling. If the pyramided system falls into the hands of unscrupulous men, the possibilities of manipulation are greatly increased. A highly pyramided system (where any securities of the top holding or subholding companies are sold to the public) is dangerous and has no justification for existence." (*Utility Corporations*, Part 72–A, pp. 161, 162.)

were ruined. Prior to the passage of the Act many holding companies were either in acute distress or in bankruptcy or receivership. The failure of the pyramiding device is illustrated graphically in the fate of investors who placed their funds in "preferred" stocks of holding companies. As of December 31, 1940, preferred stocks of registered holding companies had a total involuntary liquidating value exclusive of arrears of $2,500,000,000; of this total more than half, or $1,440,000,000, were in default. The total accumulated arrears on registered holding company preferred stocks as of that date was approximately $476,000,000.[26]

Even the preferred stocks of *operating* companies in holding company systems were harmed through excessive service charges, excessive common stock dividends, upstream loans (from the operating companies to the holding companies), other extortionate holding company transactions and excessive proportions of senior securities. Of preferred stocks of operating companies in holding company systems totaling $1,700,000,000 at December 31, 1940, approximately $450,000,000 were in default, the arrears aggregating $165,000,000. These figures reveal both the injury which pyramiding has caused and is causing to

[26] These and the following figures on preferred arrearages are taken from official reports of registered holding companies filed with the Commission.

the American investors and the unhealthy and complicated corporate structures which characterize a substantial portion of the industry. They also indicate the urgent need for system rehabilitation and simplification which Congress prescribed in Section 11 (b).[27]

---

[27] The great deflation and collapse of holding companies was not occasioned by any serious reduction or collapse of the earnings in the operating companies. The latters' earnings held up rather well through the depression and subsequent years. In fact, since 1929, State Commissions and the Federal Power Commission have been able to obtain rate reductions aggregating millions of dollars. Middle West Utilities, for example, which went into bankruptcy in 1932, actually had greater gross revenues from its electric and gas utilities in 1931 than it did in 1929 (based on figures reported in Moody's *Manual of Public Utilities* (1935)). A substantial proportion of its "earnings" had been previously derived from intrasystem purchases and sales at inflationary prices. As a whole, the electric utility industry had greater gross revenues in 1936 than it did in the year 1929. See *The Electric Light and Power Industry in the United States*, Edison Electric Institute Statistical Bulletin Number 9, 1941, at p. 39. The collapse of pyramided holding company systems, controlling scattered operating companies throughout the United States, can be attributed, therefore, solely to fundamental unsoundness.

As the Federal Trade Commission found, "their weakness was due in a smaller measure to the depression than to unsound intercorporate structure, unsound financial set-up, and in some cases to stupid, reckless, or dishonest practices. The reckless and dishonest ones generally suffered the most, and some of them went into receivership or became bankrupt. Any advantages of the electric and gas utility holding company in actual practice, therefore, were offset by fundamental structural disadvantages, so that in the net result *there were*

The Federal Trade Commission arrived at the generalization that "None of the large holding-company groups appears to have had a suitable capital structure from an investor's standpoint," specifying with respect to petitioner that—

> The North American Co. had outstanding only common and preferred until 1931, when it issued $25,000,000 in debentures. It had an important subholding company with common, preferred, and long-term debt outstanding It had also another large subholding company, in which the majority interest was recently acquired, which had common, preferred, and bonds outstanding, and this subholding company had three important subholding companies of its own with the same classes of securities.[28]

Just as petitioner's system enjoys no immunity from the evils of pyramiding holding company upon holding company, all with debt securities and preferred as well as common shares, so it presents examples of the characteristic holding company tendency to cause its subsidiaries to raise a maximum amount of needed additional capital by selling senior securities, and a mini-

---

no demonstrable advantages as regards the investor, even for the better-managed groups, because none of the important ones even closely approximated the possibilities of a thoroughly sound and conservative organization." (*Utility Corporations*, Part 72–A, p. 860. Italics supplied.)

[28] *Utility Corporations*, Part 72–A, p. 859.

mum amount by selling common stock.[29] See, e. g., *Potomac Electric Power Co.*, 8 S. E. C. 30, 36; *Potomac Electric Power Company*, Holding Company Act Release No. 3759, pp. 7, 8 (1942).

2. Dealings not at arm's length—Section 1 (b) (2)

Congress further found that subsidiary public utility companies are subjected to excessive charges for services, construction work, equipment and materials, for the benefit of holding companies or their wholly owned service company subsidiaries. A great number of examples of this practice were disclosed by the Federal Trade Commission, whose studies showed profits to holding companies on servicing of subsidiaries sometimes higher than 190% of the cost of rendering the services.[30]

[29] This is but a natural result of the existence of holding companies which do not own all the securities of subsidiaries, for both leverage and relative voting power are diminished upon sales of common stock to the public by subsidiaries; whereas sales of senior securities, at interest or dividend rates lower than the allowable rate of return, increase leverage and generally do not endanger the holding company's control.

[30] "These examples indicate that the servicing fee has been, either directly or through an affiliate, a substantial source of net income for many of the largest utility holding companies and that this fee has been collected principally and in some cases almost wholly from controlled operating utilities. They also show that the net income from servicing is high and frequently extremely high in relation to cost. It should also be borne in mind that these costs, as regards their neces-

One aspect of excessive service charges was that the sums paid were charged as operating expenses by the operating companies and thus the profits realized on the service charges were in addition to the theoretically fair return on capital permitted the operating company.[31] In this way state regulation of rates was circumvented, since the holding companies and their wholly owned subsidiary service companies were generally incorporated outside the state of regulation, and data on the cost of rendering the services were unavailable to the state commissions.[32]

---

sity and genuineness, have not been checked by the Federal Trade Commission, and, if too high, the rates of net income as computed herewith are too low." (*Utility Corporations*, Part 72–A, p. 663.)

[31] "A second source of fee income and possible profit to the holding company [in addition to charges for services which were recorded by the subsidiaries as operating expenses] is the charging of engineering fees in connection with the formulation of plans for additions and betterments to properties, fees for financing, and cost-plus fees on construction. These construction fees, instead of being expenses chargeable directly against operating revenues of the companies serviced, are capitalized when the properties are put into operation, thus increasing the rate base, and also become part of the depreciable property eventually to be covered by depreciation charges against future revenues and profits. In either case it is expected that the fees paid will be ultimately recouped by the operating company through the consumer's meter in subsequent operations." (*Utility Corporations*, Part 72–A, p. 843.)

[32] *Utility Corporations*, Part 72–A, p. 665; 844. As Congress found in Section 1 (b) (2), state regulation was also impeded because service charges were frequently allocated

Investors equally with consumers were injured by excessive service charges. Bondholders and preferred stockholders of operating companies obviously suffer a dilution of their earnings coverage, since service fees, as operating expenses, are paid to the holding company prior to the payment of interest and dividends.[33] Minority stockholders are even more directly injured, since income which might otherwise be paid as dividends to *all stockholders* is diverted to the holding company under the guise of "operating expenses."[34] Holding company security holders, though temporarily benefited by the receipt of unwarranted income, were, paradoxically, injured most of all, since securities were sold to them upon the basis of holding company income temporarily inflated by exorbitant servicing profits.

It is true that Section 13 of the Act provides for the elimination of servicing at a profit, and also for

---

among subsidiaries in several states. This conclusion was reached by the Federal Trade Commission. *Utility Corporations*, Part 72-A, p. 874.

[33] *Utility Corporations*, Part 72-A, p. 658, Note 21.

[34] "* * * If by control of the voting stock of the company, expense unproductive to the company is incurred to [the controlling stockholder's] benefit," reported the Federal Trade Commission in relation to profits on servicing, "he will lose as investor in the company's stock, but gain through control of the company. In such case, any minority stockholders lose with no offsetting gain." (*Utility Corporations*, Part 72-A, p. 658, Note 20.)

regulation of the allocation of charges as between companies in holding company systems. However, regulation of this character is at best an empirical process and Congress could properly regard the simplification of holding company systems as a more adequate solution. Apart from this present relationship to Section 11, we advert to the past evils in connection with servicing because the unsound holding company structures dealt with by Section 11 (b) represent in part the capitalization of profits from servicing activities.

The Congress also found an adverse effect on the national public interest and the interest of investors and consumers when subsidiary public utility companies are required to enter into other intrasystem transactions (besides service arrangements) without arm's-length bargaining or the restraint of free and independent competition.

As the Federal Trade Commission found:

> Exaggerated capital structures may result from intercompany sales at large profits within the holding-company group of property, or stocks, whereby the final owner within the group pays exorbitant prices. If the final purchaser of such property or stocks is an operating utility, it may have the effect of increasing the rate base and the rates charged to the consumer, or, if the management proves unsuccessful

in increasing rates, it may leave the purchasing company with a capital structure upon which it cannot pay dividends, and so forth. The ease with which profits may be realized through intercompany sales of securities when there is control through ownership of voting stocks furnishes a temptation that few holding-company managements have been able to resist.

When stocks representing control are disposed of to outsiders, the control which they represent goes with them, and the gain made is on a par with any other capital gain. Where, however, the sale is between two controlled companies of the same group, there can be no independent bargaining. The gain is taken, but the control is retained, and, therefore, there is always a possibility of subsequent repetition of the process. The characteristic effect of such dealings is that they tend to inflate arbitrarily the capital structure all along the line without regard to the sound market values of the securities or other property acquisition.

* * * * *

The Federal Trade Commission's inquiries have developed numerous instances in which inflation of capital structures through intercompany profits, whether on an arbitrary basis or upon an inflated market value, due to speculation or to actual rigging of the market, during the years prior to 1930, has contributed to present-day financial embarrassments and to many

cases of receiverships of holding companies and their affiliated companies. Thus, intercompany sales within a holding-company group involve various complications and dangerous pitfalls to different interests within the same group and often result in gross misstatements of corporate earnings. * * *

* * * * *

In their least objectionable use such transactions mean taking up, as intercompany profits, a part, or all, of any real increase or appreciation in value of stocks or properties that may have taken place and that might be realized by outright sale to nonaffiliated interests, and at the same time retaining operating control of the companies. In their most objectionable form they become the means of fraud through false showings of investments and earnings, resulting in the creation of a capital structure that may, sooner or later, collapse like a house of cards. Even though not pushed to this point, they are a distinct disadvantage of holding-company management from the viewpoint of sound financing. Danger of misuse, even by otherwise conservative managements, always lurks in contracts among parties controlled by the same interest. Even where conservatively used there are difficult questions involved arising from the fact that a single economic interest in dealing with itself for profit, and that often minority stock or bondholders have different inter-

> ests in these transactions. There is also the difficult question of determining what appreciation in properties has taken place and what part thereof may ethically, safely, or even legally be taken at any given time as income to meet interest and dividend requirements on capital structures inflated by this and other means. These difficulties constitute very serious drawbacks to the holding-company system and are inherent evils in such inter-company transactions. (*Utility Corporations*, Part 72–A, pp. 864, 865 and 866.)

A striking example of the dangers inherent in the holding company-subsidiary company relationship is *Murphy* v. *North American Light & Power Co.*, 106 F. (2d) 74 (C. C. A. 2.) In that case, The North American Company had contracted to underwrite over a five-year period certain offerings of common stock by its subsidiary, North American Light & Power Company. After three years, when it became evident that the common stock was of dubious value, North American tried to take advantage of an escape clause. In exchange for the $4,000,000 of cash it was required to pay to Light & Power in the last two years it took back notes, ranking ahead of the public preferred stockholders, rather than common stock, which ranked junior to them. It was left for derivative suits by public preferred stockholders to force North American to adhere

to its contract and take common stock rather than the notes.

We do not wish our reference to the *Murphy* case to raise an inference that the management of North American did not act in good faith, for the *Murphy* case did not turn on that question. Our purpose is to indicate by concrete reference the potentiality of abuse ever present in dealings between the typical holding company and its subsidiaries.

Absence of arm's-length dealing in banking relations has also been typical. It is noteworthy that investment bankers connected with the systems have played a central role in the organization and expansion of holding companies. The Federal Trade Commission found that—

> No large holding-company structure has grown to its present size without the aid of investment bankers, and it is also probably true that not many of the present holding-company structures have developed entirely without opposition from more or less powerful competitive banking groups. In consequence, almost every important holding-company group has more or less close business relations with certain investment bankers and, together with such banking interests, is more or less on the alert to forestall attempts of other holding-company managements, assisted by competing investment bankers, to encroach upon its control. The resulting situation is one in which

> there is great pressure on holding-company managements to give a great deal of attention to the desires and alignments of investment bankers in the formation and operation of holding-company groups. Professional managements apparently often give greater attention to the counsel of bankers than to the interests of widely scattered stockholders who are the equitable owners of the company so managed. (*Id.*, p. 75.)

In a number of instances in the course of the enforcement of the Act, the Securities and Exchange Commission has found that investment bankers stand in such relationship to registered holding company systems that there is liable to be an absence of arm's-length bargaining with respect to transactions between them. See *The Dayton Power and Light Company,* 8 S. E. C. 930, affirmed *sub nom. Morgan Stanley & Co., Inc.* v. *Securities Exchange Commission,* 126 F. (2d) 325 (C. C. A. 2); *Blair & Co., Inc., et al.,* Holding Company Act Release No. 4057 (1943).

These circumstances underlie the findings of the National Power Policy Committee that "fundamentally, the holding company problem always has been, and still is, as much a problem of regulating investment bankers as a problem of regulating the power industry."[35]

---

[35] Report of National Power Policy Committee, *supra,* Note 3, p. 6.

3. *Control of operating companies through disproportionately small investment—Section 1 (b) (3)*

It is evident from the materials we have quoted that one of the characteristics of holding company systems is the control which they afford the junior security holders of the top holding company over huge utility empires. As the Federal Trade Commission found—

> The effect of such pyramiding is to multiply greatly the control that can be exercised by the dominant parties through their personal resources. For example, in the illustration just given, an investment of $1 in common stock of Corporation Securities Co. of Chicago would exercise control over about $2,000 invested in properties of some of the operating companies at the bottom of the pyramid. It seems very unsafe to have any form of pyramiding which has such a financial basis, not only on account of the excessive concentration of control over immense masses of property but also because of the opportunity it offers to financial adventurers to have too much influence over the general economic interests of the country. (*Utility Corporations*, Part 72–A, p. 161.)

The National Power Policy Committee reported:

> By the pyramiding of holdings through numerous intermediate holding companies and by the issue, at each level of the struc-

ture, of different classes of stock with unequal voting rights, it has frequently been possible for relatively small but powerful groups with a disproportionately small investment of their own to control and to manage solely in their own interest tremendous capital investments of other people's money. And the ownership of the stock of operating companies is but one of many devices by which a few clever men have woven the amazing network of control and influence with which they have enveloped and entangled large sectors of the gas and electric utility industry. Voting trusts, interlocking directors and officers, management contracts, the control of proxies, and other means, all have been facilely used to bring about a concentration of control in fewer and fewer hands. (*Supra,* note 3, pp. 4, 5.)

4. *Lack of integration and coordination of operating properties and lack of economies—Section 1 (b) (4)*

Another general characteristic of the holding company is the extreme degree of geographic dispersal of its subsidiaries. This arose largely from the fact that during the period of holding company expansion there was a mad scramble to buy operating properties wherever they might be bought and regardless of price. [36]

[36] The attitude of the competitors in utility empire building has been described in Bauer & Gold, *The Electric Power Industry* (1939), p. 152, by quoting the reported reply of

In this connection, the National Power Policy Committee found:

> The growth of the holding company systems has frequently been primarily dictated by promoters' dreams of far-flung power and bankers' schemes for security profits, and has often been attained with the great waste and disregard of public benefit which might be expected from such motives. Whole strings of companies with no particular relation to, and often essentially unconnected with, units in an existing system have been absorbed from time to time. The prices paid for additional units not only have been based upon inflated values but frequently have been run up out of reason by the rivalry of contending systems. Because this growth has been actuated primarily by a desire for size and the power inherent in size, the controlling groups have in many instances done no more than pay lip service to the principle of building up a system as an integrated and economic whole, which might bring actual benefits to its component parts from related operation and unified management. Instead, they have too frequently given us massive, overcapitalized organizations of ever-increasing

Samuel Insull to sharp protests at the price offered for a particular property:

"Hells Bells! I am not paying for the property, but for location. You can't pay too much when you figure what you can take out of the property in the future."

complexity and steadily diminishing coordination and efficiency.[37]

The scramble of rival holding company systems to acquire local operating utilities has resulted in undesirable operating conditions. The National Power Survey Map, "Service Areas of Principal Electric Utility Systems in the United States" (1935), published by the Federal Power Commission, reveals that operating properties owned by rival holding companies stretch out across territories in a crazy-quilt fashion, irrespective of the power needs of the area served and the needed integration of operating properties.

The results of gerrymandering by rival holding companies' acquisition of utility properties has deterred regional integration, has made power more costly, and has blocked the proper coordination of power resources. In many areas, rival systems have checkmated each other's possibilities of integrating adjacent properties and have thus prevented the most efficient utilization of the power resources of the territory. Each jealously guards its own preserve and will not permit the other to coordinate the utility assets of the area into an integrated system. Students of the utility industry point out that there has been a country-wide misintegration of generation and transmission assets. There has been—

---

[37] *Supra*, note 3, p. 5.

> * * * not only uneconomical location and proportionality of generating stations, with consequent waste and duplications, but there have been particularly excessive, badly located, duplicating, overlapping and overcostly transmission lines. These were mostly planned * * * for system advantages, according to dictates of absentee control. The net result is poor economy, unnecessarily high cost of generation, haphazard interconnections, and wasteful transmission. And in most states there are extensive sections without adequate connections and with unjustifiably high cost of power.[38]

The resultant sprawling character of holding company systems raises grave doubt whether there are economic advantages in control of such properties from the headquarters of a holding company in a remote financial center.

The fundamental objectives of Section 11 in this respect find support in the recommendations of the most thoughtful students of public utilities both in this country and abroad. The Committee on Electricity Distribution, appointed by the British Ministry of Transport, reported in 1936 that the maximum benefits from centralized holding company control occur where the utility properties controlled are physically contiguous, and that such maximum benefits cannot be realized in the

[38] Bauer and Gold, *The Electric Power Industry* (1939), p. 171.

association under one ownership and management of properties serving widely separated areas. The British Committee stated:

> It will be apparent that, potentially at least, the system of Holding Companies offers certain of the advantages which we envisage as a result of the amalgamation of the smaller undertakings, such as the benefit of central management, centralized purchasing of materials, provision of adequate financial resources, etc. The evidence which has been placed before us shows that, in fact, Holding Companies have, to a considerable extent, achieved the advantages just mentioned. They have also, in planning coordinated development of their respective groups, in some degree overcome the disabilities involved in the physical separation of the various controlled undertakings.
>
> *On the other hand, the question of the physical contiguity of undertakings must be of major importance in relation to management and technical planning and development, and the maximum benefits of centralized control cannot be realized by the association under one ownership and management of undertakings covering widely separated areas.*
>
> While, in general, substantial economies can be effected by central purchasing being carried out by one controlling organization on behalf of a number of small subsidiary Companies, there is an economic limit to

the advantage accruing from large scale purchasing. We are not satisfied that any considerable benefits accrue to the larger subsidiary companies by reason of purchases being carried out by a central organization rather than by these larger subsidiaries themselves. (Report of the Committee on Electricity Distribution, May 1936, Sections 287–289.) [Italics supplied.][39]

---

[39] The Splawn Report recommended to Congress that holding companies be abolished completely. See House Report No. 827, part 2, 73d Cong., 2d sess., at VII.

See also Bonbright and Means, *The Holding Company* (1932), at p. 222:

"A sound financial structure, a well integrated system of physically connected utility properties, and a scheme of management services which assures to the public, rather than to the stockholders, the primary advantage of centralized management and control, are more necessary for the country than is the continuance of hectic efforts on the part of the dozen large utility groups to expand their properties at all costs."

Barnes, *The Economics of Public Utility Regulation* (1942), concluded (p. 671):

"When the Public Utility Holding Company Act became law in 1935, the holding company system in the electric and gas utility industries was so intricate that effective regulation was impossible, so complex that investors could not accurately appraise the worth of their securities, so irrational that the potential economies of centralized operation and management could not be realized in practice, and so unnecessarily costly that the interests of consumers in low rates were prejudiced. In the interests of investors and consumers, and as a prerequisite to effective regulation, it was essential to provide for a simplification of the uneconomic complexities and an integration along rational engineering lines. * * *"

C. O. Ruggles, professor of public-utility management at the Harvard Business School and a recognized authority whose professional expertness and integrity have been acknowledged by holding-company representatives (Hearings before the Committee on Interstate Commerce, United States Senate, 74th Congress, 1st Session, on S. 1725, pp. 1009–1010), has written:

> Careful students of public utilities have realized for some time that satisfactory results could not be obtained through the management of far-flung operating companies by highly centralized, complex intercorporate organizations. It is a regrettable fact that the management of some of these super-holding companies have had very little real interest in the prosaic business of furnishing public ultility service. They have instead been primarily interested in the issue and sale of securities; and, for that reason, they have sought a form of organization which made it difficult, if not impossible, to check their accounts or subject their management of operating companies to proper supervision and control. * * * Complex intercorporate organizations which are primarily interested in the sale of public ultility securities ought to be displaced by integrated systems of such a size that the fullest possible economies may be realized without the evil effects of highly centralized control. (Ruggles, Public Utility Management and

Regulation (1935), 14 Harv. Bus. Rev. 59, at 59, 71.)

Even if substantial economies could be realized by holding company servicing of scattered properties, the dangers accompanying the resultant concentration of power in the hands of a small group might well outweigh any such relatively small dollars-and-cents benefits. In this connection, the National Power Policy Committee concluded that—

> While the distribution of gas or electricity in any given community is tolerated as a "natural monopoly" to avoid local duplication of plants, there is no justification for an extension of that idea of local monopoly to embrace the common control, by a few powerful interests, of utility plants scattered over many States and totally unconnected in operation. Such intensification of economic power beyond the point of proved economies not only is susceptible of grave abuse but is a form of private socialism inimical to the functioning of democratic institutions and the welfare of a free people.[40]

5. Impairment of state regulation

We have referred above to several of the ways in which holding companies obstruct effective public regulation of utility companies which they control—such as write-ups, excessive service

[40] *Supra*, note 3, pp. 7, 8.

charges, and sales of securities to affiliated bankers. In fact, the obstruction of State regulation by holding companies is pervasive.

As the Report of the National Power Policy Committee points out:

> Holding-company operations are too extensive, State commission power and funds too limited, to make thorough and effective State action possible. And usually the holding companies have purposely arranged their organization and operations to keep out of reach of State regulation; their lawyers have challenged the jurisdiction of such regulation. Generally a holding company itself is incorporated outside the States in which its operating companies are located and carefully does not do business within those States in a manner which will give State commissions technical power to reach the books and records of the holding company. Even if obtainable, however, such books and records will be comparatively unintelligible and even misleading until uniform accounting methods are made compulsory. There is the further difficulty of allocating the appropriate proportion of the cost of holding-company activities to its subsidiaries in a particular State, coupled with needless waste in having the process duplicated in State after State. These difficulties of State agencies are so fundamental that not even interstate compacts—assuming they could be evolved—can make State regulation practically effective with-

out supplemental help from a Federal law. (*Supra*, note 3, pp. 7, 8.)

Senator Brown of New Hampshire stated on the floor of the Senate:

> Mr. President, I have had some experience with State regulation of utilities. I served upon the New Hampshire Public Service Commission for more than seven years. * * *
>
> * * * * *
>
> About half a dozen foreign holding companies now completely dominate and control the power industry throughout the length and breadth of the State of New Hampshire. * * *
>
> * * * * *
>
> The confusing nature of the intercorporate relationships in a holding-company system hopelessly complicated the task of the State commission. The subsidiaries were all one company when it suited the holding company managers' purposes and they were separate and distinct entities with sacred constitutional rights whenever there was a chance of escaping the arm of the law.
>
> Our commission could never even be certain as to the number of holding companies doing business in the State, because it is almost impossible for a State commission to discover the holding company or companies controlling an operating company, providing the representatives of the controlling company are not d i s p o s e d to

divulge the truth of the matter. More than once have I seen the person in charge of an operating company claim and insist that he did not know where the company was located which was over him; did not know the name of his boss; and did not know where he lived.

* * * * *

In 1930, after repeated unsuccessful efforts to obtain the facts informally with relation to a holding-company system having operating companies in New Hampshire, the regulatory body of which I was a member instituted a formal investigation for the purpose of gaining information as to whether or not certain operating companies in our State, controlled by a holding-company system which is doing business over a considerable part of this country, were complying with the law and orders of the commission, and to obtain evidence in detail as to the capitalization, franchises, and manner in which the lines and property controlled by this holding-company system were managed and operated. This investigation, with the court procedure entailed, covered some two years, and certain phases of the case are now before the Supreme Court, more than five years after initial steps for investigation were taken. (79 Cong. Rec. 8705, 8706.)

An example of efforts to subvert local authority was revealed by the conviction in 1942 of the Union Electric Company of Missouri and one of its top

officers for violating the corrupt practices section of the Act, Section 12 (h). The company had raised a $600,000 slush fund by obtaining kickbacks from lawyers, contractors, etc., and a substantial portion of the money was traced to bribes paid to local officials as well as to political contributions in violation of the Act. *United States* v. *Union Electric Company of Missouri and Louis H. Egan,* D. C. E. D. Mo., No. 31882, pending on appeal. See *Boehm* v. *United States,* 123 F. (2d) 791 (C. C. A. 8), certiorari denied, 315 U. S. 800, rehearing denied, 315 U. S. 828.

As the Senate Committee on Interstate Commerce said in reference to the Act:

> In considering this point the President's message on this point should be kept in mind:
>
> "Where the utility holding company does not perform a demonstrably useful and necessary function in the operating industry and is used simply as a means of financial control, it is idle to talk of the continuation of holding companies on the assumption that regulation can protect the public against them. Regulation has small chance of ultimate success against the kind of concentrated wealth and economic power which holding companies have shown the ability to acquire in the utility field. No Government effort can be expected to carry out effective, continuous, and intricate regulation of the kind of private empires within the Nation which the holding-

company device has proved capable of creating.

"Except where it is absolutely necessary to the continued functioning of a geographically integrated operating utility system, the utility holding company with its present powers must go."

The almost impossible struggle which State regulatory commissions have waged against the giant holding companies is proof of the President's position. (Italics supplied.) (S. Rep. 621, 74th Cong., 1st sess., p. 4.)

Private utilities with their legalized monopolies are chartered to serve public ends. A far-flung disjointed system is independent and absentee so far as any particular community in its system is concerned. Its management has the problems of no one community for its exclusive consideration. It derives a great portion of its power and its profits from outside sources over which the community has no control. It can never be successfully regulated by the community it serves. It is a breeder of bad public relations.

An operating system whose management is confined in its interest, its energies, and its profits to the needs, the problems, and the service of one regional community is likely to serve that community better, to confine itself to the operating business, to be amenable to local regulation, to be attuned and responsible to the fair demands of the public, and more often to get along with the

> public to mutual advantage. A regional system, with each company confined to consolidation of its own territory, will offer no chance for the territorial raids at fantastic prices with which for fifteen years competing holding company systems disturbed the operating business. Essentially local systems will tend to operate utilities rather than to play with high finance; and essentially local enterprise is far less likely to accumulate a disproportionate amount of political and economic power. (*Id.* pp. 11 and 12).

One must also note the adverse effect on local regulation caused by the enormous concentration of power in holding companies. For example, expert testimony is frequently adduced in proceedings before local regulatory commissions on such matters as rates, accounts, and service; and this is affected by the concentration of power. The Federal Trade Commission made the following comments in regard to the "independent" engineers, accountants, and other experts who testify in such proceedings:

> In general, these practices of the holding-company groups have tended to transfer from the independent consulting professional groups working on a fee basis, many expert engineers, accountants, etc., to the salary rolls of a holding-company group and have sometimes caused other such experts, ostensibly in independent practice,

to be largely dependent upon one of these large groups.

The opportunity for a wide range of activity on a consultant basis, conducive to professional independence of attitude, has been thus greatly limited, if not practically destroyed, in the large and important public-utility fields. This is possibly one of the serious results of concentration of control of large activities under one management in that it has given such control a dominating influence over professional attitudes. * * * (*Utility Corporations,* Part. 72–A, p. 697.)

It is quite evident that the consolidation of numerous operating units of business, previously owned and managed by unrelated individuals or small groups, into a relatively few large controlling holding companies, with volumes of business justifying establishing salaried staffs of engineers, accountants, etc., has seriously limited the field of activity of consultants. Instead of 10 jobs available from 10 independent owners, the 10 jobs are reduced to only 1 or 2. The independence of the outside consultant necessarily is influenced by such a situation, especially in matters of controversy of interest between management, investors, and consumers which arise in appraisals of public utilities.

* * * * *

Though it may be recognized that consolidations of public utilities and establish-

> ment of holding companies may in some cases have brought to bear higher grade skill at less actual cost for many operating properties, it seems necessary to consider that independence of mind on many matters and availability of experienced and independent consultants have been greatly diminished thereby. (*Id.*, p. 815.)
>
> * * * It is noteworthy that, with the growth of great holding companies, the independent professional engineers in the field of electric and gas engineering have become very scarce, and their main dependence for professional work is on salaried jobs with great corporations. Independent and expert engineering opinion is, therefore, more difficult to obtain now than formerly. (*Id.*, p. 873.)

In summary, the Federal Trade Commission found as follows:

> The highly pyramided holding-company group represents the holding-company system at its worst. It is bad in that it allows one or two individuals, or a small coterie of capitalists, to control arbitrarily enormous amounts of investment supplied by many other people. In such a situation few men could be relied on to devote their attention to prudent management of the operating companies, because the speculative element is so overwhelming. It tends, apparently, to make them (1) neglect good management of operating companies,

especially by failing to provide for adequate depreciation; (2) exaggerate profits by unsound, deceptive accounting; (3) seek exorbitant profits from service fees exacted from subsidiaries; (4) disburse unearned dividends, because the apparent gains, so obtained, greatly magnify the rate of earnings for the top holding company; and (5) promote extravagant speculation in the prices of such equity stocks on the exchanges. Such concentration of control, even without that speculative pressure, appears objectionable as a matter of sound national welfare. The pyramid is bad also because it involves the sale to the public of preferred and common stocks of holding or subholding companies which have an unusually speculative character—what are aptly called "high-leverage stocks"—although many experienced, if not wise, investors have hitherto regarded some of them as of superior merit, apparently because of the magnitude of the business they controlled. The extreme danger in which such stocks would stand in case earnings declined much below the normal rate (in spite of the warnings uttered by this Commission 8 years ago) have not been understood or believed. But, on the other hand, a sharp distinction should be made between such pyramided holding companies and the single holding company issuing only common stock and owning all of the common stocks of its operating subsidiaries, which under favorable conditions may deserve a

> rating as "business man's investment." Finally, the exaggerated importance to the top holding company of comparatively small differences in the profit of the operating companies greatly enhances the incentive of the holding company to increase such profits, or to obtain a revenue through the exaction of service and other fees in addition to the ordinary revenue by way of dividends. (*Id.*, p. 860.)

These abuses of holding companies, found by the Congress in Section 1 (b) and fully disclosed in the data before the Congress, find their climax in their detrimental effect on consumers and investors. Consumers are harmed by virtue of the strong tendency of many holding company practices to limit rate reductions and impede state rate regulation. Investors are injured because of the adverse effects of holding company structures and practices on values and prices of securities.

The ultimate conclusion of the Federal Trade Commission was that—

> The cumulative effect of some of these abuses undoubtedly resulted in the maintenance of higher than reasonable rates to the consumer and unfavorably affected the value of the securities in the hands of many investors. (*Id.*, p. 882.)

These are the evils and abuses which Congress sought to eliminate. Congress found that these evils and abuses are spread and perpetuated by the business activities carried on by utility hold-

ing companies through interstate commerce. Cf. *Utility Corporations*, Part 73–A, pp. 31–36, 41–58, 205–218.

The concern of Congress over these abuses stems from the fact that much of the power and gas involved is sold in interstate commerce, that huge additional amounts are sold to those producing in and for the commerce, that holding companies raise capital for themselves and their subsidiaries by selling securities in interstate commerce, that those securities are constantly bought and sold in interstate commerce, frequently on national securities exchanges, and that national intervention was required if these activities were adequately to be dealt with in the interest of investors and consumers.

C. CONGRESS HAS POWER UNDER THE COMMERCE CLAUSE TO REGULATE REGISTERED HOLDING COMPANIES BY ELIMINATION OR APPROPRIATE LIMITATION AS PROVIDED IN SECTION 11 (B)

At the outset of the discussion of the commerce power, two preliminary observations should be made. The first is that in view of the extensive Congressional study of public utility holding companies, the findings of Congress, and the provisions of the Act itself, the burden rests on petitioner to establish that no rational foundation exists for concluding that Section 11 (b) (1) is a legitimate exercise of the commerce power as applied to petitioner.[41] It is submitted that this

[41] See, e. g., *United States* v. *Lowden*, 308 U. S. 225, 239, 240; *Stafford* v. *Wallace*, 258 U. S. 495, 521.

burden has not been assumed, much less discharged.

The second observation to be made is that the Act, and Section 11 (b) in particular, are in the conservative tradition of federalism. The Act as a whole exhibits a careful regard for the preservation of local regulation of local utility operations.[42]

---

[42] Section 6 (a) regulates the issuance and sale of securities by registered holding companies and their subsidiaries, but an exemption from the provisions of Section 6 (a) is provided in Section 6 (b), in the case of a security issued or sold by a subsidiary company of a registered holding company "if the issue and sale of such security are solely for the purpose of financing the business of such subsidiary company *and have been expressly authorized by the State commission of the State in which such subsidiary company is organized and doing business* * * *." [Italics supplied.] Section 9 (a) regulates the acquisition of utility assets by registered holding companies and their subsidiaries, but an exemption is provided in Section 9 (b) where a state commission has expressly authorized an acquisition of utility assets by a public utility company. Where common ownership of competing electric and gas facilities is unlawful under state law or must receive state commission approval, under Section 8 the holding company device may not be used to circumvent such state laws. In Section 11 (b) (1) it is provided that the utility operations of a holding company system must be confined to a single integrated public utility system with provision for the retention of additional integrated public utility systems only if three standards are met, one of which is that "(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or *the effectiveness of regulation.*" [Italics supplied.] An integrated public utility system, under Section 2 (a) (29), may not be so large as to impair

It has been pointed out (*supra*, pp. 63–71) that one of the serious abuses characteristic of far-flung holding company systems has been the impairment of local regulatory control. Section 11 (b) is designed to strengthen local control by restoring to the states the practical and legal power to cope with important aspects of utility operations. This is not only its effect, but was its deliberate purpose. The Senate Committee Report stated (S. Rep. 621, 74th Cong., 1st sess., p. 11):

> As has been pointed out above, the purpose of section 11 is simply to provide a mechanism to create conditions under which effective Federal and State regulation will be possible. It is therefore the very heart of the title, the section most essential to the accomplishment of the purposes set forth in the President's message.

The use of the commerce power to achieve this objective is, of course, a familiar exercise of national power in the interest of a working federal-

---

effective regulation. Under Section 18 (b) the Commission is given the power to conduct investigations "at the request of a state commission" and several states have had occasion to receive this benefit, *New England Power Service Company*, Holding Company Act Release No. 3135 (1941); *American Water Works and Electric Company, Inc.*, Holding Company Act Release No. 4085 (1943). As regards jurisdiction of the Commission over accounts, Section 20 (b) provides that the Holding Company Act does not relieve a public utility company of the duty of keeping any accounts which may be required to be kept by a state law or by a state commission, and any accounting requirements imposed by the Commission shall not be inconsistent with state requirements. See also Section 13 (d).

ism. *Kentucky Whip & Collar Co.* v. *Illinois Central R. Co.*, 299 U. S. 334; *In re Rahrer*, 140 U. S. 545; *Clark Distilling Co.* v. *Western Maryland Ry. Co.*, 242 U. S. 311; *United States* v. *Hill*, 248 U. S. 420.

Thus in the present Act, Congress has exercised its power in the interest both of the states and the nation. The interstate commerce which Congress is here seeking to foster and protect has many important aspects. In general, however, these aspects may be subsumed under two main categories: (a) the interstate transmission of electric energy and gas, its distribution to enterprises in interstate commerce, and the rational interstate coordination of utility resources; and (b) the interstate functions of holding companies in the marketing of securities, exercising of control, and performance of services by one member of a system for others. In both these major aspects the essential activities of the holding company system are subject to national control.

It cannot be questioned that the interstate transmission of electricity is a subject within the regulatory power of Congress. This is true whether the transmission is for sale to independent or affiliated companies or is for sale to ultimate consumers.[43] *The Pipe Line Cases*, 234 U. S. 548;

[43] The Act does not regulate local retail rates, and it is unnecessary to consider the respective power of the states and national government in that regard. Cf. *East Ohio Gas Co.* v. *Tax Commission of Ohio*, 283 U. S. 465.

Pennsylvania Gas Company v. *Public Service Commission*, 252 U. S. 23. Indeed, the power of Congress does not depend at all upon an interstate transaction of sale. As this Court pointed out in *United States* v. *Hill*, 248 U. S. 420, 424: "The transportation of one's own goods from State to State is interstate commerce, and, as such, subject to the regulatory power of Congress. *Pipe Line Cases*, 234 U. S. 548, 560." Interstate transmission is as much within the power of Congress as the function of radio broadcasting; "By its very nature," to adopt the language of this Court in *Fisher's Blend Station, Inc.* v. *Tax Commission*, 297 U. S. 650, 655, it "transcends state lines and is national in its scope and importance—characteristics which bring it within the purpose and protection, and subject it to the control, of the commerce clause." The authority under the commerce clause is properly called into play for the protection and fostering of such commerce, and for the prevention of the spread of injury to persons in the several states by means of such commerce. The injury may, of course, be financial no less than physical. The injury may be done to consumers no less than to competitors. This is plain under the decisions involving pure food and drug legislation and the antitrust laws. *Hipolite Egg Co.* v. *United States*, 220 U. S. 45; *McDermott* v. *Wisconsin*, 228 U. S. 115; *Northern Securities Co.* v. *United States*, 193 U. S. 197. And the power

of Congress may be directed at the financial practices and corporate structure of agencies of interstate transmission in the interest of services which they render. Cf. *Dayton-Goose Creek Railway Company* v. *United States*, 263 U. S. 456. The healthy conduct of interstate commerce in gas and electricity may not be impaired by the co-existence of intrastate activities on the part of those conducting that commerce. *Delaware, Lackawanna & Western R. R.* v. *United States*, 231 U. S. 363, 370.

In addition, as stated above, the interstate business of holding companies such as petitioner, viewed as a far-flung enterprise for the marketing of securities, the maintenance of control, and the rendering of services and assistance to affiliated companies, brings it within the reach of the commerce clause. In *Electric Bond & Share Company* v. *Securities and Exchange Commission*, 303 U. S. 419, the Court described the manifold interstate activities of the system, outlining not only the interstate transmission of energy but also the performance of services and rendering of assistance to subsidiaries and the distribution of securities (pp. 432–433); and the Court, without having to pass on the permissible scope of regulation, concluded that the members of the system bore a "highly important relation to interstate commerce and the national economy" (p. 441)."

"The essentially interstate character of utility holding company activities, and the necessity of federal intervention,

Similarly, sales of power and gas to those producing for and in interstate commerce affect that commerce. *National Labor Relations Board* v.

---

were thus described by Senator Borah in the debates on the present Act:

"The activities of some of these holding companies have been perfectly lawless. They have been in disregard of the interests of those to whom they were selling their stocks and their securities. They have been in disregard of the interests of the community and they have been in disregard of the interests of the entire country. It is by reason of those things that it became absolutely necessary that the Congress of the United States deal with the subject matter covered by the bill before us.

"We certainly could not permit those things to go on indefinitely. We certainly could not permit such practices to prevail as a permanent proposition; somebody had to deal with the question. I know of nobody to deal with such companies as those which spread across State lines and control subsidiaries acting in different States of the Union except the Congress of the United States.

"* * * it seems to me that a company which owns 30 or 40 or even 5 or 6 subsidiary companies and affiliates, which subsidiary companies are operating in different States, and which this holding company must control by utilizing the means of transportation or the means of communication between the different States— a holding company which conducts the business, determines the policy, and directs the course of these different subsidiary companies, and does it through employing the channels either of the mail or of the telephone or of the telegraph—must necessarily be under the control of the National Congress, or under the control of nobody whatever. They would be in a 'no man's land' if that were not true." (79 Cong. Rec. p. 9049.)

That no such hiatus exists under the Constitution is made clear by this Court in *United States* v. *Wrightwood Dairy Corp.*, 315 U. S. 110, 118.

Consolidated Edison Company, 305 U. S. 197. Furthermore, holding company systems, through their concentrated control of buying power, substantially affect the flow in interstate commerce of coal, equipment, and other commodities of which they are important consumers.

The essentially interstate character of the business of petitioner is not significantly different from that of the news gathering and news disseminating agency whose operations were considered in *Associated Press* v. *National Labor Relations Board,* 301 U. S. 103, 128–129. There it was contended that the Associated Press was not subject to Congressional authority because it was not engaged in business for profit; because it sold information only to its members; because news reports are not a subject of commerce; and because title to the news remained in the Association during transmission. These contentions were rejected by the Court, in an opinion which emphasized that interstate communication of a business nature is interstate commerce within the regulatory power of Congress. The Court said (pp. 128–129):

> It [The Associated Press] is an instrumentality set up by constituent members who are engaged in a commercial business for profit, and as such instrumentality acts as an exchange or clearing house of news as between the respective members, and as a supplier to members, of news gathered through its own domestic and foreign activi-

ties. These operations involve the constant use of channels of interstate and foreign communication. They amount to commercial intercourse, and such intercourse is commerce within the meaning of the Constitution. [*Gibbons* v. *Ogden*, 9 Wheat. 1, 189.] Interstate communication of a business nature, whatever the means of such communication, is interstate commerce regulable by Congress under the Constitution. [*Pensacola Telegraph Co.* v. *Western Union*, 96 U. S. 1, 9, 10; *Federal Radio Comm'n* v. *Nelson Bros. Co.*, 289 U. S. 266, 279; *International Textbook Co.* v. *Pigg*, 217 U. S. 91, 107; *Indiana Farmer's Guide Publishing Co.* v. *Prairie Farmer Publishing Co.*, 293 U. S. 268, 276.] This conclusion is unaffected by the fact that the petitioner does not sell news and does not operate for profit [*United States* v. *Hill*, 248 U. S. 420; *United States* v. *Simpson*, 252 U. S. 465], or that technically the title to the news remains in the petitioner during interstate transmission. [*Pipe Line Cases*, 234 U. S. 548, 560.] Petitioner being so engaged in interstate commerce, the Congress may adopt appropriate regulations of its activities for the protection and advancement, and for the insurance of the safety of, such commerce.

It is important to recall that the use of the facilities of interstate commerce by petitioner is not casual, incidental, or collateral. The use is of the essence of its business. It is not an ap-

pendage, but the very bone and sinew of its enterprise. The abuses and opportunities for abuse which Congress found to be inherent in the utilities holding company system depend upon the employment of interstate commerce. They become a matter of national concern because they are spread and perpetuated by means of interstate commerce. In these circumstances Congress was at liberty to exercise its power under the commerce clause in an effort to eliminate or ameliorate those abuses. That effort was properly made in the interest of investors as well as of consumers. Cf. *New York Central Securities Corp.* v. *United States,* 287 U. S. 12; *Securities and Exchange Com'n* v. *Crude Oil Corporation of America,* 93 F. (2d) 844 (C. C. A. 7) (Securities Act of 1933); *Coplin* v. *United States,* 88 F. (2d) 652 (C. C. A. 9) (same). The power of Congress to prevent the spread of harm, whether it be moral or physical or financial, through the use of interstate commerce, was succinctly described by this Court in *Brooks* v. *United States,* 267 U. S. 432, 436–437:

> Congress can certainly regulate interstate commerce to the extent of forbidding and punishing the use of such commerce as an agency to promote immorality, dishonesty or the spread of any evil or harm to the people of other States from the State of origin. In doing this it is merely exercising the police power, for the benefit of

> the public, within the field of interstate commerce. * * *

The power of Congress is not limited to forbidding the interstate movement by which injurious practices are given national effect. Such a power has, of course, been frequently exercised. See *Kentucky Whip & Collar Co.* v. *Illinois Central R. Co.*, 299 U. S. 334. For, as was said in *Electric Bond & Share* v. *Securities and Exchange Commission*, 303 U. S. 419, 442, "When Congress lays down a valid rule to govern those engaged in transactions in interstate commerce, Congress may deny to those who violate the rule the right to engage in such transactions." But this is only one kind of sanction which Congress may employ. Congress may elect to reach the evil at its source. This is an equally familiar sanction. *Wickard* v. *Filburn*, No. 59, present term; *United States* v. *Darby*, 312 U. S. 100; *National Labor Relations Board* v. *Jones & Laughlin Steel Corp.*, 301 U. S. 1; *Chicago Board of Trade* v. *Olsen*, 262 U. S. 1; *Stafford* v. *Wallace*, 258 U. S. 495. Indeed, it is the very remedy which Congress employed half a century ago in the antitrust laws and which was early applied to the railroad holding company. *Northern Securities Co.* v. *United States*, 193 U. S. 197. The remedy of dissolution or divestment has frequently been applied under the antitrust acts, and under the commodities clause of the Hepburn Act. *Standard Oil Company* v. *United States*, 221 U. S. 1; *Continental Ins. Co.* v. *United States*, 259

U. S. 156; *United States* v. *Lehigh Valley Railroad*, 220 U. S. 257; *United States* v. *Delaware, Lackawanna & Western Railroad Company*, 238 U. S. 516.

The Congress might have dealt with the problem of interstate utility holding companies by abolishing them entirely or prohibiting their interstate transactions. Instead, the solution adopted by the Congress in the Act was the more moderate one of their elimination if they cannot meet the standards of Section 11 (b) of the Act. The standard in Section 11 (b) (1) is the limitation of the operations of a holding company system to a single integrated public utility system with provision for the retention of additional systems only if they are relatively small, located close to the single system and unable to operate economically under separate management without the loss of substantial economies; similarly, other holdings may be retained only if their retention is related to the operations of the retained utility properties. The standard in Section 11 (b) (2) permits the continued existence of holding companies only where they perform some useful function and do not represent pyramiding, where they have simple structures and are not the cause of unfair or inequitable distribution of voting power.

This classification of permissible and nonpermissible holding company structures is a reasonable one. It represents a relaxation of the policy of elimination in order to permit certain advan-

tages to be realized by what Congress regarded as a legitimate limited employment of the holding company device.

Moreover, this relaxation is itself related to the regulation of interstate commerce. Holding companies permitted to exist under the limitations of Section 11 (b) are localized companies of simple structure in which the likelihood of abuses burdening and obstructing interstate commerce is relatively small. The provisions of Section 11 (b) which permit the continued existence of such companies are thus reasonably related to prevention of the evils affecting interstate commerce which Congress found to exist.

Furthermore, section 11 (b) tends to encourage the efficient coordination of geographically related utility properties as opposed to the scatteration and gerrymandering which have characterized the acquisition and control of operating properties by far-flung holding company enterprises.

II. SECTION 11 (B) (1) DOES NOT VIOLATE THE FIFTH AMENDMENT

North American's argument that Section 11 (b) (1) violates the Fifth Amendment is based on two premises: First, that divestment will terminate contractual relationships and thus will involve a deprivation of property without due process of law; and, second, that such evils as were found to exist in public utility holding companies find an adequate remedy in other sections of the Act.

Amici curiae, in their brief, urge further that notice to, and a vote of, security holders are required under the due process clause as a condition to an order under Section 11 (b).

A. SECTION 11 (B) (1) DOES NOT VIOLATE DUE PROCESS BECAUSE OF ITS EFFECT ON VALUES

The validity or invalidity of a statute under the due process clause depends on the question whether the law is unreasonable, arbitrary and capricious, and whether the means selected have a real and substantial relation to the object sought to be obtained. *Nebbia* v. *New York,* 291 U. S. 502, 525. Congress found that substantial evils result from the business of public utility holding companies. (Section 1 of the Act.) We have shown in Part I–C above that Section 11 (b) (1) is reasonably adapted to the amelioration of these evils. Accordingly, Section 11 (b) (1) does not transgress the due process clause. This is true even though it may require the alteration of "vested" property rights. *Mugler* v. *Kansas,* 123 U. S. 623; *Austin* v. *Tennessee,* 179 U. S. 343; *Booth* v. *Illinois,* 184 U. S. 425; *Otis* v. *Parker,* 187 U. S. 606; *Louisville & Nashville R. R. Co.* v. *Mottley,* 219 U. S. 467; *Rast* v. *Van Deman & Lewis Co.,* 240 U. S. 342, 368; *Continental Ins. Co.* v. *United States,* 259 U. S. 156.

Petitioner argues that Section 11, by ordering North American to divest itself of its scattered subsidiaries and to confine its operations to the

single integrated and geographically restricted system of the Union Electric Company of Missouri, involves a taking of property without just compensation. The company relies primarily upon *Louisville Joint Stock Land Bank* v. *Radford*, 295 U. S. 555. In making this argument petitioners assume that the regulation is a reasonable one and that the only question is whether compensation is required. The argument ignores the consequences of the order which is before this Court. The order in question does not take property from any person and give it to another. The security holders of the company who now own interests in the subsidiaries of the North American Company indirectly through investment in the North American Company will, on compliance with the order, hold those same investments in a different form or they will receive cash in full compensation for those investments.

North American's claims of injury in the present case are that investors are deprived of their "right" to pool their investments in the North American Company.[45] The removal of similar

[45] This "right" is asserted to give the security holders a right greater than that of holding interests in the subsidiaries directly, the value of which is asserted to lie in the continuance of the present managing personnel of North American and in the diversity of investment.

North American argues that its security holders will suffer depreciation in the value of their investments, upon compliance with the divestment order. This is speculation.

rights has been held to raise no constitutional barrier in the cases under the Anti-trust laws, e. g., *Northern Securities Co.* v. *United States*, 193 U. S. 197; *Continental Ins. Co.* v. *United States*, 259 U. S. 156.[46]

---

and in fact independent statistical services reach a contrary conclusion. According to "The Outlook" (publication of Standard and Poor's Corporation, Vol. 15, No. 3, Section 1, p. 823, March 29, 1943), the estimated liquidating value of the common stock of North American was $21 as of March 13, 1943, as compared with a market price of $12⅝. A similar analysis as of February 9, 1942 (Vol. 13, No. 6, Section 1, p. 936) showed a liquidating value of $16 for North American's common stock as compared with a then market value of $9⅜. As of February 17, 1941 (Vol. 17, No. 7, Section 1, p. 920) the liquidating value was $21 per share and the then marked price was $15 per share. Another financial journal likewise calculates the liquidating value of North American Company stock at $21 per share, and states, in regard to the instant review, "Regardless of the decision which that Court reaches, there seems to be little reason for apprehension by North American Company stockholders." (*Barrons*, April 5, 1943, Vol. XXIII, No. 14, p. 18.) *Moody's Stock Survey*, in January, 1943, stated: "The present liquidating value of the shares is estimated to be appreciably in excess of the current market price." (Vol. 35, No. 3, p. 578.) These figures—representative of those relating to holding companies generally, as the articles in "The Outlook" reveal—indicate that holding company securities sell at substantial discounts from their break-up values, which scarcely betokens opinion on the part of investors that "the whole is greater than the sum of the separate parts" (Pet. Br. 61) in the case of holding companies in general, or North American in particular.

[46] Petitioner and *Amici curiae* argue further that the statute is invalid since it requires disposition of security holdings and the termination of relationships which antedate the passage of the Act. But the statute merely requires that

Further, petitioner argues that the statute and order "involve a vast destruction of values" (Pet. p. 60). In so far as this argument is predicated on the hypothesis that a holding company contributes to the earning power, and therefore to the intrinsic value, of assets which must be divested pursuant to Section 11, the record in this case plainly demonstrates the insubstantiality of the assumption as applied to North American. North American's contribution to the management of its underlying subsidiaries is largely limited to financial matters. The economic value to North American's security holders of such a contribution must be weighed against the added costs incident to maintaining the separate corporate existence of North American, as well as the salary costs of the personnel involved.[47] Moreover, Congress, in the exercise of its legislative judgment, has concluded that the economic advantages, if any, from the spreading of management costs over a vast empire are not commensurate with the economic, social, and political disadvantages, and

---

such ownership be no longer continued, and does not penalize past ownership. The Antitrust and Hepburn Act cases make it clear that no constitutional objection can be sustained to a regulation of this type merely because it requires alteration of relations existing prior to the effective date of the statute. See *United States* v. *Trans-Missouri Freight Ass'n*, 166 U. S. 290, 342; *United States* v. *Delaware & Hudson Co.*, 213 U. S. 366.

[47] Three officers of petitioner receive salaries of $75,000 per annum (9 R. 3314, 3315).

this conclusion was amply justified by the studies of the holding company systems which preceded the passage of the Act.

In so far as the argument as to "destruction of values" is predicated on the assumption that in the process of limiting the scope of operations of its holding company there will be dispositions for an inadequate consideration in relation to the value of the assets involved, the argument fails to take into account the reorganization machinery provided in Sections 11 (d) and 11 (e) of the Holding Company Act. Under these provisions the assets of the holding company (i. e., the securities which it owns of its subsidiaries and its miscellaneous investments) need not be sold to outside interests but may be distributed among North American's security holders in accordance with a "fair and equitable reorganization plan." There is provision for determination of the fairness of any such plan, both by the Commission and by the enforcement courts. One such plan was recently before this Court in *Securities and Exchange Commission* v. *Chenery Corp.*, No. 254, decided February 1, 1943. It cannot now be argued, for the purpose of conjuring up obstacles to the entry of an order requiring North American to comply with the provisions of Section 11 (b) (1), that there will be any unfairness in whatever plan may hereafter be approved. North Ameri-

can, of course, makes no such argument but simply ignores the availability of the reorganization machinery in the Act."

As the Senate Committee on Interstate Commerce reported, in reference to a bill containing more drastic limitations of holding companies, but the same enforcement provisions:

> An argument has been given wide-spread currency by the opponents of the title that the elimination of the giant holding companies will demoralize the market for all operating securities because many operating-company securities will be thrown upon the market by the giant holding companies in the course of their dissolution. The argument is premised on the false assumption that the proposed title will cause the dumping or forced liquidation of securities by the giant holding companies. As has been explained above, the title does not require the dumping or forced liquidation of securities. Such disposition as may be necessary can be accomplished by reorganization which will equitably redistribute securities among existing security holders. Insofar as there may be some redistribution of the

---

[48] For example, it is not true, as petitioner implies (Pet. Br. 64) that compliance requires payment in cash of existing bondholders and preferred stockholders of North American. A "fair and equitable" plan of compliance might well provide for payment in securities of subsidiary companies in amounts adequate to protect all rights of North American's security holders.

> securities of operating companies through investment banking channels, this will not result in a substantial net increase in the supply of utility securities on the market because for every block of operating securities distributed there will be a corresponding block of holding-company securities retired. The net effect of such changes will be to strengthen the market for utility securities generally by replacing holding-company securities with sound operating-company securities. Such operations, primarily of a refunding nature, should strengthen rather than weaken the credit of operating companies. (S. Rep. No. 621, 74th Cong., 1st sess., p. 16.)

Furthermore, the provisions of the statute are carefully designed to avoid the necessity of unduly rapid liquidation. Holding companies are given a period of at least a year to comply with the Commission's order.[49] The provisions in the Act as to the time for compliance are far more liberal than the time schedule prescribed by this court for compliance with decrees of divestment under the Anti-trust Act. The court in *United States* v. *American Tobacco Co.*, 221 U. S. 106, 187–188, ordered dissolution and reorganization of the American Tobacco Company. It decreed:

---

[49] See Section 11 (c) of the Act. This section authorizes the Commission to extend the time for an additional period of a year upon a proper showing.

> * * * for the accomplishment of these purposes, taking into view the difficulty of the situation, a period of six months is allowed from the receipt of our mandate, with leave, however, in the event, in the judgment of the court below, the necessities of the situation require, to extend such period to a further time not to exceed sixty days. * * *

The manner in which compliance is presently being effectuated scarcely supports the contention that hardship is entailed. Petitioner itself, ordered in this proceeding to divest itself of its holdings of Detroit Edison Company common stock, has disposed of such holdings by distributing the stock to petitioner's stockholders over a period of time in lieu of cash dividends, cash being used to retire a portion of petitioner's debentures. *The North American Company,* Holding Company Act Release No. 4056 (1943). In the same manner it has disposed of a portion of its holdings of Washington Railway and Electric Company. A subsidiary of petitioner, North American Light & Power Company, ordered to liquidate under Section 11 (b) (2), has sold some of its assets and retired its publicly held debentures. *North American Light & Power Company,* Holding Company Act Release No. 3658 (1942). See *City National Bank and Trust Co.* v. *S. E. C.* (C. C. A. 7, March 5, 1943).

In other holding company systems, portfolio securities have been exchanged for senior securities of the holding company,[50] and indebtedness has been retired by application of proceeds of sales of portfolio securities.[51]

With respect to the timing of the requirement for compliance, it should be observed that since 1935 North American has been on notice that it must limit its operations in accordance with Section 11. Since January 1936, it has had available to it for this purpose the machinery for voluntary action provided by Section 11 (e) of the Act. It did not choose to avail itself of the provisions of that section; rather it has waited until ordered to comply with the statute.

What the market will do in the future is, and will always be, problematical. Today, the assumption of the North American Company is that it will rise. An assumption equally possible is that

---

[50] *Standard Gas and Electric Company*, 7 S. E. C. 1089, 8 S. E. C. 481; *National Power and Light Company*, Holding Company Act Release No. 3211 (1941); *Federal Water and Gas Corporation*, Holding Company Act Release No. 4113 (1943); *United Gas Improvement Company*, Holding Company Act Release No. 4173 (1943); *Lone Star Gas Corporation*, Holding Company Act Release No. 3865 (1942).

[51] *United Light & Power Company*, Holding Company Act Release No. 3345 (1942), see *New York Trust Co.* v. *Securities and Exchange Commission*, 131 F. (2d) 274 (C. C. A. 2); *Central States Utilities Corporation*, Holding Company Act Release No. 3947 (1942).

it may fall. In such case disposition or reorganization within the near future may result in preventing a further decrease in the value of the common stock. Certainly the speculative possibility that a more favorable market will occur at some time in the future, or that retention of an investment will be more advantageous financially than its disposition, are not of such substance as to raise doubts concerning the constitutionality of a carefully worked out Congressional policy.

B. 11 (B) (1) IS AN APPROPRIATE REMEDY FOR THE EVILS EXISTING IN PUBLIC UTILITY HOLDING COMPANIES DESPITE THE APPLICATION OF OTHER REMEDIES FOR SOME OF THE SAME EVILS

North American, contending that Section 11 (b) (1) is not an appropriate method of abolishing the existing abuses, refers in detail to other sections of the Act which regulate specific activities of holding companies and their subsidiaries.

The basic difficulty with this approach is that it totally fails to recognize that in large part the other sections mentioned regulate future transactions by holding companies rather than provide for eliminating the existing conditions that Congress has found adversely affect the national public interest. To be sure, Congress might have determined that by regulating future transactions it would in time achieve its goal. As we have pointed out, Congress concluded that this would be an inadequate solution. But in any event it

was a question for Congressional discretion, rather than a question of Congressional power, whether is was desirable to allow the evils to continue until the completion of a long-drawn-out process of curing them by regulating future transactions.

Once it is established that a means selected by Congress is adapted to remedy a situation within Congressional power, the appropriateness of the remedy chosen by Congress is, of course, a matter for Congress. In *Sunshine Anthracite Coal Co.* v. *Adkins*, 310 U. S. 381, 394, the Court said:

> But appellant claims that this Act is not an appropriate exercise of the Congressional power. It urges that the nature and use of bituminous coal in nowise endanger the health and morals of the populace * * * that the increase of prices will * * * add to the afflictions which beset the industry; * * *. Those matters, however, relate to questions of policy, to the wisdom of the legislation, and to the *appropriateness of the remedy chosen—matters which are not our concern.* If we endeavored to appraise them we would be trespassing on the legislative domain. * * *

As the court below held:

> Congress did not think it could accomplish its object solely by regulating future transactions, although many of the provisions of the Act apply only to them * * *

> The wisdom of the legislation and the appropriateness of the remedy chosen is not the concern of the courts.

It is clear in any event, from what has been stated in Point I C above, that the method chosen by Congress in Section 11 (b) (1) to meet the evils inherent in the business of holding companies is reasonably adapted to the end sought.

Finally, the provisions regulating future activities are not adequate to deal with the major matters of concern under Section 11. Particularly is this so with reference to Section 11 (b) (1) here in litigation. As a remedy for evils which Congress found to exist "when the growth and extension of holding companies bears no relation to economy of management and operation or the integration and coordination of related operating properties," petitioner suggests that existing lack of integration and coordination is subject to the power of the Federal Power Commission to compel the physical connection of transmission facilities (Pet. Br. 69, Item 9). It is clear that the mere interconnection of facilities, were it possible, would not make an integrated and related whole of scattered and functionally unrelated properties. Concretely, this argument is that the existing uneconomic and uncoordinated situation of the properties of the North American Company could be cured merely by running a transmission line

from the District of Columbia through Cleveland, Milwaukee, and St. Louis to San Francisco. Even were such an engineering feat possible, it could not make of the scattered properties of the North American Company an integrated and related whole. So it is clear that the remedies provided elsewhere than in Section 11 (b) (1) are not of themselves sufficient to meet the evils which Congress found to exist. The same defect appears in petitioner's treatment of Section 11 (b) (2) (see Pet. Br. 69, Item 8).

C. THE PROCEDURE PROVIDED IN SECTION 11 DOES NOT VIOLATE DUE PROCESS

Amici curiae raise the objection, not made by petitioner, that the statute is defective for want of a requirement of notice to, and vote by, security holders. It is difficult to fathom just what the *amici* would wish the security holders to vote on. They cite cases regarding voting by security holders on plans of reorganization, but here there is as yet no such plan. The only determination that has been made thus far is a determination of what end result must be reached to comply with the provisions of the Act. Would the *amici* wish to submit to a vote of security holders the question whether North American should comply with the Act and the further question as to what the Act requires of North American? Clearly the matters thus far

determined by the Commission have not been of a kind appropriate for submission to a vote of security holders. This was explicitly held by the Circuit Court of Appeals for the Third Circuit in *Commonwealth and Southern Corp.* v. *Securities and Exchange Commission,* March 31, 1943.

Asserting that "There is something startling" (Brief of *Amici Curiae,* p. 45) about a divestment order without a vote of security holders, *amici* ask: "Why has this not been done in the railroad field?" (p. 46). The short answer is that it has been done in the railroad field. *Northern Securities Co.* v. *United States,* 193 U. S. 197; *United States* v. *Union Pacific R. Co.,* 226 U. S. 61. And it has been done in other fields as well. *United States* v. *American Tobacco Co.,* 221 U. S. 106; *Continental Ins. Co.* v. *United States,* 259 U. S. 156.

When a plan of compliance with the Section 11 (b) (1) order is evolved, the question whether there should be a vote of security holders will properly arise. In regard to Section 11 (e) plans, the Commission has stated its position in *Great Lakes Utility Company,* Holding Company Act Release No. 3419 (1942):

> The plan does not provide for submission of the Amended Plan to security holders for their approval. Neither Section 11 (e) nor 11 (d) contain requirements for

obtaining security holders' approval, and in view of overriding considerations of public policy, it was obviously intended by Congress that a plan found by this Commission, and by a Federal Court, to be fair and equitable to persons affected, and necessary and appropriate to effectuate the provisions of Section 11, could be approved and carried out whether or not such assent should be given. Nevertheless, it may frequently be desirable to submit such plans to the vote of security holders, or at least to those classes of security holders having the major stake in the plan. In this instance we are of the opinion that submission of the plan to security holders should be dispensed with in the interest of economy. Among the considerations which justify dispensing with such vote in this case are the relatively brief extension of the maturity of the bonds, the fact that the plan contemplates liquidation and the exercise of jurisdiction over the assets of the company by a court of equity, and that, under the conditions imposed by our order, the extension of the majority of the bonds is to be without prejudice to the right of any bondholders to be heard by the court as to any issues which may arise during the extension period concerning the program of liquidation by the management, in the event that such action appears necessary in the interest of the bondholders.

CONCLUSION

For the reasons stated, the judgment below should be affirmed.

Respectfully submitted.

APRIL 1943.

APPENDIX A

The Public Utility Holding Company Act of 1935, c. 687, 49 Stat. 803, 15 U. S. C., sec. 79 *et seq.*, provides in pertinent part as follows:

TITLE I—CONTROL OF PUBLIC-UTILITY HOLDING COMPANIES

NECESSITY FOR CONTROL OF HOLDING COMPANIES

SECTION 1. (a) Public-utility holding companies and their subsidiary companies are affected with a national public interest in that, among other things, (1) their securities are widely marketed and distributed by means of the mails and instrumentalities of interstate commerce and are sold to a large number of investors in different States; (2) their service, sales, construction, and other contracts and arrangements are often made and performed by means of the mails and instrumentalities of interstate commerce; (3) their subsidiary public-utility companies often sell and transport gas and electric energy by the use of means and instrumentalities of interstate commerce; (4) their practices in respect of and control over subsidiary companies often materially affect the interstate commerce in which those companies engage; (5) their activities extending over many States are not susceptible of effective control by any State and make difficult, if not impossible, effective State regulation of public-utility companies.

(b) Upon the basis of facts disclosed by the reports of the Federal Trade Commission made pursuant to S. Res. 83 (Seventieth Congress, first session), the reports of the Committee on Interstate and Foreign Commerce, House of Representatives, made pursuant to H. Res. 59 (Seventy-second Congress, first session) and H. J. Res. 572 (Seventy-second Congress, second session) and otherwise disclosed and ascertained, it is hereby declared that the national public interest, the interest of investors in the securities of holding companies and their subsidiary companies and affiliates, and the interest of consumers of electric energy and natural and manufactured gas, are or may be adversely affected—

(1) when such investors cannot obtain the information necessary to appraise the financial position or earning power of the issuers, because of the absence of uniform standard accounts; when such securities are issued without the approval or consent of the States having jurisdiction over subsidiary public-utility companies; when such securities are issued upon the basis of fictitious or unsound asset values having no fair relation to the sums invested in or the earning capacity of the properties and upon the basis of paper profits from intercompany transactions, or in anticipation of excessive revenues from subsidiary public-utility companies; when such securities are issued by a subsidiary public-utility company under circumstances which subject such company to the burden of supporting an overcapitalized structure and tend to prevent voluntary rate reductions;

(2) when subsidiary public-utility companies are subjected to excessive charges

for services, construction work, equipment, and materials, or enter into transactions in which evils result from an absence of arm's-length bargaining or from restraint of free and independent competition; when service, management, construction, and other contracts involve the allocation of charges among subsidiary public-utility companies in different States so as to present problems of regulation which cannot be dealt with effectively by the States;

(3) when control of subsidiary public-utility companies affects the accounting practices and rate, dividend, and other policies of such companies so as to complicate and obstruct State regulation of such companies, or when control of such companies is exerted through disproportionately small investment;

(4) when the growth and extension of holding companies bears no relation to economy of management and operation or the integration and coordination of related operating properties; or

(5) when in any other respect there is lack of economy of management and operation of public-utility companies or lack of efficiency and adequacy of service rendered by such companies, or lack of effective public regulation, or lack of economies in the raising of capital.

(c) When abuses of the character above enumerated become persistent and widespread the holding company becomes an agency which, unless regulated, is injurious to investors, consumers, and the general public; and it is hereby declared to be the policy of this title, in accordance with which policy all the provisions of this title shall be interpreted, to meet the problems and eliminate the evils as enumerated in

this section, connected with public-utility holding companies which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce; and for the purpose of effectuating such policy to compel the simplification of public-utility holding-company systems and the elimination therefrom of properties detrimental to the proper functioning of such systems, and to provide as soon as practicable for the elimination of public-utility holding companies except as otherwise expressly provided in this title.

DEFINITIONS

SEC. 2. (a) When used in this title, unless the context otherwise requires—

* * * * *

(7) "Holding company" means—

(A) any company which directly or indirectly owns, controls, or holds with power to vote, 10 per centum or more of the outstanding voting securities of a public-utility company or of a company which is a holding company by virtue of this clause or clause (B), unless the Commission, as hereinafter provided, by order declares such company not to be a holding company; and

(B) any person which the Commission determines, after notice and opportunity for hearing, directly or indirectly to exercise (either alone or pursuant to an arrangement or understanding with one or more other persons) such a controlling influence over the management or policies of any public-utility or holding company as to make it necessary or appropriate in the public interest or for the protection of investors or consumers that such person be subject to the obligations, duties, and lia-

bilities imposed in this title upon holding companies.

The Commission, upon application, shall by order declare that a company is not a holding company under clause (A) if the Commission finds that the applicant (i) does not, either alone or pursuant to an arrangement or understanding with one or more other persons, directly or indirectly control a public-utility or holding company either through one or more intermediary persons or by any means or device whatsoever, (ii) is not an intermediary company through which such control is exercised, and (iii) does not, directly or indirectly, exercise (either alone or pursuant to an arrangement or understanding with one or more other persons) such a controlling influence over the management or policies of any public-utility or holding company as to make it necessary or appropriate in the public interest or for the protection of investors or consumers that the applicant be subject to the obligations, duties, and liabilities imposed in this title upon holding companies. The filing of an application hereunder in good faith by a company other than a registered holding company shall exempt the applicant from any obligation, duty, or liability imposed in this title upon the applicant as a holding company, until the Commission has acted upon such application. Within a reasonable time after the receipt of any application hereunder, the Commission shall enter an order granting, or, after notice and opportunity for hearing, denying or otherwise disposing of, such application. As a condition to the entry of any order granting such application and as a part of

any such order, the Commission may require the applicant to apply periodically for a renewal of such order and to do or refrain from doing such acts or things, in respect of exercise of voting rights, control over proxies, designation of officers and directors, existence of interlocking officers, directors and other relationships, and submission of periodic or special reports regarding affiliations or intercorporate relationships of the applicant, as the Commission may find necessary or appropriate to ensure that in the case of the applicant the conditions specified in clauses (i), (ii), and (iii) are satisfied during the period for which such order is effective. The Commission, upon its own motion or upon application of the company affected, shall revoke the order declaring such company not to be a holding company whenever in its judgment any condition specified in clause (i), (ii), or (iii) is not satisfied in the case of such company, or modify the terms of such order whenever in its judgment such modification is necessary to ensure that in the case of such company the conditions specified in clauses (i), (ii), and (iii) are satisfied during the period for which such order is effective. Any action of the Commission under the preceding sentence shall be by order.

* * * * *

POWER TO MAKE PARTICULAR EXEMPTIONS REGARDING HOLDING COMPANIES, SUBSIDIARY COMPANIES, AND AFFILIATES

SEC. 3. (a) The Commission, by rules and regulations upon its own motion, or by order upon application, shall exempt any holding company, and every subsidiary

company thereof as such, from any provision or provisions of this title, unless and except insofar as it finds the exemption detrimental to the public interest or the interest of investors or consumers, if—

(1) such holding company, and every subsidiary company thereof which is a public-utility company from which such holding company derives, directly or indirectly, any material part of its income, are predominantly intrastate in character and carry on their business substantially in a single State in which such holding company and every such subsidiary company thereof are organized;

(2) such holding company is predominantly a public-utility company whose operations as such do not extend beyond the State in which it is organized and States contiguous thereto;

(3) such holding company is only incidentally a holding company, being primarily engaged or interested in one or more businesses other than the business of a public-utility company and (A) not deriving, directly or indirectly, any material part of its income from any one or more subsidiary companies, the principal business of which is that of a public-utility company, or (B) deriving a material part of its income from any one or more such subsidiary companies, if substantially all the outstanding securities of such companies are owned, directly or indirectly, by such holding company;

(4) such holding company is temporarily a holding company solely by reason of the acquisition of securities for purposes of liquidation or distribution in connection with a bona fide debt previously contracted

or in connection with a bona fide arrangement for the underwriting or distribution of securities; or

(5) such holding company is not, and derives no material part of its income, directly or indirectly, from any one or more subsidiary companies which are, a company or companies the principal business of which within the United States is that of a public-utility company.

(b) The Commission, by rules and regulations upon its own motion, or by order upon application, shall exempt any subsidiary company, as such, of a holding company from any provision or provisions of this title, the application of which to such subsidiary company the Commission finds is not necessary in the public interest or for the protection of investors, if such subsidiary company derives no material part of its income, directly or indirectly, from sources within the United States, and neither it nor any of its subsidiary companies is a public-utility company operating in the United States.

(c) Within a reasonable time after the receipt of an application for exemption under subsection (a) or (b), the Commission shall enter an order granting, or, after notice and opportunity for hearing, denying or otherwise disposing of such application. The filing of an application in good faith under subsection (a) by a person other than a registered holding company shall exempt the applicant from any obligation, duty, or liability imposed in this title upon the applicant as a holding company until the Commission has acted upon such application. The filing of an application in good faith under sub-

section (b) shall exempt the applicant from any obligation, duty, or liability imposed in this title upon the applicant as a subsidiary company until the Commission has acted upon such application. Whenever the Commission, on its own motion, or upon application by the holding company or any subsidiary company thereof exempted by any order issued under subsection (a), or by the subsidiary company exempted by any order issued under subsection (b), finds that the circumstances which gave rise to the issuance of such order no longer exist, the Commission shall by order revoke such order.

(d) The Commission may, by rules and regulations, conditionally or unconditionally exempt any specified class or classes of persons from the obligations, duties, or liabilities imposed upon such persons as subsidiary companies or affiliates under any provision or provisions of this title, and may provide within the extent of any such exemption that such specified class or classes of persons shall not be deemed subsidiary companies or affiliates within the meaning of any such provision or provisions, if and to the extent that it deems the exemption necessary or appropriate in the public interest or for the protection of investors or consumers and not contrary to the purposes of this title.

TRANSACTIONS BY UNREGISTERED HOLDING COMPANIES

SEC. 4. (a) After December 1, 1935, unless a holding company is registered under section 5, it shall be unlawful for such holding company, directly or indirectly—

(1) to sell, transport, transmit, or dis-

tribute, or own or operate any utility assets for the transportation, transmission, or distribution of natural or manufactured gas or electric energy in interstate commerce;

(2) by use of the mails or any means or instrumentality of interstate commerce, to negotiate, enter into, or take any step in the performance of, any service, sales, or construction contract undertaking to perform services or construction work for, or sell goods to, any public-utility company or holding company;

(3) to distribute or make any public offering for sale or exchange of any security of such holding company, any subsidiary company or affiliate of such holding company, any public-utility company, or any holding company, by use of the mails or any means or instrumentality of interstate commerce, or to sell any such security having reason to believe that such security, by use of the mails or any means or instrumentality of interstate commerce, will be distributed or made the subject of a public offering;

(4) by use of the mails or any means or instrumentality of interstate commerce, to acquire or negotiate for the acquisition of any security or utility assets of any subsidiary company or affiliate of such holding company, any public-utility company, or any holding company;

(5) to engage in any business in interstate commerce; or

(6) to own, control, or hold with power to vote, any security of any subsidiary company thereof that does any of the acts enumerated in paragraphs (1) to (5), inclusive, of this subsection.

(b) Every holding company which has outstanding any security any of which, by use of the mails or any means or instrumentality of interstate commerce, has been distributed or made the subject of a public offering subsequent to January 1, 1925, and any of which security is owned or held on October 1, 1935 (or, if such company is not a holding company on that date, on the date such company becomes a holding company) by persons not resident in the State in which such holding company is organized, shall register under section 5 on or before December 1, 1935 or the thirtieth day after such company becomes a holding company, whichever date is later.

* * * * *

SEC. 11.

* * * * *

(b) It shall be the duty of the Commission, as soon as practicable after January 1, 1938:

(1) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such action as the Commission shall find necessary to limit the operations of the holding-company system of which such company is a part to a single integrated public-utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public-utility system: *Provided, however,* That the Commission shall permit a registered holding company to continue to control one or more additional integrated public-utility systems, if, after notice and opportunity for hearing, it finds that—

(A) Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system;

(B) All of such additional systems are located in one State, or in adjoining States, or in a contiguous foreign country; and

(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation.

The Commission may permit as reasonably incidental, or economically necessary or appropriate to the operations of one or more integrated public-utility systems the retention of an interest in any business (other than the business of a public-utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems.

(2) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such steps as the Commission shall find necessary to ensure that the corporate structure or continued existence of any company in the holding-company system does not unduly or unnecessarily complicate the structure, or unfairly or inequitably distribute voting power among security holders, of such holding-company system.

In carrying out the provisions of this paragraph the Commission shall require each registered holding company (and any company in the same holding-company system with such holding company) to take such action as the Commission shall find necessary in order that such holding company shall cease to be a holding company with respect to each of its subsidiary companies which itself has a subsidiary company which is a holding company. Except for the purpose of fairly and equitably distributing voting power among the security holders of such company, nothing in this paragraph shall authorize the Commission to require any change in the corporate structure or existence of any company which is not a holding company, or of any company whose principal business is that of a public-utility company.

The Commission may by order revoke or modify any order previously made under this subsection, if, after notice and opportunity for hearing, it finds that the conditions upon which the order was predicated do not exist. Any order made under this subsection shall be subject to judicial review as provided in section 24.

APPENDIX B*

Name of system	Approximate consolidated assets Dec. 31, 1941	Location of general headquarters[1]	Number of utility subsidiaries[2]	Number of States where subsidiaries operate	Maximum distance headquarters to subsidiaries[3]	Average distance headquarters to subsidiaries[3]

STATEMENT	1
THE STATUTORY PROVISIONS INVOLVED	2
THE DECISION BELOW AND THE ERRORS THEREIN	6
THE STRUCTURE UPON WHICH THE S. E. C. OPERATED	6
SUMMARY OF ARGUMENT	8
ARGUMENT	9
I. Section 11(b)(1) does not rest, or purport to rest, on any federal power, such as the power over interstate commerce, and is therefore unconstitutional	9
1. The decision below supports our position as to the scope of Section 11, but erroneously upholds Section 11(b)(1) on a misconception of the exemptions in Section 3(a)	14
2. Through the operation of related sections of the Act, Section 11(b)(1) applies to companies whether or not they are in interstate commerce or affect interstate commerce in any degree, or even use the mails or instrumentalities of interstate commerce	16
(a) Section 11(b)(1), and cross-referenced sections	17
(b) Section 1, containing the declaration of policy by Congress	19
(c) The registration provisions of the Act, Sections 4 and 5	24

PAGE

3. Section 11(b)(1) cannot be sustained as a regulation of the use of the mails or instrumentalities of interstate commerce 30

II. The constitutional limitations on federal power imposed by the due process clause of the Fifth Amendment are violated by Section 11(b)(1) 34

1. The subsection violates the due process clause by taking property for public use without a condemnation proceeding and just compensation 34

2. The subsection violates the due process clause by subjecting solvent corporations to compulsory involuntary reorganization or liquidation 42

3. The subsection violates the due process clause because it does not contain the minimum safeguards required even for an exercise of the bankruptcy power 43

4. If Section 11(b)(1) is sought to be sustained on the basis of alleged abuses (which were not violations of law) occurring prior to its enactment, the Section violates the due process clause as in effect the enforcement of an *ex post facto* law 46

Statutes Cited.

This case directly involves the validity of a provision of the Public Utility Holding Company Act of 1935 (49 Stat. 803-838; 15 U. S. C. Secs. 79-79z). The Act, and various provisions thereof, are referred to throughout the brief.

Opinions Below.

The opinion of the United States Circuit Court of Appeals for the Second Circuit was rendered on January 12, 1943, and is reported at 133 F. (2d) 148. It is also printed in the Record on file in this Court (Vol. X, p. 4000, *et seq.*).

The opinions of the Securities and Exchange Commission, rendered April 14, 1942 and June 25, 1942, have not yet been officially reported. They are printed in the Record on file in this Court (Vol. I, p. 73, *et seq.* and p. 207, *et seq.*). The Commission has distributed these opinions as its Holding Company Act Releases Nos. 3405 and 3629.

Supreme Court of the United States

OCTOBER TERM, 1942.

No. 721.

THE NORTH AMERICAN COMPANY,
Petitioner,

v.

SECURITIES AND EXCHANGE COMMISSION,
Respondent.

ON WRIT OF CERTIORARI TO THE CIRCUIT COURT OF APPEALS FOR THE SECOND CIRCUIT.

BRIEF OF ARTHUR A. BALLANTINE AND JOHN F. MacLANE, *AMICI CURIAE*.

Statement.

The undersigned *amici curiae*, members of the Bar of this Court, represent registered public utility holding companies against which proceedings are pending under Section 11(b) of the Public Utility Holding Company Act of 1935 (hereinafter termed the "Act") before the Securities and Exchange Commission (hereinafter termed the "S. E. C.") and before Federal Courts. Counsel for the petitioner herein, The North American Company (a New Jersey corporation, hereinafter termed "North American"), and the S. E. C., the respondent herein, have consented to the filing of this brief.

The orders of the S. E. C. under review were issued under Section 11(b)(1) of the Act and in substance directed North American to divest itself of all of its assets except securities of Union Electric Company of Missouri (with one or two minor exceptions as to which jurisdiction was reserved) and denied North American's petition for rehearing. The assets ordered divested cost $190,000,000.

The companies we represent contend in the proceedings against them, (1) that Section 11(b) (including Section 11(b)(1) and Section 11(b)(2)) is unconstitutional, in that it does not rest, or even purport to rest, on any federal power, such as the power over interstate commerce, and (2) that Section 11(b) (including Section 11(b)(1) and Section 11(b)(2)) is unconstitutional in that it violates the due process clause of the Fifth Amendment. These are the principal issues on the present appeal, and the above-mentioned contentions made in other pending proceedings by the companies we represent will necessarily be affected by the decision in this case.

The Statutory Provisions Involved.

The Act deals with three distinct and separate subjects, viz., (a) registration (Sections 4, 5), (b) regulation (Sections 6, 7, 8, 9, 10, 12, 13, 15), and (c) disintegration and reorganization (Section 11, of which Section 11(b)(1) here involved is a part).

(a) The *registration* provisions, compelling registration of public utility holding companies and the furnishing of detailed information regarding them and their subsidiaries, rest on the power of Congress to obtain such data. *Electric Bond and Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419, at p. 442 (1938). No attack on the registration provisions of the Act is being made.

(b) The *regulation* provisions governing future activities (*i. e.*, after passage of the Act), such as issuance and sale of securities through use of instrumentalities of interstate commerce or the mails, may rest on the federal power over such commerce. These regulatory provisions seem to cover almost every important activity of companies in holding company systems which could have any connection with interstate commerce. No attack on the regulatory provisions of the Act is involved here.

(c) The *disintegration and reorganization* provision (Section 11), a part of which is here involved (that is, Section 11(b)(1)), makes no reference to any matter on which any federal power rests, and does not provide for regulation of any future activity, but for changes in existing property rights. *Revisions contemplated by Section 11 are not to be ordered because of violations of any law or statutory prohibition or because of the insolvency of any company, but for the sole purpose of creating theoretically ideal corporate and operating structures in the public utilities field.* Section 11(a) provides for studies by the S. E. C. of public utility holding company systems. Section 11(b)(1) provides for divestment by holding company systems of a part of their holdings, so as to accomplish economic integration and to disintegrate presently existing holding company systems. Section 11(b)(2) provides for making changes in corporate structures and the voting rights of security holders.

Section 11(b)(1) involved here reads as follows:

> "It shall be the duty of the Commission [the S. E. C.], as soon as practicable after January 1, 1938:
>
> "(1) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such action as the Commission shall find neces-

sary to limit the operations of the holding-company system of which such company is a part to a single integrated public-utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public-utility system: *Provided, however,* That the Commission shall permit a registered holding company to continue to control one or more additional integrated public-utility systems, if, after notice and opportunity for hearing, it finds that—

"(A) Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system;

"(B) All of such additional systems are located in one State, or in adjoining States, or in a contiguous foreign country; and

"(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation.

The Commission may permit as reasonably incidental, or economically necessary or appropriate to the operations of one or more integrated public-utility systems the retention of an interest in any business (other than the business of a public-utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems."

It will be noted that Section 11(b)(1) relates to *registered* holding companies (meaning holding companies registered under Section 5 of the Act) and to each subsidiary

company thereof. However, the constitutional right to apply Section 11(b)(1) to any company or its system is not determined by *registration* by the company. This was expressly held by this Court in *Electric Bond and Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419 (1938), *supra*. Under that decision, holding companies were required to register under Section 5 of the Act and to furnish information regarding themselves and their subsidiaries required in connection with such registration. However, the Court expressly said (p. 435) that such "registration will be without prejudice to future challenge of the validity of any provision of the Act, or requirement of the Commission," outside of the registration provisions. This decision shows that (a) the registration, (b) the regulation, and (c) the disintegration and reorganization, functions of the Act are entirely separate from each other.

There is no provision in Section 11, the disintegration and reorganization section, limiting the application of the Section to companies engaged in interstate commerce or which affect interstate commerce, and there is no such provision elsewhere in the Act.

There is no provision in Section 11 or elsewhere in the Act for a condemnation proceeding, or for just compensation to a holding company and its security holders for the loss which will result from the taking of property of the company through an order for divestment of assets.

There is no provision in Section 11 or elsewhere in the Act limiting the application of the Section to companies which are insolvent and therefore subject to the bankruptcy power of the Federal Government and to compulsory reorganization and liquidation.

There is no provision in Section 11 or elsewhere in the Act granting security holders of companies against which

proceedings are instituted under Section 11 the right to a hearing before the S. E. C. or before any Court, and no provision for the vote or consent of such security holders to any so-called reorganization under the Section.

The Decision Below and the Errors Therein.

The decision of the Court below, 133 F. (2d) 148 (C. C. A. 2nd, Jan. 12, 1943), while upholding Section 11(b)(1) as a valid exercise of federal power over interstate commerce, really supports our position that Section 11 has scope beyond any federal power, and is based on a misconception of exemptions contained in Section 3 of the Act, a matter discussed in Point I below.

The Court below also held that the divestment order did not involve a taking of property without due process, on reasoning clearly erroneous, as will be shown hereinafter in Point II.

The Structure Upon Which the S. E. C. Operated.

Here we have in North American a typical public utility holding company, through which thousands of people obtained a diversified investment in the securities of public utility operating companies located in different parts of the country. In this case, these public utility companies were located in Wisconsin, Missouri, Ohio, the District of Columbia, Michigan and California.

The securities of which North American has been ordered to divest itself cost it $190,000,000. There is a value to North American and to its security holders inherent in the assemblage of these securities over and above the value of each of the items taken separately. Through such assemblage, the investors of North American obtained the advan-

tage of diversification of their investment, and the additional advantage of having an experienced management watch and protect the investments in the operating companies. Moreover, North American and these investors obtained the advantage, under the federal income tax laws, of the filing of consolidated income tax returns for these various companies. Also, thousands of investors purchased senior securities of the subsidiary public utility companies, undoubtedly in reliance on the ownership by North American of the common stocks of such subsidiaries and the reputation of North American for experience and success in the public utility field.

North American does no business except to supervise these investments. It is eminently solvent, there has never been a default on any security issued by North American, and it is not claimed that North American has violated any law in acquiring its property.

The above facts are not contested.

Yet by order of a federal administrative agency, this $280,000,000 solvent corporation, lawfully created and existing, is ordered to divest itself of $190,000,000 of securities not acquired in violation of any law at the time in effect, with the consequent taking of a large amount of property belonging to the corporation and its public security holders, without regard to whether the company is in interstate commerce or has any effect on interstate commerce or whether the divestment affects interstate commerce, without any proceeding for condemnation and payment of just compensation, without any hearing whatever for its security holders, and without obtaining their vote or consent. This is done ostensibly for the sole purpose of creating for the general public benefit a theoretically ideal structure in the public utility field.

Summary of Argument.

We submit that there is a fundamental lack of power in the Federal Government to enact this statute applying to companies, irrespective of their being in, or affecting, interstate commerce (Point I); that the taking of the property rights of North American and its stockholders without any proceeding for condemnation and payment of just compensation is a violation of the due process clause of the Fifth Amendment (Point II(1)); that to compel a solvent corporation, which is not subject to the bankruptcy power and has not violated any law, to go through involuntary reorganization or partial liquidation is also a violation of the due process clause (Point II(2)); that the reorganization statute here involved further violates the due process clause in that it does not contain the minimum safeguards for security holders required even for an exercise of the bankruptcy power (Point II(3)); and that, if Section 11(b)(1) is sought to be sustained by alleged abuses (which were not violations of law) occurring prior to its enactment, the Section violates the due process clause as in effect the enforcement of an *ex post facto* law (Point II(4)).

Our position is not that the Federal Government cannot take any action with respect to these corporations. We think that the Federal Government constitutionally may take (a) action to regulate activities properly found to affect interstate commerce, including, on the analogy of the Sherman Anti-Trust Act, the putting together in the future of properties in, or affecting, such commerce, (b) again on the analogy of the Sherman Anti-Trust Act, in case properties were combined in violation of a law (such as the Act) existing at the time the combination was made, action to put asunder the properties so combined in violation of law, and

(c) action to condemn and take, upon payment of just compensation, property rights of corporations and their security holders for a public purpose connected with a federal power (such as interstate commerce), after proper hearings for such corporations and their security holders.

Section 11 here involved does not lie within any of these types of action.

ARGUMENT.

I. Section 11(b)(1) does not rest, or purport to rest, on any federal power, such as the power over interstate commerce, and is therefore unconstitutional.

The discussion under this Point is not on the question whether any particular companies, either the company involved in this case or others, are engaged in activities in interstate commerce or affect interstate commerce so that such activities or such effect may be the subject of federal legislation under an act passed for that purpose. That general question has been the subject of much recent litigation, resulting in decisions holding that many activities, not previously considered as affecting interstate commerce to the required extent, do affect it sufficiently for federal legislation. Those decisions are not in any respect challenged here.

The point we are discussing is the entirely different one, whether Section 11(b)(1) provides for divestment of assets by holding companies in the public utility field, irrespective of whether the companies themselves are in, or affect, interstate commerce, or the divestment affects interstate commerce. It is clear that Section 11(b)(1) does so.

Therefore, Section 11(b)(1) is not an exercise of the federal power over interstate commerce and (since it can-

not even be claimed to rest on any other federal power) Section 11(b)(1) is invalid. To establish a valid connection between a statute and a federal power the statute must not merely be one which could operate on a subject matter of federal power. The statute must be confined to the subject matter of federal power and its scope must not be such as to operate on all situations in a category, when some of them are not within the ambit of federal power.

In *Hill* v. *Wallace*, 259 U. S. 44 (1922), this Court held invalid a purported tax imposed by Congress on sales of grain for future delivery on the ground that the tax was really a penalty to coerce action by boards of trade and their members and was not an exercise of the taxing power. The Court then went on to consider whether the statute could be supported as an exercise of the commerce power. The Court held that, to do so, something had to be found in the Act confining its application to interstate commerce and said (p. 68):

> "There is not a word in the act from which it can be gathered that it is confined in its operation to interstate commerce."

There was no dissent from this decision of the Court, Mr. Justice Brandeis writing a concurring opinion in which he agreed that the Act was unconstitutional.

In *The Employers' Liability Cases*, 207 U. S. 463 (1908), this Court said (p. 504):

> "Concluding, as we do, that the statute, whilst it embraces subjects within the authority of Congress to regulate commerce, also includes subjects not within its constitutional power, and that the two are so interblended in the statute that they are incapable of separation, we are of the opinion that the courts below rightly held the statute to be repugnant to the

> Constitution and non-enforcible; and the judgments below are, therefore, *Affirmed.*"

In that case, the dissenting justices agreed that, if the statute embraced objects beyond federal power, it was unconstitutional, saying (p. 509):

> "Which interpretation, then, should be adopted? That which regards the law as prescribing the liability of the carrier only to those employés who are engaged in the work of interstate and foreign commerce, or that which extends the benefits of the law also to those employés engaged in work which has no relation whatever to such commerce. In answering this question it must not be forgotten that, if the latter interpretation be adopted, *in the opinion of the whole court the act is beyond the constitutional power of Congress.*" (Italics ours.)

In order to sustain a federal statute as constitutional, the connection of the statute with a federal power, if not plain from the nature of the statutory provisions, must be established (a) by a finding of Congress which the Court decides to be proper, or (b) by a finding of an administrative body or officer, authorized and directed by Congress to make the finding in each instance of the exercise of its or his authority, which finding the Court decides to be proper, or (c) by decision of the Court, unassisted by any finding of Congress or of an administrative commission, that the connection appears from the operative provisions of the statute.

In the case of Section 11(b)(1), there is no plain connection with any federal power; and Congress made no finding to connect the subsection with any federal power, the S. E. C. was not directed to make, and did not make, any such finding, and this Court, upon inspection of the

subsection and related provisions of the Act, will see for itself that the operation of this statute is plainly not an exercise of the commerce power or any other federal power and is not in any way limited in its effect to interstate commerce or matters affecting interstate commerce.

It is not the scheme of the Act to bring companies within the application of Section 11(b)(1) by reason of their being in interstate commerce or affecting interstate commerce. On the contrary, it is sought to bring *all* public utility holding companies and their subsidiaries under the application of Section 11(b)(1), irrespective of their being in interstate commerce or affecting interstate commerce and irrespective of whether their subsidiaries are in interstate commerce or affect interstate commerce. The principal method attempted is to forbid to any holding company or any subsidiary thereof the use of the mails and instrumentalities of interstate commerce unless the holding company registers with the S. E. C. and thereby subjects itself and *all* its subsidiaries to the application of Section 11(b)(1) and thus to the exercise of a power which the Federal Government does not have. The power of the Federal Government over the mails and instrumentalities of interstate commerce cannot constitutionally be made a means of exercising powers which the Federal Government does not have over companies which use them. *A fortiori*, the power over such instrumentalities cannot constitutionally be made the means of exercising power over companies which do not even use them, *i. e.*, companies embraced, through the statutory definitions, in the same holding company system with another company which does make some use of the mails or instrumentalities of interstate commerce.

An order under Section 11(b)(1) is not "regulation" either directly or incidentally, nor a penalty for any violation of law. The function of the subsection is not regula-

tory, but is solely to take away existing property rights not acquired through violation of any federal law. Viewing Section 11(b)(1) from the standpoint of its place in the whole Act, it is part of Section 11, which is the disintegration and reorganization provision of the Act. Section 11 has no relationship in function to the regulatory provisions (Sections 6, 7, 8, 9, 10, 12, 13, 15) or the registration provisions (Sections 4, 5) of the Act. Subsection (a) provides for studies of public utility systems by the S. E. C. Subsection (b)(1) provides for divestment by holding companies of holdings in public utility companies so that they will ordinarily be left with only one integrated system. Under subsection (b)(2), steps are to be taken to change corporate structures in the public utility holding company field, so that the structure of a particular holding company system which the S. E. C. finds to be "unduly or unnecessarily complicated" shall no longer be so, and so that voting power which the S. E. C. finds to be "unfairly or inequitably distributed" among security holders of the system shall no longer be so distributed. Thus Section 11(b)(1) provides for the taking of property rights of solvent corporations not acquired by them in violation of any law. Certainly, for Congress to enact such a statute unconnected with any of the federal powers would be unconstitutional. Therefore, for such a statute to be valid, one prerequisite is that the statute be applicable only to situations which fall within one of the federal powers, such as the power over interstate commerce. Section 11(b)(1) is not so limited and is therefore outside the scope of federal power.

We will now discuss (1) the decision of the Circuit of Appeals for the Second Circuit in this case. We will then discuss (2) the provisions of Section 11(b)(1), and of related sections, to show that the federal power over

interstate commerce is not used to bring companies under Section 11(b)(1), and (3) the impossibility of sustaining Section 11(b)(1) as a regulation of the use of the mails or instrumentalities of interstate commerce.

1. The decision below supports our position as to the scope of Section 11, but erroneously upholds Section 11(b)(1) on a misconception of the exemptions in Section 3(a).

North American argued below that Section 11(b)(1) did not rest on any federal power, such as the power over interstate commerce. The Circuit Court of Appeals in effect conceded that Section 11(b)(1) was drawn so as to include companies not in, or affecting, interstate commerce and subject to the federal power over interstate commerce, for the Court upheld Section 11(b)(1) on the ground that (133 F. (2d), at p. 153) "Section 3 provides administrative procedure by which a holding company can obtain exemption from any provision of the Act, if it and its subsidiaries are predominantly intrastate in character," and that North American had not availed itself of this opportunity for exclusion from the operation of Section 11(b)(1).

Thus the Court held, in effect, that the provisions of Section 3 afforded exemption to a company not in, and not affecting, interstate commerce. This is clearly incorrect and therefore the decision below cannot be supported.

Section 3 does not give exemption to any company on the ground that it is not in, or does not affect, interstate commerce. The test of exemption is quite different and has no relation to any federal power. The Court below, in a footnote to the statement just quoted, refers to subdivisions 1 and 2 of subsection (a) of Section 3.

The introductory clauses of subsection (a), preceding subdivisions 1 and 2 and all other subdivisions, contain a

condition precedent to exemption under any of the subdivisions, which has no relation whatsoever to interstate commerce or any other federal power. That condition precedent is that the S. E. C. shall not find "the exemption detrimental to the public interest or the interest of investors or consumers." It must be reiterated that this is a condition, irrespective of whether the company seeking exemption is in interstate commerce or affects interstate commerce. The existence of this particular condition is alone enough to destroy the reasoning of the Court below based on Section 3(a).

But subdivision 1 of Section 3(a) contains a further condition having no relation to interstate commerce or any other federal power. The holding company which is seeking exemption, and *every* public utility subsidiary company thereof from which it gets income must carry on business "substantially in a single State *in which such holding company and every such subsidiary company thereof are organized.*" These companies might all be doing an intrastate business solely; but the mere fact of organization of one of them or its doing business in a state different from the state in which another is organized and is doing business destroys the chance of exemption, notwithstanding that each corporation is doing a purely intrastate business.

The other subdivision of Section 3(a) referred to by the Court below, subdivision (2), is not available to an ordinary holding company, but only to a holding company which is predominantly a public utility operating company.

Therefore the two subdivisions to which the Court below drew attention as upholding its reasoning not only do not do so, but support our contention here.

Accordingly, the decision below is founded on a clear mistake as to the exemptions in Section 3(a), and gives

little aid to this Court in determining whether any part of Section 11 rests on any federal power. If anything, it is a holding that, except for any bearing the misconstrued exemption may have, Section 11 is not confined to any subject matter of federal power.

2. Through the operation of related sections of the Act, Section 11(b)(1) applies to companies whether or not they are in interstate commerce or affect interstate commerce in any degree, or even use the mails or instrumentalities of interstate commerce.

Take a dozen public utility operating companies having no connection with each other, 10% of the voting shares of each of which are owned by another company doing nothing but owning and voting such shares. *We will show that each of these companies is fully subject to Section 11(b)(1) by reason of artificial provisions in the Act, irrespective of whether the company owning such shares is in interstate commerce or affects interstate commerce or even uses the mails or any instrumentality of interstate commerce, and irrespective of whether any of the other companies engage in or affect interstate commerce.*

It is therefore clear that this federal statute was drawn with a broad application unconnected with interstate commerce or any other federal power. The basis on which the draftsmen obviously hoped that so broad a statute might be sustained was that registration (which subjects companies to Section 11(b)(1) by statutory definition), although compelled as a practical matter by the devices in the Act, would be regarded by the Courts as at least *theoretically* optional (the option being to go out of business) so that the Courts would accept registration as submission and not review the compulsion exerted. However, after passage of the Act and before *Electric Bond and Share Co.*

v. *Securities and Exchange Commission*, 303 U. S. 419 (1938), was decided by this Court, this theory was abandoned by the S. E. C. and the Government attorneys representing it, for the reason that they wished to argue that the registration provisions were separable from the remainder of the Act. (It seems to us that this position as to the separability of the registration provisions could only have been adopted because of recognition of the vulnerability of Section 11 to attack in respect of its constitutionality.) In that case this Court held that registration was not voluntary and that, notwithstanding registration, companies could contest the validity of other provisions of the Act, including Section 11(b)(1). Stripped of the artificial theory that registration was voluntary, Section 11(b)(1), to be valid, must be found to rest on some federal power. However, study of the Act shows that the subsection does not rest on any such power.

The relevant sections of the Act which will now be examined are (a) Section 11(b)(1), and sections tied to it by cross-reference, (b) Section 1, containing the declaration of policy by Congress, and (c) Sections 4 and 5, the registration sections of the Act, which make Section 11(b)(1) applicable to a company.

(a) Section 11(b)(1), and cross-referenced sections.

Nowhere in Section 11(b)(1) or in the whole of Section 11 is there any reference to any matter on which any federal power found in the Constitution rests. Consequently, on the face of the subsection there is no indication that its application is based on any federal power.

Section 11(b)(1) becomes applicable to a company solely through inclusion of a company by definition in the terms used in Section 11(b)(1). The subsection is applicable to "each registered holding company, and each subsid-

iary company thereof." An examination of the definitions of such terms which are all contained in Section 2 of the Act shows that they bring companies under Section 11(b)(1) irrespective of whether the companies are in, or affect, interstate commerce, and irrespective of any other matter of federal power.* For companies to be brought under Section 11(b)(1) through these definitions there need only be a public utility operating company, 10% of the stock of which is held by another company, which has registered under the Act. There is no mention of interstate commerce.

Not only is there no *inclusion* of companies in the definitions, based on such companies being in, or affecting, interstate commerce, but the *exemptions* provided in these definitions are not such as would permit any company otherwise included in any definition to obtain exclusion from the definition, and therefore from the application of Section 11(b)(1), based on its not being in, or affecting, interstate commerce.**

Nor does the definition in Section 2(a)(29)(A) of an

---

* A "holding company" (Section 2(a)(7)(A)) is any company which directly or indirectly owns, controls, or holds with power to vote, 10% or more of the outstanding voting securities of a public utility company or of a company which is itself a holding company. A "public-utility company" is an electric (or gas) utility company (Section 2(a)(5)). An "electric (or gas) utility company" is a company which owns or operates facilities for the generation or transmission of electric energy for sale (or for the retail distribution of gas) (Section 2(a)(3) and (4)). A "registered holding company" is any company which is registered under Section 5 (Section 2(a)(12)). A "subsidiary company thereof" is a company, 10% of the voting securities of which are owned by such registered holding company or a subsidiary thereof (Section 2(a)(8)(A)). In these definitions, there is no reference to interstate commerce or any other matter of federal power.

** Sections 2(a)(3), 2(a)(4), 2(a)(7) and 2(a)(8). Even an electric utility company operating within a single state cannot obtain exemption unless other conditions having no relation to interstate commerce or any effect thereon are present (Section 2(a)(3)(B)).

"integrated public-utility system", to which a holding company system is, generally, required to be reduced under Section 11(b)(1), limit the application of Section 11(b)(1) to matters affecting interstate commerce.*

(b) Section 1, containing the declaration of policy by Congress.

Nowhere in Section 1 of the Act, which declares the policy of Congress, is there any finding that all holding companies and their subsidiary public utility operating companies, whether registered or not, are in, or affect, interstate commerce.

On the contrary, the only statements are that holding companies of public utility operating companies "often" affect interstate commerce and that their subsidiary public utility companies "often" sell and transport gas and electricity through instrumentalities of interstate commerce (subsection (a)).

Clauses (1) to (3) of subsection (a) refer to activities which are "often" or "widely" carried on by public utility holding companies and their subsidiaries by means of the mails or instrumentalities of commerce such as sale of secu-

---

* The definition of "integrated public-utility system" (Section 2(a)(29)(A)), relating to electric utility companies, reads as follows:

> "As applied to electric utility companies, a system consisting of one or more units of generating plants and/or transmission lines and/or distributing facilities, whose utility assets, whether owned by one or more electric utility companies, are physically interconnected or capable of physical interconnection and which under normal conditions may be economically operated as a single interconnected and coordinated system confined in its operations to a single area or region, in one or more States, not so large as to impair (considering the state of the art and the area or region affected) the advantages of localized management, efficient operation, and the effectiveness of regulation;"

rities, performance of service contracts or sale and transport of gas and electricity. But this does not tie Section 11(b)(1) to any federal power over interstate commerce, because Congress did not direct the S. E. C., in applying Section 11(b)(1), to limit its application to activities carried on by means of the mails or instrumentalities of interstate commerce, or to companies engaged in, or affecting, interstate commerce, or even to companies using such instrumentalities. Furthermore, Section 11(b)(1), with which we are solely concerned here, does not purport to be a regulation of any of the matters referred to in clauses (1) to (3). Section 11(b)(1) relates solely to economic integration. The three activities mentioned in clauses (1) to (3) of Section 1(a) are directly regulated by other sections of the Public Utility Act of 1935,* namely, sale of securities by Title I, Sections 6 and 7, service contracts by Title I, Section 13, and sale and transport of electricity by the Federal Power Commission under Title II. (In addition, the Federal Power Commission regulates the sale and transport of natural gas under the Natural Gas Act.) Obviously the recitals of these three clauses of Section 1(a) are intended, and can be taken, as support only for the regulatory provisions just mentioned and not for Section 11(b)(1).

Clause (4) of Section 1(a) states that the practices of public utility holding companies and their subsidiaries "in respect of and control over subsidiary companies *often* materially affect the interstate commerce in which those companies engage." This clause does not tie Section 11(b)(1) to any federal power over interstate commerce

---

* Title I of the Public Utility Act of 1935 is the Public Utility Holding Company Act of 1935, and Title II consists, in part, of the Federal Power Act.

for the same reason the preceding clauses (1) to (3) do not. Section 11(b)(1) is applied to each company in a registered holding company system whether or not the control of the company materially affects interstate commerce, and there is no requirement that the S. E. C. find that a company to which it applies Section 11(b)(1) does materially affect interstate commerce, or that the company or any subsidiary thereof is engaged in interstate commerce.

The final clause (5) of Section 1(a) has no reference to interstate commerce or any federal power. It states in substance that the activities of public utility holding companies and their subsidiaries extend over many states and that state control over public utility companies has not been effective. But it has never been held that the fact that activities took place in more than one state gave rise to any federal power over such activities, if they did not constitute interstate commerce or did not have a substantial economic effect on interstate commerce. It is also certain that the mere holding by individuals resident in one state or by a corporation, incorporated under the laws of that state, of stock in a corporation or corporations organized under the laws of another state or states does not give rise to any federal power. Nor has it ever been held that alleged ineffectiveness or laxity of state control *per se* is a source of federal power to supplement that control. Otherwise, whenever the Federal Government considered that state control of any matter, however local, was ineffective or inefficient, it could undertake regulation thereof. Consequently, this clause (5) does not in any way tie the application of Section 11(b)(1) to any federal power.

Since the declaration in subsection (a) is no more than a statement that public utility holding companies and their subsidiaries "often" engage in interstate commerce or

"often" affect interstate commerce and that such activities of public utility holding companies and their subsidiaries as extend over more than one state are not susceptible of effective state control, one would expect the Act to provide that the S. E. C. should find that the particular companies to which it applies Section 11(b)(1) are actually engaged in, or do affect, interstate commerce. There is, however, no such provision in the Act. No generalization of this kind can be made the basis for S. E. C. power, granted by Section 11(b)(1), to compel a holding company or any of its subsidiaries to divest itself of valuable assets, irrespective of whether the particular companies involved themselves engage in interstate commerce or affect interstate commerce or whether the divestment affects interstate commerce.

If subsection (a) of Section 1 represented a proper foundation for Section 11(b)(1), it would follow that Congress could pass a statute saying that it finds that corporations in general "often" engage in interstate commerce and "often" extend their activities into more than one state, that abuses have arisen in connection with corporations in general, and that, therefore *all* corporations may be compelled to divest themselves of the bulk of their assets. Similarly, it would follow that Congress could enact a statute reciting that it finds that persons engaged in business, whether corporations or partnerships or individuals, "often" use the mails and other instrumentalities of commerce, that abuses have arisen in connection with business operations as shown by bankruptcy proceedings, Federal Trade Commission proceedings, mail fraud proceedings and Congressional investigations, and that Congress had therefore determined, for the purpose of preventing further occurrence of the alleged abuses, to reduce the size of

corporations and other business units to some limited amount. Certainly, no one will claim that Congressional power extends so far. As a minimum requirement (even apart from the protection afforded by the due process clause), such statute would have to have a provision directing the administrative body in charge to find that the subject companies or persons are in, or affect, interstate commerce or that the changes which are required affect interstate commerce.

The statement in subsection (c)* that it is the policy of the Act to meet the problems and eliminate the evils, as enumerated in Section 1, connected with those public utility holding companies "*which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce*" is a clear recognition by Congress that the Act must rest on a matter of federal power, to wit, the power over interstate commerce, and that the operative provisions of the Act, to be valid, must be limited in their application to companies engaged in interstate commerce or in activities which directly affect or burden interstate commerce. But Section 11(b)(1) and related sections contain no such limitation. Nor, as previously stated, is the S. E. C. required by the Act to make any finding in that regard.

There are references in subsections (a) and (b) of Section 1 to the "national public interest". But no one has yet claimed successfully in any Court that the "national public interest" as such and alone and unrelated to any enumerated federal power gives rise to any federal power, except possibly in connection with spending under the gen-

* Subsections (a) and (c) are the only subsections of Section 1 which contain any reference to any matter of federal power. Subsection (b) of Section 1 contains no reference whatever to any matter of federal power but consists only of a list of alleged abuses by public utility holding companies.

eral welfare clause of the taxing powers in the Constitution.*

Accordingly, Section 1 of the Act simply contains no finding or declaration tying the application of Section 11(b)(1) to any federal power.

(c) The registration provisions of the Act, Sections 4 and 5.

As already stated, the draftsmen of the Act obviously realized the existence of the gap between the recitals of Section 1 and the provisions of Section 11(b)(1), which are not limited in their application to matters involving interstate commerce in any manner, and relied, for bridging the gap, on the artificial device of making registration in form voluntary although, as a practical matter, it was compulsory. After passage of the Act, the S. E. C. and the Government attorneys representing it decided not to rely on this device, and this Court in the registration case already referred to, *Electric Bond and Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419 (1938), held that a company, notwithstanding its registration, could raise the question of the validity of sections of the Act other than the registration provisions.

As the Act is drawn, holding companies become subject in terms to Section 11(b)(1) through registration, since Section 11(b)(1) applies to each "registered holding company." To make it impossible for the holding companies

---

* As the Supreme Court said in *U. S.* v. *Butler*, 297 U. S. 1 (1936), at page 74:

> "It does not help to declare that local conditions throughout the nation have created a situation of national concern; for this is but to say that whenever there is a widespread similarity of local conditions, Congress may ignore constitutional limitations upon its own powers and usurp those reserved to the states."

The dissenting opinion in that case, although disagreeing with the decision in the case, did not disagree with this proposition.

not to register under Section 5, provisions were inserted in Section 4(a) which would prevent the holding companies from carrying on business at all without registering, irrespective of the connection of the holding companies with interstate commerce. But, under this Court's decision, the various sections of the Act are separable, and a holding company, finding it impossible to carry on because of the provisions of Section 4(a) without registering under Section 5 (or being compelled to register under Section 5 through the provisions of Section 4(b) which is a "catch-all" clause later herein to be discussed), can register and, notwithstanding such registration, still contest the validity or application of any other sections of the Act. This Court said (303 U. S., at p. 443): "All their rights and remedies with respect to other provisions of the statute remain without prejudice."

Is there, nevertheless, such a necessary chain of connection between the provisions of Section 4 forcing registration and some source of federal power that Section 11(b)(1), when applied to holding companies forced to register by Section 4, is confined to a matter on which the Federal Government has power to legislate? There is no such connection.

Section 5 merely contains the mechanics of registration, and there is no designation or classification therein of the companies required to register. That is contained in Section 4, which has two subsections, (a) and (b).

Analysis of Section 4(a) shows clearly that it requires registration by holding companies irrespective of their being in, or affecting, interstate commerce and thereby subjects to Section 11(b)(1) not only such holding companies but each of their subsidiaries irrespective of whether either the holding company or the subsidiary is in, or affects, inter-

state commerce, or even uses the instrumentalities of interstate commerce at all.

The key to the broad scope of Section 4(a) is clause (6) which, taken together with the introductory clause of Section 4(a), requires a holding company to register (thereby making *that holding company and all* its subsidiaries subject to the application of Section 11(b)(1)) if *any* company in which the holding company holds 10% of the voting shares uses an instrumentality of interstate commerce or the mails incidentally even to a single isolated transaction of various types, for example, to enter into or take any step in the performance of any advisory service contract, or to sell goods to any public utility or holding company (whether or not the buyer is in interstate commerce) (clause (2)), or to sell a utility security to the public or an underwriter (clause (3)), or to purchase any utility security or assets from anyone (clause (4)). Consequently, if there are a dozen public utility operating companies, 10% of the stock of each of which is owned by a holding company, and *one* of the operating companies uses an instrumentality of interstate commerce to take *any* step in the performance of a sale of goods to any public utility company, the holding company must register and *it and all* its subsidiaries are subject to the application of Section 11(b)(1). Under the remaining clauses, (1) and (5), if a holding company wishes to engage directly in transmission of electricity or gas in interstate commerce, or in any kind of business in interstate commerce, it must register, but this is only one of the myriad ways in which a company is brought under Section 11(b)(1) through the operation of Section 4(a). Even in the case of clause (5), the effect of registration of the holding company, because of a desire itself to engage in some kind of business in interstate com-

merce, is to subject *all* its subsidiaries to the application of Section 11(b)(1), irrespective of their engaging in, or affecting, interstate commerce, or even of their using any instrumentality of interstate commerce.

There is another aspect of these clauses of Section 4(a) aside from their subjecting to Section 11(b)(1), by indirection, companies not connected with interstate commerce, or with the use of any instrumentality of interstate commerce, which also shows that Section 11(b)(1) does not rest on the federal power over commerce. Section 4(a) requires registration as a condition of using, for the purpose of an *isolated* transaction, instrumentalities over which the Federal Government may exercise control. But the result of such registration is to subject companies to the application of Section 11(b)(1) *forever after*, notwithstanding completion of such isolated transaction and irrespective of whether they are engaged in, or affect, interstate commerce, or thereafter use any instrumentality of interstate commerce.

While *some* (not all) of the causes of registration may have to do with use by one company of an instrumentality of commerce (or the mails) in the first instance, Section 11(b)(1), because of registration of a holding company, applies to other companies (which are subsidiaries of the holding company by statutory definition) irrespective of the use by such other companies of any instrumentality of commerce (or the mails) and application of the subsection continues although the particular use by the first company which caused registration has stopped (*e. g.*, sale of a block of utility securities held in its portfolio). There is no connection whatever between a company engaging in the isolated transactions described in Section 4(a) which at one time may have compelled registration by a company holding 10% of its stock, and the *subsequent* impact of Section

11(b)(1) on the first company or the holding company or *another* so-called subsidiary of that holding company, since the subsection remains effective notwithstanding that the transactions which compelled the registration have wholly ceased. It is no answer to this to argue that, if a company ceases to engage in such transactions or is not in, or does not affect, interstate commerce, it may apply to the S. E. C. to terminate its registration under Section 5. There is no provision for doing so in the Act. The only ground for terminating registration is contained in subsection (d) of Section 5, namely, that a registered holding company has ceased to hold as much as 10% of the voting stock of each of the companies in which it formerly held 10% or more of the voting stock and has thereby ceased to be a holding company.*

The conclusion is unavoidable that when there is included in the field of action of Section 11(b)(1), through the operation of Section 4(a), each holding company and each of its subsidiary companies, whether or not such company is in, or affects, interstate commerce, or uses any

* The S. E. C. does not even let out from under the Act through Section 5(d) companies which have for all practical purposes ceased to be holding companies. For instance, in *In the Matter of North American Gas and Electric Company* [which is in no way connected with the petitioner herein] Holding Company Act Release No. 4092, February 5, 1943, the S. E. C. denied an application of a company under Section 5(d) when its only reason for being a holding company was its ownership of the worthless common stock of a bankrupt public utility company. The application was accompanied by another application for permission to surrender this worthless common stock to the trustees in bankruptcy of the public utility company. The applicant holding company had a number of other assets which were not utilities. The S. E. C. refused to permit the worthless stock to be surrendered on the ground that this would render the Act no longer applicable to the applicant. Having retained jurisdiction through its refusal to permit the applicant to surrender worthless stock of the company in bankruptcy, and in face of the fact that for all practical purposes the applicant was no longer a holding company under the Act, the S. E. C. then decided that, under Section 11(b)(2), it would be a good thing to order the dissolution of the applicant, and proceeded to do so.

instrumentality thereof, Section 11(b)(1) is not a regulation of interstate commerce.*

Nor does the compulsion to register exerted through subsection (b) of Section 4 have any relation to any matter of federal power, except, as in the case of subsection (a), to form a basis for requiring the furnishing of information through registration as an aid to Congress in determining upon legislation on the subject of sales of securities through the mails or instrumentalities of interstate commerce. Subsection (b) requires every holding company to register under Section 5 which has outstanding any security which had been distributed subsequent to January 1, 1925, by use of the mails or any instrumentality of interstate commerce and which was owned or held on October 1, 1935, by persons other than residents of the state of incorporation. Companies within the classification of subsection (b) of Section 4, having sold securities in interstate commerce within 10 years, would reasonably be in a position to furnish information which might be useful to Congress in connection with legislation with respect to such sales in the future. However, the distribution of a security by a company ten years before the passage of the Act by the use of the mails or the instrumentalities of interstate commerce

* This conclusion is reenforced by noting that Section 11(b)(1) does not purport to be a regulation of any companies *in respect of any of the activities* set forth in Section 4(a) which compel the registration, even of those companies which make use of the mails or the instrumentalities of commerce. On the contrary, such activities are specifically the subject of regulation by other sections of the Act and other statutes. The Federal Power Commission, under the Federal Power Act, which is part of Title II of the Public Utility Act of 1935, and under the Natural Gas Act, regulates the distribution of gas and electricity referred to in clause (1) of Section 4(a) of the Act. Section 13 of the Act regulates the performance of service contracts referred to in clause (2) of Section 4(a). Sections 6 and 7 regulate issuance of securities referred to in clause (3) of Section 4(a). Sections 8, 9 and 10 regulate the acquisitions referred to in clause (4) of Section 4(a).

can have nothing to do with applying Section 11(b)(1) to that company as engaged in interstate commerce or affecting or burdening interstate commerce in the year 1935 and thereafter. It certainly cannot be the basis of applying Section 11(b)(1) to another company merely because the first company owns 10% of its voting shares. Yet through the registration under Section 5 compelled by subsection (b) of Section 4, Section 11(b)(1) purports to operate on companies solely because they, or some other company which happens to own 10% or more of their voting stock, sold securities in that way at that early date.

It has been shown that Section 11(b)(1) does not rest on the federal power over interstate commerce, since it applies to companies irrespective of whether they are engaged in interstate commerce or affect interstate commerce, and irrespective of their use of the instrumentalities of interstate commerce or the mails. It will be shown below that Section 11(b)(1) cannot constitutionally be applied even to companies which do use the instrumentalities of interstate commerce or the mails, merely because of such use.

3. Section 11(b)(1) cannot be sustained as a regulation of the use of the mails or instrumentalities of interstate commerce.

It cannot be argued that Section 11(b)(1) rests on federal power over the use of the mails or the instrumentalities of interstate commerce, simply because the federal power over the mails and instrumentalities of interstate commerce was used in Section 4(a) to compel holding companies to register and thereby bring themselves and all their subsidiaries within the wording of Section 11(b)(1) as registered holding companies. Not only is this argument disposed of by the decision in *Electric Bond and Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419

(1938), *supra*, but it has uniformly been held that the Federal Government cannot use one of its enumerated powers to regulate matters not within its power. It cannot be pretended that Section 11(b)(1) regulates the use of the mails or such instrumentalities of interstate commerce.

As this Court said in *Electric Bond and Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419 (1938), *supra* (p. 442):

> "* * * Congress may not exercise its control over the mails to enforce a requirement which lies outside its constitutional province * * *."

Mr. Justice Holmes said in *The Pipe Line Cases*, 234 U. S. 548, 560-61 (1914):

> "The control of Congress over commerce among the States cannot be made a means of exercising powers not entrusted to it by the Constitution, * * *."

This principle was announced early. Chief Justice Marshall, in *McCulloch* v. *Maryland*, 4 Wheaton 316 (1819), said (p. 422):

> "should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects not entrusted to the government; it would become the painful duty of this tribunal, should a case requiring such a decision come before it, to say, that such an act was not the law of the land."

The principle has been most frequently applied in declaring invalid tax statutes passed by the Federal Government to regulate local matters not within its power.*

---

* *Hill* v. *Wallace*, 259 U. S. 44 (1922) (Tax on transactions not on a regulated grain exchange.)
Linder v. *U. S.*, 268 U. S. 5 (1925) (Invalid regulation of doctor's prescription for ostensible enforcement of Narcotic Tax Law—validity of tax not questioned.)

The principle is applicable to the powers exercised by the states.

> *Frost & Frost Trucking Co.* v. *Railroad Commission of California*, 271 U. S. 583 (1926);
> *Western Union Telegraph Co.* v. *Foster*, 247 U. S. 105 (1918);

In the latter case, Mr. Justice Holmes said (p. 114):

> "* * *, and a constitutional power cannot be used by way of condition to attain an unconstitutional result."

In concluding this Point, we call to the attention of the Court that not only has Congress made no finding, nor required the S. E. C. to find, that companies to which Section 11(b)(1) is applied are in, or affect, interstate commerce, but, in addition, Congress has not found, nor required the S. E. C. to find, nor has the S. E. C. found, that the action the S. E. C. has ordered taken will have any effect on interstate commerce, beneficial or otherwise, or is appro-

---

U. S. v. *Constantine*, 296 U. S. 287 (1935) (Liquor license tax which was higher for dealers violating state law than for those complying therewith.)
U. S. v. *Butler*, 297 U. S. 1 (1936) (Processing tax linked to regulation of agriculture. Here the tax was not used as a penalty.)
Carter v. *Carter Coal Company*, 298 U. S. 238 (1936) (Heavy tax on sales from which exemption could be obtained by complying with regulations.)

The dissenting Justices in some of these cases simply disagreed that the statute was an attempted regulation rather than a true exercise of the taxing power, but fully recognized the principle. For example, Mr. Justice Stone, dissenting in *U. S.* v. *Butler*, 297 U. S. 1 (1936), *supra*, at page 87 said:

> "The power to tax and spend is not without constitutional restraints. One restriction is that the purpose must be truly national. Another is that it may not be used to coerce action left to state control."

priate in the light of any effect it may have on interstate commerce. No one has found that the divestments ordered pursuant to Section 11(b)(1) have any "substantial economic effect" on interstate commerce. (*Cf.* statement in *Wickard v. Filburn*, 317 U. S. 111 (1942) by Mr. Justice Jackson, at p. 125, on the point that at least a "substantial economic effect" on interstate commerce must be shown before there is Congressional power to take action.)

If Section 11(b)(1) could be held to rest on a federal power, there would be no limit to the subject matter of federal power and nothing would be outside the scope of federal power, except matters of domestic relations or the like. There is no suggestion that there is any federal power to regulate public utilities as such and there is nothing about the public utility field which would lead to a conclusion that federal power could apply only to corporations in that field and not to corporations in all other fields of industry. Consequently, if Section 11(b)(1) could be upheld as within the federal power, this power would extend over all types of industry, and an analogue to Section 11(b)(1) could be so applied. A federal commission for all industry, or federal commissions for separate industries, could reshape the corporations and groups of corporations therein, and decree (as under Section 11(b)(1)) that they have too many plants or other assets and must give up most of them, or (as under Section 11(b)(2)) that their structure is "unduly or unnecessarily complicated" or the distribution of voting power therein is "unfair or inequitable", and, if the construction which has been placed on Section 11(b)(2) by the S. E. C. is correct, dissolve them.

II. The constitutional limitations on federal power imposed by the due process clause of the Fifth Amendment are violated by Section 11(b)(1).

1. The subsection violates the due process clause by taking property for public use without a condemnation proceeding and just compensation.

Section 11(b)(1) authorizes the S. E. C. to require corporations to divest themselves of their assets, except for those falling in the strictly limited class which may be retained. This necessarily involves a taking of property which is prohibited by the Fifth Amendment so far as the Federal Government is concerned, and by the Fourteenth Amendment so far as the state governments are concerned. Certainly there is great value inherent in the assemblage of properties constituting the assets of North American (over and above the separate value of each item of its property) which will be lost through the divestment order.

The compulsion to sell properties pursuant to a divestment order also constitutes the taking of valuable property. Moreover, not only is the holder of such property a forced seller, but it has not the opportunity of choosing its own time for making sales of particular assets, that is, when circumstances are favorable for sales of those particular assets as the local situation affecting them develops. These disadvantages and the inevitable taking of property result from forced liquidation at any time but they are accentuated to a devastating degree in time of war. In such a period, there are no markets in which a reasonable price can be obtained for assets of any substantial size, and there are poor markets even for assets of small size.

In addition, a divestment order deprives investors in North American of the advantages which they purchased, including diversification of their investment and supervision by an efficient management of North American's investments in operating companies. Moreover, the corporations involved and the investors therein will be deprived, by the carrying out of the divestment order, of the benefit resulting from the consolidation provisions of the federal income tax laws.

All of these items of property are, under Section 11(b)(1), to be taken from corporations and persons who are not even claimed to have violated any law, merely because Congress has decided that the theoretically ideal structure in the public utility field is an integrated public holding company system of comparatively small size and that it is for the general public good that larger systems be dismembered notwithstanding the grave loss which this will inflict upon those systems and the investors in them.

Thus, this property is being taken under Section 11(b)(1) for the purpose of creating theoretically ideal structures in the public utility field which is deemed to benefit the public generally. As was held in a recent decision of this Court, the taking of this sort of private property for this sort of public purpose requires a condemnation proceeding, involving just compensation, in order to accord with the due process clause of the Fifth Amendment. *Louisville Joint Stock Land Bank* v. *Radford*, 295 U. S. 555 (1935).

Section 11(b)(1) from the standpoint of the due process clause is very similar to the first Frazier-Lemke Act, adopted as part of the Bankruptcy Act, which was held invalid in the *Radford* case. Under that Act, farmers' assets and financial obligations were to be reorganized,

with the view that it was in the public interest to leave farmers in possession, and also preferably in ownership, of their lands, and not to have them foreclosed out through inability to meet mortgage obligations.

To this end, the Frazier-Lemke Act provided that a farmer in default on his mortgage could have resort to a court of bankruptcy, which would permit him to remain in possession of his lands. Then the farmer was to purchase the property at its appraised value, through deferred payments over a six-year period, if the mortgagee consented. If the consent were not forthcoming, foreclosure proceedings were stayed for five years, and the farmer remained in possession, paying a "reasonable rental" annually. At the end of five years, or at any time prior thereto, the farmer might pay into Court the appraised value of the property in full discharge of the debt.

That Act applied to vested property rights, that is, to mortgages already existing at the time of the enactment of the Act. In the *Radford* case, this Court held that Act unconstitutional on the ground that it took substantive property rights, which had already vested, from mortgagees and transferred them to the farmer. The Court said that while this might well be in the public interest, it was not due process under the Fifth Amendment to do so without having a condemnation proceeding and paying just compensation to the mortgagee. In other words, the shifting of the property rights from the mortgagee to the farmer was a quasi-public taking, for a public economic or social purpose, and it was not due process to do so without a condemnation proceeding involving payment of compensation.

The public interest had been argued to the Court at length.* The Court said (Mr. Justice Brandeis), (p. 601):

> "We have no occasion to consider either the causes or the extent of farm tenancy; or whether its progressive increase would be arrested by the provisions of the Act. Nor need we consider the occupations of the beneficiaries of the legislation. These are matters for the consideration of Congress; and the extensive provision for the refinancing of farm mortgages which Congress has already made, shows that the gravity of the situation has been appreciated. The province of the Court is limited to deciding whether the Frazier-Lemke Act as applied has taken from the Bank without compensation, and given to Radford, rights in specific property which are of substantial value. * * * As we conclude that the Act as applied has done so, we must hold it void. For the Fifth Amendment commands that, however great the Nation's need, private property shall not be thus taken even for a wholly public use without just compensation. If the public interest requires, and permits,

---

* The Court (Mr. Justice Brandeis) itself states that argument as follows (p. 598):

> "(1) The welfare of the Nation demands that our farms be individually owned by those who operate them. (2) To permit widespread foreclosure of farm mortgages would result in transferring ownership, in large measure, to great corporations; would transform farmer-owners into tenants or farm laborers; and would tend to create a peasant class. (3) There was grave danger at the time of the passage of the Act, that foreclosure of farms would become widespread. The persistent decline in the prices of agricultural products, as compared with the prices of articles which farmers are obliged to purchase, had been accentuated by the long continued depression and had made it impossible for farmers to pay the charges accruing under existing mortgages. (4) Thus had arisen an emergency requiring congressional action. To avert the threatened calamity the Act presented an appropriate remedy. Extensive economic data, of which in large part we may take judicial notice, were submitted in support of these propositions."

> the taking of property of individual mortgagees in order to relieve the necessities of individual mortgagors, resort must be had to proceedings by eminent domain; so that, through taxation, the burden of the relief afforded in the public interest may be borne by the public."

To the same effect as the *Radford* case is

> *Monongahela Navigation Co.* v. *United States*, 148 U. S. 312 (1893).

Also to the same effect is *Lord* v. *Equitable Life Assurance Society*, 194 N. Y. 212 (1909) in which the New York Court of Appeals, after referring to the fact that the state in that case had even reserved the right to amend the charter of the corporation involved, said (p. 227):

> "The right to amend a charter, however, does not include the right to take away money invested in reliance thereon, or property acquired thereunder. The power of amendment reserved by the Constitution or statutes of a state does not permit interference with property or property rights, because they are protected by the Constitution of the United States. When the legislature has created a corporation and has given it power to acquire property, it cannot take away the property so acquired without providing for compensation. (*Mayor, etc., of N. Y.* v. *Twenty-third St. Ry. Co.*, 113 N. Y. 311, 317.)"

The present case is strikingly parallel to the *Radford* case. Section 11(b)(1) is a statute involving the destruction of valuable property rights. It is allegedly founded on a public interest in the structure of public utility holding company systems, or of the corporations making up the systems. The Act recites the national public interest, the interest of consumers, and the interest of

investors, and even the interests of the states. It proceeds, as did the Act involved in the *Radford* case, without a condemnation proceeding, and also, as pointed out hereinafter in this Point, without the minimum safeguards necessary for a reorganization statute, and does not even purport to be a bankruptcy statute but operates on solvent corporations.

Are there any points of difference, so far as concerns the application of the Fifth Amendment, between the present case and the *Radford* case which would impel a court to depart from the holding in the *Radford* case? On the contrary, if there are any differences, they call for the application of the due process clause in this case more strongly than in the *Radford* case. Insolvency is not required to be present (as it was in the case of the Frazier-Lemke Act) for the S. E. C. to proceed under Section 11(b)(1), and there are not present the safeguards provided in the Frazier-Lemke Act and also in the other supplements to the Bankruptcy Act.

It is not a distinction, as pointed out in Point II(4) below, which obviates the application of the due process clause that, in the present situation, it is charged, or found, by Congress, or the S. E. C., or both, that prior to the enactment of the Act, public utility holding companies erected their systems by financing arrangements and methods now condemned by Congress, or the S. E. C., but not, at the time, in violation of law. The point is, that the property rights legally existed in the systems at the time of the enactment of the Act. This, in itself, brings into play the requirements of due process. As this Court said in the *Radford* case (p. 589):

> "Because the Act is retroactive in terms and as here applied purports to take away rights of the mort-

gagee in specific property, another provision of the Constitution is controlling.

"*Fourth.* The bankruptcy power, like the other great substantive powers of Congress, is subject to the Fifth Amendment."

The Court below held in the present case that the divestment required under Section 11(b)(1) was not a violation of the due process clause as a taking of property for public use without payment of just compensation. The Court said (133 F. (2d), at p. 154):

"Under section 11(c) the petitioner is given a year within which to comply with the order and may on proper showing obtain an additional period not exceeding one year. If divestment can be effected by distribution in kind, there may be no loss in values. If, as petitioner contends, such distribution will be impossible and a liquidation by sale becomes necessary, the process may be painful to its common stockholders, but we cannot say that the remedy selected by Congress is so unreasonable, arbitrary or capricious as to constitute taking property without due process."

This reasoning of the Court below can hardly be persuasive. The Court said there *might* be no loss in values if divestment could be effected by distribution in kind. But distribution in kind would only serve to avoid losses due to inability to obtain a fair market value for the assets to be divested. There would nevertheless remain great losses such as are mentioned at the beginning of this Point, including the value inherent in the assemblage of North American's securities and in the diversification afforded to the investors in North American's securities and the income tax savings effected by consolidated income tax re-

turns. Furthermore, with debentures and preferred stock outstanding aggregating over $100,000,000 at their liquidation or redemption prices, it is plain that a large amount of liquidation of securities will in any event be necessary in carrying out the divestment order even if some assets can be distributed in kind. But the greatest difficulty with the above-quoted portion of the opinion of the Court below is the statement, in effect, that although a taking of North American's property as a result of the divestment order might "be painful to its common stockholders", the divestment was not "capricious" and, therefore, did not constitute a taking of property without due process. How capriciousness can be the test of whether property may be taken for a public use without condemnation and compensation is difficult to see. The ordinary taking for a public use is deliberate and the opposite of capricious. When property is taken for a public highway, this is not capriciously done, but property directly in the planned right of way is selected. Does the fact that such taking is deliberate and appropriate and not capricious mean that the property does not have to be paid for?

Nor is the type of property of which North American is required to divest itself, *i. e.*, securities, entitled to less protection through the due process clause than tangible property, such as land. In the *Radford* case, this Court held that impairment of the substantive rights of a mortgagee, purely intangible rights, even if done in the public interest in order to keep farmers on their farms, was contrary to the due process clause for failure to have a condemnation proceeding, including payment of just compensation. Surely, the decision and reasoning of this Court in the *Radford* case will be deemed controlling here and not the erroneous reasoning of the Court below in the present case. Also in

Monongahela Navigation Co. v. *U. S.*, 148 U. S. 312 (1893) *supra*, this Court held that intangible property (a franchise to collect tolls) was protected by the due process clause from being taken without condemnation and payment of just compensation.

2. The subsection violates the due process clause by subjecting solvent corporations to compulsory involuntary reorganization or liquidation.

The S. E. C. contends that under Section 11(b)(1) and under Section 11(d), the provision for enforcement of Section 11, any state corporation can be reorganized or liquidated by the Federal Government, whether it is solvent or insolvent.

This is contrary to first principles. Compulsory involuntary reorganization can only take place through the exercise of the bankruptcy power,* and the exercise of the bankruptcy power is dependent on the *insolvency*, in either the bankruptcy or equity sense, of the subject.

> *Continental Illinois National Bank & Trust Co.* v. *Chicago, Rock Island & Pacific Ry. Co.*, 294 U. S. 648 (1935);
>
> *Wright* v. *Union Central Life Insurance Co.*, 304 U. S. 502 (1938).

In the *Continental Illinois* case this Court said as to the bankruptcy power (p. 670):

> "Judge Cowen, in *Kunzler* v. *Kohaus*, 5 Hill 317, 321, a decision which was approved by this court in

* So-called reorganizations in equity are simply foreclosures under the exercise of a mortgagee's contractual power to compel the sale of the mortgaged assets or are in the nature of execution sales to satisfy creditors' claims. The creditor then takes his share of the price or has the option of taking securities in a new corporation, which acquires the assets of the old. Even this type of reorganization is not effected unless the debtor company is in financial distress.

> *Hanover National Bank* v. *Moyses*, [180 U. S. 181] *supra*, said that the power was the same as though Congress had been authorized 'to establish uniform laws on the subject of any person's general inability to pay his debts * * *'".

In the *Wright* case this Court said (p. 513):

> "The subject of bankruptcies is nothing less than 'the subject of the relations between an insolvent or nonpaying or fraudulent debtor and his creditors, extending to his and their relief.' This definition of Judge Blatchford, afterwards a member of this Court, has been cited with approval here."

Take the situation of North American itself. There is no finding, and there could be none, that it is insolvent in any sense. There has never been a default on any security of North American. On any basis of valuation, it cannot be disputed that there is a real and substantial equity for its common stock. In the *Radford* case, *supra*, where the statute for reorganization of farmers' finances was held invalid, at least there was present a factor permitting exercise of the bankruptcy power, which is missing here. Radford was insolvent and unable to pay his creditors. Nevertheless, the taking of substantive rights of his creditors under that statute was held unconstitutional. The reorganization statute involved here is outlawed for the reasons condemning the statute in the *Radford* case and also for the further reason that it is made applicable to solvent corporations.

3. The subsection violates the due process clause because it does not contain the minimum safeguards required even for an exercise of the bankruptcy power.

Section 11(b)(1) and Section 11(d), which provides for enforcement of orders issued under Section 11(b)(1), lack

at least two minimum safeguards which every bankruptcy act applicable to insolvent debtors must contain in order to comply with the due process clause. If a bankruptcy reorganization act would be invalid without these two safeguards, as in violation of the due process clause, certainly a reorganization act which is applicable to solvent corporations which are not subject to the bankruptcy power must be invalid if such safeguards are missing. The missing safeguards are:

(1) Provisions requiring a hearing before the Court, for security holders of the companies to be reorganized.

There is no provision whatever in the Act that security holders shall have a hearing before the Federal Court on any issue regarding divestment of assets under Section 11(b)(1) or any order relating thereto or the reorganization made necessary by the divestment of assets. Nor is there even any provision in the Act giving security holders a right to any hearing before the S. E. C.*

---

* There is a provision that the S. E. C. *may* grant security holders a hearing. This word "may" in the Act (Section 19) cannot be construed as mandatory because in the same sentence it is provided that the S. E. C. *shall admit as a party* any interested state, state commission or political subdivision of a state. As this Court held in *Coe* v. *Armour Fertilizer Works*, 237 U. S. 413, 424-5 (1915) as to the absence of a statutory requirement of a hearing for stockholders:

> "Nor can extra-official or casual notice, or a hearing granted as a matter of favor or discretion, be deemed a substantial substitute for the due process of law that the Constitution requires. * * * 'It is not enough that the owners may by chance have notice, or that they may as a matter of favor have a hearing. The law must require notice to them, and give them the right to a hearing and an opportunity to be heard.' The soundness of this doctrine has repeatedly been recognized by this court."

Similarly, it has been held by this Court that actual notice given as a matter of discretion does not meet the due process requirement that reasonable notice be mandatory under the statute. *Wuchter* v. *Pizzutti*, 276 U. S. 13 (1928).

(2) Provision for vote or consent of security holders affected.

There is no provision whatever in the Act for any vote or consent of security holders in respect of any reorganization to be effected under Section 11(b)(1) and Section 11(d). In *Louisville Joint Stock Land Bank* v. *Radford*, 295 U. S. 555 (1935), *supra*, this Court held that, under a reorganization statute for farmers, the substantive rights of the farmer's mortgagee could not be adversely affected without the mortgagee's consent, unless the mortgagee belonged to a class, the majority of which voted for, or consented to, the change in rights, and unless the change was approved by the Court. These are two of the minimum safeguards required for any compulsory reorganization. On this point this Court said (Mr. Justice Brandeis) at pages 585-6:

> "Nor do the provisions of the bankruptcy acts concerning compositions afford any analogy to the provisions of Paragraph 7. So far as concerns the debtor, the composition is an agreement with the creditors in lieu of a distribution of the property in bankruptcy—an agreement which 'originates in a voluntary offer by the bankrupt, and results in the main, from voluntary acceptance by his creditors.' * * * In no case of composition is a secured claim affected except when the holder is a member of a class; and then only when the composition is desired by the requisite majority and is approved by the court."

To the same effect with respect to railroad bankruptcy reorganizations is *Continental Illinois National Bank & Trust Co.* v. *Chicago, Rock Island & Pacific Ry. Co.*, 294 U. S. 648 (1935), *supra* (pp. 673, 675).

There is something startling about the conception that North American's assets can be ordered to be divested and

the rights of its security holders can be changed, *i. e.*, reorganized or liquidated, by the simple fiat of a federal commission when no insolvency is involved and none of the safeguards employed in the bankruptcy process are used. Why has this not been done in the railroad field? A large number of the railroad systems of the country are insolvent and have been in reorganization proceedings for eight to ten years. With Congress, the Courts and the Interstate Commerce Commission exercising all their ingenuity to expedite and simplify the reorganization process, this simple procedure, ignoring private rights, has not been applied to the railroads. If the procedure is valid here, it is valid not only for insolvent railroads but for railroads which are solvent. All power under the commerce clause may be used in the case of solvent or insolvent railroads; the major railroad systems are beyond question fully in interstate commerce. Insolvent railroads are also a proper subject for the exercise of the bankruptcy power. Yet no one has thought that the fundamental rights of the railroads and their security holders can be taken by any such procedure as that set out in Section 11. It would obviously be a violation of the due process clause.

4. If Section 11(b)(1) is sought to be sustained on the basis of alleged abuses (which were not violations of law) occurring prior to its enactment, the Section violates the due process clause as in effect the enforcement of an *ex post facto* law.

Section 1 of the Act recites alleged abuses by public utility holding companies which occurred prior to the enactment of the Act and which were not in violation of any law existing at the time the alleged abuses occurred. The S. E. C. in the Court below tried to use these recitals as a basis of support for Section 11(b)(1), for it submitted,

as an appendix to its brief, a so-called "Economic Supplement" which contained reference to instances of such abuses relating to public utility holding companies. Moreover the S. E. C. tried to draw some analogy between Section 11(b)(1) and the Sherman Anti-Trust Act.

While such alleged abuses may form a basis for *regulation* of *future activities* of public utility holding companies, so far as such activities affect interstate commerce, they can form no basis for Section 11(b)(1), which is not regulatory but which takes existing property rights legally acquired.

If abuses occurring prior to the enactment of the Act and not violating any then existing law are the basis for the taking of property through Section 11(b)(1), the Section imposes a penalty for past acts which did not violate any law at the time committed, and the Section violates the due process clause as in effect the enforcement of an unconstitutional *ex post facto* law. A law need not be *in form* a criminal law to violate the prohibition.

> *Fletcher* v. *Peck*, 6 Cranch, 87 (1810) (annulling title to real property);
>
> *Cummings* v. *The State of Missouri*, 4 Wall. 277 (1866) (denial of right to hold office and practice profession);
>
> *Ex parte Garland*, 4 Wall. 333 (1866) (denial of right to practice profession);
>
> *Pierce* v. *Carskadon*, 16 Wall. 234 (1872) (denial of right to defend legal proceedings).

Just as the taking of property without just compensation is a violation of the due process clause (as was held by this Court in the *Radford* case), so also the taking of property as a penalty under a law which is in effect an *ex post facto* law is a violation of the due process clause.

Nor is there any analogy here to the cases under the anti-trust laws as claimed by the S. E. C. In such cases corporations are required to divest themselves of their properties, but the ground for the divestment is that the properties had been put together and combined in violation of the anti-trust laws existing at the time the combinations were put together. There is no charge here that North American acquired any of its properties in violation of any law or statutory prohibition existing at the time of the acquisitions. Consequently, no support can be drawn by the S. E. C. from the cases under the anti-trust laws.

Conclusion.

Section 11(b)(1) should be held by this Court to be unconstitutional in that it does not rest on any federal power but has a scope beyond any federal power, and in that it is a violation of the due process clause of the Fifth Amendment.

SUPREME COURT OF THE UNITED STATES.

No. 1.—October Term, 1945.

The North American Company, Petitioner, *vs.* Securities and Exchange Commission.	On Writ of Certiorari to the United States Circuit Court of Appeals for the Second Circuit.

[April 1, 1946.]

Mr. Justice Murphy delivered the opinion of the Court.

Congress enacted the Public Utility Holding Company Act of 1935, 49 Stat. 803, in order to correct grave abuses which it had found in the use of the holding company device in the nation's electric and gas utility industries. This Court in *Electric Bond & Share Co.* v. *Securities and Exchange Commission*, 303 U. S. 419, held constitutional the various provisions of the Act relating to the registration of holding companies as therein defined. In this case we are called upon to determine the constitutionality of § 11(b)(1) of the Act, authorizing the Securities and Exchange Commission to act to bring about the geographic and economic integration of holding company systems. Specifically, we must decide whether this requirement falls within the power of Congress to regulate commerce among the several states and whether it violates the due process clause of the Fifth Amendment.

The North American Company, the petitioner, is a holding company within the meaning of the Act, § 2(a)(7), and is registered as such with the Securities and Exchange Commission.[1] The Commission instituted appropriate administrative proceedings against North American under § 11(b)(1), the provisions of which apply to registered holding companies. As a result, the Commission entered orders limiting North American's properties to those which, in the Commission's judgment, complied with the standards of § 11(b)(1) and compelling it to sever relationships with all its other properties.[2] The court below, after affirming the orders of the Commission on a statutory level, rejected North

[1] North American registered with the Commission on February 25, 1937, reserving its right to challenge the constitutionality of § 11(b)(1) and other portions of the Act. See Landis v. The North American Company, 299 U. S. 248, 251-252; Electric Bond & Share Co. v. Securities and Exchange Commission, 303 U. S. 419, 435.

[2] Holding Company Act Releases Nos. 3405 and 3629.

American's constitutional objections. 133 F. 2d 148. Only these constitutional issues are now before us.

As was the situation in the *Electric Bond & Share Co.* case, North American is clearly engaged in activities which bring it within the ambit of congressional authority. North American is a typical utility holding company. It is the pinnacle of a great pyramid of corporations, the majority of which operate electric and gas utility properties. These properties are scattered throughout the United States, many of them serving large cities and contiguous territories.[3] Electric energy is transmitted across state lines by numerous companies in the pyramid or system.[4] As of December 31, 1940, there were some eighty corporations in the system, with an aggregate capitalized value in excess of $2,300,000,000. Organized in New Jersey in 1890 and maintaining business headquarters in New York City, North American maintains direct or indirect interests in these corporations through the medium of stock ownership. It is that medium that binds the system together.

North American owns stock directly in ten of the corporations, holding 79% or more of the common stock of eight of them and 17.71% and 19.2%, respectively, of the voting securities of the other two. Three of these direct subsidiaries are registered holding companies: (1) Union Electric Company of Missouri, operating in and around St. Louis, Mo., and with subsidiaries operating in Illinois and Iowa as well; (2) Washington Railway and Electric Company, with subsidiaries operating in the District of Columbia and adjacent territory in Virginia and Maryland; and (3) North American Light & Power Company, operating extensive systems in Kansas, Missouri, Illinois and Iowa in addition to being the parent of several registered holding companies.

Four of the direct subsidiaries of North American are operating companies: (1) Cleveland Electric Illuminating Company, serving Cleveland, Ohio, and surrounding territory; (2) Pacific Gas & Electric Company, serving large areas in California; (3) The Detroit Edison Company, serving Detroit and vicinity; and (4) Wisconsin Electric Power Company, a holding company with subsidiaries operating an integrated electric utility system in Wisconsin and Michigan.

---

[3] Federal Trade Commission Report to the Senate, "Utility Corporations," Sen. Doc. 92, Part 72-A, 70th Cong., 1st Sess., pp. 107-110, 706-716.

[4] In 1929 and 1930, companies in the North American system transmitted 9.3% and 7.7%, respectively, of the total amount of electric energy transmitted across state boundaries in the United States. Federal Trade Commission Report, *supra*, note 3, p. 43, Table 13.

The other three direct subsidiaries are (1) North American Utility Securities Corporation, an investment trust; (2) West Kentucky Coal Company, which owns and operates a coal mine in Kentucky and sells coal in interstate commerce; and (3) 60 Broadway Building Corporation, which owns the office building in New York City where petitioner has its offices.

The various companies in the North American system perform a variety of functions from electric and gas service to railroad transportation, warehousing and amusement park operations. All told, they conduct business in seventeen states and the District of Columbia. Electric service alone is provided for more than 3,000,000 customers in an area of roughly 165,000 square miles.

North American claims that its sole and continuous business has been that of acquiring and holding for investment purposes stocks and other securities of the subsidiaries, its relationship being essentially that of "a large investor seeking to promote the sound development of his investment." Active intervention on North American's part in the activities of these companies, it is true, has been of a limited character. Operations and operational policies, the Commission found, have been left entirely to the local managements. Nor has North American sold these subsidiaries any supplies or engineering service. [redacted]s lack of active intervention, however, is indecisive. It appears to have resulted in large part from North American's satisfaction with the local managements of the subsidiaries and from the fact that the local managements have often included men selected by or historically related to North American. See *Detroit Edison Co.* v. *Securities and Exchange Commission*, 119 F. 2d 730, 734-735; *Pacific Gas & Electric Co.* v. *Securities and Exchange Commission*, 127 F. 2d 378, 383-384. The Commission was thus warranted in considering the harmonization of local policies with those of North American as a fact, the absence of conflicts making affirmative action by North American unnecessary. But it does not follow that North American's domination of its system was any less real or effective. Historical ties and associations, combined with strategic holdings of stock, can on occasion serve as a potent substitute for the more obvious modes of control. See *Southern Pacific Co.* v. *Bogert*, 250 U. S. 483, 491-492; *Natural Gas Co.* v. *Slattery*, 302 U. S. 300, 307-308. Domination may spring as readily from subtle or unexercised power as from arbitrary imposition of command. To conclude otherwise is to ignore the realities of intercorporate relationships. *Rochester Telephone*

Corp. v. *United States*, 307 U. S. 125, 145-146. In light of the extensiveness of North American's holdings of the securities of its subsidiaries and the penetration of local managements with men of North American background, the Commission was justified in treating North American as possessing domination over its subsidiaries or the power to dominate them when and if necessary.[5]

But North American in some respects has actually intervened in the activities of its subsidiaries. It has affirmatively participated in and dominated their financing operations.[6] So completely has it taken over the planning and handling of the various flotations of securities that North American urged before the Commission, though in vain, that the subsidiaries were incompetent to handle such matters and that it would be highly uneconomical for them to attempt to do so. As the Commission noted, the ability to dominate this financing and to control the flow, through underwriting channels, of millions of dollars of securities has been of great value and benefit to North American, in addition to being of aid to the subsidiaries. North American has also provided the subsidiaries with advisory and consultative facilities in relation to management problems; and intercompany committees have been created to serve as clearing houses for technical and accounting information.

The interstate character of North American and its subsidiaries is readily apparent from the Commission's survey of their activities. North American is more than a mere investor in its subsidiaries. See *Northern Securities Co.* v. *United States*, 193 U. S. 197, 353-354. It is the nucleus of a far-flung empire of corporations extending from New York to California and covering seventeen states and the District of Columbia. Its influence and domination permeate the entire system and frequently evidence themselves in affirmative ways. The mails and the instrumentalities of interstate commerce are vital to the functioning of this system. They have more than a casual or incidental relationship. Cf. *Ware & Leland* v. *Mobile County*, 209 U. S. 405; *Blumenstock Bros.* v. *Curtis Pub. Co.*, 252 U. S. 436; *Federal Baseball Club* v. *National*

[5] As to only two of the subsidiaries, the Detroit Edison Company and the Pacific Gas & Electric Company, has a claim been raised that they were not controlled by or subject to a controlling influence of North American. The Commission rejected both claims after hearings and its determinations were sustained upon appeal. Detroit Edison Co. v. Securities and Exchange Commission, 119 F. 2d 730, cert. denied, 314 U. S. 618; Pacific Gas & Electric Co. v. Securities and Exchange Commission, 127 F. 2d 378, affirmed on rehearing by equally divided court, 139 F. 2d 298, affirmed by equally divided Court, 324 U. S. 826.

[6] See Federal Trade Commission Report, *supra*, note 3, p. 347.

League, 259 U. S. 200. Without them, North American would be unable to float the various security issues of its own or of its subsidiaries, thereby selling securities to residents of every state in the nation. Without them, North American would be unable to exercise and maintain the influence arising from its large stock holdings, receiving notices and reports, sending proxies to stockholders' meetings, collecting dividends and interest, and transmitting whatever instructions and advice may be necessary. Nor could North American maintain its other relationships and contacts with its own subsidiaries without the use of the mails and facilities of interstate commerce. Such interstate commercial transactions involve the very essence of North American's business. See *International Textbook Co.* v. *Pigg*, 217 U. S. 91. They enable it "to promote the sound development" of its investments from its headquarters in New York City. In short, they are commerce which concerns more states than one. *Gibbons* v. *Ogden*, 9 Wheat 1, 194; *Second Employers' Liability Cases*, 223 U. S. 1, 46; *The Minnesota Rate Cases*, 230 U. S. 352, 398. As stated by this Court in *Associated Press v. National Labor Relations Board*, 301 U. S. 103, 128, "Interstate communication of a business nature, whatever the means of such communication, is interstate commerce regulable by Congress under the Constitution."

Moreover, North American concedes that four of its direct utility subsidiaries, Union Electric Company of Missouri, Washington Railway and Electric Company, North American Light & Power Company and Wisconsin Electric Power Company, transmit energy across state lines and hence are engaged in interstate commerce. It further concedes that its subsidiary West Kentucky Coal Company is engaged in interstate commerce, although contending that the remaining five direct subsidiaries are not so engaged. In view of North American's very substantial stock interest and its domination as to the affairs of its subsidiaries, as well as its latent power to exercise even more affirmative influence, it cannot hide behind the facade of a mere investor. Their acts are its acts in the sense that what is interstate as to them is interstate as to North American. These subsidiaries thus accentuate and add materially to the interstate character of North American. *Electric Bond & Share Co.* v. *Securities and Exchange Commission*, *supra*, 440. They make even more inescapable the conclusion that North American bears not only a "highly important relation to interstate commerce and the national economy," *Id.*, p. 441, but is actually engaged in interstate commerce. It is thus subject to

appropriate regulatory measures adopted by Congress under its commerce power.

Turning to § 11(b)(1)[7] and its constitutional impact upon North American, we find that it directs the Commission to apply its provisions to holding companies engaged in interstate commerce. In essence, it confines the operations of each holding company system to a single integrated public utility system with provision for the retention of additional systems only if they are relatively small, located close to the single system and unable to operate economically under separate management without the loss of substantial economies; in addition, other holdings may be retained only if their retention is related to the operations of the retained utility properties.

These requirements of § 11(b)(1) apply only to registered holding companies. A holding company, by statutory definition, is a company that controls or possesses a controlling influence over an electric or gas utility company. § 2(a)(7). A holding of 10% or more of the outstanding voting securities of such a utility company is presumed to be sufficient to constitute such a relationship, but this presumption may be rebutted by proof before the Commission of a lack of control or controlling influence.

---

[7] "Sec. 11(a) . . .

"(b) It shall be the duty of the Commission, as soon as practicable after January 1, 1938:

"(1) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such action as the Commission shall find necessary to limit the operations of the holding company system of which such company is a part to a single integrated public utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public utility system: *Provided, however,* That the Commission shall permit a registered holding company to continue to control one or more additional integrated public utility systems, if, after notice and opportunity for hearing, it finds that—

"(A) Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system;

"(B) All of such additional systems are located in one State, or in adjoining States, or in a contiguous foreign territory; and

"(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation.

The Commission may permit as reasonably incidental, or economically necessary or appropriate to the operations of one or more integrated public utility systems the retention of an interest in any business (other than the business of a public utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems."

Accordingly, a company that is a mere investor in utility securities and that does not control or possess a controlling influence over the utility companies need not comply with § 11(b)(1).

A holding company as so defined must register and hence must obey the commands of § 11(b)(1) if it uses the mails or the instrumentalities of interstate commerce directly or through its subsidiaries in the operation of its business.[8] Thus a holding company may sell, transport or distribute gas or electric energy in interstate commerce. § 4(a)(1). It may use the mails or interstate commerce to negotiate or perform service, sales or construction contracts with other companies in the system. § 4(a)(2). It may use the mails or interstate commerce to distribute or make public offerings for the sale or exchange of securities of its own or of other system companies. § 4(a)(3). It may use the mails or interstate commerce to acquire securities or utility assets of other companies. § 4(a)(4). It may engage in a business in interstate commerce. § 4(a)(5). Or it may own or control securities of subsidiaries that do any of the foregoing acts. § 4(a)(6). Moreover, § 2(a)(28) defines "interstate commerce," as used in these and other provisions of the Act, to mean "trade, commerce, transportation, transmission, or communication among the several States or between any State and any place outside thereof."

By making these enumerated interstate transactions unlawful unless the holding company registers with the Commission and by extending § 11(b)(1) to registered holding companies, Congress has effectively applied § 11(b)(1) to those holding companies that are in fact in the stream of interstate activity and that affect commerce in more states than one. Congress has further declared in § 1(c) that all the provisions of the Act, thus including § 11(b)(1), shall be interpreted to meet the problems and remove the evils connected with public utility holding companies "which are engaged in interstate commerce or in activities which directly affect or burden interstate commerce." Section 11(b)(1) is thus clearly and unmistakably applicable to holding companies engaged in interstate commerce.

Not all holding companies that are engaged in interstate activities, however, must necessarily comply with § 11(b)(1). By the

[8] Section 4(b) compels holding companies to register if they have outstanding any security which has been distributed by the use of the mails or commerce, or offered for sale by like means, subsequent to January 1, 1925, and if that security is held on October 1, 1935, by any person not a resident of the state in which the holding company is organized. We need not here consider the force of this section, however, since North American and other interstate holding companies are forced to register by reason of the provisions of § 4(a).

terms of § 3(a)(1), if a holding company and all of its subsidiaries are predominantly intrastate in character and carry on their business substantially in a single state in which such holding company and every subsidiary thereof are organized, the Commission may grant an exemption from any provision of the Act "unless and except insofar as it finds the exemption detrimental to the public interest or the interest of investors or consumers."

The power of the Commission under the "unless and except" clause of § 3(a) to deny an exemption to a predominantly local holding company does not mean, as North American urges, that a holding company having no relation whatever to interstate commerce be subjected to § 11(b)(1) or to any other provision of the Act. The Commission, in denying an exemption under this clause, is bound by the policy set forth in § 1(c) to act so as to eliminate evils connected with holding companies "engaged in interstate commerce or in activities which directly affect or burden interstate commerce." A holding company predominantly local in character may nevertheless engage in activities affecting or burdening interstate commerce to the detriment of the public interest or the interests of investors and consumers. Only in such a case could the Commission properly deny an exemption under the "unless and except" clause.[9] This problem, however, is academic so far as North American is concerned. Like most public utility holding companies, North American is engaged in interstate commerce directly and through its subsidiaries. It can lay no claim to a predominantly intrastate character; as to it, § 3(a)(1) is wholly inapplicable. The possibility that the Commission might erroneously fail to exempt some truly local holding company from the provisions of § 11(b)(1) cannot negative the plain fact that § 11(b)(1) was designed to apply and does apply to holding companies engaged in interstate commerce. North American is therefore subject to its terms.

The crucial constitutional issue, so far as the commerce clause is concerned, resolves itself into the query whether Congress may validly require holding companies engaged in interstate commerce to dispose of their security holdings and to confine their activities in accordance with the standards of § 11(b)(1). In urging the negative answer to this query, North American relies upon the settled doctrine that the federal commerce power extends to intra-

[9] The Commission has recognized the fact that the declaration of policy in § 1(c) must be considered in granting or denying exemptions under § 3(a) to predominantly intrastate holding companies. See In re Niagara Hudson Power Corporation, Holding Company Act Release No. 5115; In re Long Island Lighting Company, Holding Company Act Release No. 5746.

state activities only where those activities "so affect interstate commerce, or the exertion of the power of Congress over it, as to make regulation of them appropriate means to the attainment of a legitimate end, the effective execution of the granted power to regulate interstate commerce." *United States* v. *Wrightwood Dairy Co.*, 315 U. S. 110, 119. See also *Santa Cruz Fruit Packing Co.* v. *National Labor Relations Board*, 303 U. S. 453, 466; *United States* v. *Darby*, 312 U. S. 100, 118-123; *Wickard* v. *Filburn*, 317 U. S. 111, 122-124. It is said that the ownership by North American of securities of other system companies is not in itself commerce, interstate or intrastate, and that the right to own or retain property is characteristically governed by state laws, the federal government having no concern with such matters except as an incident to the due exercise of one of its granted powers. North American denies that the necessary relationship between the ownership of securities and interstate commerce is self-evident or that it has been found as a fact by Congress, the Commission or any court. The absence of this relationship, it is concluded, causes § 11(b)(1) to fall.

This argument, however, misconceives not only the power of Congress over interstate commerce but also the basic nature of public utility holding companies and the effect that stock ownership has upon their activities. The dominant characteristic of a holding company is the ownership of securities by which it is possible to control or substantially to influence the policies and management of one or more operating companies in a particular field of enterprise.[10] To be sure, other devices may be utilized to effectuate control, such as voting trusts, interlocking directors and officers, the control of proxies, management contracts and the like. But the concentrated ownership of voting securities is the prime method of achieving control, constituting a more fundamental part of holding companies than of other types of business. Public utility holding companies are thereby able to build their gas and electric utility systems, often gerrymandered in such ways as to bear no relation to economy of operation or to effective regulation. The control arising from this ownership of securities also allows such holding companies to exact unreasonable fees, commissions and other charges from their subsidiaries, to make undue profits from the handling of the issue, sale and exchange of securities for

[10] Bonbright and Means, The Holding Company (1932), p. 10; Jones and Bigham, Principles of Public Utilities (1931), p. 589; Hearings before House Committee on Interstate and Foreign Commerce, 74th Cong., 1st Sess., on H. R. 5423, Part 1, pp. 76-77.

their subsidiaries, to issue unsound securities of their own based upon the inflated value of the subsidiaries, and to effect adversely the accounting practices and the rate and dividend policies of the subsidiaries. See § 1(b).[11] Congress has found that all of these various abuses and evils occur and are spread and perpetuated through the mails and the channels of interstate commerce. And Congress has further found that such interstate activities, which grow out of the ownership of securities of operating companies, have caused public utility holding companies to be "affected with a national public interest." § 1(a).[12]

The ownership of securities of operating companies, then, has a real and intimate relation to the interstate activities of holding companies and cannot be effectively divorced therefrom. That ownership is the generating force of the constant interstate flow of reports, letters, equipment, securities, accounts, instructions and money—all of which constitute the life blood of holding companies and allow the numerous abuses to be effectuated. It also makes the interstate transmission of gas and electricity by the subsidiaries, as well as their other interstate actions, reflect upon and magnify the interstate character of the holding companies. Without the factor of stock ownership the very foundation and framework of holding company systems would be gone and the amount of their interstate activity would be at a minimum; centralized management and control of widely scattered utility properties would be difficult if not impossible.

We may assume without deciding that the ownership of securities, considered separately and abstractly, is not commerce. But

[11] The congressional findings as to abuses listed in § 1(b), were based upon some of the most exhaustive and comprehensive studies ever to underlie a federal statute. Congress specifically referred in § 1(b) to the studies made by the Federal Trade Commission pursuant to S. Res. 83, 70th Cong., 1st Sess., the reports of the House Committee on Interstate and Foreign Commerce made pursuant to H. Res. 59, 72nd Cong., 1st Sess., and H. J. Res. 572, 72nd Cong., 2d Sess. A summary of the manifold and complex abuses revealed by these studies is contained in the Federal Trade Commission Report, *supra*, note 7. See Barnes, The Economics of Public Utility Regulation (1942), p. 71.

[12] The fact that § 1(a) refers to certain activities of holding companies as "often" occurring in or affecting interstate commerce and that § 1(b) refers to adverse effects "when" certain abuses and evils occur is but an instance of careful draftsmanship. Contrary to North American's contentions, the use of the words "often" and "when" does not imply that Congress felt that the relationships of some holding companies to commerce were negligible or that the abuses were other than general in nature. Those words merely recognize that interstate activities are not necessarily constant and that the abuses may arise from time to time. That is enough, however, to support legislative action. See Chicago Board of Trade v. Olsen, 262 U. S. 1, 40.

when it is considered in the context of public utility holding companies and their subsidiaries, its relationship to interstate commerce is so clear and definite as to make any other conclusion unreasonable. And Congress has plainly recognized that relationship in its declarations of policy in § 1(a), in its enumeration of abuses in § 1(b) and in its description of interstate activities of holding companies in § 4(a). Such statements would be utterly meaningless in the light of reality were they not premised upon the ownership of securities by holding companies and the use of that ownership to burden and affect the channels of interstate commerce.

Section 11(b)(1) is concerned with, and operates directly upon, this ownership of securities. In § 1(b)(4) Congress specifically found that the national public interest, the interest of utility investors and the interest of utility consumers are or may be adversely affected "when the growth and extension of holding companies bears no relation to economy of management and operation or the integration and coordination of related operating properties."[13] The "growth and extension of holding companies" obviously rest upon their security holdings. Congress expressed in § 1(c) its determination "to compel the simplification of public-utility holding-company systems and the elimination therefrom of properties detrimental to the proper functioning of such systems," thus eliminating the evil complained of in § 1(b)(4) and ameliorating the conditions specified in the other subsections of § 1(b). It accordingly adopted § 11(b)(1), whereby holding companies are compelled to integrate and coordinate their systems and to divest themselves of security holdings of geographically and economically unrelated properties. In this way Congress hoped to rejuvenate

[13] "The growth of the holding company systems has frequently been primarily dictated by promoters' dreams of far-flung power and bankers' schemes for security profits, and has often been attained with the great waste and disregard of public benefit which might be expected from such motives. Whole strings of companies with no particular relation to, and often essentially unconnected with, units in an existing system have been absorbed from time to time. The prices paid for additional units not only have been based upon inflated values but frequently have been run up out of reason by the rivalry of contending systems. Because this growth has been actuated primarily by a desire for size and the power inherent in size, the controlling groups have in many instances done no more than pay lip service to the principle of building up a system as an integrated and economic whole, which might bring actual benefits to its component parts from related operations and unified management. Instead, they have too frequently given us massive, overcapitalized organizations of ever-increasing complexity and steadily diminishing coordination and efficiency." Report of the National Power Policy Committee on Public-Utility Holding Companies, H. Doc. 137, 74th Cong., 1st Sess., p. 5.

local utility management and to restore effective state regulation, both of which had been seriously impaired by the existence and practices of nation-wide holding company systems.[14]

The constitutionality of § 11 (b) (1) under the commerce clause thus becomes apparent. For nearly one hundred and twenty-five years, this Court has recognized that the power of Congress over interstate commerce is "the power to regulate; that is, to prescribe the rule by which commerce is to be governed. This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations, other than are prescribed in the constitution." *Gibbons* v. *Ogden*, *supra*, 196. This is not to say, of course, that Congress is an absolute sovereign. It is limited by express provisions in other parts of the Constitution, such as Section 9 of Article I and the Bill of Rights. But so far as the commerce clause alone is concerned Congress has plenary power, a power which "extends to every part of interstate commerce, and to every instrumentality or agency by which it is carried on; and the full control by Congress of the subjects committed to its regulation is not to be denied or thwarted by the commingling of interstate and intrastate operations." *The Minnesota Rate Cases*, *supra*, 399.

This broad commerce clause does not operate so as to render the nation powerless to defend itself against economic forces that Congress decrees inimical or destructive of the national economy. Rather it is an affirmative power commensurate with the national needs. It is unrestricted by contrary state laws or private contracts. And in using this great power, Congress is not bound by technical legal conceptions. Commerce itself is an intensely practical matter. *Swift & Co.* v. *United States*, 196 U. S. 375, 398. To deal with it effectively, Congress must be able to act in terms of economic and financial realities. The commerce clause gives it authority so to act.

We need not attempt here to draw the outer limits of this plenary power. It is sufficient to reiterate the well-settled principle that Congress may impose relevant conditions and requirements on those who use the channels of interstate commerce in order that those channels will not become the means of promoting or spreading evil, whether of a physical, moral or economic nature.

[14] "As has been pointed out above, the purpose of section 11 is simply to provide a mechanism to create conditions under which effective Federal and State regulation will be possible. It is therefore the very heart of the title, the section most essential to the accomplishment of the purposes set forth in the President's message." S. Rep. 621, 74th Cong., 1st Sess., p. 11.

Brooks v. *United States*, 267 U. S. 432, 436-437. This power permits Congress to attack an evil directly at its source, provided that the evil bears a substantial relationship to interstate commerce. Congress thus has power to make direct assault upon such economic evils as those relating to labor relations, *National Labor Relations Board* v. *Jones & Laughlin Co.*, 301 U. S. 1, *Polish Alliance* v. *National Labor Relations Board*, 322 U. S. 643; to wages and hours, *United States* v. *Darby*, *supra*; to market transactions, *Stafford* v. *Wallace*, 258 U. S. 495; *Chicago Board of Trade* v. *Olsen*, 262 U. S. 1; and to monopolistic practices, *Northern Securities Co.* v. *United States*, *supra*. The fact that an evil may involve a corporation's financial practices, its business structure or its security portfolio does not detract from the power of Congress under the commerce clause to promulgate rules in order to destroy that evil. Once it is established that the evil concerns or affects commerce in more states than one, Congress may act. "The framers of the Constitution never intended that the legislative power of the nation should find itself incapable of disposing of a subject matter specifically committed to its charge." *In re Rahrer*, 140 U. S. 545, 562.

Congress in § 11(b)(1) of the Public Utility Holding Company Act was concerned with the economic evils resulting from uncoordinated and unintegrated public utility holding company systems. These evils were found to be polluting the channels of interstate commerce and to take the form of transactions occurring in and concerning more states than one. Congress also found that the national welfare was thereby harmed, as well as the interests of investors and consumers. These evils, moreover, were traceable in large part to the nature and extent of the securities owned by the holding companies. Congress therefore had power under the commerce clause to attempt to remove those evils by ordering the holding companies to divest themselves of the securities that made such evils possible.

It follows that North American's contention that the ownership of securities is not in itself interstate commerce and hence may not be made the basis of federal legislation misconceives the issue in this case. Precisely the same misconception was made more than forty years ago by the appellants in *Northern Securities Co.* v. *United States*, *supra*, 334-335, and was rejected by this Court. Inasmuch as Congress may protect the freedom of interstate commerce by any means that are appropriate and that are lawful and not prohibited by the Constitution, this Court in

the *Northern Securities Co.* case recognized that Congress may deal with and affect the ownership of securities in order to protect the freedom of commerce. Congress likewise has the power in this case.

In fashioning the remedy decreed by § 11(b)(1), Congress was following a pattern set many years ago by decisions applying the Sherman Antitrust Act, *Northern Securities Co.* v. *United States*, *supra*; *Standard Oil Co.* v. *United States*, 221 U. S. 1; *Continental Ins. Co.* v. *United States*, 259 U. S. 156, and the commodities clause of the Hepburn Act, *United States* v. *Lehigh Valley Railroad*, 220 U. S. 257; *United States* v. *Delaware, Lackawanna & Western Railroad Co.*, 238 U. S. 516. In so affecting the corporate structure of holding companies, it was exercising its power "to foster, protect and control the commerce with appropriate regard to the welfare of those who are immediately concerned, as well as the public at large, and to promote its growth and insure its safety." *Dayton-Goose Creek Railway Co.* v. *United States*, 263 U. S. 456, 478. It is clear, therefore, that § 11(b)(1) is invulnerable to attack under the commerce clause.

The constitutionality of § 11(b)(1) is also questioned from the standpoint of the due process clause of the Fifth Amendment. North American argues that this section, by compelling it to divest itself of its scattered subsidiaries and to confine its operations to a single integrated system, involves a taking of property without just compensation. It is also claimed that such evils as were found to exist in public utility holding companies find an adequate remedy in other sections of the Act and that § 11(b)(1) is therefore inappropriate. Neither contention is meritorious.[15]

The taking of property is said to involve "a vast destruction of values." Reference is made in this respect to the valuable right of North American's shareholders to pool their investments and thereby obtain the benefit alleged to flow from efficient, common management of diversified interests. But Congress balanced the various considerations and concluded that this right is clearly outweighed by the actual and potential damage to the public, the investors and the consumers resulting from the use made of pooled investments. Under such circumstances, whatever value this right

[15] The contention also is made that the fact that § 11(b)(1) requires disposition of security holdings and the termination of relationships which antedate the passage of the Act is fatal to its validity. But it merely requires that such holdings and relationships shall not continue in the future. There is no punishment for past events. Certainly there is no constitutional requirement that the status quo be maintained. See United States v. Trans-Missouri Freight Ass'n, 166 U. S. 290, 342.

may have does not foreclose the protection of the various interests which Congress found to be paramount. See *Northern Securities Co.* v. *United States, supra.* Nor does the value of North American's contributions as a holding company to the earning power and intrinsic value of the assets divested pursuant to § 11(b)(1) bar Congress from requiring such divestment. Congress has concluded from the extensive studies made prior to the passage of the Act that the economic advantages of a holding company at the top of an unintegrated, sprawling system are not commensurate with the resulting economic disadvantages. The reasonableness of that conclusion is one for Congress to determine. The fact that valuable interests may be affected does not, by itself, render invalid under the due process clause the determination made by Congress.

Moreover, there is no basis here for assuming that in limiting the scope of North American's operations there will be dispositions of securities for inadequate considerations, thereby raising a question as to whether there is a destruction of these values without just compensation. The Act does not contemplate or require the dumping or forced liquidation of securities on the market for cash.[16] Under §§ 11(d) and 11(e) of the Act, any divestment or reorganization plan must meet the standards of fairness and equitableness. In many instances this may involve no more than a distribution of the securities among the existing shareholders of the holding company.[17] But should securities be sold for cash, speculation as to unfavorable market conditions cannot undermine the validity of § 11(b)(1). Any plan of divestment or reorganization, moreover, must be carefully scrutinized by both the Commission and the enforcing court, thus enabling the assertion and protection of all shareholders' rights. See *Otis & Co.* v. *Securities*

[16] "As has been explained above, the title does not require the dumping or forced liquidation of securities. Such disposition as may be necessary can be accomplished by reorganization which will equitably redistribute securities among existing security holders. Insofar as there may be some redistribution of the securities of operating companies through investment banking channels, this will not result in a substantial net increase in the supply of utility securities on the market because for every block of operating securities distributed there will be a corresponding block of holding company securities retired. The net effect of such changes will be to strengthen the market for utility securities generally by replacing holding company securities with sound operating company securities. Such operations, primarily of a refunding nature, should strengthen rather than weaken the credit of operating companies." S. Rep. 621, 74th Cong., 1st Sess., p. 16.

[17] North American has already disposed of its holdings of Detroit Edison Company common stock under a plan distributing the stock to North American's stockholders over a period of time. In re The North American Company, Holding Company Act Release No. 4056.

and Exchange Commission, 323 U. S. 624. And there are provisions in the Act guarding against unduly rapid divestment or liquidation.[18] In the light of such statutory and judicial safeguards and in the absence of any alleged unfair plan of divestment, we cannot say that North American's shareholders are adversely affected, from a constitutional standpoint, by the operation of § 11(b)(1). North American's reliance on such cases as *Louisville Joint Stock Land Bank* v. *Radford*, 295 U. S. 555, is therefore misplaced.

It is true, as North American points out, that other sections of the Act provide for the regulation of many activities of holding companies and their subsidiaries, activities that were found to give birth to many of the evils about which Congress was concerned. But such sections regulate future transactions, whereas § 11(b)(1) is concerned with the existing structures of holding company systems. These structures in and of themselves have been found by Congress to constitute an evil that cannot be met by simply regulating future transactions. Congress, in the exercise of its discretion, has decided that it is necessary to reorganize the holding company structures. And inasmuch as it has the constitutional power to do so, we cannot question the appropriateness or propriety of its decision. *Sunshine Anthracite Coal Co.* v. *Adkins*, 310 U. S. 381, 394.

Finally, North American claims that it has engaged in none of the evils enumerated in § 1(b) and that it should be allowed to prove that fact. The contention apparently is that § 11(b)(1), as applied to North American, is unconstitutional since none of the evils that led Congress to enact the statute are present in this instance. But if evils disclosed themselves which entitled Congress to legislate as it did, Congress had power to legislate generally, unlimited by proof of the existence of the evils in each particular situation. Section 11(b)(1) is not designed to punish past offenders but to remove what Congress considered to be potential if not actual sources of evil. And nothing in the Constitution prevents Congress from acting in time to prevent potential injury to the national economy from becoming a reality.

The judgment of the court below is accordingly

Affirmed.

Mr. Justice REED, Mr. Justice DOUGLAS and Mr. Justice JACKSON took no part in the consideration or decision of this case.

[18] Under § 11(c), holding companies are given at least a year to comply with an order of the Commission under § 11(b). The Commission is also authorized to extend the time for an additional year upon a proper showing.
